For the first half mile of slow trolling we could only show two large-mouthed bass of about five pounds for the pair. This could scarcely be called good sport, but we had often fished a whole day together when the total score would not foot up half as well as this, so we were not discouraged. The murmur of a little spring brook promised a cool drink, and pulling the bow of the boat up on a sunken log under the shade of a swamp cedar, we stood up to stretch our legs, leaving our lines to trail out astern. Scarcely had I dipped up a tin-cup of water from the stream when Dan cried, "Look out Hickory! there she goes," and by the time I had drank my cup of water, and snatched up the rod, which I had left lying across the seat, the fish was twenty yards away. Stopping the reel, the line tightened, and the trouble began. It was a good square fight until I worked him in near the rushes and grass that here grew out into the lake a couple of yards beyond the stern of the boat; then the scale turned in favor of the bass (we could see him plinily), for with a rush he went into the grass, and was out of sight in an instant. A dull tug-tug advised us that the hook still held, and it was only a question of how much grass the line would pull up by the roots, or—break. Reeling up short, a steady, careful pull soon brought to the surface a bunch of grass nearly the size of a bushel basket, and on bringing it alongside and picking it from around the line, a base of about 33 pounds was uncovered, with the fight as completely

knocked out of him as though he had never belonged to the

family.

While I was stringing this one Dan struck another, larger than mine, and after a gallant fight he took his place on the stringer with the other three. We took tive here in a short time and then pushed on up the lake, not, however, without jotting down the place in our mental notebooks for future

Not caring to drag a lot of fish to Six-mile Lake and back

Jotting down the place in our mental notebooks for future reference.

Not caring to drag a lot of fish to Six-mile Lake and back, we turned them loose, believing we could take ail we wanted for camp going back. From the little brook up to the head of the lake we took half a dozen more and three or four pickerel, but put them all back in the water—the long faces with their necks broken. This lake is about the same size as White's and the general features are much the same.

At a sharp elbow in the stream connecting with St. Clair's Lake above we passed over a little pool four or five feet deep, and as Davis's dead frog came trailing along on top of the water twenty or thirty feet astern, a large bass struck it and, after a furious surge or two, leaped straight into air and shook loose.

This started the blood in the old pelican's veins, and he wanted to stop and teach that bass a lesson; but, without slacking the sharp speed at which we were going, I promised to stop as we came buck and let them have it out.

With this patched up truce, we pursued our way, and in a few mnutes were forcing our boat through a dense mat of lily pads, dotted all over with white, fragrant flowers, out into a quiet little basin of several hundred yards in circumference that looked like a beautiful gem encircled with a band of emerald. As our eyes swept around the line of shore, every branch and twig was reflected in its placid waters with startling distinctness. It was a perfect picture of quiet and solitude, and as we sat in the oppressive silence a feeling of lonesomeness came over us that we were glad to have dispelled by the discordant 'quar-ck' of a blue crane that rose down shore to our left, and winged his heavy flight to the head of the basin and disappeared into what seemed to us a dense wall of woods.

to us a dense wall of woods.

We could see no way out of the basin, but on pulling a few yards away from the outlet, a narrow strait opened up to the right (the exit of the crane) that led us out into the main body of St. Clair's Lake. This lake is a mile and a half long by about a quarter of a mile wide, with an east and west course. It is a beautiful body of water, and is said to afford good fishing, but we were disappointed in it, as going up and back only added four bass to our score. We stopped at St. Clair's landing, near the head of the lake, to look at the camping ground we had first intended going to, and to get a drink out of the famous St. Clair spring we had heard so much about. so much about

so much about.

After stretching our legs on the strip of beach I took the tin cup and went in search of the spring, but after looking up and down the slore for some distance, and "thrashing" around through the swamp and "bresh" for fifty yards along the bise of the point, I was forced to abandon the search around through the swamp and "bresh" for fifty yards along the bise of the point, I was forced to abandon the search and \$\varepsilon\$ to the house back on the side hild for directions. I was disappointed in not finding Mr. St. Clair at home, as we would have been pleased to make his acquaintance. Telling the gude wife of my fruitless efforts to find the spring, she bade a bright little girl of five or six summers act as guide, and under a running fire of questions and pleasant chatter from the little one, we passed out into the road that ran along the side hill near the spring. The present of a bright new dime (the only symptom of money I had with me) and a "thank you, sir," made us friends at once, and the conversation was carried on with renewed vigor. Passing the little barn and outhouses, she pointed out a famous speckled

versation was carried on with renewed vigor. Passing the little barn and outhouses, she pointed out a famous speckled hen, her own, that 'laid eggs every day,' and a favorite cow was duly praised for the "lots of milk" she gave.

As we thought then of moving our camp up there, a question brought the answer in a very matter of fact maner, "Oh, yes! we can let you have some eggs and all the milk you want," and learning I had left a companion in the boat as the landing, she asked eagerly: "Are you the gentlemen my paps says are coming here from Cincinnatit to camp?" On assuring her we were of the party, she said: "I'm so glad! Campers is so much company for us, and I have been looking for you ever so long." This was said with an artlessness that fully atoned for the flaw in the granman.

graininar.

All this may appear out of place in "a tale of the camp," but the writer's love for pleasant children must be his excuse. The prattle of that little backwoods naiden, who has probably never been ten miles away from the place of her birth, was as good as the reading of a pleasant book, and if this ever

ably never ocen ten miles away from the place of her office, was as good as the reading of a pleasant book, and if this ever meets her eye she will know that old "Kingfisher" fell a willing victim to her artless little ways.

We turned from the road into a path that led sidelong down the hillside, and a few yards through the deep shadows of a stately wood brought us to the spring. It was a disappointment, after hearing its praises sounded so much. A circular, shallow basin six or seven feet in diameter, nestling under the roots of a tree, water in it a foot deep, the bottom covered with a layer of soft, black mud of unknown depth—this was the famed St. Clair Spring. From the down-hill side a puny little stream, not larger than the butt of a bass-rod, leaked out, and stole noiselessly and steathily down the hill, and hid itself in the bushes at the bottom of the ravine, as though ashamed of its littleness. For a "famous" spring something appeared to be lacking.

hill, and hid itself in the bushes at the bottom of the ravine, as though ashamed of its littleness. For a "famous" spring something appeared to be lacking.

I dipped up and drank a pint cup of the water and—changed my mind. It was simply delicious; icy in coldness, and sweet and clear as a dewdrop. I drank another draught, and after a short breathing spell, another, my little friend looking curiously on, and no doubt wondering where it all went to.

ent to.

Filling the cup we retraced our steps to the path that led Filling the cup we retraced our steps to the pain that lea to the house, where I said good bye to the "little maiden without guile," and hastened on to the boat, where I found Dan slightly impatient and "dryper 'n a whole school o' fish." During my absence he had struck, and lost a heavy fish on my rod because he was unable to use his strap and hook, and on account of the reel working backwards for him when the rod was turned over, as it had to be when worked with the left hand. worked with the left hand.

worked with the left hand.

For the benefit of any brother of the angle, who may be so unfortunate as to have the use of only one hand, old Dan and I will rest here a few minutes on the little beach, while I describe his tackle and his manner of handling a fish. He generally uses a single piece Japanese cane rod of good size (a jointed rod may be used as well), 9 or 10 feet long, rather stiff and selected, with an eye to strength and extreme toughness. The reel seat is placed 18 or 20 inches from the butt end of the rod, and just back of the reel a 4-inch screw-eye is sersewed into the rod, or a ring of the same screw-eye is screwed into the rod, or a ring of the same size, the shape of a wire guide, is wrapped on. A leather

strap or piece of rein web, 26 to 30 inches long, joined at the strap or piece of rein web, 26 to 30 inches long, joined at the ends by a hook shaped like a snaffle snap with the steel tongue taken out, and the rig is complete. The strap hangs around his neck with the hook in front, ready to be slipped into the screw-eye at an instant's notice. When not handling a fish the hook is not used, but the moment a fish strikes he "hooks up" and his old "fin" is free to handle the reel. When he strikes a fish he "rears back on him," or turns sidewise, and the fish has always to work against the spring of the rod. He holds the butt of the rod between his legs to steady it, and it is for this the reel is placed so far up the rod. If the reel is put on the rod squarely in line with the first guide, the line will run on usually without serious bunching.

serious bunching.
Years ago, before he got to fishing in harness, when he struck a fish he had to pass his rod to the one nearest and lauk on with his heart in his throat until it broke away or was landed—now, he never surrenders his rod unless the fish is the strongest and longest winded. He fishes with the reel on top of the rod, and after over thirty years of the sport, we respectfully submit that it is the only common sense way of using a reel in black bass fishing; and this in the face of such excellent and respected authority as the genial author of the "Book of the Black Bass."

of the "Book of the Black Bass."

We pushed out, and in ten minutes were feeling our way up the little river leading to Six Mile Lake, a mile and a half above. For eighty rods up from the mouth long waving grass trailed in the current and choked up the stream. In many places we could see the bottom only through a channel of a foot wide. The shores on either side for some distance are swampy and tussocky. Tall flags, nodding bulrushes, long drooping grasses, and downy cat tails cover the face of the swamp back to the line of trees and bushes, and along the marryin of the stream the water is extracted in many the swamp back to the line of trees and busnes, and along the margin of the stream the water is carpeted in many places with a rich fabric direct from Nature's loom—the broad green leaf of the water lily. It is a flowered carpet, too, and you may reach out from your boat and pluck from its woof the sweetest and rarest of all perfumes.

Hatural History.

PHILADELPHIA ZOOLOGICAL SOCIETY.

A T the annual meeting of the society the tenth annual re-A, port of the Board of Directors, covering the year end-ing March 1, 1882, was submitted to the stockholders. From this document a number of interesting facts are gleaned. The increase in the number of visitors to the Gardens over The increase in

this document a number of interesting lacts are gleaned. The increase in the number of visitors to the Gardens over the previous year was 34,949, and the total number of tickets received 243,427, the money receipts being \$5,146.15 in excess of those for 1880-81. Many improvements have been made in the Garden, and new buildings erected. The financial condition of the Society is very satisfactory, the income being largely in excess of the expenditure.

The report of Mr. Arthur Erwin Brown, the Superintendent of the Garden, is a very interesting document. The menageric contains 299 mammals, 343 birds and 37 reptiles and batrachians. During the year there were received 130 munmals, 164 birds and 104 reptiles and batrachians. Five species of mammals, twenty-six of birds and five of reptiles were exhibited which had never before been included in the collections. Eleven species of mammals have bred during the past ten years have reproduced their kind in the Philadelphia Gardens. It shows that Mr. Brown has studied with unusual success this especially difficult subject. The breeding species, with the habitat of each, are as follows:

Macaque monkey, Macacus epnomelyus, India; lion, Felix

Philadelphia Gardens. It shows that Mr. Brown has sudded with unusual success this especially difficult subject. The breeding species, with the habitat of each, are as follows:

Macaque monkey, Macaeus eyaomolgus, India; lion, Félis leo, Asia and Africa; leopard, Félis leopardus, Asia and Africa; leopard, Félis leopardus, Asia and Africa; prairie wolf, Canis lutrans, North America; dingo, Canis dingo, Australia; common raceoon, Proeyon lotor, North America; white-nosed coati, Mosua narica, Central America; black bear, Ursus americanus, North America; striped gopher Spermophilus trideem-lineatus, North America; prairie dog, Cynomys ludovicianus, North America; prairie dog, Cynomys ludovicianus, North America; woodcluck, Arctomys montac, North America; beaver, Castor jiber emadensis, North America; Javan porcupine, Hystrica woodcluck, Arctomys montac, North America; beaver, Castor jiber emadensis, North America; Javan porcupine, Hystrica ecouchy, Disapprota acouchy, West Indies; collared peccary, Dicalyles torquatus, Central America; lluma, Lama peruana, Peru; common camel, Cimelus dromedarius, Arabia; Bactian canel, Cimelus bortrianus, Asia; xebu, Bos indieus, Asia and Africa; bison, Bison americanus, North America; Angora goat, Copra hirrus ear, Yemen sheep, Oris aries ear; oryx antelope, Oryx lencoryx, South Africa; wapiti deer, Gerous canadensis, North America; common deer, Cervus canadensis, North America; common deer, Cervus canadensis, North America; common deer, Cervus acis, India; fallow deer, Cervus danae, Europe; Javan chevrotain, Trajulus javanicus, Java; common opossum, Didelphys virginiana, North America; red kangaroo, Macropus viguantus, Australia; great kangaroo, Macropus giquantus, Australia; rat kangaroo, Hypsipnymnus rujesens, Australia; reseted ground parrakeet, Celopsitta nove-hollandie, Australia; golden pheasant, Thaumadea pieta, Chian; common pealowi, Puro cristata; ruffed grouse, Bonusa umbellus, North America; ommon mocaesin, Anestrolon piscioorus, North America; common rutlessake, Croda

tus, North America.

The Philadelphia Society has a wide circle of friends, as may be seen from the list of donations, which is a long one and covers a wide extent of territory.

In regard to the breeding of the ruffed grouse in confinement, alluded to in the above list, Mr. Brown writes us from Philadelphia under date of June 7:

"Unfortunately the biography of the ruffed grouse bred in the Garden is short. Four were hatched out some years ago—miscrable, puny little things which all died within twenty-four hours. The old ones did fairly well. Thad six of them, which were purchased in December, 1879, Before and since that lot I have several times had single specimens, none of which have ever lived more than a few days. I believe it possible to keep and breed them if time enough were given to it. That amount of time, though, cannot were given to it. That amount of time, though, cannot well be given in a large collection, and some amateur who ear give them a large end, without fear of rats, would have the best chance of success.—ARTHUR ERWIN BROWN,"

Remarkable Flight of Warblers.—Editor Forest and Stream: A record may well be made of the unprecedented flight of warbiers in Eastern Massachusetts on the 21st of May and the following days. There are, say, twenty-four species that one might reasonably expect to find here about that date. Perhaps in the case of two species, the Cape May and the mourning, "reasonably expect" is rather too strong an expression, as very few of us have ever seen living examples in this section. Two other species, the red poll and the chat, it do not take into account, as the former leaves us for the north about May I, and there was little or no chance of finding him here at the above date, and the latter is so rare and so local in his preseuce that the chance was practically nil. On the 21st and 22d I had the pleasure of the companionship of Mr. Purdie, of Newton, well known among "bird men" as an experienced and accurate observer, and we determined the presence of no less than twenty of the twenty-four, and that in the rather limited area of observation of about two miles by one-fourth mile, as follows: Black and white (M. varia), blue yellowback (P. americana), Nashville (M. auricapilla), Tennessee (M. peregrina) [very rare], yellow (D. varies), black-throated green (D. varies), black-throated blue (D. cerulescens), yellow rump (D. coronata), blackburnian (D. blackburniay, black poll (D. striata), bay-breasted (D. castaneo) [rare], chestnut-sided (D. pennsyl-canica), black and yellow (D. maculosa), Cape May (D. tignina) [very rare], golden-crown thrush (S. auricapillas), water thrush (S. nævius), Maryland (S. trichas), green black-cap (W. pusilla), Canadian (W. canadensis), redstart (S. raticibla), On the 26th, Mr. Purdie writes that he heard or seen in the vicinity of Boston, since leaving me, all of the four species we did not find, namely: golden-winged (H. chryspopleva), prairie (D. dissolor), pine-creeping (D. pinus) and mourning (G. philadelphia) [very rare]. This makes the list (as above rendered) complete, an instance unp REMARKABLE FLIGHT OF WARBLERS .- Editor Forest and

A LABRADOR TRIP.—Mr. W. A. Stearns, Amherst, Mass., is organizing a party to sail from Boston or Quebec to Labrador. The vessel will start June 30, and return about Aug. Price for round trip, \$100.

Camp Hire Hlickerings.

That reminds me."

It is party of us were woodcock-shooting. Among the number was Mack, who that day shot his first bird; he wrung the cock's neck and pocketed it. A couple of hours later we all stood together, when Mack felt something move in his pocket. He put his hand in and out again with a frightened motion, when the woodcock popped out and sailed up over the tree tops. About the time he was out of range we began to wake up, and six or eight shots were fired at him, but he went on.—No NAME.

[After catching his first rainbow trout, a McCloud River, Cal., correspondent, our friend, "L. W. G.," went into the mountains. He tells the story thus:]

[After catching his first rainbow trout, a McCloud River, Cal., correspondent, our friend, "L. W. G.," went into the mountains. He tells the story thus:]

Of course, the next step was to take a hunt. So the following day a friend and myself took our guns, and with an old Indian for a guide and a good horse to jack our provisions and blankets, started. The old fellow took us straight up the river, over an old Indian trail about four miles, and as we were not much used to the rough mountain trails we were then getting rather tired. We stopped to rest close by a cool mountain stream. It was such a delightful place, and the hour being quite late, we concluded to camp for the night, purposing to rise early the next morning, take our hunt, and return home the next evening. It was a beautiful evening, and the old Indian made us understand by signs, for we could comprehend but very little that he said, that he wanted to take one of the guns. So we let him have one, and he started up straight for the mountains. He had not been gone more than thirty minutes before we heard him shoot; and upon rushing up to see what he had done, we found that he had killed a fine fat fawn deer, which was the first wild deer I had ever beheld. He packed this to camp and hung him up; and we just made a good square meal of the tender steak.

After we had eaten our supper and piled up logs for a good night's fire, we chatted for an hour or so and then spread our blankets near the fire and went to bed, but not to skeep, as it proved in my case. My friend, who was somewhat used to camp life, was asleep in a short time, but I was wide awake and knew not which to be the most afraid of, the bear of the forest or the Indian that lay on one side of the fire upon our saddle blankets. I noticed that he was quite uneasy, but my gun was in hand and ready for action if needed—when all of a sudden I saw him rising up very cautiously and peering with his black wild eyes down the trail, the way we had come; and at about the same time I heard a queer sound a partly around motioned to fire. This seemed to give me new courage, and I furned, took as good aim as I could, shaking as I was, and fired. A little later and my friend's bullet whistled in the same direction, and for a moment all was still. Then came a growl that fairly shook the very

ground; and of all the cracking of brush and growling that I have ever heard the most terrific was done there. We knew by the sound that the aulmal was making its way toward the river. We then heard it make one splash into the water, and all was quiet. The rest of the night was passed by the fire, and we had no more trouble. The next morning, upon taking the track of our foe, we found it to be a very large fire, and we had no more trouble. The next morning, upon taking the track of our foe, we found it to be a very large bear. Its blood was spilled quite freely all the way to the river; and that was the last ever heard of old brain. I do not think that he had any evil intentions toward us, but had probably been attracted by the smell of the fresh venison. We were done hunting for that trip and returned home early in the forenoon, thred and sleepy.

But those days are past, and I would not now turn my hand over to the best hunter in California.

Game Bag and Gun.

CAMP-LIFE IN NORTH CAROLINA.

CAMP-LIFE IN NORTH CAROLINA.

SEVERAL years ago a party, of which the writer was one, went out to Naked Creek, about eighteen miles one, went out to Naked Creek, about eighteen miles one, went out to Naked Creek, about eighteen miles one, the control of the con an out-house to shelter us from the weather in case it should rain, as the appearance of the clouds indicated it would probably do. Our further acquaintance with the condition of that househeld caused us to excuse the poor woman, though it did not heighten our estimate of the qualities of her husband. We raised our tent, disposed of our luggage, took a hearty meal by the light of blazing pine knots, exchanged a yarn or two and sought to forget the inhospitable Archy in dreamless slumber.

Before proceeding further in my narrative it may be well enough to make an observation or so upon the appearance and character of our host (?) He was a descendant of one of the clans who lived far back in the Highlands of Scotland, and his ancestors had come to America about the year 1770.

or the claim who lived far back in the Highlands of Scotland, and his ancestors had come to America about the year 1770, and settled in the remote pine barrens of North Carolina. He had all the industry and frugality of his race, and the latter trait he carried to the extremity of parsimony. The "sacra fames aun?" was his ruling passion, and to gratify it be would almost "skin a flint." Hospitality was a word not recognized in his vocabulary. In personal appearance he was short, compactly built, had a heavy shock of red hair and a freekled face.

and a freckled face.

The next morning, after we had eaten our breakfast, this elegant specimen of generosity came to our camp, but offered no apology for his conduct in not seeing us earlier. He went with us on the day's hunt, and at noon helped us to devour our victuals with an appetite which showed that flour bread was with him a dainty to be enjoyed, whenever furnished at somebody else's expense. He not only did this, but he stuck to us at supper, staid all night with us, and showed the capacity of Dugald Dalgetty at' breakfast the following morning. He moved his quarters whenever we moved our camp, and at all meals gave unmistakable evidence that he relished the food which we had provided. Those delicious venison steaks which our cook prepared, and the infusion of Old Governent Java, sweetened with the choicest St. Croix sugar, were especially agreeable to his palate. Such was our companion, Archy. When the hunt ended, he carried home venison enough to last him several days, and promised to get and take care of one of our dogs, which, we thought, would go to our camping place at his honse, inasmuch as, after a chase, it had failed to return to us. The dog did so return to the camping ground, and Archy got him and used him. We sent specially for him, but Archy not only denied that the dog was with him, but charged the messenger were sent to the camping ground, and Archy got him and used him. We sent specially for him, but charged the messenger were we sent another messenger, with instructions to get the dog at all hazards, and he succeeded after giving our liberal riend ten dollars for the food which he said the dog had eaten! How sweetly does the memory of Archy dwell with me, when I recall his conduct! Noble Archy! But we have had our revenge. One of us, who was a sort of lawyer, took great pleasure in assisting to prosecute him for a violation of the criminal laws of the State, and in hearing the verdict of "Guilty" announced by the jury, and a fine imposed which took from his pocket more than the dog mo The next morning, after we had eaten our breakfast this

To this day he is known as Dog Archy Fatterson. The dog has my sympathy for the connection.

It was on this hunt that the writer had the pleasure of killing the finest buck he ever had the good fortune to secure. A drive had been made without success and the hunters had moved on for another. I had occupied a stand on a small road. The dogs soon started a fine buck, which was shot at, but not killed. It was in the pursuit of this deer that our dog was lost, having crossed the road to the left of where I was placed. I went up on the top of the hill to see if I could find any blood about the tracks. While examining I heard a solitary dog running in the drive which we had hunted, and looking in the direction of the cry I say a buck cross's awamp and turn down it. Thinking it would pass between where I was and the swamp, I ran down the little road with a view of intercepting it if I could. Watching him as I ran, I perceived him to stop. Knowing that he would change his course when he again started, I stopped and quietly squatted, keeping niy eyes on his fine arithers. Pretty soon "his fleet career he took," and I was glad to see that he would run within easy range. Preparing my gun I rose as he got opposite to me, at a distance of about thirty-five yards, his head just at the time hid by a large pine. I discharged the left barrel, loaded with twenty-one No. 3 shot and two and three-quarters drams of Curits & Harvey. He suddenly turned and fain directly toward me for a few yards, until he saw me, and then whirling at right singles he plunged down a sharp hill. I shot the second barrel, charged with No. 1 shot. It was apparent that I had

wounded him severely. The dog came up pear me, and not knowing me turned back. Soon afterward one or two of the hunters came up, and we followed the deer by the blood marks. It was not long before he was found, but not dead. Another shot at him brought him down, and he was safely carried to the camp. When skinned his hams were white with fat, as are a well-fed sheep's, and he needed the help of no hog's lard to make his flesh quite palatable. His net weight was one hundred and thirty pounds. I have seen larger deer, but never saw such a fat one.

That night as we sat around the camp fire of logs of black

weight was one hundred and thirty pounds. I have seen larger deer, but never saw such a fat one.

That night, as we sat around the camp fire of logs of black jack and pine knots making a hot and blazing fire which lighted up all the ground and sent its glare for many rods, we indulged in the narration of stories, some of which had but a remote connection, if any at all, with the life and sports which we were enjoying. Each one had told his tale, when one of the crowd asked our friend Martin Bicket to give us an account of an occurrence which took place at a stone house not many miles away, and which he claimed to have witnessed. So after cleaning his throat, laying down his pipe and putting into his mouth a piece of plug tobacco, he gave us the following:

Among other things sold at the store in question, was an article purporting to be derived from a distillation of the fermented juice of corn and rye, and a gentleman well-known in that section as a politician of considerable pretensions was exceedingly fond of visiting the establishment to hear the news and quench his thirst. On the occasion referred to, the aforesaid politician, Gulliver Heart, was present and enjoying a small game of "seven up" with one Murrell Bills, the stake being a nipperkin of Bankler's best, to be paid for by the loser. Several drinks had been indulged in, but after a while Gulliver, whose thirst was hard to assuage, roared out:

"It's a long time betwixt drinks—bring us the bottle."

out:
"It's a long time betwirt drinks—bring us the bottle." "It's a long time betwist drinks—bring us the bottle." A man named Day was a sort of employee about the store, and he had the misfortune to be suffering with a sore leg, which the doctor was attempting to cure by direct applications and constitutional treatment. Among other medicines which he was taking was whisky, with a mixture of assafectida, aloes, myrrh and wild cherry tree bark, kept in a bottle and to be used, tablespoonful at a time, three times a day.

will and the be used, fablespoonful at a time, three times a day.

The aforesaid bottle was hid securely under the counter, also, and unfortunately put it in close proximity to Day's leg medicine. So when he heard the demand for more whisky, he reached under the counter, also, and unfortunately put it in close proximity to Day's leg medicine. So when he heard the demand for more whisky, he reached under the counter, got a bottle, and handed it to Gulliver. B. took out the stopper, whilst G. held the glass. The bottle was tilted, and gave-repeated sounds of "google, google, google" before Gulliver yelled, "Hold; enough," Then, with eyes sparkling with delight in anticipation of a refreshing draught, he wished a health to all and put it to his mouth. One good swallow of Day's leg medicine went down his throat, when his rebellious palate forhade all further attempts. With retches, salivary ejectations and indistinct oaths, G. called for water. Just then Day came in and protested with great carnestness against the use of his physic. He took his cherished treasure and put it back in a safe place under the counter. The taste of the drugs destroyed all Gulliver's appetite for "sperrits" for a short while, and he engaged again in the delightful pastime of "powring o'er the devil's picture beuks." And then he called for the bottle. Bandler went again and took out the precious liquid from under the counter and poured into the glass until Gulliver directed him to stop. Then raising the goblet to his mouth, with an invocation of "good luck to all," he swallowed another mouthful of Day's accursed "hell broth," which made his recalcitrant stomach break out in open mutiny, whilst Day, with whining voice and subdued look, begged that the means of his physical salvation should not be again taken to serve the demands of Gulliver's appetite for whisky.

This last effort ended the hilarity of the occasion, and with sheepish mien and disturbed visage, Gulliver left for home,

uon snound not be again taken to serve the demands of Gulliver's appetite for whisky.

This last effort ended the hilarity of the occasion, and with sheepish mien and disturbed visage, Gulliver left for home, reflecting that Log Medicine was only another instance of where "All that glisters is not gold." The recital of the story, with the miniery of voice and gesture, at which Bickett is no mean proficient, kept the camp in an uproar of laughter. Whenever Gulliver "gets on his high horse," and "sloshes around," in Bickett's presence, he manages to bring things to a calm by a mild suggestion of Leg Medicine.

On the morning of the fourth day we took up stakes, and left for home, having managed to get eight deer, besides having had a pleasant time during the hunt.

The memory of joys that are past is, like the music of Caryl, "both pleasant and mournful to the soul;" pleasant, because they carry the mind and heart back to green fields and flowery meadows; and mournful, because these bright spots have faded away, never again to bloom and gladden and refresh.

Wells.

"THE CHARMED WHITE DEER."

THE subject of white deer, which appeared in Forest AND STIEAM, has occasionally been a theme of discussion among old hunters for more than half a century. Some of the old pioneer hunters believed that if a white deer had been discovered in the vicinity of their hunting ground (which was a rare occurrence), it portended ill-luck, and that it was the cause of all their poor shots, loss of wounded game, etc.; and the hunter who was so reekless as to shoot a white deer, would surely come to some had end. Many of those add hunters with whom I used to except the way were now.

that it was the cause of all their poor shots, loss of weiunded game, etc.; and the hunter who was so reckless as to shoot a white deer, would surely come to some had end. Many of those old hunters with whom I used to associate were men who seemed to have good common sense, and yet would have some imaginary whims mixed up with their hunting excursions which were simply preposterous.

I am led to believe that there is not more than one white deer among 10,000. I grow up in the wilderness and among deer, and the most that I ever positively knew about white deer was, that I once saw a white deer skin, soon after it had been taken off. The ears, eyebrows and nose were reddish brown, the feet and legs were the same color as other deer up to near the knees and gambrel joints; the rest was pure white, except a few brown hairs on the rump, and a tuft of dark hair on the upper side and root of tail. It was a two-year-old doe, was killed in Pennsylvania on or near the driftwood branch of the Susquehanna, as long ago as the fall of 1885. Killed by J. Davis and H. M. Wattles, each having a shot and both shots striking the deer. I knew those men for years afterwards. The latter named gentleman died about two years ago in Kansas, having lived to be more than eighty years old. I am not aware that he suffered any serious losses or had more ill-luck than usually falls to the lot of ordinary mortals. serious losses or had me lot of ordinary mortals. ANTLER.

MEMPHIANS AFIELD.

WITHIN the vivid consciousness of all men of fine feelings are imbedded far under the crust and dust of the surface, that is the daily battle-ground of the fight for ordinary living, pearls of precious remembrance, jeweled thoughts of victories along the heart's side avenues. With very many the ardent penchant is aglow for the Arab's ambition, to own and caress and advance into extreme beauty, strength, speed and affection, the flyers of the tun or private ground, loving them like children; while othe men infuse their own life and elasticity and clan into yach and buoyant boats, that ride the foaming waves with the supremacy of disdain and the lightness and grace of the swan. While many joyous and innocent hours are so spent when "off duty," seudding new and warmer blood through him who has earned his sport, there is yet another noble army blended into one brotherhood by similar tastes growarmy blended into one brotherhood by similar tastes growing old, yet green in happy memories of prairie and stubble fields, corn, pea and sedgegrass fields shot over many frosty days, and cheerily talked over many nights and sultry days, and cheerily talked over many nights and sultry summer days. In memory and reality the beloved forms of Addie, Guy, Pauline, Countess, Lilly, Scott, Mack, Pat, Lee, Kate, Pedro, Josie and other prime favorites of the present or past, lovingly return our glances and bound in delight when the gun and shooting-suit are brought out. No new and freckled family of dogs can supplant them in our affections, and when the aliens shall have long and gallantly swept the fields, woodlands, prairies and marshes, aiding the ringing Scott, Daly and Harris guns to bag quail, grouse and snipe, they will then be only even with those already tried, true and proven worthies. Often I have wondered, when making a long, clean double (hit or miss) on snipe, if these same birds have "scaliped" and escaped, while darting and gyrating before the deadly tubes of my far away wondered, when making a long, clean double (hit or miss) on snipe, if these same birds have 'scaiped' and escaped, while darting and gynating before the deadly tubes of my far away friends, Sheldon, Von Lengerke and Montclare. If so, they are to be congratulated, although numbers of their kin doubtless warmed the cockles of these sportsmen's hearts, forgetting to emigrate. When hurling leaden hail and death among the glossy and rich-hued mallards, I have often wondered if they ever had the pleasure of quacking before the blue pills of Misther Philip McShane, of California's golden shore, who is genial and spirited as an Irishman. When doubling up the sly old cock pinnated, that doubles on track like a wily fox, I often muse on the chance that he is a link between me and the artist-sportsman that doubles on track like a wily fox, I often muse on the chance that he is a link between me and the artist-sportsman of 8t. Paul, owner of Morford's Joe, who, with his wife drove over the plains, with ranging setters pointing and retrieving, and who charmed the hours at Windom and Heron Lake. Years of admiration lavished on my brace of (pheasants) ruffed grouse that grace my dining room aviary of mounted trophies impress on me the refinement of a Dayton (O.) sportsman who sent them as testimonials for courtesies to his friend, R. B. Morgan, then here with some admirable dogs, among them "Friend."

One picture, framed in gold and hung in memory's hall by silver cords, is the eighth annual hunt of four of us sons of Tennessee, who popped fire-crackers together thirty years

One picture, framed in gold and hung in memory's hall by silver cords, is the eighth annual hunt of four of us sons of Tennessee, who popped fire-crackers together thirty years ago, as our sons are doing now. Time, December 28, 1881; place, Goodwin, Ark., at the west edge of the prairie. Dave by old Guy, Camille by field champion Joe, Jr., Rapp by Erin, and Chuck—himself a host—were among our dogs; also, among the best, was red and white Pat, the star duck retriever, kindly given me by Mr. Washington A. Coster, of Long Island. Pairing off, and having two light wagons follow us with shells, lunch, etc., we gave the first day to quail, bagging respectively 29, 35, 53 and 39. Late that afternoon Postoak and I followed a bevy of quail into the edge of a woody, grassy slough, and bombarded them, when a roar of wings crashed and hurtled through the brush, and a line of mallards rose for hundreds of yards, circling, wheeling, quacking, and with bowed wings and down-stretched feet alighted further up the slough. For the first time we "soured on" our life-long friend Bob White; he flew unheeded by, and was, by contrast, no larger than an humble bee. Where, then, was the queen of all retrievers, my red setter Countess? Loaned to a friend, who had seen her swim lakes, plunge into muskrat holes, and trail through wild rice near Spirit Luke for wounded ducks, and who was now shooting near the banks of the Mississippi River.

muskrat holes, and trait interests for wounded ducks, and who was now shooting near the banks of the Mississippi River.

Postoak boldly waded in, the bottom being firm, and the top covered with small, thoating acorns; and at pitch dark he came groping out to my hallous with seven greenheads, not counting his own. I had to "put up" with two; but to my great surprise Canille pointed a snipe, then another, then several arose, and the work grew red hot, until fifteen gray-backs were smoothed again into symmetry. Shipping our game home—sixty miles—by the express that night, 155 quail, duck and snipe reached there on ice in time for twelve breakfasts next morning, as eight fellow sportsmen beside our four families were presented birds.

Our companions, Sam and Mack, going south, had not seen a duck, but made fine bags of quail, and heartily congratulated us on the past day; and we drank several night-

families were presented birds.

Our companions, Sam and Mack, going south, had not seen a duck, but made fine bags of quuil, and heartily congratulated us on the past day; and we drank several nightcaps to the promise of to-morrow from a jug of mild cocktail, always leaving it till night. For two drinks will cause a sportsman to see two birds when one rises, and he will shoot between them, while three nips make him dangerous to man and dog. While tod is the poorest of all masters it is a good servant, about time for robe and slippers. Shooting quail over the four miles of prairie next morning, between us and the duck slough, we dined, lolling on the grass; and about 4 P. M. were rewarded on stands by seeing scattering, then bunches, then, as it grew late, streams and long, dark lines of mallards wheeling, swerving, whistling low over us, bent on roosting in the brushy pools, and, about dark, devoid of fear and caution. Oh, that we could have had an inkiling of this flight of ducks! then 12-bores and Nos. 8 and 9 shot would have been relegated to birds alone; and 4-drachms, with No. 5 shot, would have doubled our bag of ducks, which was 110 in all, the darkness losing us many cripples. Repeatedly we dipped our heated barrels in water, and shells and daylight gave out at the same time. Our almost mustard-seed shot only intensified the lyric stanza of Bryant—

"Valnly the fowler's eye

"Vainly the fowler's eye Might mark thy distant flight to do thee wrong, As darkly limined upon the crimson sky, Thy figure floats along."

For sake of the exquisite sentiment is added-

"He who from zone to zone Guides through the boundless sky thy certain flight. In the long way that I must tread alone, Will lead my steps aright."

Carpeting the wagon beds with game at one end and setters the other, we rapidly drove to Mr. Pierce's hospitable

home at Goodwin, where bath and rupper rejuvenated and happily refreshed us, recounting the rattling doubles and rattled misses of the jolly day. Our driver and pleasant companion was Mr. T. J. Walker, whose three brothers were killed and robbed last year near Aberdeen, Miss., the criminals shortly after being both hung. Having at 10 P. M. shot over again our last heavily splashing double, between snowy sheets we sank to perfect repose—well-earned rest. Slumber was dreamily and delightfully deepened by the flickering firelight; the ghosts of dying embers chase each other athwart the ceiling until sleep closed the windows of the soul. As bright anticipation and cheery preparation are often the magna pars of a hunter's enjoyment, it is happily true that dreams frequently augment delight following glorious sport thus thrice experienced. Visions of gallycrested, scarlet-eyed wood drakes, with querulous quaver and screaming mates skimming along the water, till Scott and Daly rang a deadly halt and pealed forth with tongues of fire, quickened the heart's pulsations. Keener pleasure still bounds through the thrilled blood when a perfect storm of mallards come roaring by, swooping, veering, climbing as deader with bedom due to have the fire and the second of the storm of mallards come roaring by, swooping, veering, climbing as deader with bedom due to have the fire was a second of the storm of mallards. home at Goodwin, where bath and supper rejuvenated and hre, queceesed the heavy position of mallards come roaring by, swooping, veering, climbing as danger with leaden death bursts in flaming voileys in their midst. Excitement gradually fades and a corresponding sweet languor pervades the system, and while the myriads of wild fowl mount into azure distance the faint, yet silvery tinkle of dainty wee sleighbells seems to float from their clearing wings. The glint and glitter of sunlight seems glistening on breasts and pinions, but in reality is the golden stream of the morning sunrise awaking us for the royal sport of the third and last day.

glistening on breasts and pintons, one in reason, a stream of the morning sunrise awaking us for the royal sport of the third and last day.

The forenoon was hotly spent among the whizzing quail, the afternoon piled up the scores on ducks, and we were sated and heavily loaded with that grand game. The fat boy poured a charge of No. 8 into the ham of an old buck that jumped from a treelap, and the same good luunter broke a gobbler's wing which took the brush then and Dexter-ously outrotted Postoak. Mounting our wagons we had a delightful drive home through the grassy plain, frequently flushing water fowl from the reedy ponds en route. Casting up our three days' scores for four men, we had bagged 348 head of feathered game, each gun making nearly an equal average; and heaving ducks, dogs, valies, and all aboard, we waved adieu to our cordial aids-de-camp, and met the new year, 1882, "at home" precisely at noon of night, December 31. new year, 18 December 31.

THE AVERAGE BOY OF 30 YEARS AGO.

THE AVERAGE BOY OF 30 YEARS AGO.

66 TIS mother loved him and oft entreated him," saying:
"Now, Mit, are you sare that gun is not loaded?"
That gun was the terror of her life and she took no peace
until it was safely back and out of Mit's hands. And it was
not much ol a gun either, bought with the first four dollars
he ever had, fearfully and wonderfully made; painted rings
upon the barrel—"pug and twist" the boys called it—about
thirty-six inches long and No. 16 gauge; stock of stained
beech; front action lock that looked just from a country
smith's shop. It was loaded with an uncertain amount of
ammunition poured out in the palm of the hand, and was the
death of many squirrels. If it happened to bring down a
crow or hawk at "nine or ten rod" its reputation was established in the neighborhood as a wonderful gun, and the
farmer who still owns it, thinks it the best gun in the world
although it is more than thirty years old. What amount of
money would induce you to shoot this gun with, say, three
drams of powder?

It is wondérful that more boys are not hurt with these
chean guns, but "ignorance is bilss and it is folly to be other-

drams of powder?

It is wondefrul that more boys are not hurt with these cheap guns, but "ignorance is bliss and it is folly to be otherwise." The boys keep popping away. A mereiful providence must protect them, for the powder has no visible means of support. From the four dollar gun the average boy of that day passed up to the twelve dollar double gun, not a whit more safe, but the pride of the owner and the envy of his chums. This gun suits bin for several years, when he begins to think a rifle is more manly, and the first thing you know, he has swapped for an old set lock rifle, muzzle-loading, of course, and carrying from 90 to 120 to the pound. It will "sling" a patched leaden pill for a short distance as true as a die. He soon acquires skill enough to split a squirrel's head almost every shot. Again a few years and he will pick up a bird dog and again turn his aftention to the scatter gun. When he has shot a few quail or sniped over points, if there is any sportsmanship in his soul, he learns to appreciate a good gun and wonders what power of foolhardiness ever impelled him to shoot the original ring-till purp and twist, birmagem, that he now looks upon as more likely to hunt and kill the shooter than the game or chipping bird it is aimed at.

CLEVELAND, Ohio.

CLEVELAND, Ohio.

LARGE GAME IN THE SOUTHWEST.

HAVE not been here long enough to become fully

I HAVE not been here long enough to become fully acquainted with the hunting prospects, though I am of the opinion that this is a good rendezvous for hunting parties. I will gladly aid my brethren in any way I can. Good hunting grounds in New Mexico and Western Texas can be found at from forty to sixty miles away. I am told that in New Mexico, especially in the Sacramento Mountains, elk, black-tailed deer and cinnamon bear are to be found in large numbers. There are also plenty of mountain quail and turkeys. I hear also of mountain sheep in some places. East of El Paso, along the line of the Texas & Paelific and the Sunset Railroad in Texas, say from 100 to 200 miles, there are large numbers of antelope. These cannot be hunted successfully except with long range rifles, as they are always found on the open plains. I am told that they are almost numberless, and I know that this must be the case, for I saw a great many from the train.

At different points, in fact almost anywhere along the plains, good hunting can be had in the way of quail, jack rabbits and antelope. At Big Springs and Toyah, on the T. & P. road, good hot accommodations can be had, and I presume horses and wagons could be had also at a moderate price. Near Big Springs, only a mile or so, there are a great many ponds, basins in the sand hills, where very fine duck-shooting can be had in proper season. Even now there are large numbers of small ducks there. I took them to be teal and redheads, though I could not get a good look at them.

at them. Near El Paso, in the Rio Grande Valley, there are a great many of what they there wall valley quail, a beautiful bird, but totally unfit for dog hunting, as they run like a turkey, rarely lying to a dog. They go in large flocks, sometimes as many as several hundred, and always stay in the bushes. Gen. Harrison and other sportsmen of this place introduced a large number of "Bob Whites" last fall, in the hope that

they would do well here; but this spring not one has been seen or heard. A few evenings since I observed several they would do wen nero, but it is since I observed severance seen or heard. A few evenings since I observed severance flocks of small ducks in a small lake near here. I presume GEO. W. BAINES, JR.

THE SAGINAW MARSH.

THE SAGINAW MARSH.

A T a meeting of the Saginaw Marsh Company held last night the following officers were elected: President, Jas. Jerome; Vice-President, Wm. B. Mershou; Secretary and Treasurer, Gid. Estabrook. The Board of Directors consists of the President, Vice-President, Secretary, C. W. Wells and Arthur Barnard.

The company has a lease of the marsh on the east side of the Saginaw River, between Crow Island and the Bay county line, which is about two and a half miles long by one and a half wide, comprising the best duck grounds on the river. The membership is limited to twenty members, and by prohibiting spring shooting and keeping off poachers, we look for good shooting in the autumn. We have a jovial Frencheman, Frank Allor, in charge; and right here I must tell you a little story the boys tell on Allor.

It seems that one night last fall a party of five or six had been out on the "mash" for the night's shooting, and as was customary before taking the five mile drive home in the dark, had gathered around the festive board presided over by Mons. Allor. We were hungry, as one always is on such an occasion, and I had been helped the second time to a dish that I had not stopped to analyze further than that it was good, when I discovered a bone that I had never noticed in a bee/steak, duck or fish before; and by the smiles on the faces of the "old 'uns," it suddenly dawned on me that I was eating "muskrat," but I kept on; and Frank related his experience with animal diet like this, though I can't get in the French.

"Ah! zentleman, I 'ave heat great many kind hanimals in the stage of the content of the conten

in the French.

"Ah! zentleman, I 'ave heat great many kind hanimals in my life, fox, 'coon, snaik, muskrat and skank. Ma foi! I honly heat skank once. He was zis way. I come hin from ze marsh one day and I see me skank go hunder whood pile. Biemby I kill him and skin him and py gar! he look so nice, fat like gold. So I build me fire and stick Mr. Skank on ze stick; and pretty soon he was cook. So I break hoff a leg. Yum, yum, yum, it was good, très bon, tendar, sweet. So I heat me skank. Mais Mon Dieu! Messicurs hevary time I go hiccup, yup, for tree months. I taste that skank" I had enough of the muskrat.

Duparde.

EAST SAGINAW, Mich.

East Sagnaw, Mich.

THE Nesting-Piceon Shooters' Locic.—Brookland, Pa.—Eliter Forest and Stream: If the shooting of pigeons here in the spring prevents their return in the autumn, why do they ever return to us in such countless numbers in spring time thereafter? To me the answer seems very simple and plain. It is that we haven o food for them in the autumn; but in our large forests we have a great amount of beech timber, and when the trees, as they occasionally do, bear abundantly of beech nuts, then the following spring, food being plenty, we have a correspondingly large number of pigeons. Ours being a grass-growing section, the pigeons in the autumn prefer the vast grain fields of the West to our three or five-acre lots of buckwheat, which some belated farmer has sown because he could not get the ground prepared in time for earlier crops. I do not think anyone would look for game to return to where there was little or no food for it, and consequently we will have to wait for fall pigeon shooting here, until we can compete with the great West in raising game to return to where there was little or no food for it; and consequently we will have to wait for fall pigeon shooting here, until we can compete with the great West in raising grain. To stop our spring shooting would simply turn our section into a rearing ground of pigeons for the netters and pot hunters of Michigan and Wisconsin, and would also as certainly bankrupt all pigeon shooting here as it would stock growers (the whole kit of them), were they, after protecting and rearing a fine herd, to turn it loose and allow their cattle to stray away, to be picked un and shapethead by before all and rearring aline herd, to turn it loose and allow their cattle to stray away, to be picked up and slaughtered by loafer and tramp and converted to their own use and profit. There is no one more in favor of protecting our fish and game than myself, but I see no justice in a whole section of country being sacrificed for the advancement of another.—Back-WOODSMAN.

A RATHER "SHOCKING" SLAUGHTER OF DUCKS.—A gentleman in Philadelphia, Capt. Heath, who saw in one of the papers a statement that a citizen of "Pulaski county, Va.," had "used up" a battalion of ducks (and a single-barreled gun) at one shot, wrote to the gentleman asking for particulars. This inquiry was handed to the county paper, the New River Bulletin, and prined, with these additional particulars: "We printed the matter in our paper as it occurred, stating that at one shot Mr. H. M. Albert killed and captured and feasted upon twenty wild ducks. The Richmond Whig, in copying the piece, made it twenty-five instead of twenty. (Typographical error). This wholesale slaughter of ducks occurred during a snow. They were, doubless, ravenous, and came from New River, a stream hard by, to the cornfields of Mr. Albert, who had shucked some corn, which they were eagerly devouring. Mr. A. had an old single barrel gun loaded to its capacity, and was concealed in a fodder shock, where everything was ready; his artillery was discharged with shocking results, limbering Albert, blew his gun to the infernal regions, bagged twenty dead ducks, and as many more were wounded. These are the facts, if we must be ductile in the matter, and they will be properly mailed to Mr. Heath."

AN ADIRONDACE BEAR KILLS A MAN—Tuesday's Herald contained a report from Saratoga, N. Y., June 12, as follows: "William Milliken, of Boston, Mass., was literally torn to pleces by a black bear that he recklessly attacked at Lake Piseco, in the Adirondacks, last Saturday. Mr. Milliken was hunting and fishing with a party which included W. Wilkinson, of Wilkinson Brothers, Birmingham, Conn.; John Dixon and Messrs. Fountain and Watson, of Philadelphia. A guide name James Shires was also present. They had four dogs with them, and they struck the trail of a bear, which they followed up. The guide warned them that bears were ugly this time of the year and it was very hazardous to attack one singly, Milliken announced he wasn't afraid and could get out of the way of any bear. He followed the dogs closely, and they found two big bears and three cubs in a few minutes. The bears attacked the dogs and soon tore them in pieces, while Milliken fired at them in vain. The shaggy monsters then gave their attention to their human assailant and in a very few minutes literally tore him in pieces. The guide rushed to his rescue and was badly lacerated, but not fataly injured. Watson brought his trusty rifle to bear and shot the male bear dead, while almost simultaneously Fountain and Wilkinson despatched the female.

The cubs were captured alive. The male bear weighed 400 pounds and the female 300. The remains of the unfortunate Mr. Milliken were brought out of the woods by his companions and forwarded to Boston. He leaves a wife and three children. This is the worst tragedy which has occurred in the Adirondecks for many years. curred in the Adirondacks for many years.

Those Adriondacks for many years."

Those Adriondack Partriddes.—Lyon Mountain, N. Y., May 31, 1882.—Editor Forest and Stream: In justice to myself I will explain the facts of the case of "broided partridge in May," which appeared in your last issue. There have been but two partridges killed here, without my consent or knowledge, and when brought to my notice I protested against it. The protest of "Grouse" is right and quite in order, but in his great anxiety to make a "case" of it he says it was reported in the Morning Telegram as being "on the bill of fare." If you have the slip cut from that paper you can tell if he quotes correctly. If he does, the Telegram printed it differently from the way it was sent to them. In sending a subscription to the Telegram I mentioned, more as a joke than anything else, that "thanks to the skill of (who is a particular friend of the editor) I had that morning breakfasted on broiled partridge." [The Telegram omitted the name.] If "Grouse" will investigate matters pertaining to the game laws, and who tries to protect them in this section, he will change his mind as to "Ralph's," and find plenty to look after in other directions.—M. D. Ralph.

[Mr. John R. Wiltsie also sends us a note corroborating the above.]

Fig. Shooting Woodcor.—New York, June 2.—In your issue of May 25 an inquiry is made as to whether woodcork are "fire-lighted" nowadays in Mississippi. Some ten years ago, while taking a morning walk in the woods near New Haven, Conn., early in the month of May, I met a gettleman of that city by the name of Clark who was hunting woodcork. He remarked that woodcork were becoming scarce in the North for some strange reason (?), but said that during the preceding winter he had killed as many as sixty in one night, on several occasions, in the State of Alabama (near enough to Mississippi), by fire-lighting them. The birds were killed while sitting when hunted in this way, although he said that he killed them flying when hunting by daylight.—Mark West. [We should be pleased to hear from others who know anything about this practice.]

The Nebraska Association.—The list of officers elected at the last meeting of this association was inadvertently omitted from a former issue. They are: President, J. N. Harley, of Lincoln; Vice-presidents, B. H. Polk, Lincoln Club; Wm. Carnaby, Workingmen's Club of Omaha; J. Rogers, Silsby; S. Shasberger, Lancaster; W. F. Den, Nemaha; W. H. S. Hughes, Omaha; J. Wood, Osceola; Dr. R. R. Livingstone, Plattsmouth; Col. Mathewson, Norfolk; E. S. Hawley, Nebraska City; Recording Secretary, A. H. Sawyer, Lincoln; Corresponding Secretary, Dr. S. F. Rouse, Lincoln; Treasurer, A. R. Daveson, Brownville; third member of executive committee, B. E. B. Kennedy, Omaha. Messrs. Livingstone, Polk and Kennedy were invited to deliver addresses before the next meeting upon subjects which will be of interest to sportsmen.

New York Game Seasons.—The open seasons for game in New York State begin as follows: Quail Nov. 1, woodcock Aug. 1, wild fowl Sept. 1 (in Long island Sound Oct 1), ruffled grouse, partridge Sept. 1, robin and meadow lark, starling Oct. 1, rabbit, hare Nov. 1, deer Aug. 1 (hounding Aug. 15). The old law holds good, inasmuch as the new law failed to be put on the statute books.

The season is very Peterborough, June 3.-ONTARIO.backward, but grouse seem to be nesting in considerable numbers (according to the drumming.) Deer are plentiful, the wolves having had no chance on account of open winter. More again.—G. B. S.

Sea and Biver Hishing.

want less of Wall street and more of seaside and mountain. Many a man thinks he has no love for fishing, but he has It is latent in all men. The whiz of a reel and the bend of a rod will wake it. It will wake the dead. What is the loss of a day compared with the landing of a bass, or even a pickerel?—Rev. Phillips Brooks.

CAMP FLOTSAM.

V .-- MYTH MAKERS AND MISCHIEF MAKERS

V.—MYTH MAKERS AND MISCHIEF MAKERS.

W HENCE come the reputed Ananias-like propensities of the angler? The student, fresh from orthodox dogmas—those stumbling blocks of forty generations—finds his-answer in the doctrine of depravity—in that metaphysical achievement which cast the lie upon manhood and apologized for its nobility. The Scottish divine who, in reading those words of the Psalmist, "I said in my haste all men are liars," paused to comment, "An' Dawvid, ye maun weel hae said the like after due reflection," serves as an illustration of a once prevalent dogmatical faith, or practically shows the harvest which the laborer in the moral vineyard is wont to reap from his sowing. The world, careless of philosophy, joins in the still echoing laugh of Democritus, and formulates the creed that the story of the angler is to be taken cum grano sails.

In the beginning it was not so. One who sang his brief song and died, but left his monument in "Poke O' Moonshine" and "Castle Windows"—the friend of our boyhood—sang in his college days:

sang in his college days:

Christ chose the fisherman brave and true Before the Prince, for his friend, you kno

Before the Prince, for his friend, you know. The rock upon which a mighty hierarchy was founded—against which, it was promised, the gates of hell should not prevail, as well as the faith upon which it rests, whose ancient symbol, the $1\chi\theta\nu s$, is so significant at once of the calling of the one and the mysteries of the other—will stand symbolized forever in the form of the Galilean fisherman. Is it altogether impossible to answer our query? We think not. Time evolves strange productions in organisms and in beliefs. From the men of the river drift to the cave-dwellers, from these to those who sat mending their nets by blue Galilee when the great summons came—a summons

blue Galilee when the great summons came—a summons which for all time was to make them as though time itself were nothing—human history, were it written, would be a record of the struggle of the human for existence. It would

record how life warred against life, how the highest type found salvation in the forms which thronged woods and waters, how the fisher and hunter were evolved. Development and culture made that which before was a necessity but a pastime, and it needed but a "sweeping into the younger day," with its utilitarianism and its higher thought, to have the seal of scorn set upon all which pertained to these ancient devices for subsistence. So it has come to pass, as the world's opinion goes, that the angler must needs be a lazy, shiftless ne'er do well, an opinion which nothing but marked achievements in another field can remove. Nothing succeeds like success, but woe to the unlucky wight who, with the Waltonian love in his heart, is fated to be unsuccessful both in his ventures in flood and among men. He must needs lay hold of something to hide his shame or become the butt of his fellows. And do we not here find an answer to our query? If it be true, as Victor Hugo jusists, that society makes its criminals, are we not indebted to the same potent generator for whatever of untruthfulness we find in the angler? To save himself from merciless thrusts he must ever have a fair tale to tell, though his exploits exist but in the imagination. If this be not at his tongue's end, straightway he is covered with shame.

Who has not witnessed the departure of an angling party for a day's sport at some favorite spot, laden with rods, bait, lunch baskets and enthusiasm; how they were the observed of all observers and the envy of those whom business kept at home; and who has not witnessed the return of such a party laden with trophics of the day, every member at the front, proudly bearing his rod and eager to relate the struggle had with the biggest one of the season? But let such a party return luckless, and lo, the contrast. Tell us, ye who hear the mystic sign of the craft, did you ever see them? Yet, do you not know how the gallant band separated at the depot, how rods and baskets were entrusted to the small boy to be carried home

those liable to be betrayed by their toggery sought their way homeward through convenient back streets in order to escape the queries and cross-questions of acquaintances as to "what luck?" etc. Thenceforth, the history of that day is to the uninitiated surrounded with a mystery as impenetrable as that which hangs around the Eleusinian rites. True, a quizzing by one knowing of the expedition is apt to develop a tale of wondrous success, but left to themselves the truth remains inviolate. It requires no little courage to confess defeat in any venture, and the angler is not less human than his kind. In the majority of instances failure brings sympathy, be the failure but heroic; to the angler it brings seldom else than ridicule, and against this all men are forcarmed. So may we not safely say that the lying angler is created by society, born of its jests and banter?

There is a class of romancers who tell "fish-stories," lie, though perchance they never handled a rod, and another class who, though they never touched trigger, recount wondrous tales of game brought down. The same class, if the occasion but prompts, can lie with equal facility upon any suggested topte from snakes to "spooks." Possibly, some of these may be anglers, the probability is they are not, but instead, members of that great fraternity who delight in endless exaggeration of their personality, whether it consists of exploits in fishing or hunting, in being descended from an earl who won his spurs at Agincourt or Crécy, or in laying stone fence. If one of this brotherhood of liars occasionally angles, he must needs make himself a hero in this as in everything else with which he has to do.

angles, he must needs make himself a hero in this as in everything else with which he has to do.

It is a very human weakness, this quorum pers magna fui, but of it we venture to say the angler partakes but little. Except so far as society has touched him with its withering hand, he is as truthful as nature itself. Perchance, beyond the song of birds, the chorus of dashing waters, the watching of the shadows which all day long chased each other over distant mountain crests, careless of success, little else has filled his soul, until the dream is broken with "what luck?" and he awakens, summoned to answer that practical conundrum of the century, "does it pay?" The same overpowering weakness which sugges s the query, prompis him to assert that it does, and he asserts it but to prove to his fellows that he is of the same dross as they. It is to be nim to assert that it does, and he asserts it but to prove to his fellows that he is of the same dross as they. It is to be this or nothing; in his heart of hearts he despises the deception, and in spite of all is as pure, as guileless, as was he whose memory we reverence, on that mellow afternoon more than two hundred years ago, as he listened to the song of the milkmaid and drank in "the pensive glory which fills the Kentish hills."

On the other hand the world is quite as ready to listen to

On the other hand the world is quite as ready to listen to

Kentish hills."

On the other hand the world is quite as ready to listen to its romancers, to preserve their literature, whether embodied in Odyssoys, travels of a Mandeville, or Lands of the Midnight Sun. The places which are honored by their presence, be they lyceums, wayside wells, the shadow of the palms or the far sacred river, are thronged with eager listeners, ready to respond to their vos planaüte. With these inducements the wonder is that the angler has not swayed farther from the golden mean. Could there be added to his experience that attendant imprisonment by Calypeos or drives with Elsa Karolinas, the tale might be different.

Every angler-camper has been cursed, at least once, with the presence of a being who, could his traits be exchanged for those of the idealist above mentioned, would be less interable. This character may, with propriety, be called the selfish angler, and he has his ambitions and his methods of attainment. The former is to be considered the "best fisherman," that is, in his judgment, the one who makes the largest score, while the means adopted are those which soon secure nim the contempt of the camp. He insists upon fishing alone and the places of his success are kept secret; if inquired into be sure the inquirer is directed to some other place. If his luck has been with crawfish, depend upon it, the questioner is assured that it was with worms. Fingerings help to make up his count; occasionally he transcends himself in meanness.

In one of our outtings in camp we were having fine sport himself in meanness.

himself in meanness.

In one of our outings in camp we were having fine sport with black bass, using crawfish for bait. Unfortunately our stock became exhausted and we were obliged to send some ten miles for a new supply. After canvassing the matter, letters were sent out by members of the party, our selfish man among the rest, to different friends to forward a fresh let. It also there there were sent out by members of the party, our selfish man among the rest, to different friends to forward a fresh let. It also there there were sent out to be a fresh to the set of the party members of the man among the rest, to different friends to forward a fresh lot. In due time they arrived, the party meanwhile comforting itself with "wums." By whom sent, or in response to whose message, was at that time unknown. The messenger who brought them knew of the selfish man by name, and to him they were delivered. There were two large pails nicely packed with crawfish, in good order—the response of two friends of the party. The selfish man took them, marched without a word to his tent and stowed them away. Would you believe it? There was not a word spoken by him of the arrival of the much desired bait, not a suggestion that

we were provided for; afterward, silently and alone, he took them a short distance from cainp, to the edge of the water, and arranged an apparatus for their keeping. Thenceforth he had plenty of bait. Too proud was every member of that party to ask him for a single crawfish, much more to touch one without invitation. The next day a glorious contrast, "Mot B.," came for a day's fishing. He had brought a supply of crawfish barely sufficient for his own needs. The state of affairs soon leaked out and, forthwith that generous soul, a stranger to all save one, insisted on sharing his scanty stock with the party. They were refused, but in vain, and "Mot" was crowned a brother in more than one heart on that day. Soon after "Mot" and we anchored alongside of Self Pot and, in fitting irony, to say nothing of his chagrin, were rewarded with a dozen fine bass while he failed to get a nibble. The selfish man in camp has a near kinsman, although one somewhat better bred and of a genus not so nearly related to the porcine. This is the jealous angler who, while he has sapirations like the other, is without his methods. His aubition is to catch the biggest fish. He ineists on weighing every fair-sized fish caught by the party for purposes of comparison. Let him but once lead and you hear, "Tim ahead." This is dinned in your ears at meals, by the campfie and after you have retired. It is a harmless vagary, and although monotonous, it is perhaps childish and silly to be annoyed by it so long as it remains in that stage. If, however, he finds another is ahead, the veritable green-eyed monster may appear. Mark you, he is the only one of the party who has noted who has caught the biggest fish, and let it be someone else than himself, he is unhappy, perhaps troublesome.

Once in camp we had a jealous man who was leading—so he claimed, no one cles seemed to know—with a three and a quarter pounds bass; morning, noon and night it was, "Well boys, there don't none of you beat me," 'I'm ahead yet," etc., until it became thresome. A remedy was long sought, at last we found it. One day "Mot S." had taken a bass which we judged would weigh about three pounds—a quarter of a pound less than the "biggest fish." We had been fishing alone and, on our way to camp, our conversation turned upon the jealous man. An idea occurred to us, and we said:
"Mot, can't we fix that big fish?"
"How?"
"Why, so he will out-weigh the big one old Green-Eye is continually harping on." Once in camp we had a jealous man who was leading-

"Why, so he will out-weigh the big one old Green-Eye is continually harping on."
"Capital; of course we can."
We turned the boat into a cove and gathered about a quart of pebbles, as large as could be crowded down the gullet of our fish. We stuffed it until it would hold no more, and resumed our homeward way. As we arrived at the landing we raised a shout that we had the "biggest fish which had been caught yet." Jealously came from his tent on a run with scales in hand.
"Let's see 'eyn."

been caught yet." Jealously came from his tent on a run with scales in hand.

"Let's see 'em."

"Mot" handed him over. Jealously hung him on his scales, took one look and dropped him.

"What does he weigh?"

Jealously made no reply, but took up the fish and hung him again on the scales; we looked over his shoulder—four pounds, plump. Slowly, sadly, and without a word of congratulation he sought his tent. "Mot" put the fish in a box with other and we thought no more of it. After lunch we again went out. No sooner had we departed than, as one of the party in camp told us afterward, Jealously went to the box where "Mot" had put the fish and weighed it—four pounds. Before ten minutes had passed he had weighed it three times. Then he said to one of the party:

"Let us go out and see if we can't beat that."

They went; it was not a good day for bass, They came in and again Jealously weighed the fish—still four pounds. The last seen of him before our return he was sitting and holding that fish, looking at it in a dazed sort of a way. When we returned Jealously was alone in camp, and he came to the landing to meet us. We saw "something was up"—he was "mad." He spoke first:

"How big a one have you got this time?"

"About two pounds."

"How many stones are there in it?"

"Mot" looked at us and we looked at "Mot." The jig was apparently up, but we replied on the heels of his inquiry:

"About as many as there were in the one weighed this morning."

"About as many as there were in the one weighed this morning."

It might have been tauntingly said, but his wrath was aroused by the episode of the day, and he poured the vials of the same on us. We went to the camp in company, and left "Mot" scated on a log taking in silecte the storm which left "Mot" seated on a log taking in sileate the storm which was being poured upon him. Our flank was uncovered, and something had to be done. We found the rest of the party a short distance from camp, and quickly explained all; they know the "job" was not for them. We returned by a different way, and arrived just as the rest of the party came in. There had been a cessation of hostilities, but the appearance of the party started him off again.

"These fellows think they are smart, that they have done a big thing; they will find honesty is the best policy; any-body can play a dirty trick like that."

"What is the matter?" asked one.

"Why, that big bass they caught this morning was full of stones, look here:" and from his pocket he produced a package, and counted before us—eighteen was the number, we think—a handful of pebbles like one's thumb. "I found these in him."

these in him."

There was dead silence for a moment then, "Bill V." let him down gently thus: "Why, any —— fool ought to know that a fish as small as that couldn't weigh four pounds; I knew he was 'loaded' as soon as I saw him."

Old "Pete," another of the party, "low'd as how them ar' bass swallowed stones just like a hen—they took 'em into their gizzards to grind feed with."

The victim looked at them as though another load had fallen on him. He was squelched, and if he caught a bigger fish than ours no one heard of it. He weighed no more fish; his ambition was crushed.

Another character filling no small place in the life of a

Another character filling no small place in the life of a samper, if it chance the camp be on the confines of civilization, is the nearest neighbor. If yours be the first which has come within his experience, or if unaccustomed to the presence of the camper, each are studies to the other. On Sundays the boys chaff the old man by the hour, and, in return, are instructed in the mysteries of charcoal burning and bark Seeling.

beeling.

The contagion of civilization! how soon the neighbor is infected! Those four or five Sundays in camp; what eras each mark in his increasing knowledge of men and things!

We have seen the simple-hearted being, whose place we used as a base of supplies for milk, bread and potatoes, and who, on our first visit, was "glad to accommodate the boys," by some mysterious process evolve into the modern landlord, who came to regard each of us—as some one has put it—as Mr. Vanderbilt or Jay Gould out for a little recreation; who "reckoned as how the ole woman ought to have twenty-five cents a loaf for her bread," and that "young pertaters ought to be worth a cent a piece for the big ones."

Thus, after many days, they come up before us again—the romancer, the greedy, the ambitious and the thrifty; the man of fear and the enthusiast; once more they throng the campire, and song and tale and jest go round as of old. In our heart we cannot but forgive the weakness of the human, and for that genial blaze to-night would willingly undergo the penance of meeting their peculiarities on the morrow.

Though the yellow leaves are lying still, where once their shadows dauced and flickered, a new life is bounding through the veins of Nature, warming forest nooks, and carpeting anew the pathway of the angler. Soon the shadows will again dance and play, and the firelight gleam and flash over the tent of the lone camper with all its olden radiance. Then, perchance, the camp totssum may add to our experience something new concerning "signs," angling or characters, which comes only in the life of tnose who dwell in tents.

DOWN BY THE DAM.

DREAMS are fooling, every one;
When you wake up, they are done.

They are done, and so are you, If you ever thought them true.

TT. In the woods all low and wet, Mosquitoes there their sharp bills whet;

When you hear their piping note. Wicked words rise in your throat III. Come with me down by the dam,

Where live the sunfish and the clam: Stand upon a slippery stone Like a crow upon a bone, Then sit down gently in the stream, And try how pleasant it will seem Google, guggle goes the water.

Deeper, wetter than it ought'er. Still the stream goes puddle, piddle, Like a tune on a one-stringed fiddle. Now I drop my big bob worm,

On the book I see him squirm: Then in the bank I set my pole Just above a sunfish hole Nature goes on as usual. Flowers blow and small birds call,

Bye and bye I get a bite, See my line all straightened tight. Now an awful weight I've found, A fish that weighs a full half-pound.

I brace my feet upon the bank, And upward give a mighty yank. From underneath I scare a minnow Confound it! Now I've barked my shin O!

And yet the stream goes bubble, bubble, Which does not help me in my trouble. High overhead my victim flies, And a dozen rods behind me lies.

I follow him and hear him flop, Then down upon all fours I drop In both hands I grab him fast, Now I have him sure at last.

But can't help thinking what a fuss I've had to get the little cuss.

And the birds laugh out their glee;

Are they laughing at him or me Oh! I am glad I came to the dam; Glad my sunfish isn't a clam, And I am glad I didn't say d-

Then I'd have got not even a clam, For he who curseth at his fishing. Getteth nothing for all his wishin

VI. And still the stream goes tootle, tottle, Like ale a-running from a bottle. * * alt.

XX.
Oh! goodness! Don't I wish t'was Bass!
For my throat is as a pipe of brass— And how I wish the bubbling stream, Would turn out Bass instead of bream.

[Editor Forest and Stream: I have felt kind of swelled up lately, but it was the divine afflatus. Having brought forth the above, I feel better now. Major J. VERITY.]

THE ICHTHYOPHAGOUS DINES.

THE ICHTHYOPHAGOUS DINES.

The invitation said that the club would dine at the Palisades Mountain House. Englewood Cliffs, N. J., on Tuesday, June 6, at 6:30 P.M., and on taking a steamer for that rocky resort, we found that there had been no postponement. Landing at the foot of the perpendicular cliffs, which are a standing puzzle to the passer-by on the Hudson, we at once saw why the club had selected this spot for their annual dinner. A fall over that airy precipice, which loomed up hundreds of feet, would be instant annihilation to any member who ventured near the edge with unsteady feet; and the fact that the club would dine there was an advertisement of the fact that they were all steady men.

At the appointed time about seventy members and guests sat down prepared to taste, if not to eat, of strange and unsual monsters. Unfortunately, the weather had been unfavorable for some weeks; the rains in different parts of the country had prevented the promised supply of fresh-water mussels, hellbenders, water lizards, water snakes, etc., from being captured by the indefatigable caterers, both at home and abroad. Therefore the menu had to be filled with what

the facctious member calls "respectable fishes," and the only new things were a few of the fresh-water mussels (Unios), not enough to serve in several styles in order to try to bring out their excellence if they possess any—lamprey, and porpoise steaks. Word was telegraphed from Sandy Hook the day before to the head caterer that a school of porpoises were entering the bay, and a steamer, with small boats, harpooners and their implements, was immediately dispatched by Mr. Blackford, and a porpoise was secured. The sea-captain said: "We often eat the liver and the brains of a porpoise at sea, and they are very fair; but as for steaks, you might as well eat sole leather." His advice was not followed; the steaks were served. The cab surgeon says that the venturesome member will recover if he can succeed in getting a corkscrew into that porpoise steak, which now lies at the bottom of his stomach undigested at the end of a week. He has purchased corkscrews by the gross, but they proving too soft, he has ordered a diamond-pointed one, and is now awaiting its arrival. The patient has been fasting since the night of the dinner, and now says that the reason that the steak turned to vitrified sole-leather, is because he is a Tanner. Following is the

MENU.
Little Neck Clams.

Bisque of Razor Clams.
Whitebalt, Greenwich Style.
Soufflé of Fresh Water Clams en coquille.

Cheese. Fruits.

The table was decorated with an entire porpoise with seawed trimmings, a monster striped bass and smaller fishes, while above was a drapery of nets, harpoons, etc. Among the invited guests were F. B. Thurber, Judge Gedney, ex-Senator Strahan. Controller Semler of Brooklyn, Major Handy of the Philadelphia Press. Francis S. Street of the New York Weekly, Albert E. Whyland of Thurber & Co., S. S. Conant of Harper's Weekly, William Ottman of Fulton Market, Mr. Clark Bell of the Medico-Legal Society, and others. The regular members were all present, and seemed to anticipate the pleasure of staggering some of the guests with dishes either horrible to think of or remarkable for their indigestibility. The first Lethtyophagian delicacy was the bisque of razor clams, which was quite good, this vulcanized mollusk being quite easy of assimilation when in form of a bisque; but it is not easily dissolved in anything weaker than aquafortis if stewed entire. Perhaps the fresh water clams would have appeared to better advantage if so served, instead of in a soufflé en coquille. The turban of skate was good; skate is always good, and since the club has eaten it and praised it for the past three years, it is in danger of becoming "too respectable" to appear on its table much longer, except as the moonfish and whitefish do, as a concession to the weak stomachs. Some of the more enthusiastic members affect to like the horsefot crab—de gustifus non est disputandum. The porpoise steaks we have referred to, our dentist cannot imagine what could have split, three molars in such a way, and advises us to have them out before they get troublesome.

The dogfish; well, dogfish is dogfish anyway, and if a chef can make a palatable dish of it we are prepared to give it an impartial trial. Lampreys are good, and Connecticut people are fond of them; but in New York and West they are regarded with the aversion that the inland dweller holds toward the delicious common cel. The garfish, presented by Col.

RAINBOW AND OTHER PACIFIC TROUT.

RAINBOW AND OTHER PACIFIC TROUT.

THE question has been raised as to the species of trout which have been sent East from California. We have been of the opinion that the rainbow was the only one, and we confine the name rainbow to the S. iridea. We have objected to the names, bestowed by some of "California mountain trout," "McCloud River trout," etc., as misleading. These are not the names of fish in their own habitat, and they have no business to be re-christened to suit the fancy of anyone. The name of iridea signifies iridescent, and "rainbow" expresses it, and bestides our California friends have adopted the name. The following letter from Dr. T. H. Beun, of the Smithsonian Institution, and one of our hard-working and best-informed ichthyologists, to Mr. E. G. Blackford of the New York Fish Commission, will be read with interest:

WASHINGTON, D. C., June 3.

Washington, D. C., June 3.

Mr. E. G. Blackford:

DEAR SIR—The trout found in California are the follow-

ing:

1. Salmo irideus, Gibbons.—California brook trout, rainbow trout, occurs west of the Sierra Nevada, throughout California and northward to Oregon. I have collected a young trout at Sitka which is so nearly like irideus that I referred it to that species in my "Preliminary Catalogue of Alaskan Fishes." Young irideus cannot be distinguished

from young gairdneri by one who is little acquainted with

from young gairdners by one who is little acquainted with fishes.

2. Salmo gairdners, Rich.—Steelhead, hardhead, salmon rout, all shut (Sitkas). Sacramento River to Kodiak, Alaska. The adult bears a striking resemblance to the salar or Maine salmon, and reaches a weight of twenty pounds or more. I found gravid females at Sifka, in June, 1880. As already remarked, it is very difficult to distinguish the differences between the young of this and the last, though the adults are easily enough separated.

3. Subno purpuratus pallas.

Columbia River salmon trout of the Rocky Mountain region." "not common south of Mount Shasta in California." Abundant in Washington, Oregon, British Columbia and Southern Alaska. This is a black spotted species, with red patches on the lower jaw, and is readily distinguished from the two preceding. You remember the pair which was sent yon from the museum over a year ago, marked Sitka, L. A. Beardslee and T. H. Bean.

Bean.

3. Salmo purpuratus, var. Henshawi, Gill & Jordan. — Lake Tahoe trout, silver trout, black trout, found in Lake Tahoe, Pyramid Lake and streams of the Sierra Nevada. Considered by Prof. Jordan to be a variety of S. purpuratus. This trout is regularly brought to San Francisco market.

Two of the above species (virileus and purpuratus), were included in the lot which we received from you April 6, 1882. You have also sent us the Lake Tahoe trout at another time. With the trout forwarded April 6 there was a species of California salmon from Willow Brook, Minnesota.

"a species of California salmou from Willow Brook, Minnesola.

The only species of red-spotted trout so far known on the whole West coast is the Scidelinus mahna (Walbaum) Jordan & Gilbert. This is the Dolly Varden trout, bull trout, red-spotted trout, salmon trout, Galetz (Russian), Ahn Chuck' (Kodiskmut); it is found west of the Cascade Range, from Korthern California to, at least, Colville River in Alaska. In other words, throughout the mainland and islands of Alaska. This trout has received a great many scientific names, but the one here given is apparently the oldest. The sea-run individuals lose their red spots, and are then analogous to the Scilmo immeculatus of H. R. Storer. This is much like the common brook trout of the East (S. fontinatis), reaching its greatest size in cold, northern waters. At Kodiak it forms an important article of export under the name of salmon trout. Now, as to the question, "Is there any difference between the California mountain or rainbow trout, and the McCloud River trout?" In my opinion the two names are applied to the same fish (Sciano irideus), and I think there is no other black-spotted trout in the McCloud. Besides this irideus, there is the red-spotted species (Sateelinus malma). I have the impression that we have never received any other black-spotted species from the McCloud than irideus. However, I will look up the records and inform you if I find that I am in error. "McCloud River trout" is a bad name, because you can not know whether reference is made to the red-spotted or the black-spotted one. Rainbow trout is a good descriptive term for S. irideus. Very respectfully yours.

T. H. BEAN.

Fishing in the Saranack.—Saranac Lake, N. Y., June 6.

—I would say to the readers of the Forest and Saream that the season has opened favorably for fishing in the Saranac waters. Several gentlemen making their annual fishing tour this spring have been very successful, among them Mr. Z.

Hollingsworth, of Boston, who took a very fine lake trout, weighing twenty-two and a half pounds in Wolf Pond (one of the tributaries of Racquette River), on which he broke his rod, but by the aid of Charlie Green, his experienced guide, he landed him after an hour's exciting sport. Last week a gentleman from New York city caught four trout, weighing in the aggregate thirty-six pounds, and such large catches are of frequent occurrence. Dr. and Mrs. Trudean, who were staying at E. R. Derby's, at the head of Upper Lake, being out on the 27th of May, with Albert McKenzie, who has been their guide for the last three or four years, Mrs. Trudean captured a fish weighing sixteen and a half pounds. When the fish first struck, Mrs. Trudean thought her hooks had caught on the bottom, but the guide, knowing the depth of the water to be from thirty-five to forty feet, understood the case better, and after a spirited resistance the fish was safely landed. Lower Lake was stocked seven years ago with 35,000 brook trout, which are now often caught weighing from three to three and a half pounds. Trolling is now at its height, lasting through the month of June. The Saranac waters have never been stocked with bass or pickerel, and when we fish it is only for trout, which are more abundant and of finer quality than in any other water in the State.—Saranac Guide.

Who Fishes Near Pittsburgh?—My acquaintance with the Forest and Stream dates back to Vol. I., No. I, and I have to thank it for many a happy hour and valuable hint; and now I wish to trespass on its generosity for a little space to ask if some reader in or near Pittsburgh will kindly inform me where I can find some kind of fishing within reasonable distance of this smoky place, say where I could, by taking a train in the morning, reach my destination in time to have a few hours' enjoyment and return in the evening? Any kind of pond or river fishing would suit me, as I do not care so much for the catch as I do for the pleasure of the trip. My acquaintance here does not yet extend to any one who is posted on such matters, and as the monotony of office life is almost killing me, and I am so situated that I can hardly spare the time to hunt up a place of this kind, I take this course, hoping it will meet the eye of some generous sportsman who is acquainted with the country hereabouts and who will help me in this dark hour. I would greatly enjoy an occasional trip of this kind with a pleasant companion who has a taste for this kind of amusement, if I can make the acquaintance of one.—Stranger, (Pittsburgh, Pa., June 3).

What Fish is This?—Houston, Tex.—My friend, Col. Minson, from Brazoria county, has been catching some strange fish, which he tells me are strangers of recent appearance in the waters of his locality. He calls them black perch. In the water, when they can be seen, they present to the eye the appearance of being black, but when taken from the water-they are found to be covered with minute black spots so thick as to be indistinguishable as distinct spots when viewed from a short distance. Their shape and general formation is that of our common perch. Another remarkable feature of the fish is its mouth; when closed it has very much the appearance of that of the perch.

but when open it resembles that of the black bass, being large, wide and very prominent. What renders it difficult but when open it resembles that of the black bass, being large, wide and very prominent. What renders it difficult to take is the delicate construction of its mouth, the membrane being perfectly transparent and so thin that the hook tears out at once if the fish makes the least effort to gain its liberty. They take the fly readily, but prefer live bait. Their weight is from three ounces to one and a half pounds. They move in congregations or schools, and when one is caught the entire school can be readily taken. They resemble the black bass in flavor and are highly esteemed as a table fish. Their appearance in the waters from which they have been taken is quite recent, the first noticed being taken about two years since. What is it?—J. W. DANIELS.

Former Size of Shad,—A short time ago we published an account of the shad in Morocco, from a correspondent who said of their size and quality that they far exceed those who said of their size and quality that they far exceed those caught in the United States. Among a lot of sixty-four he found one of eleven pounds and not one less than six pounds. He said that he had heard of them of fourteen pounds. Dr. Howell, of the New Jersey Fish Commission, whose memory runs back to an earlier day on the Delaware River than any living intelligent man, says, in commenting on the correspondent's article above mentioned: "The above description answers to the size and character of the Delaware shad before the large ones were fished out, and the meshes of the nets reduced greatly in size. In 1820 five hundred and twenty shad salted at Howell's fishery (five miles below Camden) filled ten and a half meat barrels, while, as the shad have run in the last few years, it takes one hundred fish to Camden) filled ten and a half meat barrels, while, as the shad have run in the last few years, it takes one hundred fish to fill a barrel." The Doctor remembers very well when it was by no means an unusual thing to take shad weighing ten pounds each, but they have declined in size since then as well as in numbers, until about three years ago, since which time there has been a marked increase, so that shad weighing six and a half pounds each, which were extremely rare six or eight years ago, are quite frequently taken now, and there have been some taken this year, as well as last, weighing seven and a half to eight pounds each.

The Same Pickerel.—Lynn, Mass.—As you invite reports of incidents of an unusual nature 1 recall an instance of landing a pickerel, the circumstances attending which, being of so peculiar a nature as to doubt a like experience by any Forest and Stricam reader. A number of years ago I was trailing the shores of a small pond for pickerel, a few miles from town. I had already taken six or eight fish and as I hooked a small pickerel of about half a pound weight I threw it with a sudden twist of the rod some ten or fifteen feet from the edge of the water where it lay as it dropped from the hook. I began adjusting a new bait and ten or fifteen feet from the edge of the water where it lay as it dropped from the hook. I began adjusting a new bait and had barely got ready for another cast when the pickerel commenced such a vigorous flopping, that before I could reach him he succeeded in wriggling back into the water and made off to a bunch of lily pads twenty feet from shore, and as I trolled my bait (I was using frogs) past his snout he fastened to it like a man-cater to a darkey's leg. I gave him time to gorge and as he moved for deep water, struck and landed him again, this time for sure. I know it was the same individual, for I watched him from the time he got back into the pond till he took the bait the second time. Next!—N. L. M.

STANDARD TROUT FLIES.—There has been a lack of a standard to which anglers can refer with confidence and rely upon it to tell them exactly the form and colors of the different named flies. It is well known that the same fly different named flies. It is well known that the same fly bears different named flies. It is well known that the same fly bears different names in different places, and in ordering flies one is not always certain that his nomenclature is identical with that of his fly maker. To remedy this Mr. W. Holberton has issued an elegant card nineteen by twenter that in the flight part of the flight w. roberton has issued an elegant card inheaten by twerty-four inches, on which he has had the flies correctly printed and afterward colored them by hand himself. This he calls the "Standard," and it contains sixty-four patterns, faithfully colored, of the leading trout flies, with an engraving of a trout in the centre. The price of the card is \$3.50, or, if the trout is also colored, \$5. It can be had by addressing W. Holberton, 65 Fulton street, New York.

FISH PARASITES.—Washington, June 5.—The tish parasites mentioned by your correspondent, Mr. Andrew Lackey, as occurring in Adirondack fish, probably belongs to the species Ligula simplissima. It is a low form of tape worm, and infests a variety of fishes, including the salmoa, trout, pike and the like. In these it lives in an undeveloped state, never becoming sexually mature. The perfect worm is found in a variety of birds. The embryo Ligula when received into the intestine of the fish, its host, and freed from the egg, perforates the intestine and passes into the body cavity where it was found by your correspondent. Much of the history of this worm, as of many other parasitic worms, is still obscure. I should be glad to receive specimens in order to confirm my identification of the species.—Predence W. True (Assistant Curator National Museum).

PLANKED TROUT.—Fish's Eddy, N. Y.—Seeing a remark in your paper of May 4 on planked shad, the question was asked whether trout could be cooked in that way, and for the benefit of those who don't know, I will say that it is a very common way of cooking trout in the Adiroudacks among the guides, while on their nomadic excursions without parties and destitute of cooking tools. They there split a slab from a birch tree for their plank, and although it requires a little more labor, a person is fully repaid, for a more delicious plate of fish it would be impossible to place before an epicure.—An Old Guide.

Tennessee Notes.—Nashville.—The spawning season is now over, the weather more pleasant, and the Waltonians are again out upon the banks of our beautiful streams enjoying rare sport. Although the fish law is not rigidly obeyed, great good has already resulted from it. The Kentucky Fish Commissioners have been distributing a large number of shad and salmon fry lately. Col. Geo. F. Akers was with them as their guest. The Colonel says he cannot help lending a hand in the good work.—J. D. H.

Destruction of Food Fish.—We recently published an account of 50,000 mackerel being made into oil by the menhaden fishers. We now find the following item in the New York World: "Nearly 2,000,000 menhaden were rendered at the fish factories at Promised Land, L. I., last week, and 50,000 drumfish caught in the pounds were converted into scrap. The captains of the fishing steamers report an abundance of menhaden. Captain Bateman, of the steamer Falcon, on Saturday, off Montauk, took 280,000 menhaden

at one haul, and made a total catch for the week of 500,090. The Hawkins Bros., of Barren Island, last week added a new steamer, the Commodore, to their flect. The steamer is one of the largest engaged in the fishing business, and was built at Philadelphia."

"Monadnock Thour."—Boston, June 1.—Have had the pleasure of taking specimens of the "Monadnock Lake" trout with the fly. You are already aware of their peculiar silvery white appearance, and you will comprehend the long, peculiar shape when I give you the following dimensions and weight: twelve inches long weigh len ounces, also ten inches long weigh six ounces. How is that for style?—M.

THE OPERA SINGER AND THE SHAD.—New York.—The singer could not have been Bernhardt, as she was never accused of casting a shad-o-where's my Sara gone?—'Too Thin.

Boston.—It has occurred to me that it must have been Parepa Rosa, on account of the beauty of her scale.—OLD Times.

FLORIDA FISHING.—Jacksonville, Fla.—Sea front and kingfish are biting at the outer, or sea buoy, and to-day I received an invitation from one of the pilots to go after them. Will soon try the bass and tarpum and report thereon.—AL FRESCO.

ONTARIO. - Peterborough, June, - Fishing here in this part is most excellent. Black bass and maskinonge very plentiful and in good order. Tront (lake) fishing by rod and line in Stoney Lake and Burleigh was very poor this spring.

St. Claut Flats.—Detroit, Mich.—The black bass fishing season has just opened at the St. Clair, flats. Few strings have been made as yet, but no doubt good catches will be re-ported soon.—KEE TASH,

Hishculture.

TROUT CULTURE.

TROUT CULTURE.

THE fact that the early enthusiasm over trout culture has fortune by raising this delicate fish to market, has attracted the attention of the New York Evening Post, who sent a reporter to interview Mr. Eugene G. Blackford; one of the Commissioners of Fisheries of the State of New York, on the subject. Mr. Blackford; views are given in a whole column, from which we make the following extracts:

its form and color, and the firmness and delicacy of its fesh as food, has from the beginning of the work of those interested in fisheulture been the principal object of their efforts. To-day, however, notwithstanding all the money expended and the labor put forth to restock the waters where expended and the labor put forth to restock the waters where expended and the labor put forth to restock the waters where they once abounded, in addition to the large number of preserves scattered throughout the country where they are bred by private breach of the poor troop as a failure. The first work, and it probably always will continue a luxury beyond the reach of the poor man as an article of food.

"There are a number of reasons for this practical failure, for, in reality, the efforts to stock our streams and ponds with brook trout can only be looked upon as a failure. The first of these is probably the shynness of the fish, which, like the salmon, as soon as civilization comes near the waters linked in the first of the fish, which, like the salmon, as soon as civilization of the streams by the clearing of forests, the cultivation of the land, or the pollution of the streams by the establishment of factories upon the banks: but it is simply because the trout appreently dishkes civilization, and when it comes in he goes out. No better verification explored rivers of Canada a man can catch from lifty to one hundred pounds of trout in a day.

"The raising of trout in ponds or preserves has been attempts, and a come of any of them ever making a fortune or even enrining of forests, the cultivation of the land, or the

"For the last ten or twelve years a large percentage—from sixty to seventy per cent.—of the appropriation has been used for the purpose of batching and distributing through the State the brook trout, in the hope that it would become pleusiful and form one of the staple articles of tish food; but the wisdom of this course has been doubted by many, because of the meagre results, for the benefit of the people at large, from this work. The price of trout in the market is put as high to-day as it was twelve years ago, and it never will become so plentiful that a hungry man can secure two fried trout fish-cakes for ten cents. Many leading is-leuluriests think the attempt to cultivate and bread the brook trout should be left to private enterprise, while the efforts of the State Commissioners should be devoted to the protection, increase and improvement of the cod. Spanish mackerel, striped bass and sheepshead.

"The trout season opens on the ist of April and closes on the

bass and sheepshead.

"The trout season opens on the 1st of April and closes on the 1st of Septomber. The principal trade, however, is in April, May and June, and then it falls off rapidly, and there is very little demand in August. There are but few attempts to take trout out of the season, for dealers generally refuse to handle them. Notwithstanding, as I have said, the Fish Commissioners of the State have speat large sums of money yearly to increase and distribute these fish, and protect them in their native ponds and rivers, they are no more plentiful than they were twelve years ago, when the work was begun, and I am fully convinced that the attempt to propagate the brook trout by artificial means is a failure, and should be abandoned, and the money used in some way by which the general public will derive some benefit."

SOUTHERN FISHES.—Jacksonville, Fla.—As the efforts of the Fish Commission are conlined to a few fishes, I would suggest that there are some species which inhabit the more southern waters which might do well if planted further north. The fishes, called here "wan-mouthed perch" and "brem" (bream), would probably succeed in streams and ponds of the North where the Salmonide cannot live. If they could be introduced, and would grow as they do here, they would prove a valuable addition to the food fishes and fursish much sport for the angler. The perch grow to three pounds and the "brem" to ten and twelve onnees. They will thrive in creeks at the North where only suntish and catfish now exist.—AL FRESCO.

THE CLEVELAND DOG SHOW.

THE CLEVELAND DOC SHOW.

THE first annual bench show of the Cleveland Bench Show Association, held at Cleveland, Ohio, was a decided success, and we heartily congratulate the association and lovers of the dog throughout the country upon the addition of one more city to the list whose sportsmen know how to manage, and whose citizens take interest enough to support so important an institution as the bench show has grown to be. The show was held in the Roller Rink, which is well calculated for the purpose, and like all shows superintended by Mitch cols, it was managed to the satisfaction of both exhibitors and visitors. The officers of the association were unsparing in their efforts to make the show a success. We are greatly indebted to them for the many kind attentions shown us, and we shall long retain pleasant memories of our very agreeable week with the whole-souled sportsmen of the Forest City. Many of the exhibitors were old friends, although there was quite a sprinkling of new beginners. We were greatly pleased to see Mr. John Davidson again in the ring. A glance at the awards, or still better, a look at the dogs shown by him assures us that he has not lost the knack of selecting the good ones.

The judging was mostly done in a large yard outside the building. The bright sunlight, we fancied, did not show the dogs to so good advantage as the more subdued light of hall would have done. Although we could not agree with all of the decisions of the judges, we know then to be gentlemen of sterling worth and integrity, who very carefully examined the animals brought before them, and bestowed the awards honestly and impartially where they believed them due. Mr. Wilson we know to be a capital judge of field performances, and we inagine that in the bestowal of some of the awards honestly and impartially where they believed them due. This will be all right in the good time coming, when the bench show has accomplished its mission and none but field trial winners can achieve the honor of a place; but until that time co

be kept in view when deciding upon the merits of the animals shown.

Mr. Malcolm, who judged the black and tans, is undoubtedly well qualified to pass upon their merits. Mr. Sterling also handled the red Irish very well, making but few mistakes, Mr. Kirk had the most difficult task of all. We very carefully scrutinized his decisions and are well satisfied that he is a capital judge of the classes that were assigned to him, and we trust that next season all of the shows will, if possible, secure his services, for we are well assured that not only will the animals brought before him receive their just deserts, but that the very unsatisfactory condition of the much aginated cocker spaniel question will be speedily settled. The attendance was very good, even better than the managers had hoped for, and the receipts will more than meet the expenses. This result, we need scarcely say, is very pleasing to the managers. Below will be found our comments upon some of the dogs.

ENGLISH SETTERS.

The English setters were a fine lot of animals, although, as

Below will be found our comments upon some of the dogs.

ENGLISH SETTERS.

The English setters were a fine lot of animals, although, as is to be expected at this season of the year, many of them were shedding their coats, and did not look as blooming as when in full feather. Thunder was the only entry in the champion class, and as usual, was awarded first. He was looking much better than when at Boston, having entirely recovered from his sickness. In the special class for winners of one first prize, Plantaganet won over his kennel companion, Don Juan, who is a very handsome dog of nauch quality, while Plantaganet, although a grand animal, and of the type that we admire, is not yet mature; yet so well do we think of him that we are not disposed to quarrel with the award; both dogs were at their best, except a britle off in coat. In the champion bitch class Petrel II, was the only one to face the judge. She was in good condition, and well deserved the prize. A capital likeness of her may be found in last week's Fourest And Stream. In the special class for bitches who have won one first prize. Abbess was the only entry. We had not seen her since the New York show of 1890. We then thought her one of the best that we had seen for a long time,

although she was scarcely more than a puppy. She has matured well, and is now almost perfecc; and we doubt if there is a better one in the country. She is also a capital fielder, and her owner may well be proud of her.

The open dog class brought out twenty-six, with very few poor ones among them. We could not agree with the judge in placing Darkie first, as there were several in the class that we preferred for the place. Scottish Chief, who received second, we consider far ahead of him. Monte Christo, who was given third, has improved since we saw him at Pittsburgh, and bids fair to make a good one when mature. Prince of Orange, who was given vhe, we think should have been better placed, as he is a capital animal of the laverack type, and although not of good color, he is very well put together, with plenty of bone and muscle without lumber. Royal Sultan, also vhe, was not in as good condition as when at Pittsburgh. Acme, the only he in the class, has improved, and was well worthy the ribbon. There were several unmentioned ones that were deserving notice; among them was a roan dog named Prince, a fine upstanding dog that we fancied very much. Although he was lacking in feather, he had a gamy look that was very taking. We also liked Pelton Captain, Dan, Jack and Drake, and think that Mr. Wilson should have distributed a few more ribbons, which were certainly well deserved.

The bitch class was capital, with not much to choose between half a dozen. Old Doll, who was placed first, we had not seen since the Springfield slow of 1876. She carries her years wonderfully well, and although ten years old, she does not look more than half that, and she may well be proud of hearned victory over her younger competitors. Dolly Day, who was avarded second, was looking well, and may also be proud of beating such good ones as Liddesdale, Gleniflass, Olengyle and Ruby. There were several others in the class that we fancied would have received notice had they not been shown. We also liked Ladyl, who looks like a good one, althou

ful color.

Next came the class for Laveracks, and right here we ful color.

Next came the class for Laveracks, and right here we wish to enter our protest against making a regular class for them. If they cannot win in the English class, where they belong, by all means let them pass. If any one wishes to offer a special prize for them there is not the slightest objection, but they should not be placed in a regular class any more than the Mortord and Ethan Allen setters or the Orgill pointers. There were two rattling good ones in the class, and the judge took a long time to decide which was the best, which he finally did by giving first to Prince, who is one of the largest Laveracks that we have seen, and very well put together. Lava Rock is a recent importation. He was off in coat, but otherwise in fair condition. He is of the Laverack type, and a very compact well-made one. His head is not quite up to the mark, but take him all round it must be a good one that beats him. In the bitch class Petrel III, was the only entry. She is a very good bitch, with a great deal of quality, and well deserved her ribbon. There was but one dog puppy shown—Don, a very nice one for his age. The bitch puppy class brought out four beauties. Heather Belle, who won first, is a sweet little thing and shows lots of quality. The others were not so easily judged, as they were too near together. They were as well placed perhaps as was possible.

The Irish setters, with very few exceptions, were, all

others were not so can, longed, as they were to the decided together. They were as well placed perhaps as was possible.

HISH SETTERS.

The Irish setters, with very few exceptions, were, all through, very fine. Indeed we do not remember to have seen a more even lot at any show. Berkley was the only one shown in the champion class. He was looking well, as he always does, although we thought him not quite up to his usual form. In the special class for first prize winners Biz had a walk over, as Larry was on exhibition only. We never saw him in so good condition, and considered Berkley fortunate in not meeting him before the judge. In the champion bitch class Gussie was given the pride of place over Old Duck. Both were in the best condition that we ever saw them. Indeed we never before saw either of them in good show form, and thought them both deserving of the prize. In the special bitch class for first prize winner Norah O'More was rightly given the prize. Flora was not in her usual good condition and Nellie was shown much too fat.

In the open dog class livish Kork, the winner of first, is a very good animal with a perfectly flat coat. Red Hugh, who was placed second, is a compact little dog of grand color. This was the most even class that we ever saw together, and we thought that the judge should have given some of the unnoticed ones honorable mention. Duncan we thought well deserving a vhc. Sancho, although a little off color, is a business-like looking dog. Spy was in worse condition than we ever saw bim yet; we thought him also good for the three letters. Prince Elcho we hized better than Karl, who, although a good one, is more of the English type than Irish. With the exception of Cal, the bitches were fully equal to the dogs. The judge did very well so far as he went, but we thought a few more ribbons would not have been out of place. The puppies were also very good. Guess, who was given the place. She is but six months old, and, although remarkably well grown and of good color, could not compare in form

The black and tan setters, with a few exceptions, were very good, and, we thought, very well judged. Bob won in the champion class. He was in good condition. Old Grouse was looking well, but was on exhibition only. Chang was shedding his coat, and was not present. Both of the bitches in the champion class were absent. In the open dog class Argus was awarded first. He is a capital animal, and looks all over a worker. We liked Bob for second better than Lang, but the judge thought otherwise, and we are not disposed to differ very much, as Lang is very Fer from being a poor one, although he has not the gamy look of Bob. The bitches were a fair tot. Dream II., who won first we liked very well. Bell, who only scored vhc., lacked in tan, or we fancy that with her good forms he would have been better placed. Nell was another well-forned one, but was also delicient in tan. Gip, who won second, was of very good color and fairly well formed. The puppies were all good, and sach was noticed.

POLYERS.

was noticed.

POINTERS.

The pointers were a very fair lot, with so ne first-class ones among them. King Bow won in the large champion class. He is a capital dog, and was in good condition. Knickerbocker was also in good form. Faust was absent. Marguerite II. was the only one shown in the bitch class. She was looking very well, and deserved her ribbon. Chess, her only competitor, was ruled out, as she had the mange. We were sorry to see so good a lot of dogs as were exhibited by the Detorit Kennel Club so badly shown. Nearly all of them were suffering from mange, and should have been left at home. There were only two in the small champion dog class. Donald, the winner, being much the best. Sefton was looking better than when in New York, but he cannot compete with Donald. There were no entries in the bitch class. The open class for large dogs was a poor lot, with the exception of Hindoo, Brownie, Bob and Frank, who should have been placed in the order named. Hindoo was much the best, although he is a little leggy, and was poorly shown. He has grand legs and feet, and is fairly well put together. Brownie is a real, good, POINTERS.

old-fashioned pointer, and undoubtedly a worker. Bab is also somewhat of the same type. The largebitches were better, and well placed we thought. Bliss, who was unnotized, should have had at least two letters, as she is a nice bitch, although in poor condition.

The small dogs were a very good class. We faucied Selinton for first place, as he is full as good all over as Jet and has a much better loin and a better leg; aside from this Jet is capital. Baronet, who was in the catalogue as Brownett, was given second. He was looking well, but should have been content with a vhe. We also liked Rush, who has many good points, although he was so terribly poor in flesh that the judge was justified in passing him by. Dick, who scored he is a very fair one, and when mature will undoubtedly look well. Shot we also liked, although he is too long coupled. Joe Johnstone deserved his three letters. Runge should have been mirst-rate. Nellie, unnotined, should have been placed first, is a capital animal, except that she is throaty and was in bad condition from mange. Nell II. we liked for second, although Lill, who secured the place, is a very nice one, but did not show well, as she was suckling pups. The pointer dog puppies were no good and the judge very properly withheld the prizes. There was only one entry in the bitch puppy class and she was absent.

IRISH WATER SPANIELS.

Barney easily captured the prize in the champion class, although the judge thought so well of Count Bendigo that he gave him a vhc. In the open class Storm, who won first, was much the best. The others were well placed, except that we thought Royal Barney should have had at least an hc.

FIELD SPANIELS.

much the bost. The others were well placed, except that we thought Royal Barney should have had at least an he.

FIELD SPANIELS.

In the champion class for field spaniels of twenty-eight pounds and over Benedict, who won the prize, is much the lest and a hard one to best. Success was looking better than when at Boston. It will be remembered that in our report of the Boston show we stated that Black Prince should have been first instead of Success, and we were pleased to see that so good a judge as Mr. Kirk indorsed our opinion. Although the dogs did not compete in the same class at Cleveland, a footing of the judge's score gives Black Prince five and a half points the most. There were only two in the champion cocker under twenty-eight pounds class. Zulu, who won, is a capital one, with a very gamy look. Spaniels other than black, twenty-eight pounds and over, had but one representative in Flitt II. She was deserring her prize, outscoring every spaniel in the show except Benedict and Bene. In the class for spaniels, other than black, under twenty-eight pounds, there were four very good ones. Idol, Baroness, Lady Bath and Sport, but the American Cocker Spaniel Club's standard, under which they were judged, proved too much for them, and the judge withheld the prizes, as he would not make an award unless the animal scored at least seventy-five points, which they failed to do. We cannot but indorse his decision, although we thought the dogs mentioned worthy of notice. A standard should be at once adopted that will give dogs that are undeniably very fair cockers some show to win, even under a strict construction of the rules. In the class for black spaniels of twenty-eight pomos over Dash was awarded lifts and Black Prince second. We imagine that his short body beat him, as except in this we thought him the best. The class for black cocker spaniels under twenty-eight pounds had two only. Bene, a wonderful good one, was given first. Breg's Girl is to young to compete with such a one. There were only two puppies shown.

There were some very good foxhoimds shown. Bugler, the only one in the champion class, books liks an honest, all-day dog. In the open class Ringwood was given lirst. He is a grand dog, and was very well shown. Indeed, all of the dogs exhibited by Mr. D. O. Shea were in the very best of condition. Leda II., who was second, we also liked. Lion was third, but we preferred Rover for the place, as there was an honest look about him that struck our fancy.

BEAGLES.

There were only five beagles present. Daisy, the winner of first in the bitch class, was a beauty, and much the best of the lot. Reckless is a great deal too large. Boxer II. was the only puppy entered. Should he go all right, it will take a pretty good dog to beat him next year.

DACHSHUNDE.

There were but two entered. They were both first-class, ith not much to choose between them.

FOX TERRIERS.

Susie G., the only one of the three present worth mention, is a capital one, and good enough for any company.

GREYHOUNDS.

In the greyhound class Dorothee, who won first, is the best one that we have seen for a long time. She has lots of quality and is grandly made. Doubleshot was a good second and looks a goer and a stayer. We also thought well of Maud II., who deserved a vhc. as she is of good form and was well shown.

DEERHOUNDS

There was only one entry, a very good one.

MASTIFFS.

Leah was the only champion shown. She was looking better than we ever saw her. There was but one other present, Max, a puppy, a very well-formed one.

ST. BEINARDS.

ST. BERNARDS.

Priam was the only St. Bernard shown. He was looking very well and well worthy the prize. Czar, the only other entry, died nearly two weeks before the show. He was undoubtedly a great favorite of his owner, as his vacant stall was tastefully trimmed with black and white, and profusely decorated with flowers.

NEWFOUNDLANDS.

NEWFOLKBLANDS.

There were three very good ones in this class. Wallace who won first, is grand and much the best. York and Dan are also good, with not much difference between them.

The exhibition of colles, although small, was very good. In the champion class for dogs Ayrshire Laddie beat Marcus. Both are capital animals of a different type, and we imagine the natty appearance of the Laddie carried him to the front. In the bitch class Flora, a very nice bitch, was the only one shown. In the open dog class Wadie, a fair specimen, was alone. The bitch class brought out three capital ones, which were well placed. There were only two puppies, and Danville, a first-rate little fellow, won with case.

BULLDOGS.

Judy was the only bulldog shown; she was awarded the prize in the champion class.

prize in the champion class.

BULL TERRIERS, LARGE.

Brandy had a walk over in the champion class; he is a very good one. In the open class White Silk also had no competition. He is vastly improved since we first saw him in Pittsburgh. We then gave him a year to grow as good as the best of them, but he has outstripped that a long way, and, as his score of ninety-two points shows, is able to light his way with any of them. The small class only showed up one that was of the right weight, Patch; she was about as good as White Silk, except that she was off-color, and a trifle long in body.

ROUGH-HADED TERRIERS.
With the exception of Prince Charlie, first, and Lady,

second, the class was not very good—at least as a rough-haired class.

BLACK AND TAN TERRIERS.

We did not see this class, as we were at the other ring when they were judged. Fannie was given first and the other prizes withheld.

DANDIE DINMONT.

Kepiel was much the best of the two, and is a capital little one, of the true type. He has greatly improved, if, as we be-lieve him to be, ho is the Kelpie that we so much admired at New York. IRISH TERRIERS.

There was only Norah in the Irish terrier class, but she was a host in herself. She is a fine upstanding bitch of great quality, and was very well shown.

quanty, and was very well shown.

SKYES.

There were only two in the champion class, and we could not see how the judge could decide, as so far as we could determine, both were equally good. Jim was given the prize, however. In the open class for drop-carde Bruce was alone. He was very close to the champions, and if his coat had been in good condition he would have been fully their equal. The prick-cared class was very good. Flora was given first. The other two were very nearly as good.

PUGS.

In the champion class Roderick had a walk over, as George was absent, to the great grief of his many warm admirers, who wished to see him mest Roderick when he was in good form, as he was here, having recovered from his illness and showing in grand condition. May was also in good form and had a walk over in the blich class. The open classes were a fair lot and well placed.

YORKSHIRE TERRIERS were not a first-class lot. We thought them very well judged.

TOY TERRIERS.
There were only two in this class. Both of them were little arlings. Tina, who was placed first was just a wee bit the darlings, sweetest. KING CHARLES SPANIELS.
There was but one, a fair specimen.

JAPANESE SPANIELS.

This class also showed but one, which was only a moderate one.

Jim who won first was a well-bred one and well deserved MISCELLANEOUS CLASS.

This class is always the most unsatisfactory class to judge, as there are so many different types. Marquis, a harrier, was given first, and his sister Gypsey, second. We should have reversed this, as we thought her the best. The rest were well

THE SPECIAL PRIZES.

Many of the awards in the specials followed the decisions in the regular classes. These we shall not notice. Class A, for the best kennel of five English setters, brought out as good a display as we have seen in a long time, Mr. J. H. Goodsell's string were awarded the prize. We do not know of a kennel that can beat them. Mr. Davidson's entry came nearer it than we supposed possible until we saw them together. Class B, for the best kennel of five Irish setters, was won by the Emporia Kennel Club, of Emporia, Kansas. They made a good showing. Nearly all of their dogs showed more or less of the Plunkett form, and were shown in capital condition. Class D, for the best five pointers, was awarded to Mr. Joseph Lewis, of Apollo, Pa., who showed a good string. Class F, for the best five cockers, was won by the Hornell Spaniel Club, of Hornellsville, N. Y., who were well deserving of the prize as they exhibited a Leantiful collection of these favorites, and showed them in first rate condition. Class H, for the best kennel of non-sporting dogs, was won by Mr. L. G. Hanna, the president of the association, with his three pricked-eared skyes. Mr. L. C. F. Lotz won the special for the best kennel of greyhounds and was also awarded a special medal by the association for the excellence of his exhibit.

Mr. J. Palmer O'Neil won the Parker gun, which was given

special medal by the association for the excellence of his exhibitis.

Mr. J. Palmer O'Neil won the Parker gun, which was given for the best puppy under eighteen months old. The association also awaided the firm of which he is the head a special medal for their display. There was something of a stir about the special GGG., which was a fine Remington gun offered for the best English setter dog or bitch entered in the open classes, winners excluded. The entries closed at 12 M. on Tuesday, but as there were but two entries at that hour the time was extended to 4 P. M., and several more were entered and the prize was awarded to Miss Mu hall's Sam Tilden, whereupon the owner of the only entry that was eligible at the time when the entries were advertised to close (the other entry laving won in her class), protested, and after a lengthy discussion the directors announced that the association would be reserved for the present. This appeared to be satisfactory, as no doubt was entertained that the association would do exact justice. This was all of the kicking that we heard, except a little that was indulged in by one or two who owned worthless animals and wished to give them a little send off, which any one could see they very much needed. The following is a full list of the AWARDS.

AWARDS.

Champion English setter dogs.—1st, A. H. Moore, Philadelphia, Thunder, blue belton, whelped 1877, Pride of the Border-Fairy II.

Special for English setter dogs that have won one first prize.—

MR. GEO. T. LEACH'S RED IRISH SETTER DOG "BROCK," and MR. J. O. DONNER'S ENGLISH SETTER BITCH "BESSIE."

BROCK AND BESSIE.

BROCK AND BESSIE.

OUR illustration this week is a field scene from the pencil of the well-known artist, Mr. J. M. Tracy, who has succeeded admirably in giving a life-like picture of the setters Brock and Bessie. Brock is a red Irish setter dog by Osborn's Bosco out of Princepp's My Duchess, and is owned by Mr. Geo. T. Leach, of New York. He won the Members' Cup at the Eastern Field Trials, on Robin's Island, in 1881, and the Forest AND STREAM Cup for the best dog owned and run by an amateur handler at the same meeting. Bessie is a white, with lemon ear, English setter bitch, by Ranger II, out of Mallard's Belle, and is owned by Mr. J. O. Donner, of New York. She won second in the Puppy Stakes at the Eastern Field Trials, in 1879, and was the runner up with Brock in the Members' Stake at the last meeting on Robin's Island. We append a portion of our report of the heat, as the picture forcibly reminds us of the position of the dogs in the last point described: "We reached the island at nine o'clock anid a sprinkle of rain, but, nothing daunted, a start was made, and Mr. Doner's Bessie and Mr. Leach's Brock were cut loose just east of the Club House, for what proved to be the last as well as one of the best heats of the whole meeting.

Both dogs ranged in good form through the open lot to the southeast corner, where Bessie challenged by the fence and Brock a little further weet. He had the best of it, and soon made a beautiful point with his nose close to the ground, just in the edge of a brush heap, and his tail high in the air, Bessie backing handsomely. Mr. Leach flushed to order, and got in a very heat right and left, killing both birds in an artistic manner, and winning the only honors of the kind during the meeting. This was a grand performance all round, and was not excelled by any incident that we witnessed. Brock scored a good retrieve for the first bird, but was looking for the balance of the bevy, and did not find the second one. Moving on into the sprouts, Bessie challenged, but Book again struck them

THE CHICKEN TRIALS.

THE following additional entries for the Derby have been

received:

9. J. O. Donner enters Dashing Belle (Decimal Dash-Bessie).

12. Same owner enters Countess Nellie (Count Noble-Nellie).

13. B. F. Wilson and J. J. Snellenburg enter Josephine (Don C-Cora).

14. J. J. Snellenburg enters Queen Laverack (Tory-Meg Merriles).

THE GREYHOUND CHALLENGE.—Arrangements were made for the meeting at London, Ont., June 10, of the celebrated greyhounds Spring and Doubleshot to decide the momentous question of superiority, and it is to be regretted that owing to causes beyond control of the owners they should have fallen through. Early last week we were notified by the owner of Spring of his intentions in the matter, and at once communicated them to Mr. Lotz. The two countries, Mr. C. Eustace Dawson, of Montreal, Canada, who owns Spring, and Mr. L. C. F. Lotz, of Chicago, the owner of

Doubleshot, axreed to send the animals to London, Ont., where the matter would have been decided in due form. Mr. Dawson therefore sent Spring and Mr. Lotz telegraphed to Mr. Hennessy, who had charge of Doubleshot at Cleveland, O., to send him by express to London on Saturday, but owing to the hot weather and confinement at the show, he was clearly not in a condition to meet the engagement, and Mr. Hennessy very properly refused to send him. There will undoubtedly be a meeting of these dogs at an 'early day, as each owner is confident that he has the best.

PITTSBURGH DOG SHOW FOR 1883.—The Western Pennsylvania Poultry Society claim the first week in April of 1883 for their fifth annual beneli show. Mr. Chas. Lincoln will superintend.—EDWARD GRIGG, President.

THE DOG. His History and Qualities.-III. BY SENEX.

IN looking up the history of the dogs of England, I came across a very valuable and quaint old treatise, written in the year 1576, in Latin, by Johannes Caius, Doctor of Physic in the University of Cambridge. This is a treatise on "the diversities, the names, the natures and the properties of English dogs." This I believe is the first printed English book on dogs. In speaking of these dogs he says:

"In the second section of this discourse Caius thus writes of gentle dogs serving the hawk, and first of the spaniel, called in Latin Hispaniolus. 'Such dogs as serve for fowling I think convenient and requisite to place in this second section of this treatise. These are also to be reckoned and accounted in the number of the dogs which come of a gentle kind, and of those which serve for fowling. There be two sorts, viz., the first findeth game on the land; the other findeth game on the

first findeth greme on the land; the other hander greater's water.'

"Such as delight on the land play their parts, either by swiftness of foot or by often questing to search out and to spring the bird for further hope of advantage, or else by some secret sign and privy token bewray the place where they fall. The first kind of such serve the hawk; the second the net or train. The first kind have no peculiar names assigned unto them, save only that they be denominated after the bird which, by natural appointment, he is allotted to take, for the which consideration the cocker is thus named as spoken of hereafter.

reafter.
"Some be called dogs for the falcon, the pheasant, the part-

which consideration the cocker is thus named as spoken of hereafter.

"Some be called dogs for the falcon, the pheasant, the particle and such like. The common sort of neople call them by one general word, namely, spaniels, as though this kind of dogs came originally and first of all out of Spain. The most part of their skins is white, and if they be marked with any spots they are commonly red and somewhat great therewithal, the hairs not growing in such thickness, but that the mixture of them may easily be perceived. Other some of them be reddish and blackish, but of that sort there be but a very few. This is the cocker spaniel."

We are "to choose him by his shape, beauty, mettall, and cunning hunting; his shape being discerned in the good composition of his body, as when he hath a round thick head, a short nose, a long, well compact, and hairie eare; broad syde lips; a cleere red eie; a thick neck; broad breast; short and well knit joints: round feete; strong cloys; good round ribs; agaunt belie; a short broad backe; a thick bushle and long-haired taile and all his body generally long and well-haired. He is small, with a "wanton playing taile" and a busis labouring nose and to give his master warning of what he scenteth, he doeth it by whimpering and whinnies, making him adapted for covert hunting. They vary in size from 14 to 20 lb, in weight, and sometimes the dogs reach as high as 30 lb, or 35 lb. "There is also, at this day among us, a new kind of dog brought out of France (for we Englishmen are marvellously greedy gaping gluttons after novelties and covetous cormonants of things that be seldom, rare, strange and hard to get), and they be speckled all over with white and black, which health is skins and affordeth a seemly show of comeliness. These are called French dogs, as is above declared already.

"The dog called the setter; in Latin, Index, another sort of dogs be there, serviceable for fowling, making no noise either with foot or with tongue, whiles they follow the game. They attend diligently upon

the left. In making mention of fowls, my meaning is of the partridge and the quail. When he hath found the bird he keepeth sure and fast silence, he stayeth his steps and will proceed no further; and with a close, covert, watching eye, layeth his belly to the ground, and so creepeth forward like a worm. When he approacheth near to the place where the bird is, he lays him down, and swith a mark of his paws betrayeth the place of the bird's last abode; whereby it is supposed that this kind of dog is called index 'setter,' being indeed a name most consonant and agreeable to his quality. "The place being known by the means of the dog, the fowler immediately openeth and spreadeth his net, intending to take them; which being done, the dog, at the accustomed beek or usual sign of his master, riseth up by and by and draweth nearer to the fowl, that by his presence they might be the authors of their own ensaring and be ready entangled in the prepared net. Which cunning and artificial endeavor in a dog (being a creature domesticated or household servant; brought up at home with offais of the trencher and fragments of victuals) is not much to be marvelled at, seeing that a hare being a wild and skippish beast—was seen in England to the astonishment of the beholders, in the year of our Lord God 1504, not only dancing in measure, but playing with his former feet upon a tabaret and observing a just number of strokes, as a practitioner in that art; besides that, nipping and pinchadog with his teeth and claws and cruelly thumping him with the force of his feet.

"This is no trumpery tale nor trifling toy as I imagine, and therefore not wo thy to be reported, for I reckon it a requital of my travail not to drown in the seas of silence any special thing, wherein the providence and effectual working of nature is to be pondered.

Of the Dog, Called the Water Spankell, or Finder; in Latin, Aquaticus, see Inaquisilor.

OF THE DOG, CALLED THE WATER SPANIEL, OR FINDER; in Latin, Aquaticus, seu Inquisitor.

in Latin, Aquaticus, seu Inquisitor.

"That kind of dog whose service is required in fowling upon the water, partly through a natural towardness, and partly by diligent teaching, is endued with that property. This sort is somewhat big and of a measurable greatness; having long, rough and curled hair, not obtained by extraordinary trades, but given by Nature's appointment; yet, never theless, friend Gessner! I have described and set him out in this manner, namely, pulled and knotted from the shoulders to the hindermost legs, and to the end of his tail, which I did for use and custom's cause; that being as it were made somewhat bare and naked, by shearing of such superfluity of hair, they might achieve more lightness and swittness, and be less hindered in swimming, so troublesome and needless a burden being shaken off.

"This kind of dog is properly called Aquaticus, a "water

achieve more lightness and switness, and be less hindered in swimming, so troublesome and needless a burden being shaken oil.

"This kind of dog is properly called Aquaticus, a "water spaniel," because he frequenteth and hath recourse to the water, where all his game and exercise lieth; namely, waterfowls, which are taken by the help and service of them in their kind. And principally ducks and drakes, whereupon he is likewise named "a doc for the duck," because in that quality he is excellent. With these dogs, also, we fetch out of the water such fowl as be stung to death by any venomous worm. We use them also to bring us our boits and arrows out of the water, when so our shafts, which we thought never to see, touch or handle again after they were lost; for which circumstances they are called inquisitors, 'Searchers' and 'Finders.'

"Although the duck other whiles notably deceiveth both the dog and the master by diving under the water; and also by natural subtility, for if any man shall approach to the place where they build, breed or sit, the hens go out of their nest, offering themselves voluntarily to the hands, as it were, of such as draw nigh their nests. And a certain weakness of their wings pretended, and infirmity of their feet dissembled, they go so slowly and so leisurely that to a man's thinking it were no masteries to take them. By which deceitful trick they do, as it were, entice and allure men to follow them, till they be drawn a long distance from their nests; which being compassed by their provident cunning, or enning providence, they cut off all inconveniences which might grow of their return by using many and curious caveats, lest their often hunting bewray the place where they build also to themselves. For when they have an inkling that they are espied they hide themselves under turfs and sedges, wherewith they cover and shroud themselves so closely and so cratify that fon toutintstanding the place where they lurk be found or perfectly perceived there they will harbor without harm; except the

In the third section the author adverts to "the delicate, beat and protty kind of dogs called the spaniel gentle, or the comforter; in Latin, Methreus or Toloo, of which he thus writes: "There is, besides those which we have already delivered, another sort of gentle dogs (spaniel) in this our English soil, but exempted from the order of the residue. The dogs of this kind doth Callinachus call Melitars, of the island Melita, in the Sen of Sicily (which is at this day named Malta, an island indeed famous and renowned, with courageous and pulssant soldiers, valiantly fighting under the banner of Christ, their unconquerable captain), where this kind of dog had their principal beginning. "Notwithstanding many make much of those pretty puppies called 'spaniels gentle,' and though some suppose that such dogs are it for no service, I dave say, by their leaves, they be in a wrong box."

These are the three varieties of the spaniel that were known and recognized as the "gentle dogs serving the hawk, the net or the train previous to the year 15%. They doubtless have reference to the varieties that are at present known as the cooker, the water, and the St. Charles spaniels, the latter undoubtedly belonging to the variety of the "gentle spaniel." The setter not being included in the spaniel variety but only placed in this division because he was "serviceable for fowling" and thus classified among the hunting doss although he is brought up to the size and form we have him now, by a variety of crosses, carefully selected and adapted to the purpose.

Chon the accession of Charles II, to the throne of England,

ing and time classified among the nutting dogs arriving in brought up to the size and form we have him now, by a variety of crosses, carefully selected and adapted to the purpose.

Chon the accession of Charles II. to the throne of England, Scotland and Ireland, in 1649, he found the "gentle spaniel," and being a great lover of dors he took especial delight in breeding and using this variety of spaniels, and from that time they were known as the King Charles spaniel. They were of a beautiful black and tan color, a little larger than the Blenheim dog, and considerably less in size than the water spaniel. The spaniels of Charles I, were smaller than those just mentioned and their hair black and early and devoid of an. The Blenheim of Mariborough dog is a small and very beautiful variety of spaniel, much resembling that of the King Charles variety, in form and general appearance, but differing in the color, which is white, with orange or flane-colored markings. In weight it should not exceed five pounds, it is the pyrame of Buffon and derives its English name from Blenheim Palace, in Oxfordshire, the seat of the dukes of Marlborough were the breed has been preserved since the beginning of the eighteenth century.

That the dog has been a domestic animal from the earliest instory of the world is largely believed by scientists. The earliest allusions to him, though in a suirit of derision and concent, are in the books of Moses. Homer looked upon the dog with earnest interest and fondness very unlike the feeling that actuated curific ranthors and the affecting simplicity with which the poor dog's dying recognition of his long lost master is related by one who wrote, probably, not less than 2,700 years ago.

Rifle and Gray Shooting.

NEW YORK STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.

THE twenty-fourth annual convention opened at Neighbar Falls June 12. The Nagara Falls Club have been hard at work preparing for the comfort of delegates and shooters and have succeeded admirably. During the afternoon an informal reception was held at the Magara Falls (hub thouse in "Frontier Mart" for the purposes of the Magara Falls than the one of the major that the Magara Falls than the Magara falls that the Magara falls from the river, and conveyed through at the coops in troughs, so that the Magara falls that the Pavillion in Prospect farst the convention was called to order shortly after 80 clock, Mr. S. J. Murray, the president of the association, was received with hearty cheers, and delivered an address, calling attention to the work of the New York Fish Commission. The following clubs were present: Nigara Falls Shooting (Pub. Magara Kalls; Andubon Club, of Buffalo; Spencer Club, of Lyons; Senece Gun Club, Senece Falls; Queen City Club, Buffalo; Onnodega Falls Shooting Club, Magara Kalls; Andubon Club, of Buffalo; Spencer Club, Droodyng Club, Sportsmen's Club, Clifton, Springs; Monroe County Sportsmen's Club Rochester; Fountation Gun Club, Broodlyn; Coney Island Rod and Gun Club, Nonparell Gun Club, Broodlyn; Oney Island Rod and Gun Club, Nonparell Gun Club, Broodlyn; Nassan Shooting Club, Magara Kalls Roboting Club.

The following new change of the Magara Kalls Roboting Club, Broodlyn; Nassan Shooting Club, L. L. Long Island Shooting Club, Maghington Gun Club, Broodlyn; Coney Island Rod and Gun Club, Nonparell Gun Club, Broodlyn; Coney Island Rod and Gun Club, Nonparell Gun Club, Broodlyn; Coney Island Rod and Gun Club, Forester Club, Broodlyn; Nassan Sho

the member to be expelled from the association and decurred from all future contests."

Mr. Rowland F. Hill presented the following resolution, which was adopted;

"Resolved, That a committee of five be appointed by the president, and endeavor to secure the passage by the Legislature of a comprehensive game law; also, that each club of this association elect three delegates to assist said committee, by nurging their respective representatives in the Legislature to promptly pass such law; also, that the Board of Supervisors of each county be requested, through the secretary of the State Association, to assist the committee in their efforts to seeme such legislation; falso, that when we adjourn this evening it be till Wednesday evening next at 8 o'clock, at the Ningara Edis Cults Rooms, for the purpose of receiving the appointment of said committee of five, and if necessary, for further discussion of the subject."

Falls Club Rooms, for the purpose of receiving the appointment of said committee of the and if necessary, for further discussion of the subject."

A motion was made and carried "that a committee of three he appointed to precure from the next Legislature a beneficial charter for the association in place of the club canter which they now hold, so that the operations of the association in oftening prizes for trap short of the association of the subject of the club carried which they may had, so that the operations of the association in oftening prizes for trap short of the subject of the club capture of the doctor of the subject of the club capture of the doctor of the subject of the club capture fighter and the buil-batter, with which they had been unjustive classed by some of the public press."

It was then in order to decide where the next convention should be held, and Mr. Charles Fish animed Dansville as the place. Mr. Janes Farlkmer, Jr., of Dansville, replied that it had been bis pleasure to stand before the association at two or three proposed honor, they would decime it.

Mr. Henry Altenbrand then said that as the next convention would be the twenty-fifth anniversary of the association, he thought it would be filling to have it held at Nigarar Falls; that the fact of its being the twenty-fifth anniversary would probably draw a large at lendance, and he thought they could be well taken care of there. Here, the made a motion to that effect, which was unanimously carried. The convention then proceeded to the election of officers for the ensuing year, which resulted distances are provided to the second view-fresident, Mr. Henry, W. m. Pool, of, Niagarar Falls; the resulter, Mr. F. C. chamberlin, of Rooklyn.

The Eurocolin Secretary, John B. Sage, of Buffalot, Corresponding Secretary, John B. Sage, of Buff

there were 193 entries. H. B. Hooker, Monroe County Sportsmen's Club, won 1st prize; Chas. S. Rice, Niagara River Club, Buffalo, won 2d prize; R. Sejleen, Doan Richmond Club, Batavia, won 3d; H. Whitney, a boy of 14 years, member of Excelsior Club, of Phelps, won 4th prize. No. 2 commenced, but not fluished.

THE CANADIAN WIMBLEDON.

THE CANADIAN WIMBLEDON.

THE Dominion of Canada Rife Association will hold its regular meeting for 1882 on the Rideau Ranges, Ottawa, beginning on Monday, September 4. The programme is long and the prize list tempting. The principal events are as follows:

The Manufacturers' Match, No. 1; 72 prizes, value \$480; entrance 50 cents each; 500/ds.; 7 rounds; Snider rifles; position any, with head to target.

The Manufacturers' Match, No. 2; 69 prizes, value \$420; 000/ds.; 7 rounds; Snider rifles; position any, with head to target.

Dominion of Canada Match; value: for teams \$210; individuals \$508, Open to all efficient members of the active militia, members of rounds; Snider rifles; position any, with head to target.

Dominion of Canada Match; value: for team \$210; individuals \$508, Open to all efficient members of the active militia, members of runk; and to all officers, non-commissioned officers and men of her Majesty's regular army and navy stationed in Canada, who are also members of the association. The team prizes to be awarded to the five highest aggregate scores made by any five previously named members of any regiment or troop of cavalry, field battery, brigade of garrison artillery, corps of engineers, or battalion of active militia; "A" and "3" batteries, Royal School of Gumery, cadets of the R. M. College or of the same denomination of the forces of H. M. regular army or navy stationed in Canada, provided that all are members of the Dominion Rifle Association; 5 team and 70 individual prizes, value and 500 days, any, with head to target; no coaching. Macdougall Challenge Cup Match, the cup presented by Lady Macdougall, with \$200 added by the Dominion Rifle Association; open to all, as in the Dominion of Canada Match; the cup to be the property of the member winning it twice coasceutively; entrance 50 cents; 460 and 600/ds; 5 rounds at each range; Snider rifles; position any, with head to target.

The Hon. The Michighter Militia's Match, \$200 presented by the Hon.

dougall, with \$200 added by the Dominion Rifle Association; open to all, as in the Dominion of Canada March; the cup to be the property of the member winning it twice consecutively: entrance 50 cents; 460 and 6000;45; 5 rounds at each range; Snider rifles; position any, with The Hon, the Minister of Militia's Match, \$200 presented by the Hon. A. P. Caron, M. P., Minister of Militia, with \$200 added by the D. R. A.; teams to be selected from the competitors entered as individuals, and composed of three previously named representatives of any affiliated association, whose names shall have been given in, in writing, to the secretary of the Dominion Rifle Association by some duly accredited representative of the affiliated association, and vouched for as having been members of such affiliated association, and vouched for as having been members of such affiliated association, and vouched for as having been members of such affiliated association and vouched for as having been members of such affiliated association, and vouched for as having been members of such affiliated association, and vouched for as having them members of such affiliated association, on vouched for as having to an individual 60 cents, and for teams \$8: 500 and 630 vids; 7 rounds at each range; Snider rifles; position any, with head to target; no conching.

The "Gzowski" Military Matches, the "Gzowski" Cup and \$335 by the Dominion of Canada Rifle Association; open to sections of five, officers, N. C. officers and men, from any one regiment or troop of cavalry, battery, or brigade of artiflery, battallon or independent company of the active millin of Canada, the "A" and "B" batteries. Kingston. Three prizes will be awarded to the sections making the highest scores in each of the following competitions: Three prizes for skirmishing—all at moving targets. In addition to the above match prizes, five prizes will be awarded to the sections making the highest scores in each of the following competitions: Conditions—1. Starp; shooting: 200 yets; standing;

The Bunkers Atoms; 530yds.; 5 rounds; Shraer emes, possessed with head to target.

The Bankers Prizes—Grand Aggregate; to be awarded to competitors who have made the highest aggregate scores in the following matches, viz. The Manufacturers; Nos. 1 and 2. "Macdongal," penninton." and "Minister of Allilla," 50 prizes, value 535; entrance

matches, "iz." "The Mammacturers", Nos. 1 and 2." "Macedongall." "Dominion." and "Minister of Militia," 50 prizes, value \$365; entrance 30 cents.

The London Merchants' Cup: open to teams of eight members of any affiliated Provincial Association: entries to be made by any duly accredited representative of such Provincial Association farty prize the cup and \$80, second prize \$61; entrance \$15 cach team; 500 and 6 Myds.; 7 rounds at each range. Shider rifles; postition any, with head to larget: no sightling shots.

Prizes presented by His Excellency the Governor-General and H.R. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess Louise; value \$800; to be competed for by the 50 win. It the Princess and \$400; each of the seven next hignest competitions to receive a badge; entrance \$1; 200, 500 and 600 Myds.; rounds 7 at each range; Snider rides; position at 2007ds, standing; at 500 and 600 yds, any, with head to the target; ties for the first three places and the tenth place shall be shot off by tiring 5 shots at 6507ds.

The Wimbledon Team for 1883 will be selected from the wimers in the trand Aggregate Batch, and their places on the list shall be demanded by the Governor-tieneral combined. No competitor shall be eligible to a place in the team who has been twice at Wimbledon in 5 years.

The Hamilton Powder Company's Matches, open to all; series A \$500, for Martini-Henry rilles; competitors will be allowed to enter three times for each series on payment of the entrance 50 ceaks (series B, 11) prizes, tvalue \$100; entrance \$0 cents; \$600,00; or Martini-Henry rilles; competitors will be allowed to enter three times for each series on payment of the entrance for each series on payment of the entrance for ea

random sections, owy, s., i counts, position any, with mean to the seque Range Marge, but not not all; 21 prizes, \$250; entrance \$1; 1,000 yids, 10 rounds; rides any; position any, \$1,000 yids, 10 rounds; rides any; position any, \$2,000 yids, 10 rounds; rides and \$1,000 yids, 10 rounds and \$1,000 yids, 10 rounds and \$1,000 yids, 10 rounds; target for each match three times, on payment of entrance fee for each interfer or each match into \$1,000 yids, 10 rounds; target 4ft, square; bullseye fin; Snider rides to still \$1,000 yids, 15 rounds; target 4ft, square; bullseye fin; Snider rides to still still \$1,000 yids, 15 rounds; target 4ft, square; bullseye fin; Snider rides to still \$1,000 yids, 10 yi

(REEDMOOR, June 7.—"June International Military Practice" match, 2d competition, 1st starst arranged to furnish practice to those desiring to compete for places upon the American Team. Open to everybody. Distance (first stage), 200, 500 and 600yds, seven shots at each distance. Standing at 200, prone it. c. lying head toward the target) or sitting at 550 and 600yds. A return match will be shot at Newark Tuesday. Montreal-FLIGHT OF REVOLVER BULLET.—Ideal! Colley, Montreal-you give me information, or refer me to whore I can get it, each lowing point; Under what cincumsations may a revolver—who turned in its course so as to enter an object and logge in E will blunt end, the cone being outermost! In a case of shot and a occurred herelately, the bullet entered the man's abdomen, performing the intestings and a brunch of the worth, and logged in the first in

correbrs, the conical end projecting about 2 millemetres beyond the surface of the bone. So far as could be assertained on careful inspection of the clothing, the builtet did not strike a button or any substance in the wastecast pocket.—W. O. If the recover was not rifted the builtet was just as liable to be reversed as not.]

NEWPORT vs. FORT ADAMS—Vesterday the first of what promises to be a series of matches between the Newport club and a team from the 4th Artillery was shot at the Fort range. The wind was quite strong, bothering the shooters considerably. The conflitions were 290yds, of bhand, to shots each, making a possible total of 30. The soldiers were allowed two points each for military stiles. The score was:

LLOYD'S REGISTER FOR '82.

TIVE most valuable current publication in book form to yachtsmen is Lloyd's Register. It is remarkable that so useful a work should as yet have found so few subscribers it America. The standing of Lloyd's as a gigantic and wealthy corporation of international reach, is so well known the wide world over, that we had expected more liberal support to an annual volume containing so much practical information, and so repicte with data of both English and American yachts. It is within bounds to say that as an art'y yachts which leave our building yards are most of them crude in their mechanical conception, chunsy in scauting, of inferior material, and especially poor in point of fastening and fittings. Only recently a large schooner was launched with her thours merely spiked to the keel and no edge boiling to the garboards. Her planking was treanslied, with one through and one blumt bolt at the butts. A good portion of the skin and even most of the deal wood was of yellow a fortune, was heralded in the press as "first-class build throughout," and her owner to this day does not know what a cheap, shodly job her has yed. A swap was put up by one of the foremost builders in New York. Lavish expenditure upon cabin furniture and particular attention to the diameter of the galley, "such an importantieum on a modern yacht," may hide structural faults from the unprofessional eye, but to call such yachts instellar and hard observed by the general run of yacht builders.

A couple of years ago another large schooner drow out the eye bolts to which her bowspirt shrouds had been set up, and her builder by the general run of yacht builders.

A couple of years ago another large schooner drow out the eye bolts to which her bowspirt shrouds had been set up, and her builder much the hardy of the general run of yacht builders.

A couple of years ago another large schooner drow on the eye bolts to which her bowspirt shrouds had been set up, and her builder much better the professional state they got an annual

Lloya's much similar blundering and "scamping" of work was ramping among country builders alread, but since they have taken the supervision of yacib building in hand, and buil down clear and specific rules for scanding, fastening, materials and conditions to be observed in construction, the art has advanced to a high pitch of perfection almost unknown on our shores.

It is often remarked the art has advanced to a high pitch of perfection almost unknown on our shores.

It is often remarked that our yachts are these of iron hallass heretofore, though lead is now recognized in absolute necessity to a racing vessel, but in the main where a difference is found in our favor, it is to be ascribed to iron-pikes instead of yellow metal or copper through boiling, to the use of soft instead of hard woods and to cheap rig and limited outhit. Quality for quality there should be little or no difference thing there should be a margin in favor of the latter, for her timbers follow a straighter mould, there is less "say" to the planking, less decking to lay, and spars are not as lofty nor sail area so excessive. Lighter scanding is admissible, and workmanship much facilitated. As the worth of constructive points becomes more appreciated, so same kind deserving of confidence—of which there seems not the faintest probability considering the futile attempts made in our merchant marine—it is far better that we accept such well established to the stable of the dignity of an intelligent profession, we refer to Lloyd's Register as a stepping stone toward progression. The most complete rules crystalized from the best falent and long experience, are set forth to the dignity of an intelligent profession, we refer to Lloyd's Register as a stepping stone toward progression. The most complete rules crystalized from the best falent and long experience, are set forth to experience, are set forth to the dignity of the dignity of the procession of the stable of the procession

compass to steer the shortest course across the wide sea of uncerainty and to clear the hidden rocks of development by costiy experiment.

That is all there is to it. That Lloyd's originated in a miserable
little, ancient, pent-up isle which cannot hold a tailow dip to this
great and glorious, etc., has not an iota of bearing on the case. A
on such grounds any one can take exception to the logic of our appeal. We wish to see "Lloyd's Yachi Register" more widely read in
America, to promote the cause of good yacht building. Until we
have something better to recommend of American manufacture, it is
the best in the market, and therefore we say buy it, read it, learn by
it, and splikes in floors, buts that draw, fish-tooks fasted of anchors,
a waste of wood instead of ample fastening, and provincial follies by
the score, will vanish in one-quatter the time and at a title of the
expense, if we will only keep the engle caged and profit by the toil
of others who have been through the mill to the extent that circumstances will admit.

Lloyd's Yacht Register contains specifications for building fron,

of others who have been through the mill to the extent that circumstances will admit.

Lloyd's Yacht Register contains specifications for building iron, wood and composite yachts from fifteen to 500 tons. Scantlings, Instenings, workmenship, surveys, fittings, engines, boilers and a vast tot of general information. Busides this a 185 of all the yachts of record in Great Britain, their tonnage, dimensions, rig, builders, etc., charts of large, burgers, over 500 American yachts, and a very complete chart of American club pennants. The Register can be obtained through Lloyd's surveyor in New York, Inf. Blos. Congdon, or the chart of the property of the pennants. The Register can be obtained through Lloyd's surveyor in New York, Inf. Blos. Congdon, or add that a study of the kegister will shed much light in dark places concerning the dimensions of cutters, most of which will be found to have considerably more beam than the Madge and some less. All cutters are not built on the lines of the Madge. Those who like things at little planner can find beauty cutters to suit their fancy, and those who like things can be sense.

GEM AND A LESSON.

GEM AND A LESSON.

As it will be seen by our advertising columns, this famous little Boston windjamner is on the market. Her record is an excellent one and will prove of interest. She was built in the spring of 1880 by Woods Brothers of East Boston from a model by R. M. Woods, who was not afraid about "therethol be been down," and who understood the back down in length there you went down," and who understood the back down in length of all, 28ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, bean and 18ft, 5in, in 18ft, 5in, or the line by 18ft, 5in, or the 18ft, 5in, or the line by
which fairly slaps the nonsense in the face every time its head is raised.

Well, R. M. Woods does not suffer from the disorder, and so he gave from the hold of an honest little ship. And he did not expect her owner to go climbing mountains in her or carting across Sahara, but expected her to sail in real wet water, and therefore did not nind giving her the draft to do the bushess intended. It is off, time, just iff, more than a narrow beam entire of modern reach give, and a crusher for those poorly-informed worthless who diag-dong the old crusher for those poorly-informed worthless who diag-dong the old crusher for those poorly-informed worthless who diag-dong the old crushers are mentioned for the worthless who diag-dong the old crushers are mentioned from the control of th

found out for themselves that Forest and Stream holds the weather gauge on keel weights, and they build accordingly. Gem showed lighting flag June 17, 1899, in local matches, and though not landing the bauble, had to give in to larger bouts only. She next met a lot of her own size in a strong hereze, and the way she footed was a tough of the considerable of the short way and the should be shou

the ballole, and to give in to larger touts only. Since max mere a tough ther own size in a strong breeze, and the way she footed was a tough mut to the snoal-draft school, and the way she footed was a tough mut to the snoal-draft school, and the way she bugged and screwed out was an eye-opener for the believers in centerboards. She beat the lot.

She sailed six more matches that season and pocketed three firsts. She then nauled out for the winter, and only sacrifice to the faithful's seed,—3.56 bits. of cold lead was merclessly invited up from below, and the state of the sailed six more matches that season and pocketed three firsts. She then nauled out for the winter, and only sacrifice to the faithful's seed,—3.56 bits. of cold lead was merclessly invited up from below, as the state of the sailed schings was sure to be visited with the thrasning foretold a hundred sloop of ancient butch descent transformed into a yacht by a little wantiding, pane and puty and street of courters. But dem was a eye-oponer in her waters like the Madge in New York. She would be a load of ends to back up practical? Then, not filled her locker with very stop of the ship very the sailed of the sailed of the sailed of the sailed of the sailed ship of the sa

OUTSIDE BALLAST.

OUTSIDE BALLAST.

HOW little the average newspaper reporter knows about yachting and its history, is well illustrated by a turn contemporary, which are made the starding discovery that outside ballast is "with the starding of the starding discovery that outside ballast is "with the starding of the starding discovery that outside ballast is "with the starding of the starding of the starding sparit and the success of the yacht he tried it on is what all good yachtsmen say to this day. But this story about the Sport is getting as fulled threadbare, "to our contemporary, so poorly in the starding sparit and the second of the yacht he tried to not swap the getting of the starding of the starding of the starding of the yacht had say be almost stupitying of the yacht be greated as you be almost stupitying of the yacht ball younger days outside ballast was "not.aing new" in New York, but that experiments had been carried on years before the Sport threshed old hookers down the oay. It will be still further enlightening our contemporary to intora it that outside ballast was essayed in the great the starding of the starding that the starding that the chair. The lowest position be "invented" the days of the wide, is at an it to contribute stability, it is almost a deed containing that the chair. The lowest position be "invented" the days of the whole has maintained that the recent revival of outside ballast no one who has maintained that the recent revival of outside ballast on one who has maintained that the recent revival of outside ballast one one position is well as the starding of outside ballast one of the position of the bag consenue; its own ignorance upon a topic which is as familiar to yachtsmen as A, B, C.

But experiments with outside ballast having been carried out with great success in years gone by,

all but bood and soul boats outside ballast may add to, but seldom or never diminishes speed, if the sail area is proportioned to what the boat can carry.

Outside ballast may be "nothing new," but for its resurrection from a dim recollection to a fashionable reality, which has added speed, safety and ability to more than half the American feet, the community will, we think, bestow the sole credit upon Fortsar and Strakka. We have battled alone and unaided for this reform, and the widespread recognition which the merits of outside ballast have at last outsined is a gratifying recognition of the influence this journal has been read by the property of the second of the second second and all San Francisco has tone, New York will learn to do in the course of time.

We are proud of our record on this question.

HOW LENGTH MEASUREMENT MISLEADS.

HOW LENGTH MEASUREMENT MISLEADS.

DURING the recent "regatta" of the Hudson River Y. C., when the breeze freshened on the run home, the sloop Lillie romped the breeze freshened on the run home, the sloop Lillie romped the properties of the process of the proces

of Lillie, Eldiva would be found the faster of the two. As the matter now stands under the workings of the length rule the victory is really barren of meaning. Lillie outsaide Eddiva, it is true, but that she did so upon the worth of her form is just as much an open question as it was before the race was started. The matter aptly demonstrates how false standards are set up by length measurement, and how the truth is smothered. The average person, without the time or inclination to think the matter over, will, like the reporter, attribute all to the greater beam of Lillie, and feel inclined to take her as his pattern, forgetting that the same size put into a moderate shape would tan Lillie men matters out of ten. The virtues of bulk are wrongfully attributed to model, and this is the great sin of measuring by length.

THE QUAKER CLTY YACHT CLUB, JUNE 5.

THE QUAKER CITY YACHT CLUB, JUNE 5.

Editor Forest and Stream:
The seventh annual regetat was certainly the finest race ever gotten up on the Delaware, affording an opportunity to try the skill of the sading masters, as we I as the weatherly qualities of the yearts. The exciting part of the race was from Unicester down, through glad to know that the dimerva of Thermon (the oil year year may not on keel), outsailed the fleet, except the large cabin boats Alinerva and Vim. And I believe her oil saling master could have taken her first around the buoy. The big Alinerva wins the champion flag and austin challenge out for three successive regardats, making her possession a fixed ract. She was hard pushed by the Vim, who passed her twice, and had a picesant lead, when the tide reversed her sea went down, and the wind lightened. Then the Minerva got her work adelphan, Hasse, and ling throughout. The arong an and Thy, the Adelphan, Hasse, and ling throughout. The arong an unit Thy, the Adelphan, Hasse, and she carried something away, and withdrew. Time at home stake-boat:

First class—Winry, 3:13½, champion flag and Austin challenge cup.

First class—Vim, 3:13½, swinging pitcher.

First class—Minerva, 3:0134, champion flag and Austin challenge of the class—Minerva, 3:034, swinging pitcher.
Third class—Minerva, 1:332, coampion flag.
Second class—Morgan, 3:454, champion flag.
Second class—Auogan, 3:454, champion flag.
Third class—Adiepia, 3:34, salver pitcher.
Second class—Lifty, 3:48, marine glasses.
Third class (1)—Hasse, 5:50, canapion flag.
Third class (1)—Hasse, 5:50, canapion flag.
Third class (3)—Hasse, 5:50, canapion flag.
Third class (3)—Hasse, 5:344, andorr ight.
[It would be interesting to many of our readers if the skipper of the Trenton Minerva would publish experiences with his boat and her iron shoe to help settle the question to what type outside ballast may be applied with advantage. The matter is of the greatest importance.

It it can be shown that shoal and beamy boats lose none of their speed by keel and low weights, the days of the "traps" and sand bags are unmitered, which would be a great boon to the community and bankruptery to sundry undertakers and coroners who have thriven and grown sleek on yacating "accidents."

OUTSIDE BALLAST A SUCCESS.

OUTSIDE BALLAST A SUCCESS.

Editor Forest and Stream:
The yacht Nepenthe, recently lengthened aft, above the load line, and fitted with iron on the keel outside, may just returned from Atlantic City. Capt. Williams reports her greatly improved and now entirely safe at sea. Judging from the press of canvas he was successfully carrying yesterday as he passed us, bound to Philadelphia, assures me that he has not exaggerated the weatherly qualities of this modernized yacht.

K. G. W. Hill application of outside ballast to this sloop of stoal her will encounted additional experiments with light drafts which may be the means of making safe boats out of the large fleet of traps still in existence]

means of making safe routs out of the large fees of traps still in existence]

OBITUARY.—In the recent demise of Scott Russell the shipbuilding world loses one of its greatest lights. Mr. Russell, best known in America as the builder of the Great Eastern, and the author of a mammeth work on naval architecture, of great value and erudition, and the subject in the trapest of the great population which has ended by displacing the traumb rule carpeate group under which has ended by displacing the traumb rule carpeate group under which has ended by displacing the traumb rule carpeate group under which has ended by displacing the traumb rule carpeate group and the received by displacing the traumb rule carpeate group of the cod's head and holow bows were gathering flame, he foresaw clearly the necessities of the future, and early in the contests ranged himself on the side of the modern ideas in favor of iron, he screw and leugth in steamers. In his days of activity as a shipbuilder he possessed a man grasper of the proportion of the possessed in a steamers. In his days of activity as a shipbuilder he possesses in an grasper in type-free and a profounder usign tinto the engineering aspect and processed in pursuit of, his well known for the proportion of the p

will live as a leading light in the engineering profession as long as vessels continue to be launched and steam engines built.

THE LONDON SHIPWRIGHTS' EXHIBITION.—We are pleased to hear that Mr. G. L. Watson, of Glasgow, has been awarded two gold medals for his exhibits at the Shipwrights' Exhibition, held in Fishmongers' Hall in London. Mr. Watson's exhibits are models of a screw steam yacht and a schooner yacht, and each has gained the highest award in its respective class. As a correspondent had the pleasure of a look at them in Mr. Watson's some before they were sent away to London, a few words about them may be interesting. The former, which has not yet been built, is a model of a full powered steam yacht of 715 tons B. M. Between the perpendiculars she is 197-oft. her extreme breadth is 7-3, and her moulded tepth 190. She will have a driving power to proverful, beautiful messpeed of 14 knots. In appearance she is a powerful, beautiful messpeed of 14 knots. In appearance she is a powerful, beautiful messpeed of 14 knots. In appearance she is a powerful, beautiful messpeed of 14 knots. In appearance she is a powerful, beautiful the speed of 14 knots. In appearance she is a powerful, beautiful the speed of 14 knots. In appearance she is a powerful, beautiful the speed of 14 knots. In appearance she is a powerful, beautiful the speed of 14 knots. In appearance she is a powerful to the case of the common of a prince. The other extinct beautiful the occan be a sent that the common of a prince. bolted up with iron fastenings last season. The fastenings, as might have been expected corroded and two tons went to the bottom of the property of the proper

sulf-ledged rig of the gods. All that the Heediess is, and of such as the tetebings of Forest AND STREAM.

THE DECLINE OF THE CENTERBOARD—There are forty-for schooners in the fleet of the Bastern Yacut Club. Of this number aless than thirty-one are keels, and only thirteen have centerboard: Instead of the schoolers are superior elicities exploit is astonisming. It snows now rapped has been technings of sentiment; how fast the sentimental romancing about its upperior eliciency of the board has been swept away before the light of experience, hammered home till it told by forest and yellow the superior eliciency of the board has been swept away before the light of experience, hammered home till it told by forest and it associated that the superior eliciency of the comparatively old, remnants of a dissolving the state of the superior eliciency of the superior elicienc

Mr. J. F. Tams is to be credited with the improvements Albutros shows this senson.

ATLANTIC YACHT CLUB.—Especial attention is called by the club in the regatla circular to the rule demanding the deposit of a winning yacub's "lines" with the club before being entitled to the prize. This is a most excellent provision. There are now three clus in these waters insisting on the same provision—the N. Y. Y. U. He S. C. Y. C. and the A. Y. C. In a short time very valuable and instructive data will be gathered in this way.

VEDETEE BOATS.—The trials of the Vedette boats built by the Herreshofts for the French naval service, has terminated very successfully. The trials were wintessed by a board of American officers, composed of Chief Engineer Isherwood, Captain T. O. Selfrage, Engineer Allen, and Lieutenant McLean. The French were represented by officers from the ran Caasseur, in Bristol Harbor.

LARCHMONT YACHT CLUB.—The new book for % has been issued. It shows a fleet of 13 schooners, 38 sloops, cutters and sywks, 14 jb and mainsaid boats, 17 cathouts and 1 steamer, a total of 89 sail. There are 185 members on the list, showing the high considered of one yach to every two members, entitling the club to obtained of pre-minerally a sailing club.

PERSONAL.—It. John Harvey, of the well-known firm of Harvey.

PERSONAL—Mr. John Harvey, of the well-known firm of Harvey & Prior, London, is sojourning with us for a few weeks, partly on business in connection with the construction of cutters and pratly for the benefit of his health. We are pleased to find the latter much improved and Mr. Harvey rejuvenated many years since his last visit.

last visit.

FOAM.—Mr. F. Gordon Dexter's schooner Foam, Eastern Y. O., has received a thorough overhauling at Noank. Her spars now aro: Malimast, 71t.; foremast, 91t.; to, masts, 31t.; bowspirt outboard, 24t. C. F. Reynolds, of Mystic, will do the skippering.

WENONAH.—The spars for Mr. Stillman's new 60-ton cutter are as follows: Mast deek to hounds, 48t.; masthead, 91t.; topmast, 37t.; mast, deck to truck, 90t.; mainboom, 61ft.; gaff, 37ft.; topsall sprit, 36t.; bowspirt outboard, 27t.

ATLANTIC YACHT CLUB.—The annual regatta was sailed Tuesday, June 13. On account of going to press Wednesday morning, a detailed account is deferred to next week.

EASTERN YACHT CLUB-Has now 44 schooners, 29 sloops, 8 cut-ers, 1 yawl and 9 steamers; total, 91 sail. Members, 457 and 11 hon-rary, total, 468

orary; total, 408.
BEDOUIN.—Mr. A. Cary Smith is superintending the construction of this 70-ton cutter, building by Piepgrass, for Mr. Archibald Eogers.
BELLE GROVE PLANTATION.—Will the correspondent who sent the plans of a yawl forward full address to this office?

Answers to Correspondents.

Piscator, Brooklyn.—The "yawing" of your yacht is due to he great beam and roundish form promoting rapid rotation about he centerboard. For a remedy, add sin. keel for whole langth, and keep it straight along the bottom. The keel need not interfere with beach ing or lying on the sand, if made of oak and "alligator" shape Round up at forward end. To modify her belan, if required only if a small extent, after the boat's trun. If you want more weather helm, bring her by the head \(\frac{1}{2} \) or 1 inch. For less helm, let her go more by the stem. We would be glad to publish your experiences with the yawl rig.

more by the stern. We would be glad to publish your experiences with the yawlrig.

J. M. A., Lexington, Ky.—While fishing in Green River, of this State, a few weeks ago, I caught several "green bass," as they were called by the natives. Not knowing more of the different species of called by the natives. Not knowing more of the different species of called by the natives. Not knowing more of the different species of called by the natives. Not knowing more of the different species of black bass of the so-called "green bass" was one of the two species of black bass (historepierus) or of the rock bass (ambiquites). The general form of the fish is not different from that of the common black bass, but there is a blending of the colors white and green, with a preponder ance of the green. If I remember correctly, a distinct black strips can the cattle length of the fish, when made in think it night be ask for information upon a subject to the fish, but it is a sever to my question, after no attempt to describe the fish, be new to others as well as to inyself? Ans. Ambiophites, or rook bass, is very others as well as to inyself? Ans. Ambiophites, or rook bass, is very others as well as to inyself? Ans. Ambiophites, or rook bass, is very others as well as to inyself? Ans. Ambiophites, or rook bass, is very others as well as to inyself? Ans. Ambiophites, or rook bass, is very others. The k. Intensus is a silvery his with six to ten stripes. It could not be that tish.

PUBLISHER'S DEPARTMENT.

Gruph & Co., Polladelphia, Pa., June 5, 1882.—Editor Forest and Stream: Mr. Davis Grubh, of the firm of Jos. C. Grubh & Co., had just returned from a trip (extending through many weeks), in which he visited the principal gun dealers in Pennsylvania and Joho. His boscrvations indicate that the prolonged rains which have been endured in some parts of these two States have affected the hesting and the control of grame birds injuriously.—W. M. H.

and naturing of game brist injuriously.—W. M. H. BOTTLED JUNIEEE WATER.—We observe in the columns of the Elfabris City (N. C.) Economist announcement of the formation of a company for the purpose of bottling and charging with gas the junicular than the purpose of the south for its nectional qualities. If it is the ceram sections of the South for its nectional qualities. If it is the ceram sections of the South for its nectional qualities. If it is the company sould be successful from a financial point of view we know some of those interested, and believe that they will push the matter.

The Parker Gun.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and h won more laurels than any other gun when brought in competition in the field or at the trap. At the Island last year, at the New York State Convention, the PARERR won the Pierce Diamond Badge and "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a re-enforce at the several points where the upper flies are to be attached, by which the size of the line at such point is doubled, the result being that the wear point is doubled, the result being that the wear proper is the such point of the second proper is the second to the second proper is the second proper is the second in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of it cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

cast about a leader of single gut the latter soon becomes badly chafed and list enameled surface In addition to this its difficult to hold the loop of the leader in the act of looping the snell to it sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader and accordance with my invention, while Fig. 3 shows the manner of looping the leader in the act of attaching the fly. In these drawings 4, Fig. 1, denotes a leader of silkworm gut adapted to the purposes of fly-fishing for trout or bass, and as heretofore made, such leader being composed of several lengths of gut knotted together, as shown at b, and the snell attached to the fly being looped about the leader, as shown at c. In carrying ny or more points (according to the number of flies to be used in the east in addition to the stretcher) and ditional piece of gut 4, which I term a "reenforce," thus doubling the body of the leader a such points. This re-enforce may be added in several ways, but a simple and easy one is that shown in Fig. 2, in which two adjacent ends of two strands of gut are laid side by side and knotted further, as the same and thought and the snell attached, and after passing the fly practised, both with my leader and those heretofore in use, is to double the leader in a loop, as shown at c in Fig. 3, and then apply the fly by passing such loop c through the loop of the snell to which the fly is attached, and after passing the fly on the strength of the loop of the leader row is shown at figs. With a single gut the actor holding fly the short of the lites from the leader is generally facilitated in consequence.

All fly fishers will readily see the advantage there is musing them.

in consequence.
All by fishers will readily see the advantage there is in using them.
The easiest way to apply a "fly" or to remove if without impairing the strength or durability of the leaders. Length 3, 6, 4 fc, made of superior silk worm gut in all varieties.

THE USE OF THE FIELD GLASS

THE man who spends any considerable portion of his time in the open air should provide himself with every appliance of art to make his outdoor hours enjoyable. No one, unless he be blind or lamentably unobserving, can take so much as an hour's walk in the country without seeing very many things which he does not understand, but which he would like to investigate. Along the roadside, or in the grass at his feet, are hundreds of beautiful flowers, each one of which would well repay the closest inspection and study; the weather-stained rails of the fence, and the gray rocks in the venerable stone wall are covered with a growth of mosses and lichens, which are wonderful in their diversity, and, when closely viewed, beautiful in their details; among the branches of the tall trees the actively moving forms of the birds are seen, and one naturally wonders to what species they belong, and wishes that he might obtain a closer view of them. Of two observers of the same scenes, who are equally alive to the beauties of Nature, he will derive the most enjoyment from them who has the keenest and best trained senses.

The man who loves nature, even though he be no naturalist, will find that, if he carries a field glass with him in his walks abroad, his perception and appreciation of her beauties will be greatly heightened. The glass extends his range of vision so much, his eye is enabled to take in so many sights that he could not otherwise hope intelligently to perceive, that he is introduced at once to a new world, and enjoys a hundred pleasures that would otherwise have escaped

To the naturalist, who studies nature intelligently, and has advanced far enough within her gates to appreciate the delight of solving some of her mysteries, a glass is indispensable. He wants to see things clearly, to have them brought close to him for inspection, before he takes possession of He does not wish to load himself down with a cargo of useless stuff which upon closer examination must be thrown away; he desires to be able to pick and choose

During the season of migration the collector often sees flitting about in the tree top a dozen or twenty warblers. Some of those nearest the ground he can recognize by their colors, others perhaps by their actions and mode of flight, but there may be half a dozen in the tree about the identity of which he is wholly at a loss. He does not wish to shoot one of them without knowing what it is, not only because he declines to take life needlessly, but also for the reason that among the half a dozen birds there may be one very

desirable specimen. He has recourse then to his field glass, almost as important a part of the collector's outfit as is his gun. In old times, when we used to collect birds, we would about as soon have thought of starting on a day's excursion without ammunition, cotton, or paper, as of going without

The glass is equally indispensable to the man who hunts big game. He starts out to pit his cunning against animals whose sight, smell and hearing are their only defense against the attacks of enemies. The eyes of the hunter have lost quickness and certainty of vision, possessed by his primitive ancestor, who was obliged to see his quarry before it saw him, or starve. His ears have been dulled by the roar of the town, or the rattle of machinery His nose does not help him, its powers failed far back in the ages. And yet this hunter will, if he be skillful make havoc in the ranks of the alert and watchful game although he is so handicapped by the dulling results of civil-The man with the quick eye will detect the brown back of the deer through the forest before the animal sees him, while he whose vision is less trustworthy, will either miss it altogether, or take it for a fallen log covered with moss. The quick car will detect the whistle of the bull elk, mellowed by the distance, as it reverberates along the valleys and among the pines of the mountain side, or the thrilling roar of the bull moose, which comes to him through the hemlocks and alders from the distant barren, or the snapping of the stick that tells of the presence, near at band, though invisible, of some large animal, he knows not what. He is thus always prepared for the event.

The mere possession of the best arms will never place a man on an equality with the animals which he pursues. His senses must be trained, and he is to employ every aid that art can furnish to supply the qualities which, through lack of use, have now failed him. The sense of sight is the most of use, have now failed him. important to the hunter. He must be able to find his game while it is still at a distance, in order that he may look the country over and approach unconscious animals in the best

Many a night in the Rocky Mountains we would have gone to bed supperless, or with no more satisfactory meal than hard bread and "sow belly," had it not been for the good glass which showed us the tips of the bull elk's horns as he lay couched in the brush on the hillside, or the distant and scarcely to be distinguished form of the deer feeding among the willows in the creek bottom. That same glass, too, has, on several occasions, done us good service in showing to us the presence of hostile Indians. We think that in this way it has twice saved our scalp, and know that on both these occasions it at least kept us out of a fight, where every chance was against us.

A field glass then—a good one, understand—is an impor-tant part of a hunter's outfit. The man who is shooting birds over dogs can get along without it very well, but the naturalist and he who is after big game requires it. The article need not be large, nor particularly expensive, though money intelligently put into a glass is money well spent. Still, a pair of long-barrelled opera glasses, with good lenses, will answer almost every purpose, and need not cost very much. The most convenient way to carry them, is slung over the shoulder on a strap, which should be strong, securely sewed to the case, and rather short, so as not to admit of the glasses flying about if you have occasion to ride or

Besides the use of the glasses as aids to vision we have seen the time when the lenses performed—for a shivering party all of whose goods, except guns and cartridge belts, were peacefully reposing beneath the sands of the Platte Riverthe office of matches, kindling the fire which gave courage to the half-frozen wretches, and enabled them to continue, on foot in the dead of winter, their journey through a hostile Indian country to the settlements. Of the importance of a glass to the yachtsman we need not speak; but perhaps most fowl shooters do not appreciate how much satisfaction and pleasure may be derived from its use. The long hours in the blind or battery, when the birds are not flying, may be beguiled by watching the movements of the rafts of ducks and the extended lines of geese and swans which ride peacefully on the water, far out of gunshot, looking to the unaided eye like mere dots upon its surface; and the curious and interesting actions of many of the scarcely known inhabitants of marsh and water may be observed with as much accuracy and ease, as if they were being carried on within a few feet of one's face. In fact we know of scarcely any way in which so much pleasure may be had at so little cost of trouble or money, as by the habitual

carrying of a pair of glasses. The new field which they open up to the observer is of wide extent, and in its exploration a vast amount of enjoyment will be found.

PYTHON EGG OMELETTE.

THE attention of the club with the hard name is called to the fact that they have been beaten at their own game; completely 'laid over,' distanced, and outdone by a German professor. Let them call a meeting of the executive committee at once, and speedily devise means to obtain some as yet untried monstrosity and eat it, if it kills them all. At the same time, it will be a gracious thing in them to acknowledge the defeat they have received at the hands of this venturesome Teuton, by chartering a ship and sending over for him and making him their presiding officer, an honorary member, or grand high caterer. If this cannot well be done, for some such reason as that he will not come, then let them have a bust of him in marble, crocodile fat, porpoise steak or other enduring substance, and let it occupy place of honor at the feast. If made hollow and with a movable jaw, then it could have an attendant to stuff it with the delicacies which abound at an Ichthyophagian revel, lizards' tongues, snails' livers and the like.

The gentleman who has thus taken the epicurean cake and all the fragments thereof, and made the caterers of this cace blooming club hide their shriveled heads, is Doctor Hermes, Curator of the Berlin Aquarium.

The Doctor has several large pythons in his "snakery," and one of these without a premonitory cackle laid him a handsome batch of fifty-six eggs. The eggs looked good, and it occurred to the Doctor that here was a source of human food which might be available to some starving straggler in a distant land, where snakes are more plentiful than chickens; and he decided to test their merits as an article of food. Everyone knows that if a German is devoted to science he never hesitates to carry out an idea that may occur to him, and therefore Dr. Hermes no sooner conceived the idea of eating these eggs than he proceeded to execute it.

Now, some men would cat a nice lot of eggs all alone, and, smacking their lips at the recollection, would afterward tell their friends how rich the feast had been. Not so with Dr. Hermes. He is as generous as a brave man should be. He invited a few gourmets to share his delicacies with him, and after they had assembled he began experimenting by boiling one of the serpent's eggs for several minutes and then opening it for their delectation. To his surprise, the boiling failed to coagulate the contents of the leathery shell, and a gray liquid was all that was to be seen of the expected tid-This, we must confess, rather staggered our hero, but with truly Spartan courage he returned to the attack. He could not expect his guests to eat what he would not, and although the boiled egg might have been drunk, there was not enough consistency to it to be eaten.

His second essay was to make an omelette. Breaking a few of the eggs into a pan, and adding the usual condiments, he placed the mass on the fire and succeeded in presenting his friends with a python omelette such as cannot be obtained in the ordinary New York boarding house. But even then they semehow did not show any enthusiasm over it, notwithstanding that it "smelled uncommonly appetizing." The Doctor grasped the situation; he must lead in this assault upon the works of prejudice. He took a good portion, and never flinching under the gaze of his confrères, he ate it, and after swallowing it helped himself to another generous portion and remarked, "es schmeckt," which, rendered in American, might be freely translated "bully." His heroism was contagious; his friends rallied; they attacked the omelette of snake's eggs. After eating it, they immedidiately organized a society to import the ova of pythons, boa constrictors, and anacondas to supply a restaurant to be built in Berlin within whose walls prejudice shall be un-

This is evidently the nucleus of a club which will have a more extended field than our own Ichthyophagous Club, for the latter confines its food to strange inhabitants of the water, and, therefore, can only eat horrible fishes, unusual marine mammals, and outrageous aquatic reptiles. German club will not be bound by any such narrow lines, but will be able to dine on any form of animal life which it can procure. The Zoological Gardens will be enlarged and will become valuable adjuncts to the markets of the city in the matter of purveying food for the people; and the good German housewife will inquire of the portier at the outer gate: "Guten Morgen, Herr Portier, haben sie gute Python Eier heute?"

He will answer: "Jawohl, Madame, ganz frische."

Whereupon, after counting her family and considering their appetites, she will order: "Geben sie mir zwanzig Stück," and so mankind will be benefitted by having a new source of food supply, and Dr. Hermes will be remembered in history as a benefactor with him who made two blades of grass to grow where but one grew before.

THE VETERAN FOX-HUNTER .- We may be mistaken, but we venture to assert that the veteran fox-hunter of the country is Col. Thos. Goode Tucker, of Gaston, N. C. Col. Tucker is in his seventy-sixth year, and he tells us that he is to-day as capable of undergoing the fatigues of a hard red-fox run as he was fifty years ago. His fondness for the chase has not at all abated, though increasing deafness interferes with the enjoyment of following the music of the hounds. He is, as yet, free from the usual infirmities of age, and can hold his own with younger huntsmen. said, we may be mistaken, but until very positive proof is offered to the contrary, we shall maintain Col. Tucker's claim to the honor of being the veteran fox-hunter of the

WOODCOCK,-From the trout fishermen of Massachusetts come reports of waters in good condition and excellent sport with the fish. Many a good catch has been made, and the captives are said to be unusually heavy, the increase in weight being very general. From the same source we hear that in fishing the streams many more woodcock than usual are started, and this presages a large number of home-raised birds, and a heavy "first flight," so called. It is a comfort to know that in most of the States the birds may now rear their broods in comparative quiet, only disturbed by the poacher. We hope that the day is not distant when the poor things may have rest from December 31 to October 1 in every State in the Union.

THE MICHIGAN YEAR BOOK .- We are in receipt of the "Fifth Annual Book" of the Michigan Sportsmen's Associa tion, containing all the papers and discussions of the meeting at East Saginaw, last January. The book makes a pleasant and valuable addition to the sportsman's library, and no one can estimate how much good its publication and distribution may accomplish in moulding a healthy public opinion in relation to game and tish interests. The book is a credit to the Michigan Association, and that association is a credit to American sportsmanship of the best type.

THE JULY "CENTURY."-Those who read the entertaining letters on Alaska, contributed by "Piseco." to the Forest AND STREAM, two years ago, will be interested in the pictures of Alaskan life in the July Century. There are also illustrated papers on "The Horse [and dog] in Motion," the yacht, the California bee pastures, and a paper on Thoreau by John Burroughs. The illustrations are exquisite. With each new number the Century engravings excite our admiration and wonder.

Many Shad are now being taken with the fly at the foot of Holyoke Dam, and occasionally one strikes a salmon weighing from twelve to twenty pounds. This gives variety to the fishing, and smashes much tackle. Shad fishers should remember, however, that it is illegal to kill salmon here. and so, even if their tackle holds and they get the fish within reach of the gaff, they will do well to cut the leader. The shad fishing is good sport enough for anyone, however.

THE UNITED STATES WILL BE REPRESENTED at the English Fishery Exhibition next May, Congress having passed, last Monday, an appropriation of \$50,000 for that purpose. The results of the American exhibit at Berlin, in opening foreign markets for our fishery products, prove that the money spent in this way is we'r invested. There is reason to believe that we will be even more creditably represented at London than we were at Berlin.

THE DOG CATCHERS ARE ABROAD.—Several hundred dogs have already been captured, the great majority of them worthless curs, of which the city is well rid. Owners of valuable animals should be on their guard. It is decidedly easier to keep a dog out of the clutches of the catchers than to recover it again from the pound. The catchers are on strike for fifty cents instead of thirty cents per dog.

CAMP COOKERY. -"Nessmuk" has told us how he bakes a bird in clay, and Mr. H. H. Thompson writes appreciatively of barked shad. Now that the camping season approaches, such culinary hints are in order; and it is a proper time to reveal some of the secrets of woods cookery.

Those Fly-casting Scores certainly belie the merit of some of the contestants, for we know that the distances there recorded do not show what can be done by the men to whom they are credited. Some of the awards were a surprise to many.

in our Trap Shooting Columns will be found a full report of the annual meeting of the New York State Association for the Protection of Fish and Game, with the exception of the details of the last two matches.

THE COMING GAME SEASON.—We should be pleased to receive from our readers reports as to the prospects for game the coming season.

FOREST AND STREAM FABLES.

VI,-THE FOX AND HIS GUESTS

A FOX, finding it becoming an irksome labor to get a living by his usual honest methods, since it was a long way from his home to the nearest poultry yard or goose pasture bethought him of a plan to fill his larder, and at once made He caused it to be noised about that nowhere in the whole region could Turkeys find such quantities of beech nuts as in his wood, nor such swarms of grasshoppers as in the pastures along the woodside, where the grass grew so thick and tender, with a wide pond near at hand for bathing and swimming, that it would delight the heart of any goose It was added that any fowls wishing to get the benefit of all these good things were quite welcome to come and do so.

Some wise old Turkeys and Geese had no faith in these fine stories, saying that "they had heard of the Fox before, and doubted whether much tender grass and many grasshoppers held long together." But many less wise were taken by host Reynard's glowing representations, and flocked thither in great numbers. But they found the beech nuts scarce, the grasshoppers few in the poor pastures, and the boasted pond proved to be a mere puddle. Meanwhile, however, the Fox had good picking, and throve and waxed fat throughout the season, for the few returning fowl said nothing of their ill-fare, and more kept going; and before the summer had passed feathers and bones were plentier along the woodside than blades of grass had ever been.

Before thou believest a big story of Fish and Game it may be well for thee to learn somewhat of its source. Peradventure it may be a Tayern.

The Sportsman Tourist.

CAMPS OF THE KINGFISHERS.

IN SEVERAL PARTS-PART III.

R OUNDING a shady point in the river a pair of mallards, male and female, flapped noisily up from the water, and "quacked" off-up stream, only to be disturbed again the next hundred yards or so. Perhaps they were a wedded couple that preferred a summer residence here in this quiet mook where food was abundant in the marsh below, and where housekeeping with their little ones would be easy, to the long, weary spring journey to the breeding grounds of the far north. It may be that they were a pair of cloping lovers, hid-ing from the stern eye of the "paternal pariont," waiting to be taken back to the relenting wings, with the usual ecremo-

nies. Who knows?

Soon after leaving the head of St. Clair's we went around to the right with the stream, and, winding along through the river we saw myriads of sunfish sporting in the shallow pools, a few bright barred perch flirted past the boat, and every few rods a bass would break water as we seared him out from under the shade of a bush or log along the banks.

Near the head of the river we passed under another bridge, and a short distance on we struck the dead water at the foot of Six Mile, with the writer hot and dry and a trifle fagged. For half a mile or more the lower end of the lake is narrow and shallow, the water varying in depth from two and three to fifteen feet. All along here we found very little water open enough to fish with any satisfaction. and shallow, the water varying in depth from two and three to fifteen feet. All along here we found very little water open enough to fish with any satisfaction, the rushes, lilies and grass growing up from the bottom in patches and streaks that in many places reach from one shore to the other, to the "serious pesterment of ye honest angler." We struck and lost at least a dozen lish in the grass and weeds, and after exhausting our stock of plain and figured invectives, we pulled in to the mouth of a small stream, that came with laughing song into the lake from the east, to get a drink and look into our lunch basket.

Jim (our editor) swears a big, four-sectioned oath that the writer can smell a spring or hear the tinkle of a little stream

Jim (our editor) swears a big, four-sectioned oath that the writer can smell a spring or hear the tinkle of a little stream a mile away, and can drink more water in a day than a drove of camels. But then Jim don't take kindly enough to any well defined species of exercise to get up a good healthy thirst. Rowing a boat up a swift, crooked stream, or down, either, for that matter, is not just his way of occupying his time; and as his blood is never heated up to much above the freezing point, a little water goes a good way with him. When Jim and the scribe—or any other man—ish together in the same boat, Jim usually manages to let the scribe, or the other man, appropriate his share of the rowing, and most of the water. And Jim never murmurs at missing his trick at the cars; oh, no; not Jim! Jim's good about that, and for this reason we all like to row for Jim. He started in last yea: to take rowing lessons to harden his muscles; took the last lesson first, and quit; muscles became too hard for his comfort. And yet, after all, Jim is fond of rowing a boat—by substitute.

We pushed out, and did nothing to speak of but to get

by substitute.

We pushed out, and did nothing to speak of but to get fast in the grass every few yards for the next half mile, when the lake widened a little, and got deeper, and was comparatively free from grass. Off a low, marshy point we took two fine bass, and Dan struck a pickerel, or maskalonge, that kept him as busy as a dog in a "yaller jackets" nest for a while; but the fish broke away just as I had figured out the exact spot where I would jerk the galf into him.

Above this the water still deepened, and we found no grass to bother, only a thin strip along the shore. We fished leisurely along the windings of the east side, till stopped by another spring brook flowing into a quiet little bay, where

grass to bother, only a time strip atong the snore. We leisurely along the windings of the east side, till stop another spring brook flowing into a quiet little bay, we took water and a pair of very game big-mouths. A little further along we ran the boat up on a narroof sandy beach at a bold point reaching out into the

of sandy beach at a bold point reaching out into the lake, and got out to rest and discuss the propriety of going on up to the head that day, as the sun warned us that if we wished to get back to camp before dark and do any fishing going back we had better be moving.

At this point the lake is less than a quarter of a mile wide, but turning and looking east and south, we got a glorious view of a magnificent sheet of water, spread out before us like a beautiful picture.

Sweeping around to the, left, the shore receded till the lake looked to us to be fully two miles wide. Following up the shore lines with the eye, they became more and more indistinct, until lost in a blue, smoky haze that grew so dense toward the head of the lake that the shores were entirely hidden from view, Struggling through the blue vapors and hidden from view. Struggling through the blue vapors and smoke, the fervid rays of the July sun flashed and danced fair treatment.

on the gently ruffled bosom of the lake, making the little ripples look as if sprinkled over with dust of old gold. It was a charming, dreamy picture from which we were loth to turn, but a dozen rapid revolutions of Dan's red broke the spell, and clambering back into the boat, he started the fun with a sharp fight with a three pound big-mouth. In half an hour we took five more, all of which were dropped back into the lake to finish their growth. As they struck the water they would shake themselves in a dazed sort of way for a mount to see if everything well as the second of the secon

back into the lake to finish their growth. As they struck the water they would shake themselves in a dazed sort of way for a moment to see if everything was in working order, but once on an even keel, a stroke of the tail sent them into the grass or out into deep water in a flash.

Filling and lighting his pipe, Dan said: "I'll bet a fish-nock that last one thinks lightning struck him somewhere! Did you notice how wild he looked when I was leading him up to the boat? When we get away from here, they'll collect under the shade of yonder patch of Illies and compare notes, call each other 'lot o' suckers,' and pass a fishy resolution to steer clear in future of anything having a semblance of a speckled frog. And then next day they'll forget all about it. With all his smartness, a base has no memory to speak of. I lost a big one a few years ago in the Tippecance River, in the morning, and in the afternoon I took the same fellow, with a couple of feet of my lime dangling from his mouth and my hook buried in his bowels. Fact!"

Crossing to the west side we fished back until the grass began to annoy us, adding three bass to the score, and when opposite the stream where we had caten our lunch, crossed back and left our lines out while we slaked our thirst and straightened our legs. Dan here lost a very obtinate fish in the grass, but whether bass or longface we could not tell, and reeling up in disgust we headed for the outlet, and under a long swinging stroke were soon following the sinuosities of the little thread of water leading to St. Clair's.

The camp at St. Clair's is a good one, but the spring is a trifte unlandy, and firewood rather scarce in the immediate vicinity.

trifle unhandly, and firewood rather scarce in the finnediate vicinity.

Follow the road up the point leading straight back into the woods eighty rods, the regulation distance, turn down a path to your left, and a few yards will bring yout of the spring. This, for the information of any vagrant wandering brother of the rod and reel who may be passing through this water way and is athirst. We did not stop, but held our course along the south side of the lake, not getting a strike, however, until we pulled across and left our lines trail out at a "water station" a short distance from the outlet. We took one bass here and might have taken more, but not caring to waste til we pulled across and left our lines trail out at a "water station" a short distance from the outlet. We took one base here and might have taken more, but not caring to waste time we moved on, and making the circuit of the basin at the lower end stopped the boat near the outlet and took three more fine ones, which we put on a stringer to take to camp. As we neared the bend in the stream where Dan struck the large bass going up, and remembering the promise given, we approached cautiously to within eight or ten yords of the little pool, and pulling the boat silently up on the bank in a position that would allow us both to cast without fouling our lines, we stood up to get a look into its clear depths.

Shade of gentle Thad. Norris! There, lying near the bottom and under the shadows of some drooping bushes, faning the pebbles with an occasional flit of a fin, we saw

tom and under the shadows of some drooping bushes, fanning the pebbles with an occasional flit of a fin, we saw
five or six great lazy looking bass, the sight of which brought
an unwonted sparkle into old Dan's eyes as he quietly took
up his rod, hooked up and swung the hook to me for a frog.

"A small one, Hickory! they will swallow it the more
readily, and there is not room enough in that hole to allow
them much time on the bait."

As I hooked on one of the smallest frogs in the bucket, I
confess my nerves were a trifle shackly, and the blood
quickened its flow, for the sight at the bottom of the pool
roused up all the "old Izaak" there was in me. The instant
Dan's frog touched the water the pool seemed alive with

contess my nerves were a trille shackly, and the blood quickened its flow, for the sight at the bottom of the pool roused up all the "old Izank" there was in me. The instant Dan's frog touched the water the pool seemed alive with fish, and the spray flew in all directions as the frog disappeared and the line ran out toward the bushes. Hooking on a frog as quickly as possible, I dropped it two or three yards further down, and instantly the water was in a turnoil. I struck my fish after giving him barely a yard of line, and then began a there tussle to see who would win, the fish striving to get over a little bar at the foot of the pool and under a projecting sunken limb where the water liad secoped out a hole three or four feet deep, and I to hold him away from it. Muscle and tackle prevailed and I led him flopping and floundering across the stream to a small sand bar just below, where I felt the danger was over, and a minute later he was making signs for water in the bottom of the boat, with a good sized fight still left in him.

Meanwhile Dan had struck his fish and was tugging with might and main to get him out from under the bushes, where he seemed bent on staying. Suddenly the fish shot into the air, easing the strain on the rod so quickly that Dan came near losing his balance and going overboard, but recovering as the line again tightened, the fight took a turn in his favor and the buss, assisted by a friendly lift from the writer, was presently gasping in the boat with his mate. They were a handsome pair and would weigh at least three pounds a piece. Another east, and the sport grow fast and furious, most of the time both of us handling a fish at once, until we had eight flopping in the boat, when all at once they quit rising; and a dozen casts all over the pool failed to stir another flu. We did not stop to string them but dropping the boat a few yards down stream, we took two more out from under the sunken limb, and then rested after our victory. A complete victory, for a careful look over the water con

rod, the tackle had to stand the strain of holding them away from the roots and bushes, or break, and it took quick, sharp work from the very start. Never were two "honest anglers" happier or better satisfied with themselves and the world at large than were "old Dan and Hickory" over these few minutes of rare and exciting sport, the memory of which will haunt our day dreams until we are called to float our boat on the placid lakes and meandering streams, and build our camp fire on the green shores of the "happy fishing grounds," I strung the fish and dropped them over the side of the boat, where they soon revived in the fresh running water.

boat, where they soon revived in the fresh running water. Dan rammed a fresh charge in his pipe, touched it off, and trimming the boat with a hitch to port, balanced himself on the seat, a picture of perfect content as we swung into the current and took our way down stream and out into Bower's Lake. Skirting leisurely along the rushes and lilies for perhaps half a mile without taking a fish, we began to think our luck had deserted us, when just as we were passing the mouth of a small spring brook, a vigorous strike put an end to one of Dan's "reminiscences of Tippecance," and I stopped the boat to see that in the coming fray the old fish hawk had fair treatment.

My frog was trailing along on the inside near the lily pads some twenty yards astern, and fearing our lines would foul, I began to reel in to get out of the way, all the time watching Dan's line as the fish ran it out. A smart pull on my line caused me to glauce in the direction of my bait, and I caught a glimpse of the broad tail of a fish within a foot of the lilles, as it disappeared with a sweep under the water. I was on my feet for some to merition and us the line run out was the stern feet too soon to mention, and as the line ran out past the stern into deep water, I believe now, that I was "a leetle mite

naryous."

"Look out, Daniel! there's music in the air; there goes the 'bullbass' of the Six Lakes!" but Dan was busy, having booked up and struck his fish, which was surging on toward the rushes with forty yards of line out. My line was running slowly out under his rod, which made the situation look awkward for handling both fish, and reaching over his head us to sai facing the story. I nessed my requireder his out. us he sat facing the stern, I passed my rod under his, outside, and stood up looking lakeward, with a clear field for a side, and stood up booking lakeward, with a clear field for a fair fight. At first I thought my fish was a bass, but he ran the line out so slowly that I said: "Pickerel; maybe mask-alonge." If pickerel, I knew he was a big one; if mask-nonge, I knew nothing, for I had never handled nor seen one alive. I gave him plenty of time to swallow the frog to the vent if he wanted to, for I was determined we would not part company by reason of the hook having an insecure hold and tearing out at a critical time. When forty or fifty feet of line had run off the reel I struck him smartly to make sure the barb of the hook would be buried. "It was like sure the barb of the hook would be buried." It was like striking it into the side of the hook and the only effect it sure the barb of the hook would be buried. "It was like striking it into the side of the boat, and the only effect it produced was a rush straight out into the lake as resistless a: a locomotive. With thirty yards of line off the reel and my thumb nearly blistered, I held the rod up in the right hand and with the left, pulling one oar at a time, worked the boat a hundred feet or more out into the lake, where I felt there would be small danger of him doubling back on us and getting tangled up in the grass and lily stems. It was burgling, awkward work, but the strong pull of the fish helped materially to place a safe distance between us and the shore. Slip, slip, as we drew out into the lake, the line went out from under my thumb, foot by foot, every fibre in it under from under my thumb, foot by foot, every fibre in it under a strain that threatened to part it or burst the rod into splinters.

I was fishing that afternoon with a slender slip of Japanese

I was isbing that atternoon with a stender sup of supanese cane nine and a half feet long, and not larger at the tip than the top end of a wheat straw, the whole, with the mountings, weighing but T₂ ounces, but it was a glorious stick; strong, pliable, and as thoroughly trusty as a piece of finely tempered steel—a perfect rod, grown and modeled by

A clean one hundred yards of new G. braided linen line A clean one hundred yards of new G, braided linen line on the red and a 5-0 Linerick hook on gimp completed the tackle with which the trouble began, but how much of it would be left when the fight was ended was a matter for serious consideration. Under the pull that I thought would certainly cause something to give way, the fish veered around to the right and went off down the lake like a vicious horse with the bit in his teeth, the line throwing up a little thin sheet where it entered the water that showed the pace he was going at. Twenty yards more line off and I had to shift my thumb to the side of the spool to get a better stopping purchase.

"Line about all gone, Danny, and the fight just getting hot—can't hold him much longer—performance 'Il close in two minutes unless something turns up to make that fish alter his mind." The rod was bent now so that every moment I was looking for the splinters to fly; the tug of war had come; whether all as turns the fiels. smash the rod or turn the fish.

smash the rod or turn the fish.

I felt the strain case a trifle, and when barely two layers of line were left on the spool shaft, the fish came to the surface with a sweep of his tail that made the water fly, and started, without an instant's pause, back toward the boat. He was too far away to make out what "tribe" he belonged

He was too far away to make out what "tribe" he belonged to, but this was a question of little moment as long as he was working under a pressure of 120 pounds of fight to the inch. The immediate danger was passed. After the ordeal they had just gone through, I believed the rod and line would hold anything short of a Texas steer, and I drew a long breath of relief and made up my mind that, barring an accident, that fish would eventually bring up at the Camp of the Kingfishers, some five miles below.

With so little line on the reel, it was hard work to pick up the slack at the speed the fish was coming, but by the time he was half way to the boat from the point where he turned, the rod was working again, and I was anxiously waiting the

the rod was man way to the sout from the point where he turned, the rod was working again, and I was anxiously waiting the next move in the game. He came straight on, swerving neither to the right nor to the left, and as he flashed into sight and dashed under the boat, two yards under water, the question of his fribe was no longer a matter of conjecture. "Maskalonge, Dau! by the great horn spoon of our forefathers! Five feet long if he's an inch."

fathers! Five feet long if he's an inch."

But there was no time to talk. Whipping the point of the rod around the bow, with two feet of the tip under water to insure the line from touching the boat or an outhanging oar,

it cut the water with a sharp hiss as it came up into position again for another trial of strength with old longface. Twenty yards from the boat he sounded and went down until I thought he would find the bottom of the lake, when suddenly the rod straightened back and my heart went down into my shoes, it seemed, for I thought the line had parted thought he would find the bottom of the lake, when suddenly the rod straightened back and my heart went down into my shoes, it seemed, for I thought the line had parted and left me nothing but a bitter disappointment. Only for an instant, however, for directly I felt a tremor run up the line and down the rod to my hand, telling as plainly as a "sounder" to a skilled operator that some one was sending a message from the other end of the line. Translated from the original Esox it read, "Look out up there, old sardine!—here yit, smeared all over with war paint and bilin' full o' wrath!"

here yil, smeared all over with war paint and bilin' full o' wrath!"
"Great Scott, Dan, look at that!" as an enormous fish went straight up into the air with a mighty leap, and with jws wide spread, angrily shook himself from head to tail, scattering the glittering drops from his quivering fins in a miniature shower. What a magnificent fish he was! how clean built and powerful he looked, and how frail the little thread and switch of a rod that were matched against his amazing strength! He was in the air only for a moment, and yet what a glorious sight—a sight to be remembered and talked of for a lifetime.

I estimated him to be between four and five feet in length, and comparing him with a few large ones! had seen weighed

I estimated him to be between four and five feet in length, and comparing him with a few large ones I had seen weighted at different times, I said to Dan, "A thirty-five pounder, sure." A noble fish, truly! and how for years I had longed to try conclusions with a large one of this tribe—the great northen pike, the terror of the waters. But this fish had me at a disadvantage. In the first place, I was not fishing for maskalonge, and had only light bass tackle, a rather poor equipment for a long struggle with a thirty or forty-pound maskalonge that did not know just how strong he was. And

then my old comrade. Dan, was, in a manner, helpless, and could not be of the slightest assistance to mc, unless it were to make a few 'judicious remarks' at critical periods of the encounter.

If he could have taken the oars and followed the fish in

some of his wild rushes, the olds would not have been so unequal, but as it was, I had to guide the boat with one hand by an occasional dip of an oar in the water, while standing up and holding the rod in the other, as the fish towed the little craft slowly around over the lake where the whim led him.

The issue depended solely on the strength of my tackle and what little skill I was possessed of, and not on any un-due advantage I might take over the old warrior at the other end of the line.

I wondered, too, if he had swallowed the hook and frog

far enough down to get his murderous teeth past the gimp. If so, it was only a matter of time for him to saw the line off

If so, it was only a matter of time for him to saw the line off and "gang his ways."

But we would see.

When he went into the air and reached the highest point of his leap, I am positive he was fully the length of my rod from the water, and as he fell back on his side with a tremenduous splash, I believe my heart actually stood still until the line tightened up and I felt the thrill it imparted to the rod at every stroke of his powerful tail, as he went off quartering up the lake with a pull that made my thumb burn as the reel turned strudgingly under it.

turned gradgingly under it.

All this time Dan had sat quietly at the stern of the boat, saying not a word—patient old soul that he is—and in the absorbing struggle with old longface, I had almost forgotten

him.

Now he said, "Hickory, can you reach the gaff, and yank
this sneakin' cuss into the boat?" It was the same fish he
had struck near the shore—a pickerel of perhaps five pounds.
He had worried all the fight out of him, and reeling up short
had held him up to the top of the water, out of the way,
until he thought I would have time to lend him a helping
had in writing the finishing cityle to the "Ill favored deavil."

had held him up to the top of the water, out of the way, until he thought I would have time to lead him a helping hand in putting the finishing stroke to the "ill favored deevil." It took but half a minute to reach the gaff, reach out and jerk him into the boat, where we left him to gasp his life out in the hot sun, a piece of cruelty unavoidable for lack of time to break his neck with the club. Facing around, and touching an oar to head the boat in line with our fish, the battle raged hotly again.

Slip, slip the line went out till again there were but a few feet left on the reel; every inch now paid out under a strain that draged the little boat slowly through the water. When almost in despair for the result he came around to the right again, and, in a wide circuit, worked back down the lake. A hundred and fifty feet of line in the air from the tip of the rod to where it touched the water, with barely a perceptible sag in it, meant that the fish showed no signs of tiring; and lighting his pipe. Dan settled himself to enjoy the sport. As old "Musky" swung around I managed to take up a few yards of line for an emergency; but this time it was not needed, as he suddenly made a short turn, and coming back up the lake, flashed by within ten feet of the bow of the boat.

How grandly he moved; and what immense power in the

How grandly he moved; and what immense power in the How grandly he moved; and what immense power in the steady, measured stroke of his broad tail! No sunfish movement in that! no silly flirtings; no spasmodic caperings and crazy curvetings; but just the uncontrollable rush of an untamed horse when he feels the first prick of the spur. As he went by, and rod and arm and wrist began their work again, the old pickerel at the stern puffed an extra fragiant cloud of smoke, and ventured an admonisher. "Careful, Hickery! c-a-reful, old Mackerel! coolly! and don't you lose him!" How could I coolly under a broiling sun, and the blood at fever heat? But there was not the slightest tremor in my nerves now; the first flurry of excitement had blown by long ago, and I felt as steady as a rock; only a fittle anxious, perago, and I felt as steady as a rock; only a little anxious, per-haps, as to the amount of gimp old longface had inside of

Had I lost my head for half a minute I would have lost the

fish in less time.

A similar caution from the veteran now and then, when A similar caution from the veteral now and then, when the fish seemed to be gaining an advantage, was about all that was said for near an hour; the battle was fought out For three-quarters of an hour he kept up this tireless, per

For three-quarters of an hour he kept up this tireless, persistent pull; up the lake, across, down, and once making a wide circuit clear around the boat, gnashing his teeth, we imagine, in furious rage at his futile efforts to part the puny thread that was wearing the life out of him and drawing him with a silent, never relaxing force, relentless as fate, to the gaff and certain death. After nearly an hour of this desperate struggle for life, I felt the strain on the rod relax a trille, a sign his strength was failing him, and when he surged around again toward the boat, I managed to take up twenty orthirty yards of line as he went by. Dan said he would like to "feel of him" for a minute or two just to get "one taste of pure glory." I passed the rod to him in perfect faith, and sat down to give my legs, and arms, and wrists a few minutes needed rest. Taking it again after a little time (it cost old Dan a mighty effort to release his loving clasp of it) the fish was brought around head to the boat, this time with few minutes needed rest. Taking it again after a little time (it cost old Dan a mighty effort to release his loving elasp of it) the fish was brought around head to the boat, this time with less exertion, and I began to work him carefully back, giving line as he would surge from side to side, and taking it

ing line as new would surge from side to side, and taking it up again under a pull to suit the rod.

When fifty or sixty feet away he suddenly came to the surface, and with just the dorsal fin and three or four inches of the upper lobe of the caudal waving languidly from side to side, allowed me to reel him up to within fifteen feet of the boat.

Here he turned broadside to us and I let him rest a little, to give us time to study the case over and determine what to do next. We did not know whether that gentle movement of the tail meant a clean surrender or a menace of further war after a short armistice, or it might be a ruse to throw us off our guard, when he would make some unlooked for move and smash things all to flinders. I hesitated about using the gaff, for he looked so heavy and powerful I feared that in the struggle to get him in the little-skiff we might by some unlucky chance be capsized and I would have to swim for it and look after Dan besides, for in the water he would be as helpless as a baby. To put the old fish hawk in actual peril was not to be thought of, though fish, tackle and all went to Davy Jones and we never got another nibble as long as we lived. We couldn't just then think of anything to help us out, we were in one of old Capt. Truck's worst, "categories." "Daniel, we've get an elephant on our hands; what'll we do with him?"
"Pull along shore and hunt a place where we can beach Here he turned broadside to us and I let him rest a little,

"Pull along store and hunt a place where we can beach him," suggested Dan. Entirely engrossed in the sport, we had taken no note of where the maskalonge was leading us, and on getting our

bearings we found we were only a couple of hundred feet from the opposite shore where the fish was first struck—a little below, and over a quarter of a mile from the mouth of the little stream. While making up our minds what the top of the water a few feet from the boat, waving his flag and apparently resting, and revolving over in his mind some untried move that would prove an astonisher to us. Handing the rod to Dan—all the while keeping the line just taut—1 took the oars and pulled along up shore to find a place clear of bushes, grass and lily pads, where I could get him into shallow water, wade in, jerk the gaff into him and drag him ashore.

As we moved away he swung around behind us and got inshore fifteen or twenty yards from the boat, where he swam along just abeam, with his dorsal out of water, with a strong side pull that kept the rod in the shape of a crescent, but never once making a plunge or showing a sign of fight. For 200 yards we pulled along the shore hunting a place to land, but, finding no suitable spot, we concluded to take the chances with the gaff; as Dan said, 'we either had to gaff him or tow him to camp with the rod.' Heading the boat out into the lake I took the rod and brought him up where I could reach him with the gaff. Here he balanced himself on his fins at the top of the water, glaring fercely at us with his cruel looking cyes, but showing not the slightest disposition to renew the struggle. It appeared to be an uncondion his fins at the top of the water, glaring fiercely at us with his cruel looking eyes, but showing not the slightest disposition to renew the struggle. It appeared to be an unconditional surrender, and now for the first time we had a good chance to look over his "parts." He looked a dangerous customer—a vicious devil from snout to tail. The yellow rings in his eyes imparted to them a glitter that was murderous, and as he worked his long, powerful jaw in the act of breathing, it revealed two rows of terrible teeth that said plainly, "who enters here leaves hope behind."

But a more pleasing sight to us was two inches of gimp in sight at one corner of his mouth, and it was just this that cost the game old warrior his life.

We took all this in while I reached down and got the gaff. Holding the rod up in the left hand and getting the steel, as I thought, well under his jaw, I gave a quick pull, but unfortunately it struck the jaw-bone and glanced off, slightly turning the point. Quick as a flash a single stroke of the tail sent him under the bont, barely missing it as he went by.

went by.

Instantly dropping the point of the rod into the water and

the fight was on again. A rush of sixty or seventy yards sufficed to tire him and bring him again to the surface, and he was soon brought back to the boat with his courage comhe was soon brought back to the boat with his courage completely gone. It would have been safer this time, perhaps, could I have struck him aft of the vent, but he kept obstinately head on to the boat, and I could get him barely close crough to reach even that, so that Uncle Thad, Norris's advice about gaffing a fish, "Gaff him somewhere," was the only chance left.

By sounce left.

Picking up the gaff again, I reached out, this time with reacter care, and getting the point well under his chin (if the have chins) jerked the steel into him come up the gain again, it reached out, this time with ter care, and getting the point well under his chin (if have chins) jerked the steel into him, mighty flirt of his tail came near taking me into the

A inguly lift of his tan earm ear taking me into the water; but keeping a desperate grip on the gati handle, I succeeded (I never can tell how) in dragging him over the gunwale and inboard. As he fell into the boat his tail and a part of the body slipped under the low thwart, which stopped further mischief from that end.

stopped further mischief from that end.
Quickly removing the gaff from his jaw and reversing it,
I ran the end of the handle under the rail supporting the
thwart, and bringing it down across his head, used it as a
lever to hold him down. Planting the left knee near the
ventrals, I had him so fairly laid out that he couldn't make
a respectable flop. Taking Dan's pickerel string (a quarter
inch braided cord with a long wire needle attached) I passed
it through his gills and out of his mouth, carefully avoiding
the gleaming teeth, and knotting it firmly, cut the line a foot
above the gimp, raised him over the side of the boat and let
him slide gently into the water. He was so dazed at the
suddenness of his taking in and the rough treatment received
in the last few moments that he made barely an effort to get studenness of its taking it and the rough treatment received in the last few moments that he made barely an effort to get away; a surge or two to pull himself together, and I led him to the stern, where he was securely tied, and the hard-carreed victory was won. And it was a victory any angler might well feel proud of—he might even be pardoned for boring his friends with an occasional rehearsal of it during the reveniends of his natural lifetimes. his friends with an occasional rehearsal of it during the re-mainder of his natural lifetime. It was a battle that would have pleased cool-headed old Uncle Thad., or the veteran, Brother Dawson, to the heart's core, and even that skilled salmon fisher, President Arthur, would, I ween, have taken a hand in such a fight with a right good relish. It was a good hour and a half from the time he was first struck until he was dragged over the side of the boat, a full hour of which was a continuous, desperate struggle, liable at any in-stant to end disastrously to Hickory and his tackle. Dan said "it was the loveliest fight that ever was fit," and looking at the fish and then at the rold and line, wondered

looking at the fish and then at the rod and line, wondered that it lasted more than a couple of minutes. No more fishing that day; we could well afford to rest on our laurels already won. Placing the little rod carefully and tenderly in the boat, we pulled across the lake to quench our thirst at the little stream, for it had been a long time between

tenderly in the boat, we pulled across the lake to quench our thirst at the little stream, for it had been a long time between drinks.

Two lighter hearted or happier old pelicans never headod hoat for camp and supper, but we made such slow headway, drugging our fish through the water, that the sun was down when we drew out of the river below, into White's Lake. The edge of the evening deepened into twilight, and twilight into darkness, before we were half way down White's, and we had yet fully a mile and a half to go to camp. At the foot of the lake we felt around until we found the entrance to the river, and in a manner groping our way through the increasing darkness, we followed the little streak of faint gray water through the woods, now scraping under an overhanging bush and anone coming almost to a stand-still to sort the stream from the surrounding gloom, until at the end of what seemed to us an hour, we floated out into the silent waters of Sisson's, in sight of the lone pine outlined against the sky, overshadowing camp at the point.

When off the mouth of our little stream we could hear voices and see the ruddy glare of the camp-fire reflected on the surrounding foliage, and we imagined we caught an odorous whiff of coffee in the air, that we knew Frank would have waiting for us. We heralded our approach by launching a yell that went rolling back into the low hills and away down the lake in quavering echoes, starting half a dozen neighborhood dogs into a melodious barking match and arousing the camp into sudden activity. A clear bugle blast came back to us over the water in the well-known voice of the scribe, backed by a chorus of whoops that created a furious spurt in the barking match; and it was proclaimed

that our two mendacious laggards, Jim and the scribe, had

We rounded the point, and pulling the boat up on the strip

We rounded the point, and pulling use beat up of and in front of the flagstaff, were at once in the midst of a general and brotherly handshake all around.

"What luck? where's your fish?" asked the scribe, as he held up a lantern and peered along the sides of the boat to see if he could catch sight of a stringer hanging over in the

Untying our string of bass I dragged them out into shallow

Untying our string of bass I dragged them out into shallow water, where they made the spray fly for half a minute before quieting down so the light would reveal their glistening sides and bristling spines to the eager eyes of the boys. The general verdict was "a lovely lot of bass," and they were indeed, a fine lot, none of the ten taken from the pool in the river were less than two and three-quarters, and Dan's largest one weighing, next morning, a trifle over four pounds. "A whole week's sport, just there on that string!" said Jim with a wistful look.

were indeed, a fine lot, none of the ten taken from the pool in the river were less than two and three-quarters, and Dan's largest one weighing, next morning, a trifle over four pounds. "A whole week's sport, just there on that string!" said Jim with a wistful look.

"If you two old loons can't do better than that," growled the scribe, "you had better stay in camp and cook. Why, Jim and I could have caught more than that in two hours; couldn't we, Jim?" And Jim had to say, "of course we could," or go back on his record. They were turning to go back to the fire when Dan stopped them with, "wait a minute, old knots and gnarls! Hickory, bring out the string that has the sunfish on it." Old masky had all this time remained quiet at the stern of the boat, resting up and getting his jaw back into shape, after the last five miles of wrench and strain he had subjected it to by his mule like disposition to pull back. Taking a couple of turns of the cord around my hand as a precaution against losing it and the fish by a sudden jerk, I pulled the knot and towed him out to the white sandy beach in five or six inches of water where the lantern would show on him with good effect.

When the light flashed on him a furious plunge to get back into deep water, and a fiirt of his tail that sent the water flying ten feet away, admonished us that the game old feltew had not yet lowered his flag, but after two or three useless efforts to pull his old enemy into the lake, he rested uneasily under inspection, nervously working his pectorals and glaring at us with a vicious gleam in his eyes that boded ill to whoe ver came within reach of his powerful jaws.

"Great Cassar's bones!" exclaimed old Knots; "where did you eatch him?" engerly asked Brother R.

"Bet my best rod agin a speckled frog that Dan caught him!" chipped in Jim. "A splendid maskalonge," said Frank; "looks like a forty-pounder from here," stepping into the water to get a better view of him.

After thoroughly looking over his "parts"—as Knots put it —as well as they could

and blulous Governor of South Carolina once upon a time, many years ago.

Tying our fish to the boat again I shoved out into the lake three or four rods, to an old log standing on end in sixteen or eighteen feet of water, and fastening it securely to this, left them for the night; Frank coming out in another boat to

take me off.

left them for the night; Frank coming out in another boat to take me off.

As we went up the bank into the firelight old Knots said, "Hickory, did you take that fish yourself, or buy it of some Mossback' up the lake?" On assuring him I was fairly entitled to the "butt end" of the honors of defeating old masky on his own battle ground, and bringing him a captive into camp; "there, Jim! same old story; a fool for luck." Turning to Frank he asked if it were not about time to expect another attack from the "muskeeters?" Frank said nothing, but disappeared behind the cupboard, and from some mysterious nook among the twisted roots of a cedar at the end of the table, fished out a vial of something that Knots said worked like a charm in keeping off the mosquitos, a dra(ch)m or two usually being sufficient, but if they were numerous and rash it took a little more. We heard it escaping into a tin cup, and caught fragments of a conversation between them that sounded very much like, "the Gov. of North Caro—here's to the 'boss fish,'" and we knew the musketers were repulsed. teers were repulsed.

"Knots!" may h

teers were repulsed.

"Knots!" may his shadow never grow less; and while Frank is fixing a bite for the two old pelicans, we will make a "divarsion" and hold a little discourse about him. Full of knots, so to speak, and angles and corners, but draped over with a mantle of goodness and kindliness of heart to his fellows that has polished the knots and rubbed off and rounded and smoothed the corners and angles. Full of crotchets and whims, and opinions, he loves the off side of an argument just for the sake of the "off side." Surrounded by a strong shell that does not "open to all," yet a staunch and true friend to who may succeed in getting on the inside of it.

and true friend to who may succeed in getting on the inside of it.

Twined among the gnarls runs a vein of curd and acid, that if not just palatable is always refreshing. He's as square as a cube in his relation with others and hates sham and small dealing. He loves his rod, his pipe and his friends. He detest the seiner and the pot-fisher, and his wrath waxeth hot at the nurderer of fingerlings who fishes for count. He is a fuir and honest angler, rarely taking more fish than will suffice for present needs, or to help some neighbor to a "mess;" and if so he returns them to the water with a benediction. He loves a good fish story and can tell one on occasion, and he don't make serious objection to a dash of "sustenance" in nis spring water, just as a qualifier. He is generous and hospitable, to sharing his last meal, his blanket, or his last pipe of tobacco with a brother angler, even though he be an entire stranger. And he has a warm corner in his heart for dogs, which is a whole chapter with foot notes to his credit. There, that's old "Knots," and if there be a worthier disciple of "Izaak of blessed memory" he does not happen to be within the scope of the writer's acquaintance. quaintance

quaintance.

After Dan and I had finished a supper that set Frank to figuring on how long our supplies would last, the fire was kicked together, an extra chunk or two thrown on, and we gave the boys an account of our day's trip, listening in turn to their reasons for not getting in on time. The trip had been unsatisfactory to them from the time they left St. Paul; some raw, chilly weather on the lake, fogs, missed connections, etc., and they were glad to get to camp and rest.

There were so many things to talk over, such an airing of our limited knowledge of maskalonge fishing, their habits, and the best ways to capture them—such wondrous stories of hass fishing in years gone by (to all of which Brother R. lent an attentive and wondering ear), that the turn of the night was on us, and the voices of the woods hushed in slum-

ber hefore we thought it time to reel up for bed. Doubtless Brother R.'s credulity was taxed to its utmost stretch by not a few of the whoppers, but being a stranger to the ways of the "guilcless angler," and a seeker after truth (in the shape of fish lore and marvelous yarns), nowhere to be found in such (un)limited store as in a well regulated camp of old fishermen or hunters whose heads have grown gray with years of much "wrastlin" with it, we thought it well to start him with a dose that would make him marvel where the rudiments of the art commerced.

[TO BE CONTINUED.]

Matural History.

DR. COUES'S NEW CHECK LIST.

IN the second edition of his Check List of North American IN the second edition of his Check List of North American Birds Dr. Coues has given us a work about which it is hard to write without using language that may be thought exaggerated. Of its ornithological value it is not necessary to speak at length. All who are familiar with the work which the author has done on the birds of North America know that his contributions to the literature of this subject are as careful, exact and critical as the most scientific spirit can make them, and that at the same time his writings display, when the opportunity offers, a literary skill and finish that is as attractive as it is unusual.

In the present volume, however, which, although it is called the second edition of the Check List of 1873, is practically a new work, Dr. Coues displays a fund of philological erudition which is remarkable, when we take into consideration the amount of work which he has done, and the eminence to which he has attained in other fields of research.

The Check List of 1873 purported to enumerate only 635 species, but as a matter of fact it contained 115 more, since only the full species were numbered, the sub-species, varieties

ation the amount of work which he has done, and the eminence to which he has attained in other fields of research. The Check List of 1873 purported to enumerate only 635 species, but as a matter of fact it contained 115 more, since only the full species were numbered, the sub-species, varieties and races being lettered a, b, etc., under their respective numbers. In the present list, however, a somewhat different plan has been pursued, each variety flaving its own number. As Greenland has usually been regarded as belonging to the American continent, all the birds of that peninsula are included in the list, with the result of bringing the number of species enumerated up to 888. In the old list therewere by actual count 750 species and sub-species mentioned in the body of the work and 28 in the Appendix. Of this 778 only 10 have had to be removed from the list, while 120 new species or sub-species have been added to it. About the validity of most of these there is no doubt, but further research may perhaps modify the views now held in regard to some few of them. The above statement shows as well as anything can what progress has been made in North American ornithology during the past nine years, and the showing is very gratifying, and one of which we may well be proud. The number of earnest students of North American ornithology is constantly increasing, and with the happiest results for science.

It is not, however, from an ornithologist's standpoint that this work is especially noteworthy; it is even more interesting when viewed from that of the classical scholar. For many years it has been a matter of astonishment and regret, that so many men who, from the nature of their pursuits, were obliged constantly to make use of terms drawn from the Latin and the Greek languages, should have given so little attention to t'e study of these tongues, and should display such disheartening ignorance of them. No one can talk for half an hour with the average collector or indeed, ornithological, without hearing quantities, acc

tion of the present work.

We have no hesitation in saying that this Revised Check We have no hesitation in saying that this Revised Uncok List is one of the most important contributions that has been recently made to ornithological literature. It will make more easy the work of the professional student, and smooths away at once many of the difficulties of the beginner, enabling him to commence his work with a full and intelligent comprehension of many things which, without such a help, would long have remained dark mysteries.

PROCEEDINGS OF THE PHILADELPHIA ACADEMY.—Part I. of the Proceedings—January to April—has just been issued. As usual with the publications of the Philadelphia Academy of Sciences, the number contains a vast amount of interesting material. Among the contributors are Dr. Joseph Leidy, Mr. Thomas Mechan, Rev. H. C. McCook, Prof. Angelo Heilprin, Prof. E. D. Cope, Dr. H. S. Williams, Dr. L. T. Day, Messrs, Theo. D. Rand, Henry C. Lowis, Edward Potts, Isaac Lea and many other well known names. Among the more important communications are Dr. Leidy's remarks on Rock Specimens, Filaria of the Black Bass, on Balanoglossus, on Scolithus in Gravel; Dr. Thos. Mechan's Fruiting of Ginko biloba and "the relation of heat to the sexes of flowers;" Dr. Henry S. Williams's description of New Troids from the Rocks of the Chemung Period of New York State (with Plate I.); Dr. L. T. Day's paper on the species of Odontomyia found in the United States; Prof. PROCEEDINGS OF THE PHILADELPHIA ACADEMY.—Part I

Angelo Heilprin's remarks on the Occurrence of Ammonitis in deposits of Tertiary Age; Prof. E. D. Cope's note on the Condylarthia; and Rev. H. C. McCook's paper on the Variations in the nest forms of the Furrow Spider, *Eppira strix*. There are many other shorter notes of especial interest.

FROM PORTNEUF CANYON TO PARMA-CHENE.

CHENE.

The plains are turning green, even to the dusty sage, which I had supposed indifferent to whatever of spring showers or winter blasts. A rough month of April we have had, and the nights are only just ceasing to leave frozen ground and stout ice. We are tenting in the Portneuf Cañon, on the Ft. Hall reservation for Bannocks and Shoshones, altitude 5,400 feet. In April we had ducks enough—mallard, teal, buffleheads, sheldrakes, shovelers and others new to me, and which I had not books to identify. The mallard breed in numbers along the Portneuf River. We hear by night their low quacking at our very bedside. I tried a new Colt ten-bore on geese with good success. A Baker three-barrel in camp shoots uncommonly well.

Dead winter, to all appearance, still rests on the mountains west. About the skirts of the snow are elk and bears, now unmolested. The cañon is full of deer. They winter in bands of hundreds. In the deep snow of March they were slaughtered without merey. I have no patience to repeat the various tales of killing. The meanest Indian is above such acts. A man told me of shooting thirty-seven uneatable does, and stopping only because his cartridges were out.

We sten to the stream and catch a few trout at any time.

above such acts. A man tord me of shooting many section uneatable does, and stopping only because his cartridges were out.

We step to the stream and catch a few trout at any time. Have not yet tried a fly. They run six or seven ounces, with now and then one of three to five pounds. Soon I mean to say what I think of these fish, after casting in Maine and Canada. Enough at present that they are unmistakably trout, that we catch them and eat them.

So much by way of showing old friend Forest and Stream that R. isstill 'on the trail." But mainly I would have a word on the ruffed grouse question.

Most of the theories are from data gathered during shooting season. A man goes in October to his old cover and finds few birds, returns to his study and assigns the most apparent local cause for their diminution, whether foxes, setters, hawks, snares or ten-bores. My own observations, though not critical, were made over much New England territory, hunted and unhunted, and throughout the four seasons, for a space of three or four years. The first of these years birds were abundant and broods full in September. Since then broods have grown smaller, whether in districts over-hunted or untracked. In the spring every cover had its nest, but in July the chicks were few, perhaps five or six in a brood.

I have found no nests of late years, yet can hardly believe

cover had its nest, but in July the emics were tew, perhaps five or six in a brood.

I have found no nests of late years, yet can hardly believe that a Malthusian wave has converted grouseland to the extent of laying six eggs instead of the honest baker's dozen of old. The mortality or abatement must be between nest-

that a Malthusian wave has converted grouseland to the extent of laying six eyes instead of the honest baker's dozen of old. The mortality cr abatement must be between nesting and shooting time.

I learn of no corresponding increase of predutory animals. During the first years referred to we boys in Vermont kept no idle watch over the fere nature of our hills and valleys. Ned was a mighty hunter of foxes and coons, Ed was keen for mink and muskrats and pike and suckers, "R." held rank in grouse and squirrel warfare, and was inspector of woods and "sign." We all prowled about, banded or singly, and at hours unearthly. This period reached to the time when the number of grouse began to lessen. We never observed an increase of foxes, mink or skunks, though the latter were sufficiently "numerous" at times. Frequent inquiry during days more recent has confirmed me in acquitting the "yermin."

Other assigned causes vanish before the fact that, as I believe, the birds do not reach maturity at all. Moreover there has been no succession of cold spring weather sufficient to kill the young directly after hatching. But whatever the cause, it must be as general as is the blight widespread. Now, a suggestion I have not seen before: In many grouse I have shot of late seasons there were along the backbone inside a number of white worms two inches long, slender, sharp at both ends, and scarcely showing life. There seemed no emaciation nor lack of condition. I have opened five other species of American grouse without noticing anything similar. The question, of course, is whether this parasite does not destroy the young bird or affect the egg. That they were only in the younger birds I cannot say, now whether to be found when the covers were yet full and our brave bird led his lusty twelve until the falling leaves of October.

brave bird led his lusty twelve until the rating leaves of October.

Of late I see no notes from Parmachene and especially my old range on the Connecticut headwaters. A March letter from Tom Chester speaks of a quiet winter and game undisturbed at the Connecticut lakes. It was my bad luck in '81 to miss summering with Tom as usual. I believe I could still go to beaver ponds where no sportsman's hook save mine has ever been, and where the moose and caribou tracks are as big and fresh as ever. I expect never to find another such rare grouping of mountains and perfect primitive forest. If a man would have a taste of real forest life with all hunting possibilities short of this land of grizzlies, there is the spot. If he is not satisfied then let him pitch his double-staked tent in this breezy country and see the swallows perching on the guyropes for lack of trees. Let him come and the boys will take him "sniping."

R. Osena, Idaho.

A BATHTUB FOR THE BIRDS.

MANY of your correspondents write about the whole sale destruction of our little facthers of the sale destruction of our little factors of the sale destruction of the sale de MANY of your correspondents write about the whole-sale destruction of our little feathered friends, and one very significant remark was made in regard to the killing of small birds to supply the milliners, by persons who under the plea of students of ornithology destroy our little pets by the hundred. To those who honestly wish to make a study of our small birds, i, e., warblers, thrush, flycatchers, etc. I submit the following, a plan we have tried for many years with the most interesting success. To many it may be familiar, and to those who are blessed with springs on their grounds or living near a lake or convenient pond it may not be worth trying, but to those like myself living on a sandy soil which soaks the water up like a sponge, I would say: Give the birds a bathtub and they will use it, and when you see them flutter off, all fuzzy, little balls of wet feathers, and hear their happy songs of delight, you will feel amply repaid for all the trouble you may, have taken in preparing the bath.

The size and style will of course depend upon the ideas of the designer, the object is to give a gradually increasing

depth of water to accommodate all, from the little short-legged chip to the long-legged catbird. A tank which we have found to answer the purpose admirably may be made in the following manner: Take a good, stout, water-light lox, with a central platform, to which four boards with strips nailed at intervals of two inches, should lead down. Two or three pailsfull of water will cover the platform, say to the depth of two inches, and the water will gradually shoal up the steps on the boards leading from it. Place it partly in the shade; I always like to have it where the sun reaches some portion of it, so that when a little fellow is washing there is a continual shower of bright diamond drops flying in the air. Now, the student placing himself at a convenient window with a good strong opera glass can bring the birds right air. Now, the student placing himself at a convenient window with a good strong opera glass can bring the birds right up, close enough to see the delight which sparkles in their bright eyes as they bathe. It should be near the house to afford you an opportunity to observe without being observed. If you object to the bulldozing of the English sparrows, a Flobert or parlor rifle with shot (dust shot) cartridges by your side will effectually put a quietus on said sparrows, and as the report is so slight the other and more desirable guests will not be disturbed. I have frequently turned them over in the very presence of catbirds, who seemed very much astonished at the sudden cessation of their noisy chatter, and who after a curious examination of the dead body

much astonished at the summer variety and who after a curious examination of the dead body would continue their washing unconcerned. The same means may be used sparingly to secure rare specimens for collection and study.

The above experiment will amply repay its trifling cost in the increased number of sweet songs that will ring out from the trees around your dwellings, and the sight of the many bright forms disporting themselves therein during all the summer. You may store it away for the winter, but have it ready by early spring of the next year, as the birds will be on land.

Diok.

SOME OÖLOGICAL NOTIONS.

SOME OOLOGICAL NOTIONS.

M. R. ERNEST INGERSOLL's little book on "Birds'Nesting" lies on my desk before me, and I have just
enjoyed the delightful pleasure of reading it. A wholesale
ransacking of my exceedingly lumble Field Books divulges
a few notes having a slight bearing on Mr. Ingersoll's gracefully written book, which I hope will not be considered out
of place in these columns.

Nests of the Chrypsomitris tristis (goldfinch, yellow-bird,
thistle-bird) have been found in Middle New York with
eggs in them as early as the 11th of May. A cousin of mine
furnishes this item from her note-book: "May 28, 1868.
This morning at daylight we had a snowfall of two inches.
Shortly afterward I went into the pines for a stroll, and on
my return, found a yellow-bird sitting on three eggs, in the Shorty ancerward I would muo the pines for a stron, and on my return, found a yellow-bird sitting on three eggs, in the back part of the orchard in a large apple-tree. The instance was so exceptional, that I could not convince my father respecting the kind of a nest I had found until he visited it humself." Nests of the same birds containing fledglings have been found here in September, and on one occasion as late as the 19th.

late as the 19th.

Have been convinced by my own observations and the assertions of friends that many species of male birds assist the female bird in nest-building. This has been closely watched so often that I am positive it is correct.

This spring I found the egg of a Molothrus pecoris (cow blackbird) in the nest of an Applanus phamicus (redwing swamp blackbird). I am not aware whether this is a "singular circumstance" or not, but I never saw anything of the kind before, nor do I remember reading of such an occurrence in any work on ornithology.

guar circumstance" or not, but I never saw anything of the kind before, nor do I remember reading of such an occurrence in any work on ornithology.

Have noted that eggs of certain birds vary thus: The first one laid is often fully one-fifth larger than the last, and those between them vary, growing proportionately smaller as they increase in number. This is by actual measurement very carefully taken. Of course this is not always the ease, but I venture to affirm that it is quite as often so as otherwise. Eggs of the same species from the North are almost invariably larger than those from the South. Perhaps the late Dr. Brewer's theory in this respect is sufficiently absolute that we might safely accept it as a law.

Two years ago there was shown me in lower Vermont the nest of an Iclerus battimore (Baltimore oriole, English or golden robin, hangnest) that was not even semi-pendulous. It was built early in the season, and the bottom of it was securely "planted" in the three-forked crotch of a young elm; the top was narrowed as usual, and was held up and in place by three well-constructed "guys," running from a point exactly over the nest to the three forks before menioned. The guys, tac weaving of the nest around the forks at the bottom and the twining and twisting of the extreme point exactly over the nest to the three forks before men-tioned. The guys, the weaving of the nest around the forks at the bottom and the twining and twisting of the extreme ends of the guys further up on the forks, were the most cutely-planned and dexterously-executed specimen of bird-architecture, of this peculiar species, that I ever have ex-amined.

LEW VANDERPOEL.

NIVERVILLE, N. Y., June 17.

GRAIN-FEEDING HABITS OF FIELD CRICKET. Ghan-Peeding Habits of Field Chicket.—One morning after a rainy night, as I was passing along the highway, I noticed one of our common field crickets working at a kernel of corn that had dropped from some farmer's wagon while on the way to market. The rain had softened the grain; and after watching the insect some time, I found it was eating the germ of the softened kernel; I watched patiently until the cricket seemed to have satisfied its hunger, and found the germ had all been eaten away. Early in the fall I found them in conflicted eating the crowns of kernels or ears that had blown to the ground, something I had always before attributed to mice.—F: M. Webster in June Naturalist. Naturalist

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One chuva spider monkey, Aleles marginatus; one brown howlor, Myceles fuscus; one black saki, Pithecia siatanas; two pig-tailed macaques, Macacus nemestrinus, both mules: two bions, Felis leo, male and female; two African civets, Vierra civetia; two common geneta, Geneta two African civets, Vierra civetia; two common geneta, Geneta orac-hollandia; and one Egyptian telhemmon, Herpestes ichneumon, all received by purchase. One coelot, Felis pardatis; one musang paradoxure, Paradoxurus musanga; one raccoon, Procyon lotor; one opossum and five young, Didetphys virginiana; two gray squires, Schures arolineiss; two gray to turkey vulture, Cathartes at ratus; one turkey vulture, Cathartes wis tencecholites; one exceed owl, Scops asio; one Cainada goose, Bernicia canadensis; one white heron, Ardea egretta; five alligators mississippiensis; two horned lizards, Phrynosoma cornutum, and three garter snakes, Eutwaia siralis, all received by presentation. Two bactrian camels, Camelus bactrianus; one fallow deer, Cervus dama, mnie; one elik, Cervus canadensis, female; one Virginia deer, Cervus virginianus; four woodchucks, Archomys monax, and one turtle dove, Turtur visorius, all born in the garden.

Game Bag and Gun.

BITS OF FLORIDA EXPERIENCE

THERE were three of us-Capt. W., an old Buffalo sailor; W., the editor of our county paper; and the undersigned. We had sailed up the sluggish and tortuous St. Johns, past Lemon Bluff, with its tumble-down buildings, shallow Mullet Lake, Lake Harney, on whose beautiful sandy beach we camped beneath wide-branching oaks on moss, the dense hamak rising like a wall on the left, e unbroken surface of the beautiful lake stretching the

the right.
the snoring of the Editor was the only sound we

New had sailed through Puzzle Lake, the Captain alone knowing the one of many devious channels that would lead us into the river again, so much alike are these openings and banks of rushes, and so bewildering to the stranger. We had jibed, poled and rowed around the bends and behind the banks of reeds where the breeze had fainted dead away, leaving us mourners, had shot at occasional ducks and got none, peppered a sleepy 'gator now and then, had run up the E-con-loc-hatch-ie and camped, where I caught more bass in a half hour than we could eat in a week, and which I gave to the steamer next morning. At last we had tied our boat in the edge of Salt Lake, in water four inches deep and mud far deeper, had waded ashore and boarded a dilapidated old car drawn by two huge mules over a joint-racking wooden tramway six or thereabout miles to Titusville, and put up at the Titus House, kept by Co. Titus, he of the glittering, coal-black eye, withered bands and eventful history. Rheumatism had tied him to his chair, but his loaded gun was within call, and those who had angered him wanted We had sailed through Puzzle Lake, the Captain alone fory. Rheumatism had tied him to his chair, but his loaded gun was within call, and those who had angered him wanted to remember it

gun was within call, and those who had angered him wanted to remember it.

W. had come over to attend the first session of court at the new county seat of Brevard county, to pick up an item. I had accompanied him to see the country and Indian River, and Capt. W. had kindly tendered the use of his boat, which we were very glad to accept, for she was staunch and he was a capital sailor and companion and knew the Upper St. Johns

was a capital sailor and companion and knew the Upper St. Johns.

Court had suddenly adjourned before we arrived. We had time on our hands. We had not seen Indian River. We would go. But how? Just as we were asking ourselves where we should find a boat, there came in a former whilom resident of our village, a watchmaker, who now resided at Daytona, upon the Halifax, and who had come down plying his trade along shore, stopping for a week now at Titusville. His boat was new, safe, nineteen feet long, five feet beam, and we were welcome to it for a week. Could anything be more opportune? But he had a companion who had come down with him, an elderly gent who, as a part and parcel of the boat, bunked in it, and would be expected to go along. H-m—! Well, all right. We went down about dark to inspect our ship, and found our fourth, whom I shall call O., abed on his little cot under the canvas, occupying one side the centerboard. We said to ourselves, as we walked away. "Of course he won't take that cot with four in the boat—of course not. Oh, no!" How our calculations are upset sometimes. We laid in our stores that night. Next apprains we got them aboard, made the ac-

as we walked away, "Of course he won't take that cot with four in the boat—of course not. Oh, no!" How our calculations are upset sometimes. We laid in our stores that night. Next morning we got them aboard, made the acquaintance of O., whom we found to be about fifty-five years old, without, as it proved, one idea of sport in his noddle. And he must take that cot—couldn't be comfortable without it. We looked at him, at each other, at the one side of the ship left vacant, and sighed. One could double up like a jack-knife astern the cot, and the other two could dovetail legs on the other side.

We had a beam wind. We cast loose, and as we got under way, called a council of navy and agreed that Capt. W. should command, all his orders being implicitely obeyed. O. rather reductantly acquieseing as with a proviso, he having sailed in the vessel several days and knowing all there was to be known. W. and I emphasized the compact and trusted that O. would not make an ass of himself. We sailed and we sailed. The weather was perfect. A moderate breeze made the wavelets dance and sparkle. Afar to right and left low shore lines rose dim and hazy, while away in the distance ahead were wooded points made out, the effect was of a mirage, forests with nothing under them. We smoked and dozed the day away, meeting an occasional boat, and toward evening ran into land where a house stood on a bluff. We made a fire, cooked a pot of coffee and suppered, after which we called on the resident, whom we found a guava jelly maker. We inspected his store of jelly consisting of several hundred dozen glasses and jars, and after laying in a supply to keep off scurvy, took our departure. The breeze being favorable, we kept the water all night enjoying immensely the glorious mooning found us near the State Agricultural College, that bold, shameful swindle perpetrated by some shameless Solons at Tallahassee. The uncompleted building, painfully plain, with its gable to the river, stands in the midst of a howling wilderness on a waste of poverty-

tracks dotted the land, a few ducks sat on a par out in the river, and toadfish played round the boat. Now the wind shifted to the southeast and it was tack, tack across and back all the weary day. Occasional points of sand and shell ran out into the river from the eastern shore, and what a dreary out into the river from the eastern shore, and what a dreary waste of bleached palmetto and scrub that was between the river and ocean. Deer, snakes and buzzards monopolized the earth and air. During the afternoon, while beating, we ran in just above a shell bar that ran out some two hundred feet. Our loat had one scrious fault, she would not come round nicely, but would stick her nose into the wind and hang there, drifting. It was exasperating. Her rudder was not long enough or her sail large enough, or her shape right, or something else, so we had generally to push her around, with such a wind as we had. Well, we ran in just above the bar, and Capt. W, put her about with an extra shove on the tiller. But it wouldn't do, she nosed the wind and was satisfied. The captain glanced rearward and shouted to O., who was half asleep forward: who was half asleep forward:
"Jump up there, O., quick, and push her nose off with that pole."

He got up like cold molasses, took the pole and began to push along the gunwale like a canal boatman, and the captain yelled:
"Not that way, push her nose off!" And stolidly O.

kept trying to push her ahead, and we drifting on that bar. Again the captain yelled: "Blank you, I say, push her bow around?"

"Blank you, I say, push her bow around!"
While the flapping sail and swinging boom made confusion worse confounded. With pig-headed obstinacy, without a word, O. pushed on the pole as before. In a rage the captain shouted to me:
"S., jump up there, for Heaven's sake, and push her around."

iumped and attempted to obey the order, but the old

I jumped and attempted to obey the order, but the old pusher refused to give pole or place. I gave one glance astern, pulled off my shoes and stockings and jumped overboard in waist-deep water, put the painter over my shoulder, and began to tow. Overboard astern went W. and the captain and we pushed her into shallow water and safety, at the cost of lacerated feet for days, caused by sharp shells. Just above was another point. Under the lee of that we pulled the boat and anehored her for the night, the captain wrathy and the pusher glum, the latter presently muttering something about ungentlemanly treatment, whereat the captain let himself out in plain English for a few fleeting moments, the while we wrung out and spread out our soaked trouserloons. We reminded the old gent of the agreement and the danger, and he, seeing himself hopelessly in the minority, succumbed, presently apologized, whereupon the captain did the graceful and we swung into good humor again. While we were taking a smoke W. had gone ashore and presently called out, "Why, here are deer tracks, plenty of 'em." I got into some overalls the captain leat me in a jiffy, took some buck shells and my Parker and went ashore. W. had disappeared with his gun. I followed up the beach, which curved to the right, and was here only a few yards wide heaving the feet high. W. had disappeared with his gun. I followed up the beach, which curved to the right, and was here only a few yards wide, bounded by a bluff on the left about five feet high. After going a few hundred yards I saw far ahead two objects near the water, indistinct, and yet when I watched I was sure they moved. I laid down my straw hat and begun my stalk. The wind was off shore, and by taking objects near the water, indistinct, and yet when I watched I was sure they moved. I laid down my straw hat and begun my stalk. The wind was off shore, and by taking advantage of the contour of the bluff, an occasional bush, or picce of drift wood, I got within two or three hundred yards. Then, as cover grew scarcer, I laid prone and began my approach. It was very slow work, but every stretch took me nearer, while the deer strolled unconsciously back and forth. When I was within a hundred yards one of the deer walked up the bluff, in a trail, and disappeared. The remaining one, a spike buck, gamboled up and down the beach, seemingly playing like a calf. Before I got within gunshot he disappeared in the same manner as the first. I crouched close to the bluff and made my way to the spot where he disappeared, crawled up the bluff carefully and peeped over. Nothing to be seen but palmettos and bushes. I gathered my feet under me, squatting and looked—nothing. Slowly I rose with finger on trigger. Inch by inch I straightened until I stood erect. No deer in sight. Where could they be? As I saked myself this question a doe raised her head from the bushes where she stood feeding, quartering from me, about thirty yards away. I put one load into the butt of her car and down she went, while from under my feet almost the buck rose with a tremendous leap and straightened himself for the scrub, but he got the other broadside and down he went. I went to him, bled him, and then went to look at my doe. My doe wasn't there. There were the broken and displaced bushes where she had struggled, but that was all. If ever I was nonplussed it was then. I was satisfied she was near somewhere and that a dog would find her at once, but there wasn't any dog. If had seen her go off. The buck jumped in her direction, and when I shot him the smoke might have concealed her while she made the jump or two which took her to cover, or where she fell. But I had seen her go off. The buck jumped in her direction, and she had the jump or two which took

the waves.

Iv Poisoning.—To persons who are easily poisoned by the ivy we recommend the following, from an old friend whom we have shot and fished with in former years, and who could hardly go into the woods without being poisoned and suffering for days or weeks with skin cruptions in consequence. On this subject he now writes from Southern Illinois as follows: "I have found a simple and effective remedy for poison vines, etc. It will cure it as quick and certain as one can get poisoned, but the soner it is subject the better. It is nothing more nor less than citric acid. I apply it by wetting a piece in my mouth and rubbing the parts affected. Have never been obliged to apply it but once, and have used it on as many as fifteen or twenty different persons, perhaps twice as many. I discoved it myself; and you know how sensitive I always was to the poison. It is also splendid for a hacking cough, and I think beneficial in a malarial country where one is breathing vegetable poisons continually.—W. M. Locke."

Score for Mr. Reid.—A Virginia paper is in the field with this: "Mr. Peter Reid, of Frauquier county, says that a few days ago, as he was talking to a friend, he noticed a little snake, about a foot long, and before killing it he turned it over with the muzzle of his gun. To his surprise the snake ran up the gun-barrel, and he could not get it to come out, so he let it remain. As he was going home he saw a hawk flying overhead and raised his gun and fired at it. The hawk was not hurt, but seeing the snake in the air started toward was not hurt, but seeing the snake in the air started toward it and caught it on the fly. Mr. Peter Reid is a brother of a magistrate and a church member."

CLINTON SPORTSMEN'S CLUB.—Clinton, Mass., June 16.
—The Clinton Sportsmen's Club organized Wednesday
evening, June 14, and chose the following officers: President,
G. W. Goss; Vice-President, Charles Frazer; Treasurer, W.
P. Bowers; Secretary, Geo. L. Avery; Directors—G. W.
Truel, J. D. Hayer, F. E. Carr. The club starts with
twenty members.—G. L. A.

Woodcock Shooting on Long Island opens August 10. hey cannot legally be shot there in July, as many people

ANTELOPE AND TURKEYS.

I IIAD to teach myself how to hunt antelope, and it took me several years to learn. Now if I can see a band of them on the prairie I can always get close enough for a shot; and if you are going to try them this fall I will give you the benefit of my experience. Go out in a buggy with a span of good ponies, take a man to drive, and when you see a band of antelope drive around them a long way off, and get to windward at least a mile away. Then drive slowly at them down wind. When the band see or scent you they will run across wind about half a mile, and then turn and run straight up wind. When they run across wind turn the team and run across wind, too, and pretty soon they will run age wind about half a mile, and then turn and run past jump out of the buggy and blaze away with a Winchester rifie. You can generally get one or more. Disembowel them and let them lie, for you want new to go. Follow the band up at a sharp trot; they will commence to tire within six miles, and you can get as many as you want if you shoot at all. This sounds simple, but it is the most killing way I know. If antelope are ha flat and you aren foot, go to leeward, stick a lot of weeds in your hat, and crawily like a snake on your belly. If the band is east of you at sunset, and they cannot smell you, you can walk up to within good yards just before the sun sets. They cannot see anything when it is between them and the sun, but the moment they grow unexsy shoot. They can't see you or smell you, the they hear I HAD to teach myself how to hunt antelope, and it took me several years to learn. Now if I can see a band thing when it is between them and the sun, but the moment they grow uneasy shoot. They can't see you or smell you but they have some way of finding out; perhaps they hear one's footfalls. Bulfalo will try to pass you to windward, the same as antelope, but you must be on horseback to ride in ahead of them. I have shot a good many as they have run past me within the last five years.

Will "Keonk" tell what he knows about turkeys? I have hunted them a good deal, but I know he can give me a good many points. I know a place not a hundred miles from Cimarron where there are 10,000 turkeys in a section twenty miles wide and ten long; in fact, three little crecks plum full. I am going there October 10. There are some whitetail deer, too, but not many. Who wants to go with me? Anyone that does please say so.

Cemarkos, Kausas.

CIMARRON, Kausas.

"Snipe Shooting."—We have seen a photograph of a bas relief by Mrs. A. J. Kellogg, of Detroit, whose husband is the well-known fish commissioner. It represents a main shooting costume intently watching for a rise of his is the well-known is a commission. The representation in shooting costume intently watching for a rise of his favorite bird, and with his gun at a sportsman's "ready" with finger in readlaces to press the trigger. The man is a fine figure of an ideal sportsman, whose well-knit frame is well seasoned by long exercise and the pose is admirable, showing that the artist must be familiar with her subject.

Pennsylvania Woodcock.—The continued rains throughout the Middle States during the past spring has in many places ruined the prospect for good summer woodcock shooting. Not a few young birds have been destroyed, especially where they were hatched in districts exposed to inundation. Another cause which has affected them is the unseasonable cold weather we have been having.—Homo.

A Water-Proof Boat Paint.—Mix the lead paints for a 16-foot Long Laker, and for enough cover one coat; add one gill rubber solution of the consistency heavy varnish. Apply this paint heated nearly to boiling. After three years' hard service my boat is now and always has been water-proof. Do not heat the paint indoors, as benzine is used to dissolve the rubber gum.—Ned Norton.

Admondack Game.—Meacham Lake, N. Y., June 16.—
ne hunting season promises to be a good one. Deer signs The hunting season promises to be a good one. Deer signs are plenty, also partridge. The young broods are now out, more than I have seen in this section for years.—A. R. F.

Sea and River Hishing.

A scholar, a preacher I should say, that was to preach to procure the approbation of a parish, that he might be their lecturer, had got from his fellow pupil the copy of a sermon that was first preached with great commendation by him that composed it; and though the borrower of it preached it word for word as it was a first, yet it was utterly disliked as it was preached by the second to his congregation: which the sermon borrower complained of to the lender of it, and was thus answered: "I lent you, indeed, my fiddle, but not my fiddlesfelt for you are to know that provides when the property is the property of the provides when the property is the provides when the pro was thus answered: "I lent you, indeed, my fiddle, but not my fid-dlestick; for you are to know that every one cannot make runsic with my words, which are fitted for my own mouth." And so, my scholar, you are to know that as the ill pronunciation or ill accenting of words in a sermon spoils it, so the ill carriage of your line, or not lishing even to a foot in a right place, makes you lose your labor; and you are to know that though you have my riddle, that is, my very rod and tackling with which you see I catch fish, yet you have not my fiddle-stick; that is, you yet have not skill to know how to carry your hand and line, nor how to guide it to the right place; and this must be taught you—for you are to remember I told you angling was an art— either by practice, or a long observation, or both.—Izouk Watton.

THE NIAGARA FLY CASTING.

THE NIAGARA FLY CASTING.

NIAGARA FALLS, June-15, 1882.

It was a source of disappointment to a large number of the visiting sportsmen, at the time announced for the fly casting to take place, that the weather was so unfavorable. The wind was blowing heavily from the southwest and a cold disagreeable rain had commenced. It was found impossible to postpone the casting to another day, as the remainder of the week would be fully taken up by the other be siness of the convention. The waters selected for the casting were in the canal basin, about a table from the town. The buoys being placed, the men were called to the score. The wind was blowing strong, which made the casting difficult. The first contest was the trout and black bass casting; single hand, open to all members. There were only four entries in this contest. The following is the summary of scores, as given by the judges:

SUMMARY.		
Frank Arrowsmith Length of rod.		With allowance.
George L. Hier11ft, 136in,	71ft. 68ft.	76 ft. 6036ft.
J. J. Meldram 11ft, 6 in.	66ft.	0.0781
H. Pritchard	5511.	. 60 ft.

Club, of Rochester, won the first; George L. Hier, of the Onondaga Fishing Club, of Syracuse, the second, and John J. Meldrum, of the same club, the third prize. Messrs. A. Porter of Niagara Falls, and Seth Green of Rochester, were judges, with H. L. Leonard of Brooklyn, referee.

were judges, with H. L. Leonard of Brooklyn, referee. Before the first contest was closed a heavy rain storm came up, which necessitated an adjournment until fairer weather. At three o'clock in the afternoon, the rain having ceased, the B. F. Nichols Sweepstakes were called. The casting was much more accurate than in the previous contest, and the distance thrown greater. All the contestants did fine execution in both accuracy, style and delicacy. The following is the score as furnished by the judges:

SUMMARY.		
Length of rod.	Casts.	With allowance
Reuben Wood10ft.	74ft.	79ft.
H. L. Leonard10ft.	75ft.	Soft.
George Hier	75ft.	75ft.
H. Pritchard	70ft.	
J. J. Meldrum	71ft.	
W. S. Barnum	ouft.	

Mr. Reuben Wood, of the Onondaga Fishing Glub, was awarded the prize, after a long discussion by the judges, on the ground of style, though the longest official cast was Mr. Leonard's, who actually won by distance. Mr. H. L. Leonard, of Fountain Gun Club, Brooklyn, was given second and George Hier, of the Onondaga Fishing Club of Syracuse, the third prize. Messrs. A. A. Porter, of Niagara Falls, and Charles Burgess, Lockport, acted as judges, with George Marsh, of Buffalo, referee.

In the amateur class there were only two entries, W. S. Barnum, of the Onondaga Sportsmen's Club of Syracuse, who won first prize, and Fred. Fraiser, of the Lyons Sporting Club, the second. Following is the score as furnished by the judges.

SUMMARY. Length of Rod. Distance.10ft. 66ft.11ft. 2in. 60ft. W. S. Barnum Fred. Fraiser

FISHING AT THE RICHARDSON LAKES.

FISHING AT THE RICHARDSON LAKES.

I'T would have done your soul good could you have been here the last two weeks and seen some of the catches of frout that have been brought into the Middle Dam Camp. The ice went out the 22d of May, and two days afterward the ball opened with an eight-pound trout, captured at the Middle Dam. A day or two afterward the camp was full of sportsmen, and up to the present date every one has caught all the fish they wanted to. This is saying a great deal, when we consider what cormorants fishermen are. One gentleman who has been lure for years told me had caught more fish than he knew what to do with, and had land the best ten days' sport be had ever had in his life, and he has fished all through New England and the provinces. He added, "I don't like to be a hog, and am going home, and shall send some of my friends down."

The fish have run the largest here this spring that I ever knew in twelve years' experience on these waters. Wm. A. Chase, of Holyoke, Mass., took five trout from the West Arm of the Upper Richardson Lake that weighed twenty-two pounds—"honest fujun"—an average of over four pounds each. There were twelve in Mr. Chase's party, four ladies and eight gentlemen, and the total each for ten days was about 300 pounds of trout. They fished also at the lead and foot of the Narrows, and at the Middle Dam, the fishing being splendid in all four places. Messrs. Minter, Norris, Favor and Jones, of Lowell, Mass., stopped about a week and took about 300 pounds. Among them was a seven-pounder, two six-pounders, three five-pounders, and several trout ranging from two to five pounds each. Harry Perkins and friend, from Salen, Mass, have had the same good luck as others, and have captured a large ones among them. Messrs. Bearse and Frost, of Lewiston, Me., to use their own words, had the best time and the best fishing they ever had in their lives. They caught several trout ranging from two to five pounds each, learry Perkins and friend, from Salen, Mass, have had the same good luck a

trout have been carried off from the Richardson Lakes, and still the water is alive with them.

The most of the trout have been taken with worms and minnows. One warm day a few were taken with a fly. The weather has been the coldest and roughest I ever saw here at this season of the year, in an experience of twelve years. It has rained about all the time, and when it did not rain the wind blew a gale. Whether the weather has improved the fishing I cannot say, but one thing I am sure of, no one ever saw or heard of such tishing as the people have had here this spring, and the old sportsmen here say it will continue for at least three weeks longer.

The steamers on the Richardson I also make two round.

located between Camp Whitney and the Upper Dam landing. Messrs. Sater, Howe, Sprague and Cabot have all spent a week in camp, and had excellent fishing. M. P. Kennard, Esq., Assistant Treasurer of the United States, and Chief Justice Gray are both members of the Aziscobos Club, which is composed mostly, if not wholly, of Boston gentlemen. Samuel Betton, Esq., one of the owners of the prettily located Camp Bellevue, just above the Upper Dam landing, is now at his camp, and is having splendid luck fishing. Messrs. McKean and Boric, the two other owners in the camp, are expected soon. These gentlemen are all from Philadelphia. J. A. L. Whittier, Esq., and a party of friends from Boston are at his romantic cottage, Birch Lodge, beautifully situated on the shore at the head of the Upper Richardson Lake, near the West Arm. They are having fine fishing, and one of them took a six-pounder yesterday.

having fife fishing, and one of them took a six-pounder yesterday.

Parties who contemplate coming here should provide themselves with a copy of "Farrar's Richardson and Rangeley Lakes, Illustrated," which is a complete encyclopedia of the whole country. To a stranger coming here for the first time it is worth ten times its price. There are only two direct ways of reaching the Richardson Lakes. First via Portland, Bryant's Pond and Andover; the second via Bethel and Upton. There are two other routes, however, that may be taken. One via Portland, Gorham or Berlin Falls and Errol Dam; and the other via Portland, North Strafford, Colebrook and Errol Dam. The latter takes parties through the celebrated Dixville Notch, a more beautiful and romantic piece of scenery than the White Mountains ever saw.

LAKE WELDKENNEBACOOK, Maine, June 9.

LAKE WELCKENNEBACOOK, Maine, June 9.

MY FIRST RAINBOW TROUT.

MY FIRST RAINBOW TROUT.

AM sitting here in my room overlooking the sparkling waters of the McCloud River as it comes foaming and splashing along over its pebbly and rocky bottom from its source up on the snow-capped mountain of old Shasta Butte. The water as it leaves the cold snow and icy mountain is, of course, as cold as ice can make it, and at the beginning is nothing but a small brook which one can easily step across. But as it descends it is fed all along by thy, spiteful running creeks, until it forms a large and angry stream. Then thowing along for some distance through a level country, where there is but little fall, the sun warms the water some degrees before it reaches the large spring. It is the general supposition that this large spring is fed by the snow and ice on the mountain and runs for a distance of some forty miles underneath the ground, and then breaks out at a point where the water as it breaks out of the ground is very cold, and adds about one-half more volume to the main stream, and after the water reaches this spring and the two currents are mingled together, it leaves the whole stream again nearly as cold as ice-water. Starting from there down through the mountains, falling at an average of fifty feet to the mile, and warming in temperature one degree every ten miles, it adds its waters to those of Pitt River, and from there is called Pitt River. Then it flows down and empties into the Sacramento, and from there is carried to the ocean. Many a pleasure-seeking party from the cities and towns of California find camping places along it banks. The river of itself, with its pure, cold water, is a most beautiful sight, sajing nothing of the millions and millions of the finny beauties which inhabits its waters, or the beautiful scenery and the sweet-scented wild flowers that grow on its banks. The month of Mny is, I think, the grandest time of the year here, as the whole mountain's sides are masses of variegated flowers. The nights at this time in the year are cool and the days are perfecti

can be found in their stomachs.

The hunting in this vicinity is very good. Large numbers of deer, bear, panthers, lynxes and wild cats can be found in the mountains. The bear are nearly all of the black or the brown kinds, with a few cinnamons, and once in a

while a grizzly.

with though you have my fiddle, that is, my very rod and with which you see Leatch fish, yet you have not my fiddle. Its you yet have not skill to know how to carry your hand not how to golde it to the right place; and this must be mer at this season of the year, in a negretience of the weather late it will be a grizzly.

HE NIAGARA FLY CASTING.

MIMARA FALIS, June 15, 1889, a source of disappointment to a large number of visiting sportsmen, at the time amounced for the wind me showing bearing the weather was so unfavorate with which agree the weather has been the collects and roughest I ever saw white a grizzly.

The steamers on the Richardson-Rangeley Lakes Transportation Company are building a small beleful the more distant fishing grounds. The Richardson-Rangeley Lakes Transportation Company are building a small beleful the South Arm, and are also building a sleep spot spot me casting to another day, as the croft the week would be fully taken up by the other of the convention. swift and good two feet deep. But I seemed to have a death-like grip on my rod and had hung to it, and after crawling out of the water at a double-quick speed, I first took a glance around to see if any one had witnessed my adventure. I then grasped my reel and got a strong foothold and commenced winding in my line.

To my great joy I found that the monster, whatever he may be (and I doubted not but what it was a whale or shark), was still fast to my line. The fish was, however, nearly across to the other shore and some way up the river; but I was then perfectly cool and collected after taking my cold bath, and soon had him up within some twenty feet from where I was. He was jumping from two to six feet out of the water and splashing around spitefully; but it was no go; I soon had him safely landed some thirty feet from the water. I had that day the satisfaction of eating for my dinwater. I had that day the satisfaction of eating for my din-ner one of the finest fish I had ever tasted, which was a ten-pound rainbow trout. pound rainbow trout,

McCLOUD RIVER, California, 1882.

LIGHT RODS VS. TOY RODS.

LIGHT RODS VS. TOY RODS.

Editor Forest and Stream:

In Forest ann Stream of June 8 I find a communication on the "Weight of Rods," by Geo. W. Van Sielen, in which that gentleman takes me to task for the disfavor with which I regard extremely light and withe-like trout fly-rods, on page 229 of my "Book of the Black Bass."

Now, while I court and invite manly, fair-minded and straightforward criticism upon anything I have written, I do not consider the article in question of that character.

I know nothing whatever of Mr. Van Sielen beyond an occasional contribution to Forest and Stream, but in this instance he has not shown himself to be an honest or a competent critic, for he disproves nothing that I have written,

petent critic, for he disproves nothing that I have written, neither does he prove anything of his own knowledge or experience. On the contrary, he misrepresents my language neither does he prove anything of his own knowledge or experience. On the contrary, he misrepresents my language and perverts my meaning; says that I am supercitious and absurd; charges me with a lack of experience and skill, and a want of patience and scil-control. He is sareastic, insoleut and presumptuous. The animus of his article is manifest when he leaves the subject in hand to cast a slur upon my profession, and wanders off to the realms of speculation to say that if I play billiards I use a twenty-ounce cue. He says: "The Doctor actually expresses his preference for thrashing around (after black bass, though, in this case, with a ten-ounce rod, and enduring the extra straining of the brachial muscles, doing that all day, to the time consumed in the operation; and to "the general demoralization and used-up condition of the flexors and extensors of his arms," in simply playing and handing a big black bass in open water!"

This sentence contains an untruth, and is made up of garbled extracts from two entire paragraphs of my book, which a careful and sincere critic would have quoted entire, or not at all. I present them here to the impartial reader, in

or not at all. I present them here to the impartial reader, in justice to myself:

justice to myself:

"I am a great stickler for extreme lightness in rods when compatible with strength and action, but there is a certain limit in weight that must be observed, so as to conform to and preserve other and equally essential qualities in a good working rod. Now, while I will guarantee, in open water, to land any black bass that swims, with a well-made six-ounce split bamboo fly-rod, I will not undertake to say how much time would be consumed in the operation; nor do I envy the energy depending on the properties of the constitution of the constitut envy the general demoralization and used-up condition of the flexors and extensors of my arms that would ensue at the close of the contest. With a rod of suitable weight, the largest bass can be safely and pleasantly handled, and it is worse than useless to make a toil of a pleasure by using independent means."

worse than useless to make a toil of a pleasure by using inadequate means."

"A trout fly-rod, then, weighing eight or nine ounces, and not more than eleven feet long, is just about right for ordinary black bass fishing; but where the bass run large, averaging nearly or quite three pounds, a somewhat heavier rod, say ten ounces, will be found a more suitable and pleasanter rod to handle, though the eight-ounce rod will do even here, for one who is an expert fly-fisher, and who does not mind a little extra straining of the brachial muscles."

When it is considered that the largest black bass weigh from twelve to fourteen pounds, and that where they average three pounds they run up to six or seven pounds or more, the above paragraphs will be better understood.

Mr. Van Sielen further says: "The doctor has yet to learn the delight and sweet reward of controlling oneself, and delicately handling and killing with a five-ounce rod a three-pound trout. There are a dozen gentlemen in the Willewenoe Club who can do it; and all good fly fishermen (for trout) know that the lighter the rod and the heavier the fish the greater the pleasure (provided you have the skill)."

I have done this and more. Last winter, in Florida, I "deli cately handled and killed" a thirty-pound redfish on an eight-ounce rod and ordinary black bass tackle. I have "deli-cately handled and killed" trout of three pounds and over (on the Upper Peninsula of Michigan and on Lake Superior) with a cedar fly-rod with lancewood tip, weighing not quite five ounces. I have experimented and fished with fly-rods with a cean hy-rod with antewood up, weighing five duries. I have experimented and fished with fly-rods and bait-rods weighing from two ounces to two pounds, and with then have killed all manner of fishes, from the Muryland gudgeon, weighing less than an ounce, to the striped bass and redfish, weighing forty pounds and over. Barring the Atlantic salmon, I cannot now recall a single genus of inland or Atlantic coast fishes, that will take a bait or rise to a fiv that I have not taken with the rod and line, not ex-

the Atlantic salmon, I cannot now recall a single genus of inland or Atlantic coast fishes, that will take a bait or rise to a fly, that I have not taken with the rod and line, not excepting sharks, rays and sawfish; but I will not say they were all 'delicately handled and killed."

From this varied experience, extending over a period of hirty-five years, I assert (and the most skillful fly-fishers and anglers of the largest experience will affirm the assertion) that 'the lighter the rod and the heavier the fish, the greater the pleasure," is not a true aphorism as regards trout or any other fish, be it never so skillfully handled. There must be a limit to the lightness of the rod or the 'heft' of the fish. Any expert fly-fisher can occasionally kill, in open water, a three-pound trout on a five-ounce rod—it is no great feat; but is it the best thing to do? What amount of pleasure would an angler derive from a rod weighing from four to seven ounces on the Rangeley lakes or on the Nepigon' What delight or pleasure would an angler experience with a three-pound trout or black bass on a five-ounce fly-rod in shallow and rocky, brushy or mossy waters? The fish would have it all its own way. The best the angler could do would be to hold it in cheek by main strength and the spring of the rod. Should a lively fish of this weight make for the brush or sweeds, how could the angler prevent it with such a switch's He could not make a sugle turn of his rech, nor take an inch of line from the fish, which would get foul in spite of him;

for giving the butt under these circumstances would smash for gying the but under these circumstances would smash the rod. This is where the extra "straining of the brachial muscles" comes in, to say nothing of the "delight and sweet reward of controlling oneself."

Many fishers are deceived as to the weight of their rods. I have known men who bragged of using five, six or seven-ounce rods, which when put on the scales weighed fully eight aureus

ounce rods, which when put on the scales weighed rully eight ounces.

But there is another function of the fly-rod more important than "delicately handling and killing" the fish, which Mr. Van Sielen seems to have overlooked: that of casting the fly. None but the shortest casts can be made with extremely light and willowy rods weighing from four to seven ounces, and from nine and a half to ten and a half feet in length. A long line cannot be lifted neatly, nor a smooth, straight cast of any considerable length be made with such rods. with such rods

with such rods.

I do not retract a single word I have written on this subject. A rod weighing eight ounces is certainly light enough for either a fiy-rod or bait-rod, for trout or black bass, and can be handled and manipulated with the greatest ease and can be handed and maintuited with the greatest ease and delicacy by anyone possessing the strength of a youth, I still maintain that fly-rods weighing from four to seven ounces are toy rods, and not suitable for black bass fishing, or for trout that weigh upward of a pound. They may be very pleasantly used, however, as I have stated, on small streams where the trout run from a half pound downward, which is no exactly surfaces they are results found in the

streams where the trout run from a half pound downward, and it is on such waters they are usually found, in the hands of the coxcombs and diletanti of the fraternity, who prate of "delicately handling and killing" three-pound trout on four and five-ounce rods, as every day occurrences. As to my billiard playing, I gave that up several years ago, but I took great delight in it for many years, and always used a fourteen-ounce cue. I will concede, however, that Mr. Van Sielen's experience and opportunities have given him the advantage of me in this game, for I must confess that I am totally ignorant of the "Bowery style."

CYNTHIANA, KY.

Cynthiana, Ky.

A WORKING CLUB.

Chagrin Falls, O., June 5, 1882.

EVERY observing person who has made any study of the subject has observed the crudeness or inadequacy of the game and fish laws of each and every State in the Union. Some are much better than others, but all are defective. The meagerness of appropriations for the purpose of stocking our waters with desirable fishes is remarkable considering the great importance of this matter to the people.

ing the great importance of this matter to the people.

If an acre of water will produce as much food as an acre

of water will produce as much food as an acre

and when it is If an acre of water will produce as much food as an acre of land, as is stated on good authority, and when it is known that our inland waters are producing almost nothing at all, what reason is there in a great State like Ohio making an appropriation of a few thousand dollars when economy would indicate a generous outlay which, in a short time, would be repaid a bundred fold to the people who paid it? But the remedy is what we are after, and that can be found only in concert of action. What we need is a fish and game club in every town and village in the country. These are not expensive, and all that is needed is for two or three interested individuals to get their sporting friends together. not expensive, and all that is needed is for two or three interested individuals to get their sporting friends together, organize as simply as possible, and go to work. A club to be effective should not have too many members. A dozen active ones are worth much more than those with a hundred members who are sleepy heads. Meetings need not be more frequent than quarterly, except when important business is on hand.

may ask what can we accomplish with a club. I you what we have done with a little club of ten or a dozen members.

We have created an interest in fishculture, and stirred up

dozen members.

We have created an interest in fishculture, and stirred up the farmers in this vicinity until there is not a township within fifteen miles from this place which has not a carp pond stocked, some of them having three or four; we have introduced small-mouth black bass in half a dozen new waters; we have erected a pond for propagating carp, and have it stocked with fish which will probably spawn this year, from which we will, as soon as possible, distribute carp free to all who will take care of them; we have constructed another pond of over half an acer for propagating small-mouth black bass, and we have reduced pot-fishing and pst-hunting to a minimum. There is much more which we have done, but I have already said so much that I fear I shall be marked down as an egotist.

Through clubs, we can correspond with each other and agree upon wholesome legislation, and bring to bear a pressure on our legislatures which they will not resist. Pot hunters and fishers are afraid of clubs, and since the organization of ours we have been able to cut down the depredations of these outlaws, which we could never have done as individuals; a few arrests made through the club struck terror to them, until they tremble at anything that so much as smells of club. Again, the fish commissioners, State and

as smells of club. Again, the fish commissioners, State and National, are much more likely to furnish fish for stocking where there is a club, naturally expecting that the fish will be better looked after where such an institution exists. Now, brother sportsmen, do not wait, but a few of you in each city and village meet and organize a club and keep it

each city and village meet and organize a cuto and keep it up, and it will not be long before you begin to see the bene-ficial effects resulting therefrom. With clubs in each town or village we could have State conventions and accomplish a vast amount of good. J. J. Stranahan, Secretary Chagrin Falls Fish and Game Club.

Secretary Chagrin Pails Pish and Called Onegon Hill (Pa.) Trouting.—Wellsboro', Pa.—At the risk of seeming prolix I add a word this morning concerning Oregon Hill. Matoon called at my den an hour ago and gave me a few points, to wit: The fly-fishing is better in Little Pine Creek than it has been for years back. Cause, thought to be the driving of the trout from Big Pine by the black bass. The old mill pond, three miles from the Corners, is well stocked with fine trout; but the independent hood-lum is getting away with them rapidly. The pond, mill, house, with ten acres of land and water, can be leased for a few dollars—about enough to cover taxes. Then the waters house, with ten acres of land and water, can be leased for a few dollurs—about enough to cover taxes. Then the waters can be posted and preserved under the lease. (Have half a notion to lease the place myself.) Fine strings of trout have been caught in most of the streams mentioned in my last, but just now it is very cold for the season—backward and up to the stream of the stream of the stream of the week. There is five and one-half miles of good brook-fishing on Trout Run, and one of its tributaries, Sherman Fork, affords two miles, with a fine fall of ten feet, and good flyfishing in the basin below. Probably the first week in June will give the best fishing, but a man ought to take only what he needs for present use, and I can take them any time during the open season. Yours fraternally, Stnon Peter.

SALMON FISHING IN THE JACQUES CARTIER.

CARTIER.

RISING far to the north amid the Laurentian Ranges the River Jacques Cartier, on its way to join the St. Lawrence, presents the most varied of grand and ricturesque seenery; at times midly rushing through rocky gorges, whose mountainous banks almost hide the stream from the sun's rays, at times widly hurling its waters over precipitous falls amid a never 'ceasing sound of its distant thunder, again peacefully rippling over its pebbly bed, again forming deep pools and placid miniature lakes, this river ever offers to the tourist and sportsman attraction possessed by few others. To the latter, beside the enchanting character of the stream, the lordly salmon and speckled trout enrich its waters, which are yearly fished in by the lessees of the river, citizens generally from Quebec or Montreal, being within twenty miles of the former place.

Not long ago the writer formed one of a party to visit this wayward stream, and put up at the cottage of a Mr. Dery, a

Not long ago the writer formed one of a party to visit this wayward stream, and put up at the cottage of a Mr. Dery, a farmer of the locality, and whose dwelling is delightfully situated on the west bank close to the rustic looking bridge, which eroses in a peculiarly formed freak of nature and just above a beautifully wild fall and cataract. Looking down over one side of the bridge the visitor perceives a deep hole of the appearance of a well, in which can be distinctly seen hundreds of salmon; but they are safe from the snares of the sportsman; no fly, however gaudy, has been known to tempt these fish from this watery cavern, whose base can not be seen on account of its depth and the turbulence of its waters, in which the salmon ascend and descend, gyrate and lazily rest themselves. The formation has evidently been caused by the countless years of the eddies in the place. One never tires watching the movements of theses fishes, some of which are perfect monsters.

Below the bridge are the wild romantic falls up which the

Below the bridge are the wild romantic falls up which the salmon rush to reach the spawning grounds and at the foot of which is considered the best take in the river, but it is no easy task to land a large salmon in that mad rapid, and many which is considered the best take in the river, but it is no easy task to land a large salmon in that madrapid, and many a rod and line have come to grief and many a disherman drenched and run the risk of losing his life in the attempt to follow his prey down the stream, and to do so he must swim like an otter and be nimble of foot in leaping from stone to stone and keep his ground on the treacherous river bed. Such an accident occurred to one of our party, and it certainly seemed to be a most hazardous undertaking, but he was richly rewarded in the capture of nigh a twenty pounder. For my part I was not so rash in encountering such tasks but followed the stream from above the rapids as far as the Red Bridge, about a mile, where is situated the pretty little village of Ste. Jeanne de Neuville, which, since the building of the North Shore has somewhat lost its former Arcadian character, for hotels, stores and neat villas have taken place of farm houses and simple shops. But the river cannot be altered and it still rushes on or quietly flows as long ago, through its borders of unspeakable loveliness and wildness. There are stretches here and there, which placidly widen into lakes and on which are placed boats to paddle about in or whip the surface for speckled trout, and this I found more congenial than the daring of my companion, for I was better able to study the varied beauties of the localities and the quiet and peaceful touches of nature here and there presented by the wooded banks and forest relades.

to study the varied beauties of the localities and the quiet and peaceful touches of nature here and there presented by the wooded banks and forest glades.

We spent three days at this village fishing up and down the stream with wonderful success, securing a good basket of trout and salmon. The village hotel was next and had a good table at the most extraordinary moderate charges. The village of St. Raymond, on the river St. Anne, which is a famous trout stream and of wonderful beauty, can now be reached by railway train, and opens up to the sportsman many advantages to try his skill with rod or gun. In fact all this country is full of lakes and rivers teeming with trout, bass and lunge, while swamps and woods are teeming with snipe, woodcock, partridge and other birds, while the tourist is offered views of every description of landscape, wood and water.

water,
From Ste. Jeanne de Neuville, the North Shore Railroad rrom Ste. Jeanne de Neuvine, the North Shore Ramoau runs the traveler into Quebec within an hour, as the track is for nearly the whole way a down grade. Barked Trout.—New York, June 19.—"An Old Guide," of Fish's Eddy, N. Y., in your issue of the 15th inst., in an article headed "Planked Trout," reminds me of a toothsome article headed "Planked Trout," reminds me of a toothsome feast a party of us enjoyed years ago in the Adirondacks, upon large brook trout prepared for the coals by Gen. Richard U. Sherman. Each fish was split open and fastened with wooden skewers to a large piece of fresh birch bark so braced by cleats that it could not be warped much by the heat. Into gashes slashed in the thickest part of the flesh were inserted thin slices of pork, and the bark set up on edge before a bed of hard wood coals. There may be a better method of cooking a large brook trout, but the subscriber has not wasted any time since then in experiments, that style being good enough for Yours truly, H. H. Thompson.

LARGE ADIRONDACK TROUT.—Canton, N. Y., June 17.—

Range Adirondack Trout.—Canton, N. Y., June 17.—

Lake, one morning this week, caught with a worm, below the dam, consisted front that measured twenty-two inches in length, and spread sprea a speckled frout that measured twenty-two inches in length, fifteen inches in greatest girth, and weighed five and shree-quarter pounds. A day or two before he caught one weighing four and three-quarter pounds. Such fish are rare, though the Oswegatchie River produces them larger than any other water east of the Rockies, except. Maine, I helieve. Reiley Bishop keeps the Cranberry Lake House this season. While this is not a "high-toned" resort. Mr. Bishop knows how to make people comfortable, and Mrs. B. knows just exactly how a trout or venison steak (in season) should come upon the table.—J. H. R.

"Down by the Dam."-Boston, Mass., June 17. "Down by the Dam,"—Boston, Mass., June 17.—Editor-Forist and Stream: I am surprised that you should have been imposed upon by your contributor, "Major Verity," The poem "Down by the Dam," which he sent to you, had already been published in the June Century. It appears very strange to me that you should have been so duped; and I have little regard for the honor of your veracious correspondent.—Hubbite. [Our correspondent's criticism would be all right if his facts were as he states them. But the truth is that Major V.'s poem was not printed in the June Century. There was, it is true, a poem in that magazine, of which "Down by the Dam" is a very close imitation, but we think that in true poetic merit our own contributor's verses rather outshine the rhymes of the Century bard.]

BASS FISHING IN THE NIAGARA KIVER.—On Friday last, Mr. L. Herdell. connected with the International Hotel, at Niagara Falls, caught eighteen black bass and one small white bass in the Niagara River, in two hours, with a fly. They were all taken at a spot about ten minutes' walk from the grounds where the late New York State Association for the Protection of Fish and Game Tournament was held. They ranged in weight from half a pound to a pound, and were a fine lot of fish. The fishing in the river for black hass, rock hass and pickerel is excellent now, and parties may be seen at any time busily engaged in landing the finny beauties.—M.

THE AMERICAN FISHCULTURAL ASSOCIATION.
PROCEEDINGS ELEVENTH ANNUAL MEETING.
[CONTINUED].
MATERIALS FOR A HISTORY OF THE SWORD-FISH.

MATERIALS FOR A HISTORY OF THE SWORD-FISH.

BY G. RROWN GOODE.

THIS essay upon the Sword-fish and its uses makes no claim to be considered a contribution to knowledge. In the course of six summers' study of fish and fisheries on the const of New England and as many winters of research into ichthy-ological liberature, a considerable quantity of notes concerning the Sword-fish have accumulated in the writer's portfolio. These are printed below, arranged in systematic order, with the hope that they may stimulate inquiry by showing at a glanne what is now known about the habits of this mysterious fish and what it is desirable should be learned. Such of the tacts as have not previously been printed are for the most part drawn from the experience of fishermen either by the writer or by others who have kindly responded to latters asking for information by interviewing their local authorities. Mr. John H. Thomson, of New Bedford; Mr. Willard Nye, of New Bedford; Mr. E. G. Blackford and Mr. Barnet Phillips, of New York; and Mr. C. B. Fuller, of Portland, have aided thus. Capt. Benjamin Ashby, of Noank; Capts. R. H. Hurlert, John Rowe, and George H. Martin, of Gloucester; and Capt. I. H. Michaux, of New Bedford, vetoran swordfishermen, have been asked questions innumerable, and their words are frequently quoted. As far as possible, all statements have been confirmed by personal observation; but for this there has been little opportunity. Few fishes are so difficult to observe, and a student may pass summer after summer in the attempt to study them with few results other than the sight of a few dozen dorsal fins cutting through the water, a chance to measure and dissect a few specimens, a page or two of estimates of annual captures, and perhaps the experience of having the side of his boat pierced by one of the ugly swords.

signo of a few dozen dorsai has circing through the water, as a chance to measure and dissect a few specimens: a page or two of estimates of annual captures, and perhaps the experience of having the side of his boat pierced by one of the ugly swords.

This paper is the fourth of a series upon "The Natural and Economical History of American Food-fishes," the first, on the Scuppaug, and the second, on the Bluelish, having been published by Professor Baird in the Report of the United States Fish Commission, Part I (1873); the third, on the Meuhaden, in Part V (1870) of the same report. "The History of the American Whale Fishery," by Mr. Alexander Starbuck in Part IV, is also properly to be enumerated in this series.

POPULAR NAMES OF SWORD-FISH.

The names by which the fish under consideration is known all have reference to its most prominent feature, the prolonged snout. The "Sword-fish" of our own tongue, the "Zucaard-fish" of our own tongue, the "Zucaard-fish" of our own tongue, the "Zucaard-fish" of continuous the starbuck in Part IV, is also properly to be enumerated by "Nex depada" in Cuba, and the French "Espadar", "Dara" and "Epsee-apada", the Spaniard's "Espada", "Espadar-fish" of our own tongue, the "Zucaard-fish" of continuous the starbuck in the starbuck in Part IV, is also properly and the "Independent of the "Gladuis" of ancient Italy and "Xiphias", the name by which Aristotle, the father of zoology, called the same fish twenty-three hundred years ago. The French "Espadar" and the "Independent year and on the same fish and French West Indies carry out the same idea;

are members of the same rauna. Spear-usa is a much bound name.

The "Sail-fish", Histiophorus americanus, is called by sailors in the south the "Boohoo" or "Woohoo". This is evidently a corrupted form of "Guebucu", a name apparently of Indian origin, given to the same fish in Brazil. It is possible that the Tetrapturus is also called "Boohoo", since the two genera are not sufficiently unlike to impress sailors with their differences. Bleeker states that in Sumatra the Malays call the related species, H. Iladius, by the name Joohoo (Juhu), a curious coincidence. The names may have been carried from the Malay Archipelago to South America, or vice versa, by navigators.

species, H. guains, by the mainer may have been carried from the Malay Archipelago to South America, or vice versa, by navigators.

In Cuba the Spear fishes are called Antifa and Aguja de Parladas; the Sail-fish, Aquja prieta or Aquja voludora; Tetrapturus albidus is specially known as the Aquja blunca, T. albidus as the Aquja de Casta.

In the West Indies and Florida the Scabbard-fish or Silvery Hair-tail (Trichiuvus lepturus), a form allied to the Nyhias though not resembling it closely in external appearance, is often called "Sword-fish". The body of this fish, is shaped like the blade of a saber, and its skin has a bright intellicuster like that of polished steel; hence the name.

The various species of Sticklebacks, Casterosteus wouleatus, G. aweboraceasis, and Pygosteus occidentalie, are known as "Little Sword-fish" by the boys of Portland, Mc., and vicinity. The spines, damagning in the extreme small fingers of tyro fish-gatherers, give reason to the name.

Sail-fish appear to occur throughout the tropical and southern parts of the Atlantic and the Indian Ocean, Their names, wherever they are found, point to its most striking characters. In Marcgrave's time the Portuguese of Brazil called it Bicuda, referring to its snout, and Rochefort, in his History of the West Indies, calls it the Bécasse de Mer; a bécasse being

a long-snouted bird like a woodcock or a snipe, while in the Malay Archipelago the Dutch call it Zec-snip or "Sea-snipe." The Malays of Amboyna called it the Ikan-layer or Fan-fish, in allusion to the fan-like movements of its dorsal fin, while those of Sumatra called it Ikan-jean or Sai-fish. The French Voilier and the Dutch Zeyl-fisch and Bezaan-jisch mean the same; a bezaan being the sail upon the mizzen mast of a ship. The names "Boohoo" and "Woohoo" have already been referred to. The family name is "Myl-meen", signifying "Peacock-dish".

POEY'S DESCRIPTIONS OF TETRAPTURUS ALBIDUS AND TETRAPTURUS AMPLUS.

It is quite probable that the larger species of Tetrapturus, T. amplus, Foey, which frequents the waters of Cuba, in company with the species now so often seen on our coast, may yet be found on the coast of the United States. It seems desirable, therefore, to quote here, in full, translations of the original descriptions. These species should both be critically compared with the Tetrapturus Georgii, described by the Rev. H. T. Lowe from Madeira.

"It is very strange that the fishes known at Havana by the names Aguja and Aguja de Paladar have never been described in ichthyological works. Their size would naturally attract the attention of travelers, and since they are very common for four months in the year it would have been very easy to obtain them. Their flesh is palatable and always wholesome. They may have been confounded with T. belone of the Mediterranean, especially since the Xiphias gladius, here known as the Emperador, is often taken in our waters.

It is only necessary to glance at the figure of T. belone given by Cuvier and Valenciennes and to carefully follow the description, to be satisfied that it is another species. The Histiophorus americanus, which we call Aguja prieta or Aguja voladera, is also found on our shores. Of the true Tetrapturus and befalus and the Aguja de Casta (Tetrapturus ampulse.

Tetrapturus albidus) and the Aguja de Casta (Tetrapturus and up to the middle of July; some ar

Tetrapturus albidus is abundant during the month of June and up to the middle of July; some are taken in August. The ordinary weight is 40 pounds, though they are sometimes taken of 100 pounds weight.

Tetrapturus ampius makes its appearance at the end of July, and is most abundant during August. Its ordinary weight is 200 to 300 pounds, but it reaches a much greater size, and is often taken weighing 400 to 500 pounds, and even 800.

The males are the smaller. These two species swim at the depth of 100 fathoms. They journey in pairs, shaping their course toward the Gulf of Mexico, the females being full of eggs.

depth of 100 fathoms. They journey in pairs, shaping their course toward the Gulf of Mexico, the females being full of eggs.
Only adults are taken. It is not known whence they come, where they breed, or how the young return; it is not even known whether the adult fishes return by the same route.
When the fish has swallowed the hook it rises to the surface, making prodigious leaps and plunges; exhausted at last, it is dragged to the boat, secured with a boat-hook, and beaten to death before it is hanled on board.
Such fishing is not without danger, for the Tetrapture sometimes rushes upon the boat, drowning the fisherman or wounding him with his terrible weapon.
The fish becomes furious at the approach of sharks, which are its natural enemies. They engage in violent combats, and when the Tetrapture is attached to the fisherman's line it often receives frightful wounds from its adversary.
The ovaries are large; the ova are small and yellow, and nearly one-eighth of an inch in diameter.
The Cuban fishermen agree in admitting under the name Aquio blanea two species, one called Cabezona (large-headed); the other smaller, the nape lower. I agree with them to some extent; yet, although I have drawn and measured many individuals of the two kinds, I do not dure to describe them as distinct, since I find remarkable variations, which lead me to suspend my judgment. I only describe one individual from those considered the large-headed variety."
For the more technical part of the description of these two species see Appendix.

EARLY ALLUSIONS TO THE SWORD-FISH IN ECROPE.
The Sword-fish was known to Pliny, who writes: "The Sword-fish, called in Greeke Xiphias, that is to say in Latin Glaudius, a sword, lath a beake or bill sharp pointed, wherewith he will drive through the sides and plankes of a ship, and bouge them so, that that they shall sinke withall. The experience whereof is seene in the ocean, near to a place in Mauritania called Gotta, which is not far from the river Lixes."!

Many other classical and mediaval writer

experience whereof is scene in the ocean, near to a place in Mauritania called Gotta, which is not far from the river Lixos."!.

Many other classical and mediaval writers made curious allusions to the Sword-fish. A very good summany of their views is given by Bloch, and is here quoted. The scepticism of this author is sometimes a little excessive:

"This fish is found in the North Sea and the Baltic, but is rare in those waters. In the Mediterranean, however, it is very abundant. It lives for the most part in the Atlantic, where in the winter it is found in mid-ocean. In spring it appears on the coast of Sicily, where its eggs are deposited on the bottom in great numbers. However, according to what I have been told by the illustrious Chevalier Hamilton, it is never seen in that region more than three or four feet long. The larger ones, often weighing 400 or 500 pounds, and that they often exceed the dolphin in size.

The larger ones, often weighing 400 or 500 pounds, and that they often exceed the dolphin in size.

"A various writers have spoken of the Emperor of the Sea' as occurring in the Baltic. Olearnix and Schelhammer record its capture near Holstein; Schoneveld mentions one from Mecklenburg; Walbaum one from the vicinity of Danzis; Hartmann one from near Fillau; and Wolf another taken near Königsberg. "One mentioned by Schoneveld as taken near Mecklenburg "One mentioned by Schoneveld as atken near Mecklenburg."

Mecklenburg; Walbaum one from the vicinity of Danzig; Hartmann one from near Pillau; and Wolf another taken near Königsberg.

"One mentioned by Schoneveld as taken near Mecklenburg was so large that it required two strong horses to draw it from the water. The body, without the sword, was eleven feet long, the sword three. The eyes were as large as hene eggs, and the tail was two feet broad. Of four seen by Professor Koelpin during his stay at Greifswald, one measured more than three and one-half feet in circumference. * * *

"These fish, according to the story of the Chevalier Hamilton, always appear in pairs as they approach Messina, a female and a male together."

[Then follows a description of the method of capture, very similar to that given below.]

"This ish lives upon marme plants and fish. It has such a terrible defensive weapon that other voracious fishes do not drare to attack it. According to Aristotle, it is, like the tunny, tormented by an insect, and in its fury leaps out of the sea and even into vessels. According to Statius Müller, the skin is phosphorescent at night. Although such large fishes are not usually well flavored, this one is considered palatable. Picees of the belly and the tail are especially esteemed, and hence they are expensive. The fins are salted and sold under the name 'callo'. * *

"Aelian errs in saying that it enters fresh water, and in cataloguing it among the fishes of the Danube.

"Oppian and Ovid consider it, on account of its sword, one of the most terrible denizens of the sea. It is not at all probable that, as Pliny and many other later ichthyologists have written, it pierces the sides of vessels with its sword and swads then to the bottom; its sword is not sufficiently strong. "Galvaini, who gave the first figure of the fish, was wrong, like many writers who followed him, in giving two dorsal and two anal fins.

"Gesner, Aldrovandus, and Jonston have represented the species with two ventral fins. Bellon and Bomare were wrong in classing it among the whales. Subseque

have failed to find the scales represented in the figure given by the former and the teeth of which the latter spoke."

ALLUSIONS TO THE SWORD-FISH IN AMERICA BY EARLY WRITERS.

The ancient city of Siena, secluded and almost forgotten among the hills of Northern Italy, should have a peculiar interest for Americans. Here Christopher Columbus was educated, and here, in the height of his triumphs as a discoverer, he chose to deposit a memento of his first voyage across the seas. His volive offering hangs over the portal of the old collegiate church, closed for many years, and rarely visited save by enterprising American tourists. It consists of the old collegiate church, closed for many years, and rarely visited save by enterprising American tourists. It consists of the helmet and armor worn by the discoverer when he first planted his feet on New World earth, his weapons, and the weapon of a warrior killed by his party when approaching the American coast—the sword of a Sword-fish.

It is not probable that Columbus or some of his crew, scafaring men of the Mediterranean, had never seen the Sword-fish. Still, its sword was treasured up by them. and has formed for more than four centuries and a half a striking feature in the best preserved monument of the discoverer of America.

The earliest allusion in literature to the existence of the Sword-fish in the Western Atlantic seems to occur in Josselyn's Account of Two Voyages to New England, printed in 1074, in the following passage:

"Pirst Voyage:—The Twentieth day, we saw a great number of Seabats, or Owles, called also flying iish, they are about the bigmess of a Whiting, with four times with which he pierced our Ship, and broke it off with they fly as long as they are wet, when pursued by other fishes. Here likewise we saw many Grandpisces, or Herring-hogs, hunting the scholes of Herring-hogs, in the afternoon we saw a great fish called the Vehuella or Sword-lish, and roke it off with string to get loose, one of our Saliers dived and brought is about.

A half centu

DISTRIBUTION OF XIPHIAS GLADIUS IN THE EASTEEN ATLANTIC.

The Sword-fish is abundant in the Mediterranean? even as far east as Constantinople. Aelian said that it was frequent in the Black See, entering the Danube. Unfortunately, this is neither confirmed nor contradicted by any later writer whose works I have seen, except Bloch, whose skepticism is as unreliable as the statements of Aelian. Aelian says that this species, with several others, is frequently taken in the Danube at the breaking up of the ice in spring. This is so contrary to the known habits of the fish that it throws discredit on the whole story, for the present at least. From the entrance to the Mediterranean they range south to Cape Town. Berthelot saw greathumbers of them off the Canaries. They have been trequently noticed on the coasts of Spain and France. They occur sparingly in summer in the British waters, even to the Orkneys and the Hobrides. They occasionally reach Sweden and Norway, where Linneus observed them, and, according to Lutken, have been taken on the coast of Fibmank. They are known to have cocurred in Danish waters and to have found their way into the Baltic, thus gaing a place in the fauna of Russia. A number of instances of the occurrence of Sword-fish in the Baltic are mentioned above.

FAIRY PRINCE.

THE subject of our illustration is Fairy Prince, owned by Mr. A. S. Bishop, of Pittsburgh, Pa. Fairy Prince is a medium sized blue belton Laverack setter dog, whelped Sept. It, 1880, by Pontiac out of Fairy II. He was bred by Mr. J. C. Higgins, of Delaware City, Del. He has been shown but twice. His first appearance was at Pittsburgh last March, where he captured second in the Laverack class. We then expressed the opinion that when nature he would be heard from again, a prediction that was verified a few weeks later at the New York show, where he was shown in better form and easily won first in the native English setter class, a very large and good one, and again was second in the special class for Laveracks. He is of capital form, and when fully market in the native Denglish setter class, a very large and good one, and again was second in the special class for Laveracks. He is of capital form, and when fully market in the native production as sketch by Harry Tallman, and is a very good likeness.

THE DOG.

His History and Qualities.-IV.

THE DOG.

BY SENEX.

THE sculptures of Nineveh and the hieroglyphics of Egypt attest the very early domestication of the dog, and the existence of races similar to some of those which exist at the prosent day; and the high value attached to him by many nations is further attested by the place assigned to him or his image, as emblematic of the attributes which they ascribed to their gods. During all these ages there seems not to have been any distinct classification of dogs into groups or species, but we observe certain species were prized beyond all others for the offices of the hunter and fowler.

In "Johnson's Natural History," showing the habits, structures and classification of animals, by the Honorable S. G. Goodrich, the family of Canida, from canis, a dog, are thus classified: The Cynhyene, including the hyena dog; the canis, including the dog, wolf and jackal; the vulpes, including the fox and fennee and the otoeyon. Of the Cynhyene there is a single species, the Cynhyene, which is found from Caffarria to Abyssima. It is nearly of the size of the wolf, its dentition is that of the dog, with long legs and large jaws, but is distinguished by having only four toes on each foot. Like other dogs in their wild state, they hunt their game in large packs, which are led by a chief. The genus canis, or dog, in many respects the most remarkable brute in the whole circle of minated nature, was classified by F. Cuvier, in accordance with the development of the frontal sinus—the cerebral cavity—to be ill adapted to the present state of knowledge covering this subject; and another classification, founded on that of Hamilton Smith, with modifications by Gervais and others, is found to be the most accurate and complete, especially with reference to the domesticated varieties.

In this classification here are embraced six divisions with reference to the domesticated varieties.

In this classification here are embraced six divisions with reference to the domesticated varieties.

In this classification for embraced in cani

"A greyhounde should be headed lyke a snake. And neckyd lyke a drake, Fotyd lyke a cat, Tayled lyke a ratte, Syded like a teme And chyned like a bream,"

And chyned like a bream."

Division II. comprises the matin, from a French word signifying mastiff, is a breed peculiarly esteemed in France, and was erroneously regarded by Buffon as the progenitor of the dog race. He is of medium size, robust frame, short hair, erect ears and a little pendulous at the tip, possessing moderate powers of scent, great activity and endurance with a somewhat fierce disposition. Among its varieties are the Dalmation or great Danish dog, the Cuban mastiff or Cuban bloodhound, and according to Gervais the primitive turnspit, who in former days was much regarded as an auxiliary in most of the kitchens of Europe, but whose place is now usurped by modern improvements in the machinery of cooking.

Division III. embraces the shaggy or woolly breeds, and possesses many of the most remarkable and interesting species. They are known as the St. Bernard dog, the Newfoundland, the Labrador, the Lapland, the Hare Indian, the Iceland, the Shepherd's dog, the Pomeranian Wolf and the Drover's dog.

cies. They are known as the St. Bernard dog, the Newfoundland, the Labrador, the Lapland, the Hare Indian, the Iceland, the Shepherd's dog, the Pomeranian Wolf and the
Drover's dog.

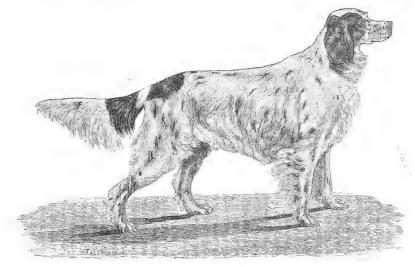

Division IV, contemplates the hunting dogs, hounds and
spaniels the division that most interests us at the present.
They are divided into the old English hound, which is said to
be the original stock of the island of Great Britain, and was
principally employed in the chase. The foxhound is a cross
serveen the first and fourth divisions, and became soon after
the most celebrated and esteemed hunting dog in England.
The staghound is still another cross, which has at present become a part of the regular Crown establishment. The royal
kennel is situated upon Ascot Heath, about six miles from
Windsor, and Swinley Lodge, the official residence of the
master of these hounds, is about one mile distant from the
kennel. The varieties of this division are the English bloodhound, the African bloodhound, the otterhound, the beagle,
the harrier, the lurcher, the spaniel, the setter, the pointer
and the water spaniel.

Division V, embraces the cur dogs, or mixed breeds (and
their name is legion), among which are the terriers, the
pariahs of India and generally the vagabond street dogs of
Asia and Africa; the poe, found in the islands of the Pacific;
the karrande, the native of New Zealand; the semi-domestic
dogs of the Indians of Patagonia and Terra del Puego, and
also the dingo, of New Holland, are comprehended in this
class.

class.

The sixth division comprises the mastiffs, the bulldog and his crosses, including the bull terriers and the pug dog.

Of Division IV. I shall confine my attention to the cocker as a variety of the spaniel. The cocker, one of the smallest of the land species, and by far the most useful to the modern sportsman, was chiefly used in flushing woodcocks or pheasants from dense underbrush and thick coverts into which the setter cannot enter. He is exceedingly active, wiry and

MR. A. S. BISHOP'S LAVERACK SETTER "FAIRY PRINCE."

nimble, and gives forth a whimper or bubbling tone as soon as he comes upon the scent of game, and if not properly trained will sometimes flush the bird before the sportsman is fairly within range, but when he is properly trained and is made to hunt close and not to give tongue until the bird arises, he is the most valuable of all the varieties of the spaniel. I have found the most satisfied enjoyment in the thick coverts and the dense raspherry patches in the woods of Northern Michigan in search of the partridge and woodcock with my favorite and intelligent cockers, than with any other kind of field sports. There can scarcely be imagined a prettier object than the nervous, restless and impatient cocker, full of activity and bustling in every direction, with the quick and constant motion of his tall inclined a little downward. "The moment he scents the bird, expressing his delight by the quivering of every limb, and the low, eager whimpering which the best breaking cannot always subdue, he pounces suddenly upon his prize, when the affrighted bird rises, and then the little cocker shrieks out his eestacy, startling even bark."

the sportsman with his sharp, shrill and strangely expressive bark."

This beautiful, intelligent little hunting dog has been so changed by crosses with large field and water spaniels, ctc., etc., till to-day there seems not a single breeder or admirer of the cocker who can claim for him a clean and pure standard. All the evidence of "ye olden time" hilly demonstrates that he was a small, active, wiry, short and clean-limbed dog. The old artists who painted him made him a small dog, short mitzele, long silky ears, round head, and a compact, active little dog scarcely weighing over eighteen pounds. In fact, there is no question but that the little cocker, from design and perhaps partly by accident, has changed very much his standard and scale of points from what he was some one hundred or more years ago. I shall not inquire to what this change is attributed, nor do I intend to call in question the motives inducing it. My present paper is intended to show the confusion—perplexity—which surrounds the type of the cocker, and to see if some plan may not be developed whereby his standard may become as fixed and as certain as that which marks the setter or the pointer. I believe it is pretty generally admitted that in England no cocker standard proper exists to-day, from the intermingling of the cocker with other varieties of the much-admired spaniel. American breeders have as a rule followed the example of old England, and seem to think it the most important consideration that the strain be enlarged and be clothed with more bone and muscle, so as to give him power and endurance.

Does it not occur to the American breeder and sportsman the interning his bone and

have as a rule followed the example of old England, and seem to think it the most important consideration that the strain be enlarged and be clothed with more bone and muscle, so as to give him power and endurance.

Does it not occur to the American breeder and sportsman that in enlarging his frame, strengthening his bone and muscle, and in every way augmenting his bulk, that he is being unfitted for the sportsman in those very positions where his increased size detracts from his usefulness in thick covert and hedgerow shooting. If larger dogs are needed for any special work that the setter or pointer if unfitted for why, in justice to the little cocker, is not the field spaniel bred up to this kind of work, but don't call the progeny cockers. This overweening desire to attach the name cocker to everthing that partakes of the mixed spaniel strain is not only simply ridiculous, but this intermingling of field spaniels and cockers is affecting all the variety of spaniels in our bench shows and is fast wiping out the useful and pretty little cocker. There was a distinct type of the cocker, there is now only an ideal type. Frank Forester, the father of American field sports speaks of the old styled cockers in Vol. I. of his "Field Sports" thus: "The cocker cannot better be described than as resembling a setter in the same degree as a punchy, powerful, short-legged pony resembles a well-bred horse. It is very strong and bony for its size; the head, and especially the nose, is proportionally much shorter than that of the setter, the trontal sinuses more fully developed, the eye larger and more prominent, the ears much longer and more curly, then so long that they literally seem as if they were intended to sweep away the morning dew, the coats are altogether longer and more curly, the tail not merely feathered, but bushy, and the logs thickly fringed, even to the toes, and in weight he is seldom above twenty pounds."

Stonehenge, the English leading authority, in his "Dogs of England and the Britshi Islands," says of

docked and carried under the level of the back; coat wary and siky, with the profile beautifully fringed. The colors most prevalent were liver and white and white flecked and ticked on legs and face; although I have seen black and white flecked and ticked, solid black, solid liver, liver and tar; also black, white and tan. This description agrees as near a I can give with the dogs I was taught liver, liver and tar; also black, white and tan. This description agrees as near a I can give with the dogs I was taught on were used for wood. The McKoon, of the Blue Star Kennel, who has given almost a life-time to the culture of this intelligent dog, coincides very closely with the authorities above quoted, and I believe all fair-minded cocker breeders will acknowledge his competency in defining the true type of the cocker. In his views upon the adoption of a cocker stand acknowledge his competency in defining the true type of the cocker. In his views upon the adoption of a cocker stand and undefied cocker, regardless of our own dogs or those of any interested parties through favor or desire. But we should construct this standard as near as possible to the perfect type of the cocker, so that the best formed and qualified cockers for American work may go to the fornt at our beand affiness of the little cocker to prove, first, that the original and true type of the cocker to prove, first, that the original and true type of the cocker to prove, first, that the original and true type of the cocker to prove, first, that the original and true type of the cocker to first, that the original and true type of the cocker to statude as mall, active, wiry dog, with long, broad ears, short muzzle, long, well-arched neck, deep, broad chest, back strong and level, stoul to his, ribs well sprung, with a warvy or flat coat, round-bodied and short-legged, and not weighing over twenty pounds.

A town if we compare this typerican Cocker Spaniel Club, we shall see that quite another variety of spaniel is described, and no more like the cock

in its pure robes of white, but that it should obtain with so much force in starting the woodcock or partridge from its tangled covert does not seem to me so important.

Another letter from a breeder of wide repute says: "I will write you in the future about my idea of a cocker. I have not yet seem my ideal, but I shall breed it before long. It will not be many years before you can tell the ——cocker as easily as the Gordon setter." Certainly this gives us nothing but a modern Babel of confusion as to the pure standard of the cocker, unless he expects to wipe out the cocker in the blood of the standard adopted by the A. C. S. Club. A letter from a breeder to me of very late date says: "A great many of our customers call for larger dogs." this is the reason why "we cross our cockers with ——who is a field spaniel of thirty-five pounds, and we have got liver and liver and white colors seventeen or eighteen pounds, but have been trying for over a year to sell them for \$25 with no takers."

This last statement opens our eyes to the fact that certain customers, who probably do not know the difference between a spaniel and a bloodhound, do not wish to buy cockers but field spaniels, and those breeders who have been heretofor raising progeny to a cocker standard, are crossing their cocker stock with the large strain of field spaniels to suit the caprices of such customers. The error lies in this, that while larger spaniels are in demand, the supply should come from that strain and not from the cross of the small cocker. A breeder of March Tast writes: "The old blacks that came from Hornellsville were far, far ahead of those imported horrible, injudicious mixtures they are now trying to make us all swallow with their cockers." "Mr. F. writes me that they were crossing their big blacks with their cockers," calling the progeny all cockers. If this is so it cannot be long before the A. C. S. C. will have to increase their cocker standard weight to thirty-five pounds; and it seems that this increase of bone and muscle is alr

"Mooreffeld Kennel, May 10, 1882.

"E. C. Franklin, Esq. "Mooreffeld Kennel, May 10, 1882.

"Yours received; but I do not think I can do you any good, as my opinions of a cocker spaniel are at total variance with the so-called cocker spaniel of the day. On reference to the English Kennel Club Stud Dog Book, you will find that the most celebrated show dogs are either half Sussex spaniel, or the dam or paternal sire has Sussex. In the first place the real old-dashioned cocker, such as I recollect as a boy some thirty-five years ago, and the same gentleman has the breed still, was a quick, active spaniel, all life, in all colors, what I mean—liver and white, black and white, whole liver, and sometimes all black. These were used in what we called cover shooting at home (England) for driving out rabbits and woodcock in brush so thick that a beater (a man) could not penetrate. They would average from twelve pounds to twenty-four pounds, but never larger. They had splendid noses, would retrieve and would stand on game until flushed. In order that we might know where they were in thick cover They had small bells fastened to their necks, so that when we did not hear the bells we proceeded at once to where we last heard them. Mr. Moore has a pure cocker spaniel in champion Charlie, but his days are over; he cannot win any more; and, therefore, I do not show him. The present cocker is much too heavy and clumsy. Why, in thick brush one of the true cockers would leave him miles. Rorn. Jex. Blake."

If any more evidence should be required to prove that the cocker is maniel, as a distinct type of the snaigle is, not recover.

much too heavy and clumsy. Why, in thick brush one of the true cockers would leave him miles. Robert Jex. Blake.

If any more evidence should be required to prove that the cocker spaniel, as a distinct type of the spaniel, is not recognized or understood by the great mass of those even who pretend some familiarity to canine culture or knowledge, it will afford me much pleasure at a future time to furnish it. I shall be content for the present to bring before my readers the views and opinions of one whose position in the editorial department of one of our very best American sporting papers is entitled to great weight and consideration. In summing up his remarks upon the late Westminster Bench Show, held in New York, and speaking of the quality of the cockers here exhibited, he thus writes: "This is a difficult and most unsatisfactory class to judge, as it is not clearly settled in the minds of spaniel breeders just what a cocker spaniel is. A long head is by some considered the correct thing; by others it is looked upon as an evidence of an outcross. Cocker spaniels, and upon this busis we believe that the standard of excellence should be framed."

By all the evidence introduced I have shown conclusively, I think, that the real simon pure cocker is a small dog with peculiar traits and form, and that the standard given him by the A. C. S. C. does not correspond with his characteristics at all, nor does it satisfy a large portion of cocker breeders will not (and indeed I think they should not) accept the standard above spoken of, that is, for such who desire to see the cocker re-established to his pristine and normal condition, the purpose of raising a genuine strain of cockers that will benefit the sportsman, restore the almost lost type of this little dog, and do away with the eternal warfare that is establishing a false condition of things and unixing the proper standard of the cocker. I will always be found on the standard above spoken of, that is, for such who desire to see the cocker re-established to his pr

DOG STOLEN,—Mr. E. E. Hardy, of Boston, Mass, writes us that some one has stolen his liver and white English setter dog Roll. In our issue of June 1 will be found an excellent likeness of Roll, which may lead to his recovery. He is of good size, and nearly white, with liver cars. Anyone knowing of his whereabouts will confer a favor by notifying his owner, who will pay a liberal reward for the conviction of the thief.

SUMMER SHOOTING.

SUMMER SHOOTING.

The season is close at hand when, in some of the States, woodcock may be legally killed, whatever the moral or ethical aspect of the case may be. And to those who choose to broil their brains and stew their adipose tissue in weary trampings through the tangled swamps in the sweltering heat of July in search of sport, we have a few words to say. In relation to such shooting we shall only proffer a single word of advice—"don't." Nor shall we weary you with a repetition of the many rules laid down for your guidance while jeopardizing your health in the scorching heat. Our only object in penning these lines is to impress upon your minds the very great importance of properly taking care of the dumb companion of your outings, and to see that he is not ruined by an excess of labor while totally unfitted by his previous habits of performing a tithe of the work that you expect him to accomplish. Many days before you take him out for game he should have plenty of exercise every day, in order to get rid of his superfluous flesh and to harden his muscles.

Nothing is better for this purpose than several miles each

order to get rid of his superfluous fiesh and to harden his muscles.

Nothing is better for this purpose than several miles each day after your team. You should commence with short distances at first and gradually increase, until your dog is as hard as a piece of rubber. If you have no team you can get him in very good condition by taking him out for an hour in the morning and the same at night. You should also very carefully attend to his food and see that he has only just what he needs and no more. Well cooked corn or oat meal and rice mixed with plenty of vegetables is the best possible diet that he can have. Do not delegate this to the servants, but attend to it yourself, and you will not only have the satisfaction of knowing that it is done as it should be, but your chief reward will be in the increased regard that will spring up between you and your dumb friend. Do not forget while shooting that your dog must have water very often, although he must not lie in it long. He should also have a resting spell occasionally, no matter in how good condition he may be or how eager he is to hunt, as long continued exertion in hot weather is very apt to show bad results in after years either in a broken constitution or rheumatic affections. For the future welfare of your dog then, if you have no regard for your own health, use proper discretion while working him in hot weather; and let no greed for just one more bird induce you to prolong his work beyond the limit, safety.

LOUSIANA FIELD TRIALS.—The New Orleans Gun Club will hold their field trials at Opelousas, La., commencing on December 11. The first event on the card is the Members' Stake, for a valuable silver cup, open to members only, who must handle their own dogs. Then comes the Derby and All Aged, which are open to the world. Liberal prizes are offered, and without doubt it will be an interesting meeting. We think that it should have been appointed for one week later, as it will be impossible for any of the dogs competing at Grand Juuction the previous week to take part, which some of them would undoubtedly do were time enough given them to do so. We would suggest that the club take the matter into consideration, as it is not too late to change.

DEATH OF PRINCE TAXIS.—We have just received a letter from Mr. E. A. Herzberg informing us of the death from distemper of Mr. T. F. Ryan's English setter dog. Prince Taxis, winner of first prize in the open class for imported English setters at the last New York show. A capital likeness of him was published in our issue of May 18. We sympathize with Mr. Ryan in his loss, as he gave promise of making when mature a first-class animal.

THE GREYHOUND CHALLENGE.—Mr. Dawson incloses to us a telegram from Mr. Lotz which says that Doubleshot was not in condition to show and offering to pay expenses. Mr. Dawson writes: "I am sorry we did not meet. Is would have been more satisfactory. Please look after the medal for mext show. I understood each was to pay his own exponses."

EASTERN FIELD TRIALS.—Mr. Jess. M. Whaite, of High Point, N. C., writes that the prospect for birds in that vicinity is very promising for the successful running of the Eastern Field Trials next November.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kennel Notes, that to avoid mistakes all names should be written in print; Lerriers, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animal is unite or female, and to know the date of birth and the breed to which if delongs, whether pointer, setter or other. A careful study of the notes in this number of the paper will show just what is wanted.

NEW YORK STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.

NIAGARA FALLS, June 15

THE Niagara Falls Club have made admirable arrangements for affording shelter from the sun was provided for the contestants, and reference of shooters and reporters. A comfortable stand, affording shelter from the sun was provided for the contestants, which is the property of the contestants of the register of the contestants of the register of the

WEDNESDAY EVENING.

The first contest was called at half pass uine, the shooters not being on hand promptly, the day's programme could not be gone through.

WEDNESDAY EVENING.

An adjourned meeting of the association was held at the Niagara Falls Club rooms, Wednesday evening. President S. J. Murray said he should be a supported to the same of the same and the same law. Abel Crook, Brooklyn; Mr. Murray then appointed the following gentlemen as the committee to try and secure a suitable game law. Abel Crook, Brooklyn; Mr. Murray then appointed the following gentlemen as the committee to try and secure a suitable game law. Abel Crook, Brooklyn; M. A. Stearns, Danswille, and J. N. Babcock, Syracuse. If any member of the committee should be unable to attend when necessary, he will have the power of substituting another gentleman.

Abel Crook, Brooklyn, Chairman; N. B. Cooke, Brooklyn; Henry R. Jones, Buffalo.

Standing Committee: Henry Altenbrand, Washington Gun Club, Brooklyn, Chairman; W. J. Babcock, Seth Green, Rochester; Hon. Klott. B. Roosevelt, New York; Jonathan Sidway, Buffalo. Mr. M. A. Stearns moved that the secretary of the association be instructed to correspond with the various clubs, at the proper time, and ascertain what prizes they may have to contribute at the next convention. So than it might not be left to chance, and that the clubs should not so that it might not be left to chance, and that the clubs should not in the first shoot, and that the association reserve to itself 23 per cent, of the entrance money in said contest.

Mr. R. F. Hill offered a S800 cash prize to be convention. Accepted with thanks. Mr. Henry Altenbrand offered a prize to be should for only by members of the association of twenty-five years' standing. This was accepted heartily, but it being found that there would be no one to shoot under such conflicions, it was l

The first business on Saturday morning was the shoot for the Pierce Diamond Badge. Dr. Wynw donated \$50 of the entrance money, which according to the rules under which the match is shot belonged to him, to be used as extra prizes: \$15 to go with the medal as second prize, \$25 as third, and \$10 as fourth. C. E. Felton, Chicago, and W. C. Jacus, Buffalo, were judges.

Single bird shoot, 15 single birds, 21 yards rise; Dr. R. V. Pierce's Diamond Badge:

There was a vast congregation of steam yachts, bugs and sailing craft off Bay Ridge, and many of the steamers accompanied the fleet outward as far as their limited seagoing qualities would permit. The wind was blowing s. s. w. fresh, with every appearance of freshening; tide, half elbb. The start was of the usual shuffling order, follow my leader and ten minutes to do it in. Of late, the public has not been indebted to the N. Y. Y. C. for any advance in yacht-racing customs, or, for that matter, in anything appertaining to the sport, the club having found an acceptable vent for its enthusiasm in balls, are works and festivities, while saining has languished. The revision of their saining rules, and the complesory dropsit from the junior liths: and we do not look to the N. Y. Y. C. for anything smarter than the storeotyped old tining. Both the Adantic and Seawahaka Corinthian have curtailed their periods of grace to 5 minutes, as a sort of feeler to doing away with the grant to laggards altogether. If their lirst attempts were not quite successful, it was not due to any fault in the mathod, but to the failure to appreciate the new order among the skippers, many of whom found themselves on the wrong side of the committee steamer when they should have been on the right side. The start is not to be blamed for any such lubberliness, and with a final or two more, the five minute period will be found to work with a trial or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to work with a final or two more, the five minute period will be found to w

The Canadian sloop Atlanta beat out with the rest but was dropped by big and little as she was not being pressed. The Long Island shore was hugged as closely as possible, and all hands crossed over to Staten Island, then tacket off and stood into Gravesend Bay. The wind stiffened up and clubs came down all around, Montauk and Tidal Wave hanging on a while longer.

A few boards and a fetch into the Coner Island shore enabled the yachits to lay for buoy No. 10. In this work Hildegard with a smart crew had come out in the lead with the work Hildegard with a smart crew had come out in the lead with the lay of the work of the authority of the work of the lead of the work of the state of the lead of

Oriva. 12 40 feetwing. 12 54 54 55

The yachts stood on until able to weather 856, when they hove around for the Hook, which could be hade in Fig. Then the hard worked the stood of the hook which could be hade in Fig. Then the hard worked the stood of the hook with the stood of the hook was the result. Julia had already put for the Horseshoe, leaking badly. The water was said to have risen over the cabin floor. Possibly water in the bilge accounts for not showing up quite as well as a Steer's built craft ought to do. Topsails were handed and topmasts housed by the sloops. Then Oriva's jaws were spilt, and down came her mainsail just as her fun was about to begin. Christine turned tail and flew for shelter with the peak dropped.

The rest kept at it. Montauk found the wind to her liking and stalked away grandly. Rambler held on to topsails for awhile, but finding them more than she wanted, followed suit and clewed down. Mystery jumped her bowsprit out of her, and the masthead and top hamper went with it. Her rigging, being new, may not have been set up properly, but her spars and it gappeared too light for such a first of the standard pluckly kept up a stern chase to the initia. Notating the death of the such as the steen the such and pluckly kept up a stern chase to the initial way which argued well for her as a heavy weather boat, though when it comes on really bad, her huge sticks must be dangerous things to keep from taking charge. The outer mark was rounded to the gay ring of Captain Cosyrove's big fog bell, as under:

Montauk had weathered to severthing, and scened to take the sea in a way which argued well for her as a heavy weather boat, though the gay ring of Captain Cosyrove's big fog bell, as under:

Montauk had weathered to overything, and scened to take the sea in a way which argued well for her as a beavy weather boat, though the gay ring of Captain Cosyrove's big fog bell, as under:

Montauk had weathered to severything, and scened to take the sea in a way which argued well for her as a beavy weat

It was a run for home, and ballooners came into requisition. Montauth held her fead clear up to the line, though Fidal was picking up so fast on her that it became evident Montauk's play is to windward proved and though Fanny's lee, and made the finish with a couple of lengths only to spare, but lost to her sister, allowing for their difference in start. Valkyr never put in a smarter bit of sailing, and proved herself exceptionally good in the sea. She had six minutes to spare and nine with allowance. Her day's work may be taken as a complete "vindication" of the medium type. Long ago, when we medium type the "conception form, would-be critics deemed the medium type the "conception form, would-be critics deemed the medium type the "conception form, would-be critics deemed the medium type the "conception form, would-be critics deemed the medium type the "conception to such that is a supplementation of yacht design. In spend made over the course by the Montauk is the best on record, beauing that of the Idler, June 8, 1876, from Stapleton with finish at buoy 15, which was 35, 54m, 48s. Prizes go to Rambler, Albatross, Montauk, Crusader, Fanny and Valkyr. Montauk as ot takes the Bennett Cup for schooners. Times of this is a under:

JERSEY CITY Y. C.-THURSDAY, JUNE 15.

JERSEY CITY Y. C.—THURSDAY, JUNE 15.

THE club sailed a very successful match last Thursday, it being the trenty-fourth annual meet since the organization. Wind moderate from s.s.e., but freshening throughout the day.

The course for classes A and B was from an imaginary line between the judges' and stake boats anchored off Bedloe's Island, thence around bony No. 85. Southwest Spit and return to starting point, twenty-nine miles and a half. The course for class C was to red body, No. Indies and a half. The course for class C was to red body, No. Indies and a half. The course for class C was to red body, No. Indies and a half. The course for class C was to red busy, No. If and return, sailing twice over the course, the winning yeach in each class to complete the distance within eight hours to be entitled to a prize. Th t time allowances were for classes A and B three minutes to the fort, including one-quarter of overhang; for the other classes, two minutes to the fort. The start was a flying one. It will be noticed that the ciub has receded from mean leight to including only one-quarter the overhang, a step in the right direction and events, even inoget abolished for all them in New York, as it has been elsewhere. The yachts got across straggling, Liciee being in the lead, and twenty-two minutes before the last yacht got over. Among the big ones lainda, Commodore H. C. Roome, showed the way, but finally lost on allowance. Mignon, in trying to clear a coaster in the Narrows, fouled and parted her bobstay. Forsyth and Brother had it all their own way, and Annie F. had a sail over. Judges, B. F. Clawson, Stephen Maife and Gis. Bian. Summary as under:

While, were accommodated aboard the Americus steamer.
Francis O. De Luze, Walter L. Suydan, A. H. Stevens and S. Nelson White, were accommodated aboard the Americus steamer.
The day was hazy and pleasant, the brezee mild to moderate from s.s.e., and not over steady during the forenoon. Tide last of the flood. A five-minute start was essayed, and would have proven successful enough but for the proverbial perversity of skippers in refusing to give a thought to their position until the signal brings them stated wrong side of the conmittee steamer, and pefore the meaning the standard of the continuence of the content of the standard of the standard of the content of the standard of the standard of the standard of the content of the standard of t

Schemer, 1:22:00; Valkyr, 1:24:00; Olytio, 1:26:20; Albatross, 1:26:30. To the Scotland lightship Schemer and Wave made tack and tack in close company, the forner turning the lightship at 2:07,45, when both made more sail for the run boune to a freshening wind. The rest kept on to the Sandy Hook slip, heeling rail under and after some rattling work, in which sheets were trimmed with dexterity, old Captain Cogrove set his big bell a gonging as the racers cased around the lightship as under:

н.	M.	s.	H.	М.	S.
Gracie2	19	55	Vixon	31	05
Fanny 2	21	10	Valkyr2	40	(15)
Eclipse 2	28	26	Clytie	42	37
Oriva	39	40			

Gracie essayed a balloon jib against the rules, and Fanny subsequently lodged a protest; the rest were content with jibropsalis and spinakers to port. At this business Eclipse's crew proved the quick-est. Fanny jammed the gooseneck of her spinaker boom, and lost some time in setting the sall in consequence. The fleet came staggering along, reeling under a heavy press, and the committee steamer had to open out what to reach the line ahead. Ware was found still leading schemer by a few lengths, and there was little time to wait before the big ones came bowing down, finishing a well-salled race as below.

ATLANTIC YACHT CLUB, TUESDAY, JUNE 13.

ATLANTIC YACHT CLUB, TUESDAY, JUNE 13.

In view of the experiences of the New York matches a couple of days later, it was particularly kind of Providence to let up on the southeasters just in time to give the fleet of the Atlantic Y. C. a smooth sea and a nice wholesail summer wind from the southward which carried the lot around the course in very quick time, the only thing approaching to windward work being a couple of boards out the Narrows and long and short leg down big clubs in the oscion, naturally much interest on the barrows and long and short leg down big clubs in the season, naturally much interest on the larger classes there was good sport among the scheeners, but fracele was the only single sticker at the line and safled the course without making a contest. We view with some satisfaction the fracele was the only single sticker at the line and safled the course without making a contest. We view with some satisfaction the failure to fill in her class, for it argues that popular taste no longer runs on such unwieldy boats, but prefers more moderate tonnage for the sloop and cutter rig or else goes of into schooners at once. The allowed the season of the schooners at once. The short of the season of the schooners at once. The short of the school of the schooners are such those desiring to see yachting lifted from smooth water proclicities those desiring to see yachting lifted from smooth water proclicities than schooners they would be serviceable as comfortable cruisers and much less expensive in crew and keep. The only addition larger shoops have seen this year is the old time Julia "aitered back" from a handy wholesome schooner to a clumsily rigged stilling machine, and been withdrawn and put on the big single stickers in America, has been withdrawn and put on the big single stickers in America, has been withdrawn and put on the big single stickers in America, has been withdrawn and put on the big single stickers in America, has been withdrawn and put on the big single stickers in America, has been wi

schooners we have and a reliable sort of craff in any match, but being larger than her antagonists required a little more breeze than she found.

Among the small schooners little Madcap, generally sailed for what she is worth, hope-t to save her time off Agnes and Triton, but this the strength of the wind precluded. By the way, Madcap, seems to the strength of the old precluded. By the way, Madcap seems to a closer winded boat, handier oven than as a would be a liveller and a closer winded boat, handier oven than as a would be a liveller and a closer winded boat, handier oven than as a would be a liveller and a closer winded boat, handier oven than a seem of the craft of the mannast in her cable. Suashine, ex-Commodore Peet's little cruiser, came boldly to the start, though she failed to be placed. The principal interest centered in the sloops. They included quite a fine fot, among them Lizzie Z, who has run up an enviable record from the start of the s

The conditions of the match were as follows: Hybra start, with from minutes grave to cross. It appears from this that the Atlantic Y. C. has recognized the necessity of reform in the method of great frequinty seaths away, and has inter the demand for a one gun start half way as a bestiming by limiting the period of great from ten to bre minutes, come start in the start of the sta

Agnes	12	28	00		1.0	100	*10

the outer mark so that Atalanta overstood at the Scotland enough to cause her the loss of a close race. Eclipse and Lizzie L. had been doing very fine work to windward, and held big Gracie names in the lee in a way which did not augur well for the latter's chances in international match with a wind-jamming cutter. Nor did not big sloop dispose of those little flyers till the outer lightship was rounded and sheets were freed, when tonnage and her well-known capacities on a reach launched her ahead at the finish. The Sandy Hook lightship was fetched around at the times mentioned, the smaller sloops having cased away for home around the Scotland mark, the Elephant having the race well in hand, with Wave a good second.

Crusader, Agnes, Gracie, Lizzie L. and Elephant were the winners of the club prizes, while Livingstone Cup goes to Eclipse as first sloop home of her class. Mr. Willard is to be congratuated upon his mailen win, and judging by the way Eclipse performed this day, his mailen win, and judging by the way Eclipse performed this day, first so that in the constant of the again this season. Lizzle L. is a "poser." If it is not all in the constant in the constant of the post, so it must be the luck to which some of unity is hardly in the boat, so it must be the luck to which some of unity is not greated to her good. Kelpie carried away topmast early in the race. Rever made a fair third, which is something in such good company. Elephant and Wave left their class hull down. A protest was lodged against Elephant, her salling master not being a regular season hand, but shipped for the occasion only, which is not permitted by the club by-laws.

NELLIE WINS.—In the match race between Mr. Hyde Bowie's schooner Neille and Mr. Henry White's schooner Fleur-de-Lis. Salled on San Francisco Bay June 8, the Neille won handsomely, her opponent giving up. Neillo is by Matthew Turner, and measures bott, over all, 55.08 on the line, with 19.5 beam, and 5ft, depth. Fleur-de-Lis is 597t. 16m, water line, 18ft. 6in. beam, and 5ft. depth. Pieur-boom, 25ft., within bermuda mainsail. A few days before the race Fleurest Basico ballest was removed and added to the keel. The fleurest basic ballest was removed and added to the keel. The fleurest basic ballest was removed and added to the keel. The fleurest basic ballest was supported by French Match ballest with the fleurest ballest was slippered by French Match ballest with the fleurest ballest was slippered by French Match Mellie received 2m. 28fc. French Match Mellie received 2m. 28fc. from her opponent under the length rule, but this did not much matter one way or the other.

It was blowing a strong northwester. Course from Mission Rock to Hunter's Point, thence to slake-boat near Oakland shore: thence to Fort Point. On return to go north of Alcatraz and Goat Island, round the Oakland mark and home same. Fleur-de-Lis could not early her canvass, and Neilie had it her own way from the start. The former give up, and Mr. Bowie landed the purse, after his yacht had been put through the hard work in the heavy sea and strong breeze, in the most admirable style. Neilie remains cock of the walk on San Francisco Bay. Time as under:

Start, Hunter's Point. Oakland.

THE "CENTURY."—A carefully-writen article on the "Evolution of the American Yacht," in the Century Magazine for July, will be found full of interest and instruction to the saling public. The author, S. G. N. Benjamin, is evidently a deep student of the questions of type, measurement and rig, and we are glad to find him that the foundation of the control of the advance insulated by Forest and Stream. The outlook of the charge was also been always to the control of the machine into the ship. We will recur more fully to the article at another time.

NEW YORK CANOE CLUB.—The regatia of the New York Canoe Club will take place on Saturday, June 24, off the club house, New Brighton, S. I. Paddling race for canoes, Classes 2 Paddling race for canoes, Classes 3 and 4. Sailing race for canoes, Classes 4 and 5

YACHT FOR SALE.—We call attention to the advertisement of schooner yacht Southern Cross. She was built in 1880, and every means was used to make her an inusually strong boat, comfortable and dry, suitable for family use in all kinds of weather. She is offered for sale now only on account of the death of her late owner.

The Inventors and Only Manufacturers of Genuine "MIST COLOR" LEADERS, of which Seth Green says: "I have tried them and found them to be the most perfect I have ever seen."

Prices are per dozen. All highest quality selected.

Parker Gun.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PAINER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 330 competitors. Send for Catalogue.

THE CENTURY FOR JULY.

The July number of THE CENTURY MAGAZINE contains several papers of special interest at this season, as follows:

at this season, as follows:

A History of
THE AMERICAN YACHT,

By S. G. W. Benjamin, descriptive of the evolution of the American yacht, and showing points of comparison between American and English yachts with biographical sketches of Henry Eckford (with portrait engraved by Cole) and other noted yachtsmen and builders, accompanied by diagrams, plans, etc.,—in all, forty-four illustrations. To be followed in the August number by a similar article on American Steam-Vachts. Yachts. "THE HORSE IN MOTION."

A comprehensive paper, by Col. George E. Waring, on Dr. Stillman's recently published work of that title, with reproductions of many of the famous instantaneous photographs made by Mr. Muybridge of San Francisco, at the private race-course of Gov. Stanford of Cali-lornia, showing the curious consecutive positions of horses in rapid motion.

THE JULY CENTURY

THE JULY CENTURY
Contains also several short stories,—an autobiographical mining sketch by Joaquin Miller,
Carlyle's "Tour in Ireland," an interesting illustrated paper entitled "Among the Thilinkits in
Alaska," "A Great Charity Reform," "House
Construction: Precautions against Fire," (frontispiece portrait of Ralph Waldo Emerson, a biographical sketch of Henry D. Thoreau, etc., etc.
Price, 35 cents; \$4,00 a year. Sold by booksellers and newsdealers everywhere, or by the
publishers,

publishers,

THE CENTURY CO.,

UNION SQUARE, NEW YORK CITY.

The Gentle Way is Best.—In dyspepsia, liver complaint, and constipation, the diseased organs are preternaturally sensitive and tender. Do not use them roughly. An alterative like TARANY'S SELTZER APERIENT, that tones, corrects and purifies the system without unduly exciting or irritating either the stomach, the liver or the bowels is the true specific in such cases. Reason teaches this and experience confirms it.

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies
are to be attached, by which the size of the line at
such point is doubled, the result being that the wear
upon it by chafing from the loop of the ity-snell is
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a
cost about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface
worn off.

tated. Heretofore, in looping the upper files of a cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

In addition to this its difficult to hold the loop of the state of the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the small to file the looping the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a leader made in accordance with my invention, while Fig. 3 shows the manner of looping the leader in the act of attaching the fly. In these dewlings of the purposes of dy-fishing for trout or bass, and to the purposes of fly-fishing for trout or bass, and as heretofore made, such leader being composed of several lengths of gut knotted together, as shown at b, and the snell attached to the fly being looped about the leader, as shown at c. In carrying my invention into practice, I add to the leader 4 at one or more points (according to the number of flies to be used in the cast m addition to the stretchery an auch points. This re-enforce may be added in several ways, but a simple and easy one is that shown in Fig. 2, in which two adjacent ends of two strands of gut are laid side by side and knotted together, as shown at a fin. Fig. 3, and then apply the dy by passing such loop e through the loop of the leader rannoving and tedious, owing to the flexibility of the single gut. By doubling the re-enforce, as shown at Fig. 3, and the leader rannoving and tedious, owing to the flexibility of the single gut, by doubling the re-enforce, as shown at Fig. 3, and the leader have believed the loop of the leader of the which the fly is attached, and after passing the fly which the fly is attached, and after passing the fly which the fly is attached, and after passing

of the mes from the Addition of the message there.

All fly fishers will readily see the advantage there is in using the they to apply a "fly" or to remove it with easiest why to apply a "fly" or to remove it with easiest why to apply a "fly" or to remove it with easiest why the strength or durability of the leaders. Length 3. 6, 9 ft., made of superior slik worm gut in all varieties.

The Hazard Powder Co.,

MANUFACTURERS OF

Junpowdel

Hazard's "Electric Powder,"

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 13½ lb. Vegs. Burns shouly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rific."

FFFG, FG and "Sea Shooting." FG in kegs of 25, 13½ and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard Rifle Powder of the Country.

Superior Milning and Blasting Powder.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUNKET POW.
DER; also, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.
The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

THE ANGLER.

 ${f I}^{
m N}$ these summer days when the gun is laid up in lavender, if that be the name of oil and flannel, and the honest man goes not forth to shoot anything called game, but for his sport goeth only a fishing, it is a proper time to consider the angler and his ways. Angling is set down by the master of the craft, whom all revere but none now follow, as the Contemplative Man's Recreation; but is the angler, while angling, a contemplative man?

That beloved and worthy brother whose worm-baited hook dangles in quiet waters, placid as his mind-till some wayfaring perch or bream or bullhead shall by chance come upon it, he meanwhile, with rod set in the bank, taking his ease upon the fresh June sward, not touching his tackle nor regarding it but with the corner of an eye-he may contemplate and dream day dreams. He may watch the clouds drifting across the blue, the green branches waving between him and them, consider the lilies of the field, note the songs of the cathird in the willow thicket, watch the poise and plunge of the kingfisher, and so spend all the day with nature and his own lazy thoughts. That is what he came Angling with him is only a pretense, an excuse to pay a visit to the great mother whom he so dearly loves; and if he carries home not so much as a scale, he is happy and con-

But how is it with him who comes stealing along the brink with such light tread that it scarcely crushes the violets not shakes the dewdrops from the ferns, and casts his flies with such precise skill upon the very handsbreath of water that gives most promise to his experienced eye; or drops his minnow with such care into the eddying pool, where he feels a bass must lie awaiting it. Eye and ear and every organ of sense are intent upon that for which he came-sport. He sees only the images of the clouds, nor any branch but that which impedes him or offers cover to his stealthy approach. And his ear is more alert for the splash of fishes than for bird songs. And with his senses go all his thoughts, and float not away in day dreams.

Howsoever much he loves her, for the time while he hath rod in hand, Mother Nature is a fish-woman, and he prays that she may deal generously with him. Though he be a parson, his thoughts tend not to religion; though a savant,

not to science; though a statesman, not to politics; though an artist, to no art save that which now employs him-the art of angling-for this day, at least, exalted above all else. So far removed from all these while he casts his fly or guides his minnow, how much further is his soul from all but the matter in hand when a fish has taken the one or the other, and all his skill is taxed to the utmost to bring his victim to creel. Heresy and paganism may prevail, the light of science be quenched, the country go to the dogs, pictures go unpainted and statues unmolded till he has saved this fish

When the day is spent, the day's sport done, and he wends his way homeward with a goodly score, satisfied with himself and all the world besides, then he may ponder on many things apart from that which has this day taken him by green fields and pleasant waters. Now he may brood his thoughts, and dream dreams; but while he angles, the complete angler is not a contemplative man.

THE PRESIDENT SPEAKS.

I Nour issue of May 11 we drew attention to a so-called hunting club, newly organized in the West, and our remarks have at length extracted from the president of this club a reply, printed in another column. This reply is perhaps intended to be sarcastic, but, if so, the sarcasm is of a very mild character, and on the whole we are disposed to regard the letter as a good-natured one, and the invitation as given in good faith.

Mr. Back's letter is, however, rather amusing. He takes it for granted that in writing about the West and its game we are dealing only in glittering generalities; that we rely for our information merely on what we have read; that, in fact, we are "tenderfeet." In all these assumptions the President is wrong. Our feet have been hardened by many a year's contact with the rugged sides of the mountains, and long ago ceased to trouble us, either when footing it through the sage brush over the plains, or when scaling the steep hillsides, up which it was necessary to drag our un-willing animals. No, we are not tenderfeet. In fact, we incline to the belief that if the President will take a census of the population of Glendive he will find that there are not ten men in the town who have seen so much of frontier life in all its varied aspects as we have. When Nebraska and Kansas were uninhabited wastes we hunted through them and fought the Sioux and Arapahoes by the side of our red allies, the Pawnee Loups. As civilization pushed westward we moved on, thrust forward by the advancing tide of emigration; Colorado, Wyoming and Utah were for years our hunting ground. Then the cattle began to come in too Hinking ground. Then the cather began to Colon in the thickly, and we traversed from South to North and from East to West Dakota and Montana. There was no Glendive in those days, nor a foot of railroad in the latter territory. Hunting, fighting Indians, prospecting and mining, we took the rough with the smooth, and usually managed to have meat in camp, notwithstanding the supposed poor shooting with which the President credits us. We were with Custer in the first expedition to the Black Hills, and were among the first to detect among the grass roots, in the valley where now stands a flourishing town, the shining particles that a little later started the rush to the Hills. When we first drank of the waters of the Yellowstone River, we risked our hair, in company with two brave fellows, one of whom the Sioux have since killed, for the privilege of enjoying the hunting on that stream, and we may perhaps be allowed to express a doubt as to whether the President had at that time any special acquaintance with that river, its valley or the sur To speak more particularly of the terrirounding region. tory from which our correspondent writes, we can say that we know it pretty well. There are, to be sure, some portions of Montana where we have not traveled, camped or hunted, but we fail to recall any section south of an east and west line drawn through Benton that we are not pretty well acquainted with. We know the Missouri, the Musselshell, the Judith, the Pend d'Oreille, the Hellgate, Big Blackfoot and Snake rivers; have hunted among the Judith, Big and Little Belt, Snowy, Crazy Woman's, Bridger, Powder River, Coeur d'Alêne and Bitter Root Mountains.

Idaho, Washington and Oregon are also familiar to us; we have a somewhat intimate knowledge of Nevada and Cali-fornia, nor are the dense forests and high rocky shores of British Columbia altogether unknown to us. although we have no desire to specify what we have done, we occasionally hit when we shoot, and have been known to kill most varieties of animals found in the mountains, from bear down to badger. We can usually find our way to

drive a team, sit a bucking horse-for a while-and throw the diamond hitch.

Having said thus much, somewhat against will, but because we want to show the President that we know what we are talk ing about, we may add a few words about the game and the prospects for its extermination. If the President is an old mountain man he is insincere when he gives us to understand that the game is so abundant that it cannot be exterminated. If he has been through the experiences that from his letter he clearly wishes us to infer he has, he knows perfectly well that the game will last but a very short time. It is more charitable, perhaps, to assume that the President is himself in fact, if not in name, a tenderfoot; that, although he lives on the frontier, he is a dweller in towns, one whose experiences of the life of a mountaineer are confined to a few days in camp each year. We are the more disposed to think that this is the case, because his letter presents internal evidence that he is not an old-timer. If this be so, let us tell the President that he is wrong, that the game will disappear in the Yellowstone Valley as we have seen it vanish in other localities. It is but about eight years since we could see along the Platte River and thence south to the Republican, and beyond through Kansas, the Nation and Texas, buffalo by thousands and hundreds of thousands. Day after day you could travel over the prairie and never be out of sight of them. Where are they now? It is but a short time since the antelope fairly swarmed in Kansas and among the sand hills of Western Nebraska. Where are they now? You may travel a hundred miles through what used to be the most magnificent hunting grounds for these graceful animals, and not see a dozen of them. In like manner all game, whether it be buffalo, elk, blacktail deer, mountain sheep or antelope, has disappeared from a dozen localities which we could name. In like manner it will disappear from the Valley of the Yellowstone, unless steps are taken to protect it there.

These steps will be in direct opposition to the purposes of the President's club. We hope that there are in Montana law officers and private citizens with pluck and backbone enough to oppose this organized destruction of game; men with "sand" enough to see that the laws are enforced, and that the big game of the Northwest which is so rapidly disappearing from the country shall not be utterly wiped out We hope it, but—we doubt. of existence.

FLY-CASTING TOURNAMENT.

PREPARATIONS are being made for a fly-casting tournament, to be held in the vicinity of New York. Prominent anglers are interested in the affair, and a substantial prize list has already been well started. At the solicitation of the gentlemen principally concerned in inaugurating the movement, the tournament will be held under the direction of this journal, acting in concert with a committee appointed for the purpose.

Great care will be exercised in framing the conditions of the several contests to insure a satisfactory test of the skill of the competitors, and every effort will be made to render the tournament a success. The meeting will not be local in character; it is the aim of the projectors to secure a repre sentation of the best work of each angling center, and to make the tournament a pleasant meeting of anglers from various parts of the country.

We shall give further particulars of the meeting as the plan is matured. Meanwhile, we should be pleased to receive correspondence on the subject.

ST. JACOB AND THE BULL .- Among the medals secured for the coming international military rifle match will be one for the highest individual score on the American side, and another for the best score made by a member of the English team. One of those medals will bear the figure of the ubiquitous and oleaginous St. Jacob (with a hint to try his oil), and the other that of the Bull rampant (with an injunction to smoke Durham). Mrs. Lydia Pinkham and the Hop Bitters man are yet to be heard from. Doubtless the manufacturers of Vanity Fair would jump at the privilege of a representation at Creedmoor; and if this thing is judiciously worked there is no limit to the pile of medals that may be secured from enterprising and philanthropic firms.

FLORIDA BEHIND THE AGE. - Deer, quail and other kinds of game are "in season" just now in Florida; in fact the people down there shoot all the year around. The State had a game law once, but it was not of much good, even while ostensibly in force, and the ignorant legislators, who like to slaughter deer at all times, rescinded the obnoxious camp, can cook a meal, pitch a tent, make a bull boat, law as soon as possible. It is a great pity that the people of

Florida should not see the wisdom of preserving the game attractions of the country. These are the inducements which lead a very considerable proportion of winter tourists to visit that State; and as a simple matter of dollars and cents it would be wise to protect game in its breeding season. Perhaps in two or three hundred years Florida may reform in this matter.

THE DESTRUCTION of valuable food fish for manure. spoken of by our Philadelphia correspondent in another column, is greatly to be deplored, and it certainly seems as if there should be some means of bringing this food supply to a market. It ought to pay the fishermen to send their catches, if not to the large cities nearest to the fishing ground, at least to the towns and villages in the neighborhood, where the fish should bring prices that would yield far more than the agriculturalist could afford to pay for them as fertilizers. Such wholesale destruction as that spoken of by our correspondent cannot fail to result in great injury to the fisheries of the Delaware River.

"Professor."—We congratulate our whilem correspon dent, who went out with the ill-starred Jeannette expedition as plain Mr. R. L. Newcomb, and returned as "Professor Newcomb." He went through hazard and hardship enough to earn the newspaper-given title; and he deserves it much more richly than, for instance, does "Professor Bibiero," who tried to swim across the East River the other day with his arms and legs pinioned.

The Sportsman Tourist.

ON AN OLD TURNPIKE.

In.

In retracing our steps, at our last "outing," we saw nothing worthy of note save a young setter—a fine Insh setter of remarkable build and breeding. He seemed out of his "reckoning" entirely, and I wondered to whom he owed allegiance, and I made free to examine his collar, on which was graven his name and his owner's, well known in a neighboring city. Recognizing in me a lover of dogs, he soon was as friendly as a stange dog should be, and ere long his master came up, and he left me with good will—with my good will, also. What sentiments are inspired at the sight of a noble, well-bred dog! Although I have decided preferences for a few breeds, I confess that I truly love all, and see much in a good dog to honor and to love. The wisest man may learn many virtues from him, and some he holds in a degree so pre-eminent that no man may attain thereto. A faithful friend, a boon companion and an interested partner is a dog, and once made, his allegiance can never be broken or shaken.

Some country scenes are made peculiarly attractive by the presence of a dog, and a few such I shall always remember. But now to our tramp, continuing the deserted pike from the house where we saw the little girl with flowers in hand. Behold! there she runs with her darling dog, having a joyous romp among the buttercups and the fresh grass! To be sure, though her companion and playmate be a cur, she is as happy and proud of him as though he were a "first prize" at a bench show. I do love to see little children with dogs for playfellows, and to see the intercourse continue from year to year till the allotted three score and ten of man's life shall have seen successive generations of canine pets.

man's life shall have seen successive generations of canine pets.

In crisp October weather I doubt not this secluded tract would afford good cover for quail and grouse, and it were well to bear in mind its many advantages over the much-frequented shooting ground made familiar by years' practice. But a truce to shooting and the talk thereof. There is something in the thrught of it that seems incongrous to me, with spring and the fresh leaves and the carol of the nesting birds. In the fall it is far different, and then I could enjoy, with such a chivalrous, tender-hearted shooter as "Nessmuk" for companion, a day in the stubble, week in and out, during the season.

What quaint ideas of road making these old turnpikes illustrate! Every one who has tramped or driven on one knows their peculiarities, and this is no exception. Yonder hill will afford a fine outlook, and I am curious to see what its top will afford us, or rather our eyes, to dwell upon. The way thither is steep and undeviating, and barren of interest in an especial degree. No country road can be utterly uninteresting if we are in the mood to see and to consider the minute objects of interest that appeal to us at every step of the way. Barring a road despoiled of shade trees—and many bits of road are thus being devastated every year—if at peace with myself and the world in general, I can find enough to occupy my attention. Alas, how many there are who are beauty blind, and see not, on any road, anything to admire or be satisfied with! They have not the sentiment of a dog even, and few of his less exalted qualities.

A few more rods and we can see over and far away, and, if I mistake not my bearings, a water view will give diversity to the scope.

A few more rods and we can see over and far away, and, if I mistake not my bearings, a water view will give diversity to the scope.

Here we are, and there flows a river—placidly flows through green meadows and wood-laden banks. A pretty scene, truly, and well worth the climb its acquaintance to make.

Below us the road ends abruptly at the riverside, and we can continue our turnpike tramp no longer and no farther without the aid of a boat to ferry us to "the other side." When the pike fell into disactude the bridge was taken away, and the crumbling abutments attest the sharpness of the tooth of time and its unprotected state against the rude buffets of the elements. The sight of the river is suggestive of—fish and fishing, and the inexpressible delights of an angler's life.

Pausing here, let us leisurely recall the fact of our augling experience and, on the morrow, prove to our own satisfaction how experience (as well as "history") can "repeat itself" and cast the shadow of the rod upon yonder water.

Thus ends our tramp, as many a pleasant one has ended, by a pretty bit of water, and here I beg leave to begin for Forder AND Stiedand an unpretentious series of papers on angling, which I beg to call "With Hackles and Gentles," and inscribed to all lovers of the "craft."

O. W. R.

"CAMPS OF THE KINGFISHERS."

IN SEVERAL PARTS-PART IV.

"CAMPS OF THE KINGFISHERS."

IN SEVERAL PARTS—PART IV.

WE were up betimes in the morning, for we wanted to put in a good day's fish to decide the question of moving camp. But first we must needs have a look at the big fish to see how he had passed the night. When Jim and I took a boat and pushed out to the stern of the one o which he was tied, a sight greeted us that smote us full sore with grief. Calamity of calamitres! There, hanging at the end of the cord in the clear water, tail down and mouth wide opened, was the old warrior, limp and dead as any salted mackerel, and we were so anxious to keep him alive until we were ready to start home. Putting sadly back to shore, we carried him up to the camp and laid him out at full length on a board, where he was surrounded by the boys, and many were the regrets expressed at his unexpected death.

Many conjectures were made as to the cause of his sudden taking off, but probably the true cause was the injury he received when I planted my knee on him in the boat, and the drag of five miles through the water to camp. Perhaps he died of a broken heart—of grief and chagrin at his defeat and capture by a little thread that looked to him scarce of strength to check the jerky spurt of a well-developed sunfish, let alone the headlong rush of one of the mighty tribe of Bosar nobolitor. Who knows? But his broken spirit had taken noiseless wing (or fin) during the night and passed away, and we mourned him as one whose like we might never see again. Frank and the Scribe, joined by our jolly, good-natured young neighbor, Aleck, who had come walking in on us as silently as an Indian, repaired to the "nook" and took a brief consoler.

We took the measure of the old chief, and carefully noted it down, as follows: Extreme length from tip of under juw to end of caudal fin, 4 feet 4½ meches; girth at pectoral fins, 20 inches; at ventrals, 25½ inches. The caudal fin, as it iay on the board naturally and without stretching, measured just a foot from point to point of crescent in a straigh

exactly 12 inches. He was a magnucent usin, vary usin and color for a maskalonge, which made the spots show faint and indistinct, but withal a fish of perfect form and splendid development.

We borrowed a small steelyard from across the lake to weigh him with, which was marked for thirty pounds, and two additional notches past the mark. Aleck, who had speared numbers of them, and a few larger than this one, had pronounced it a forty-pound fish from the first, and none of the party had "guessed" him below thirty pounds. Two of us swung him up between us on a pole, raising it as high as our heads to clear the tail from the ground, but found the steel yard would not give his weight.

The "pea" was moved out to the 32-pound notch, and on letting it go, beam and pea flew up with such a decided jerk that we felt safe in placing the weight at thirty-five pounds at the lowest, and it was so recorded.

Having no arsenic nor rock salt at hand to preserve him, and none of us being much versed, anyhow, in methods of keeping a dead fish in hot weather, Frank dressed him, and carried half to Aleck's mother, with the compliments of the camp; the other part went the way of many a noble fish before him. I brought the "bug-cleaned" and sun-dried head home w th me and have it yet.

But the morning was wearing away and no fishing yet. Jim and Knots, with Brother R. eager to take his first bass, went together in one boat, choosing to fish Sisson's Lake thoroughly and take a dip into Hanley's, below, if the sport did not promise well nearer camp. The veteran and I, having in mind the glories of the day before, headed our boat for the "upper waters," and when out into White's Lake began fishing, but did nothing worth noting until well up towards the head.

Just below the saw-mill the lake narrows until, fishing from a boat in mid-channel, a long cast will almost drop your frog or minnow among the lilies on either side. Here we pulled the boat up on a sand-bar at the mouth of a tiny spring brook, and Dan had some fine sport with three

bass, that, by the way they took hold, had clearly not been to breakfast.

I had the luck to lose one in the grass that was certainly as large as Dan's three, else he would not have got away. [And this reminds me—as the Scribe would say—that it may be well in this connection to proffer a morsel of advice to aspirants after piscatorial honors, and more especially to the younger part of the fraternity, who may be ambitious of becoming masters in the gentle art. Always when you lose a strong, hard-fighting fish, if the symptoms are bass, make solemn asseveration that he would weigh from six and one-quarter to nine and three-quarter pounds (had you landed him), and be particular about the quarter pounds. If trout, draw it a shade or two milder, and don't stickle for a quarter of a pound, for quarter-pounds in trout are seldom numerous enough to contend about. Other fish are to be regulated according to the symptoms and circumstances surrounding the case. You will find this about the only way left to get even with your partner, who has taken the most and the biggest fish. Advice free.] e free.]

Dan said not a word, but I could see a smile flitting around the corners of his mouth that threatened to broaden into a snicker; and filled to the muzzle with disgust, I shoved the boat out from the bank and we took our way up

shoved the boat out from the bank and we took our way up the lake.

A few rods from the point a violent and unlooked for jerk came near yanking the old sinner into the water; but righting himself in a moment, a sharp tussle began between him and what we supposed to be a maskalonge or large pickers. The fish made for the grass on the east side; and as Dan braced himself to hold him away, and I swung the boat around to assist him, the line flew back, and on recling up we found the gimp had broken short off an inch or two from the hook.

We looked at each other for half a minute and said nothing. The very best selected and most forcible forms of expression known to the American language would not have met the requirements of the case. I was reminded of the loss of my bass a few minutes before, but managed to let the pressure blow off without an explosion.

Near the inlet, a few hundred yards above, Dan struck a pickerel of such amazing strength and game that his skill and powers were taxed to the utmost to get the upper hand and bring him to gaff.

Such prodigious power have some of the "fighting pickerel" of these upper lakes that yards.

Such prodigious power have some of the "fighting pick-erel" of these upper lakes, that I verily believe they could "walk off" with two bass, each of the same weight as the

pickerel.

This may sound a lit[†]le fishy, but I believe others who

have handled some of them will agree with me. I had recled up to be out of Dan's way, and keeping the boat in position for him and not moving more than four or five rods, he took six more with the same frog as fast as he could handle them, while I yanked them into the boat with the gaff and knocked them on the head with a short club. With the seventh fish the frog had become stripped of skin and most of the flesh from the jaws back, and Dan was fishing with just about nothing but the frame. He called for another frog, but as my share of the sport was getting a little monotonous, I suggested that we had enough, that pickerel fishin' didn't amount to much anyway—when I was getting none of it. Had I kept on with the gaff and the club, and hooked on a frog occasionally, I believe the old fishhawk would have stayed there till he had half filled the boat with the hungry sneaks, or until darkness had driven us to camp. We agreed we had enough, and not wishing to be burdened with them going up, we pulled back across the little bay, made the acquaintance of Mr. Wilson and a couple of men at the mill, and gave them our morning's catch. We got out and stretched our legs by taking a look over the mill and the pond, and it was during this short stop with the mill owner that he informed us of his intention to stock the pond with trout.

A curious spring that he called our attention to furnished as a glorious drink of clear, cold water, and we pledged a

A curious spring that he called our attention to furnished as a glorious drink of clear, cold water, and we pledged a health and better acquaintance all around by drinking in turn from a bright tin bucket that served the occasion far turn from a bright tin bucket that served the occasion far turn from a bright tin bucket that served the occasion far This spring gushes out of the ground near the fuol of the low hill, in a stream as big as a man's leg, and, dashing along five or six feet, pitches into a hole and is lost to sight. From here it works its way underground somewhere into the lake, which is perhaps soventy or eighty yards distant. Any thirsty and tired brother who may happen that way will find it just north, near the upper end of the mill, and I am certain that after he has once drank of its sweet, cool waters, he will feel good toward old "Kingfisher" for telling him where it is, and will drink his health in an extra tincupful.

cupful.

As we were ready to push out from the boom of logs at the foot of the inclined tramway, up which they are drawn from the water into the mill, one of the mill men told us that early in the morning he saw a maskalonge that would weigh twenty to twenty-live pounds lying in the shallow water at the mouth of the river just above. Backing his boat cautiously away without alarming him, he went back to the mill for a spear, but on returning found the fish had either gone up the stream or back into the deep water of the lake. Then Dan and I were sure this was the same chap that had broken his worthless ginn at the narrows a short lake. Then Dan and I were sure this was the same chap that had broken his worthless gimp at the narrows a short time before. Of course it was, and did we not know all the time it was a maskalonge?

Had we arrived at any other conclusion all the traditions of the craft would have been as naught; all the teachings of our early youth would have been in vain. Yea, even back to the time when we flipped horned chubs and silver sides out of the little pool below the old millwheel with a bent pin.

best pin.

Dan soliloquized (Dan tackles an average soliloquy "perfectly regardless"): "If fish could leave a trail in the water, how many a subtle theory could be exploded, and how many a fine structure in the shape of a marvelous fish story, with gables and turrets and buy windows and all the modern improvements, would be wrecked before it was ready for the roof. How many of the 'known habits' of the denizens of the waters would have to be unlearned! All haill then, ye trackless waters, for from out your hidden depths comes at the beck a world of comfort to the school of anglers burdened with superfluity of knowledge, soaring imaginations and mendacious proclivities."

with superfluity of knowledge, soaring imaginations and mendacious proclivities."

As this line of thought led under the circumstances strongly in our direction. Dan seemed not to care about giving it further voice, but lighting his pipe gave himself up to silent enjoyment, while I worked our way up the half mile of crooked river and out into Bower's Lake. At the little stream where we took the five bass the day before we stopped to get a cooling drink and rest, and fish awhile. As we pulled in under the branches of a cedar, we disturbed a nimble-footed little red squirrel who was a "slakin" of his thirst," or mayhap he had come down to the brook to take a bath, or put the finishing touches on a late morning toilet. He was highly indignant at the intrusion, and berated us soundly from a crotch in a small cedar where he had taken refuge at the first sign of danger. As we kept quiet and showed no disposition to molest him, his curiosity moved him to leave his retreat and creep cautiously out on a projecting limb to see what we were doing. Embodiened at our indifference, he sat up on the limb and "sassed" us to his heart's content. Moving a little further out on the branch toward us and peering curiously at us out of his bright eyes, he seemed to think we were not much anyhow, and for our lack of spirit chattered and scolded at us and heaped taunts on us till he worked himself into a towering rage. At every "bark" or note of his peculiar chatter his tail would give a responsive "illp," greatly to our amuscement. It seemed to us that every motion of his little jaw closed and broke a current of electricity connecting with his tail, causing it to "flip-flip" in a most ludicrous manner

They are bright, pretty little creatures, quick as a flash in their movements, and in size are between a ground squir-

"flip-flip" in a most ludicrous manner

They are bright, pretty little creatures, quick as a flash
in their movements, and in size are between a ground squirrel and a gray. They are abundant throughout all this
region of country, but as they hold no rank as game, a
charge of powder is seldom wasted on them, yet when broiled
see, art they make a very toothsome "mou'ful" for a hungry
camper. After scolding at us until he was hoarse, our little
chatterbox gave his tail an extra vigorous and deflant birt
and disappeared in the folinge, his departure hastened, no
doubt, by a flourish of Dan's rod as he swung it back for a
cast,

Cust.

We fished here quietly for an hour, taking seven fine base that would run near three pounds apiece, but no pickerel. I lost a splendld fellow under the sunken limb that was of course a couple of pounds heavier than any of Dan's, because he had four to his credit, while I had but three.

Filling our "tanks" from the stream, we pulled out for the next water station above, the spring brook, at the mouth of which we struck the big maskalonge the day before. We rowed carefully past this for a hundred yards and back again, hoping there might be another one hanging around that was spoiling for a fight; but as none responded to our challenge, we pulled in and tied our string of fish (we had taken a few more coming up) to a stake driven into the sand at the mouth of the stream, to be left there and picked up on our way back.

At the head of the lake, near the mouth of the river, we

spent an hour or more with a school of pickerel, taking them until their capture ceased to be sport.

A glance at the sun told us we had loitered too long on the way to go further up that day without being late in camp again; however, had we struck another chief of the tribe, I have no doubt we would have stayed out until morning, if necessary, and felt little the worse for it.

We fished along around the cast shore, took a couple of bass, and went ashore at Bower's house to hunt a spring, as the last hour in the broiling sun had well-nigh parched us with thirst.

with thirst.

with thirst.

Taking the path from the landing up to the house, I soon "smelled out" the spring a few rods south, at the foot of the low hill; and I won't say how much I drank of it, but Jim is not much off in his estimate of the writer's capacity for water that goes to the spot. Filling the old-fishioned army cup brimming full, I took it down to Dan and went back to the house to find some one to take our fish off our hands.

The most noticeable features about the place were a shift-less, "wuthless" looking dog that roused himself out of a sound nap at my approach—too lazy to bark or ceax more than a couple of listless wags out of a burr-infested tail, and dead sunfish—a pig-pen right alongside the front door, containg a fat, grunting porker—and a cow stable built against the rear of the house; thus making it handy for a change of most villamous smells.

knock brought "Uncle Bower," an aged, bent man, to

the rear of the house; thus making it handy for a change of most villamous smells.

A knock brought "Uncle Bower," an aged, bent man, to the door, and after getting him to understand that we wished him to accept our fish, he went with me to the boat and we loaded him down with fish enough to last him and his good dame and a neighbor or two a week, or as Dan said, "enough to keep him sortin' fish bones for a mouth."

Glad to have disposed of our fish in a way that would do ur fellow creatures some good and not look just wasteful, we said good bye to the pleasant old gentleman and pulled across the lake to pick up our other string of fish.

Going down Dan fell into a streak of sport that was entirely new to him and greatly to his pleasure. I pulled the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the boat along at a moderate speed ten or twelve feet from the surface. Every few yards, or at most rods, a bass would make a dash for it, frequently leaping for it while in the air, and when one was hooked I stopped the boat and waited while he was led alongside, when after disengaging the hook he was dropped back into the water, a few only of the larger ones going on a stringer for camp. After half a mile or more of this (to Dan) exciting sport I got tired of taking them off and dropping them back, and meekly suggested that some things had limits—even skittering for big-mouthed hass might run against a boundary line somewhere, and as my part of the spoils amounted to little more than "gaawin" of a bone," while he was feasting off the fat of the land, stuffing himself with woodcock, and trout and terrapin

disappointed at the results of the day's fishing.

After leaving camp in the morning they were overtaken down the lake by Aleck Benway, in his boat, who was out for a day's sport with rod and spear, and at his invitation Brother R. had eagerly changed his cramped quarters in the bow of the little skiff for a more roomy and comfortable place in Aleck's little boat, which was a marvel of speed and seaworthiness, and could, he boasted, show a clean pair of heels to anything on the Lakes, either under sail or with him at the oars. She was indeed a beautiful little boat, with num at the ears. She was indeed a beautiful little boat, with easy graceful lines that the eye of a sailor would love to linger on, and being built entirely by Aleck and his brother, she was the pride of his heart.

After the swap, Jim and the Scribe had fished all around Sisson's Lake, with about the same luck that Dan and I had

experienced two days before.

Going on down into Hanley's Lake, they fished that with Going on down into Hanley's Lake, they fished that with hetter success, but still they were far from satisfied, and after a lunch at camp they went up stream and fished White's nearly to the saw-mill and back. Here they found the fishing better, but not to compare with that of the year before, around and above the islands at the foot of Central, and they went back to camp ready to cast their votes for a move in the morning, either up or down.

Brother R. had acquitted himself just about as we had ex-

Brother R. had acquitted himself just about as we had expected he would do.

The first bass he caught was a pickerel that dashed under the boat, smashed the top joint of his Uncle Dan's best rod, and got away; "leastways" that is the way it was told in camp. He was equal to the emergency, however, for he concluded that pickerel fishing was too high up in the art for him to begin with, and tying on a small hook he joined Alcek in 'histin' out sunfish' witt what was left of the broken rod. Tiring of this they went below into Hanley's, and Alcek—as related by Brother R.—gave an example or two of his marvelous skill with the spear. These spears have usually three to four barbed tines of slender steel, welded on a short shank with a socket, into which is fastened a slender shaft or handle of ash or white cedar ten to fifteen feet long, and very light and tough. Going down through the river Alcek called Brother R. to look at a healthy-looking sunfish sunning himself close alongside a sunken log, and poising his spear he hurled it with unerring precision a distance of full twenty feet, impaling the little fish and leaving the spear quivering in the log. Next he threw the spear twenty-five feet or more and transfixed a four-pound pickerel swimming leisurely along outside the lilies, and a couple of others met their death at lesser distances, all of which was to Brother R.'s profound astonishment. profound astonishment.

To such wonderful proficiency in throwing a spear do some of the dwellers along these lakes attain that they disdain the slower and to them less exciting method of procuring a mess of fish with rod and line, but provided with a spear, and a torch in the bow of the boat or cance if by night, with a comrade to paddle, they will kill a dozen fish

in less time than it would take to find bait for a half day's fishing with pole and line.

In spearing by daylight the weapon is often thrown several yards from the boat, and if a large pickerel or maskalonge is struck, fish and spear disappear from sight and remain under water until the buoyancy of the handle brings them to the surface. Occasionally the handle will pop up a quarter of a mile away, and then tall paddling or rowing "sets in" to get in reach of it and if the the recording we have of a mile away, and then tail paddling or rowing "sets in" to get in reach of it, and if the fish is mortally hurt, he is soon dragged into the boat; but sometimes they go under again and lead the boat a merry chase before spear and fish are secured. In the hand of an expert like Aleck it is almost certain death to any fish coming in reach, and Brother R., having in mind his experience of the forenoon, went back to

naving in mind his experience of the forenoon, went back to camp profoundly impressed with its superiority over the rod as a sure thing on pickerel at least.

That night, when the last man had relieved himself of the day's accumulation of fish l—ore, and we had discussed the question of moving camp, eleven o'clock was creeping on and we went to bed undecided to go up or down.

**Experience of the forenoon, went to be discussed the content of the conten

MAINE WATERS AND ROUTES.

MAINE WATERS AND ROUTES.

A RTICLES from different writers have frequently appeared in the Forest and Stream regarding the Rangeley Lakes and their tributaries, how to get there, the beautiful scenery along the route, the fine stage and hotel accommodations, etc., etc., usually winding up with a glowing account of the wonderful fishing and hunting in some specific locality, all of which no doubt possesses a good portion of real significance, at the same time some policy may be discovered, and each one has his pet route and place. But to take a general and broad view of the matter, these lakes and wilds of Maine are nearly all in the same latitude, and extend the whole length of the State, from New Hampshire to New Brunswick, bordering on the Province of Quebec, or the Canada line, a distance of over two hundred miles, presenting a very large field for sportsmen and tourists.

dred miles, presenting a very large field for sportsmen and tourists.

To be perfectly famillar with this vast wildness would require one's lifetime of fifty years, so it may be expected of one to give a true account of only a portion. Our real knowledge only extends from New Hampshire to Moose River, embracing Parmacheene and the Rangeley chain of lakes, together with the Seven Ponds, Chain of Ponds, Tim Pond, King and Bartlett Pond, Spencer Ponds, Jim Ponds, Flag Staff Pond, etc. But this narrative is intended mainly for the Seven Ponds, Massachusetts Bog and vicinity, embracing facts gleaned from three famous hunters and trappers, viz., Warefield, alias Kit Carson, alias David Crockett, alias Whitman, Haines and Crosby. These gentlemen have spent several winters in this very remote section, including the one last passed, besides guiding sportsmen during the summer months, and they are all inhabitants of Rangeley, Franklin county, Maine, and are well-known to many readers of Forest and Stream. These hunters spend their winters in the vicinity of these ponds, for the purpose of trapping ofter, bear, beaver, mink, sable, lynx, fisher, etc., of which there are an abundance. It is the usual custom to spend a few weeks the first of the winter in securing etc., of which there are an abundance. It is the usual custom to spend a few weeks the first of the winter in securing their winter's supply of moose, caribou and deer meat, and a good supply may be found at their home camp any time during the winter, all taken of course before the closed time, as guides are not supposed to violate the fish and game law

laws.

These ponds nestle among lofty and magnificent mountains, known as Snow Cap, White Cap, and the Boundary mountains, on the top of which the boundary line between Maine and Canada runs east and west in a zig-zag course to

Maine and Canada runs east and west in a zig-zag course to suit the convenience of these peaks.

It is but a very few years since sportsmen had never cast a fly upon these waters, and as yet only the shores of those most accessible have been marked by their footprints. Though the distance from one pond to another vary from half a mile to one mile apart, yet as Warefield remarked to us, no sportsman's rod had ever cast a shadow upon either of the four of the most northerly and westerly of these mirrors among the mountains, for the most fastidious sportsman as yet has never failed to satisfy himself with the greatest abundance of trout and game found within the limits of the nearest approach of these lakes. Nor west Pond is the uppermost of the chain, and is truly on the divide, as it has two distinct outlets, one flowing into the Dead River and thence into the Kennebec River; the other into the Rangeley lakes and Androscoggin River. Adjacent to this pond is Massachusetts Bog, dotted with pools of water, literally alive with speckled trout, the weight of which on an average is two pounds each, and around this bog the moose, deer and caripounds each, and around this bog the moose, deer and cari-

pounds each, and around this bog the moose, deer and caribou have beaten paths.

In August last year a Frenchman, from Canada, shot two large moose in open daylight near this bog in one day. In March, 1881, the above named hunters built a very fine camp, fourteen feet square, at Nor'west Pond, which will accommodate a small party, and this last winter built three fine boats from pine boards which they sawed from pine logs fully three feet through. There was no saw mill within thirty miles. Warefield describes it thus; he says: "We cut the trees on the slope of a hill, laid skids one end on the ground, the other end on a prop six feet high, rolled the logs out near the props so they were six feet from the ground, then with a whipsaw, one man above and one below the log, we sawed out our boards by hand power, as was the custom in olden times."

Messrs, Grant and Richardson have several fine camps and boats at the more easily approached of these ponds, and

Messrs. Grant and Richardson have several fine camps and boats at the more easily approached of these ponds, and Kennady Smith also has a camp and boats at one of them. The number of sportsmen visiting these ponds has rapidly increased annually, as have also the accommodations, and if I am rightly informed. Mossrs. Grant and Richardson, proprietors of the Kennebago Lake House, are this year running a camp at these ponds, in connection with their hotel at Kennebago Lake, and parties are not under the necessity of taking in any luggage except their rods, guns, etc., thus saving a large amount of hardship which has had to be endured herrotore.

ing a large amount of hardship which has had to be endured hervifore. We don't feight to be some foreight sportsman, and unimterested in the travel to this great hunting and fishing grounds, but give all the information possible for the benefit of sportsmen and readers of Fordet and Stillard, as has been our practice for many years; and we stand accountable for the truth of all we say. We don't advise any to attempt to visit Seven Ponds unless they are strong and healthy, for there is no way to reach them without hardship, though a road has been cut out from Tim Pond, a distance of nearly fifteen miles, yet the surface of the ground is in its natural

state, and any one at all acquainted with the country knows state, and any one at all acquainted with the country knows that it is quite as easy to walk as ride over such a road. The glowing accounts which have appeared in Forest and Stream in regard to trout fishing in Tim, King and Bartlett, and other ponds, tributaries to Dead River, are substantial facts. But when it is claumed to be the superior route to the Seven Ponds, it is not correct, according to reports of truthful men who have tried both routes. The distance from railroad, by way of Dead River. Tim Pond etc. to Seven Seven Ponds, it is not correct, according to reports of truthful men who have tried both routes. The distance from railroad, by way of Dead River, Tim Pond, etc., to Seven Ponds, is seventy miles, at least; while by the Rangeley and Kennebago route, from railroad to same ponds, is less than forty-five miles, and the stage and hotel accommodations much better. By this last route one is able to reach Seven Ponds one day sooner, beside saving twenty-five miles' staging.

staging.

It is but just that sportsmen and those visiting these places should know the facts regardless of any personal interests, and any doubting these statements will do well to investigate for themselves. The different routes to thee great sporting grounds, viz.: Upton, at the foot of Umbagog Lake, Andover, leading to south arm of Richardson Lake, Phillips and Rangeley and Kingfield, North Anson and Eustes, each and all have their attractions and friends, and are all superior routes to certain points; and yet no one route is the best for all; and truly it is not our purpose to induce any to go any way other than for their own personal interests. Yet since the telegraph and narrow gauge railroad from Farmington to Phillips have been established, thus cutting the stage ride down to seventeen miles, the Phillips and Rangeley route takes the lead, and is much the quickest, cheapest and easiest route to the following points, viz. Greenvale, Rangeley, Mountain View House, Haine's Landing, Bemis Stream, Indian Rock, Parmacheene Lake, Kenebago Lake and Seven Ponds. In going to Upper Dam it makes but little difference, the cost is about the same eitner way. s but just that sportsmen and those visiting these places

the six lower lakes the ice goes out nearly all at the

makes out little difference, the cost is about the same either way.

In the six lower lakes the ice goes out nearly all at the same time, thawing away first around the inlets. The boats commenced making trips all within two days this present season. In Parmacheene and Kennebago the ice goes out from three to five days later. A telephone line is now being constructed from Phillips to Rangeley, and will probably be extended to Indian Rock the present season. The poles are nearly all set and the wire will be applied soon. This will be a great advantage to sportsmen.

The fishing season is late this year, on account of the extremely cold spring; but the last few warm days has shown that trout are still abundant, and many boxes have been taken home, some containing seven and eight pounders. As an example, I might mention Messrs. Chace and Sargent, of Haverhill, Mass., who own a camp at Haines's Landing, and have had as guests for a few days Rev. Wm. T. Hubbell, Baffalo, N. Y., and Wm. T. Plaisted and son, Somerville, Mass, making a party of six, including Mrs. Chace. The party were encamped for a week, and took upward of two nundred trout, the largest of which weighed eight pounds two ounces, and ten of the number averaged over seven pounds each. Mr. Plaisted is well known to many readers of FOREST AND STREAM, having been a conductor on the Boston & Maine Railroad for nearly thirty years. He is a thorough and genial railroad man, and is well-nigh the front as a trout fisherman, having taken last week from Moose-luckmagunite Lake fish weiging as follows: One 7 lbs. 2 czs., one 7 lbs. 5 czs., and one 7 lbs. 14 czs., beside fifty others weighing from one to two pounds each, the smaller ones all returned to the water.

Trains leave Boston for Rangeley Lakes via Boston & Manne and Eastern Railroad at 9 A. M., arriving at Phillips at 7 P. M., thus saving thirty minutes from former years. Fares have been reduced to Phillips and return \$1; so tickets are now sold from Boston to Phillips and return for \$10. Stage fare from P

PHILLIPS, Me., June 16, 1882.

PHILIPS, Me., June 16, 1882. SAMUEL FARMER.

I have just returned from a week's sojourn at Tim Pond and the Seven Ponds. Notwithstanding that we went too early by two or three weeks, we had very fair sport with the gamy trout of that section. Mr. Smith has several new camps ready, and spares no pains to make the fisherman's stay pleasant in every respect. His son's wife has charge of the Tim Pond camp, and her table is first-class in every respect. To those who have never visited these ponds we say, give them one trial this year and our word for it you will repeat your trips annually. There is no limit to the trout in these waters.

BIDDEFORD, Maine June 8.

FISH AND GAME IN COLORADO.

HAVE just returned from a short trip to Middle Park, having taken over 4,000 young New England trout and liberated them in the waters of Granz River. They were the first to cross the dividing range in this State. Only three were lost in transit, although taken over on the second day after the road was opened through the snow for travel.

after the road was opened through the snow for travel. Mountain streams are all very high from the late and heavy spring snows and frequent rains since. This gives assurance of good fishing after the season fairly opens, say by the 10th or 15th of July.

There is plenty of game in the park. Residents say it is more plentiful than a few years ago. I found the people using wild meat almost exclusively, and there is doubtless some waste that ought to be stopped. I heard of some slaughter of elk and deer for their hides the past winter and spring, and saw one wagon load of elk hides brought in that could hardly all have been taken from animals necessarily killed for meat, as they represented but a single family of persons. I was told of another party who killed about seventy-five elk for their hides.

killed for meat, as they represented but a supersons. I was told of another party who killed about seventy-five elk for their hides.

I saw two men who were trapping beaver. They had several fresh skins, but complained of poor success. Another party of three men came in while I was there with their season's "catch." They wintered about Egeria Park and on the headwaters of Yampa River, and complained of doing badly. The reason they gave was that a party of trappers from Utah worked over all that part of the country last summer, from Green River eastward to the Gore Mountains, and then backward in the fall over the same ground. They swept it clean. This trapping of fur-bearing animals in the summer season, when they are raising their young, ought to be prohibited by the severest penalties.

The same part, told me that trout had been almost totally destroyed last season in the Roaring Fork of Grand River by blasting. Also, that the same practice had greatly reduced their numbers in Eagle River and William's Fork of the Grand. The development of new mining camps in the vicinity is the cause.

CAMP COOKERY.

ROASTED TROUT-FIG PUDDING.

ROASTED TROUT—FIG PUDDING.

In your last issue I told your readers of a nice way for cooking large brook trout. The article was printed precisely as written. Its absolute correctness pleased me very much. One is not often able to tender to an editor such unstincted praise on this point. My good humor prompts me to say nothing savage about the ridiculous blunder in an editorial comment upon my note. Rather let me "heap coals of fire" upon your head by communicating another excellent method of woods cookery of brook "shad"—no, no, I mean trout. Credit for it is due to Mr. Robert B. Cable, Elmira, whose ability as a railroad man is only equalled by his success as a camp cook. The fish, undrawn, were wrapped, separately first, and then in a body, in oiled or buttered brown paper and the package lightly covered with green leaves and put to roast in the hot embers, as potatoes are often roasted. The delicate flavor of small trout cooked thus is beyond description. But what will equally recommend this method to anglers is the fact that when one carefully unwraps each cherub he finds all the brilliant speckles in full display as at the instant of his leaving the water. And the skin will not cleave to the flests, but peel from the side in one piece like the bark from a young balsam in sap time.

New York, June 26, 1882.

In response to your call for "camp cookery receipts," allow me to favor the outdoor fraternity with a capital thing to "top off" on after a good square meal. The ingredients are very simple, but it gives a finish to a dinner that is inexpressibly grateful to the somewhat abused palates of those roughing it in the woods.

I surprised a party of ravenously hungry campers with it last year, and gained thereby such an enviable reputation as a cook that I have traveled on it ever since.

FIG PUDDING.

Cut 6 figs into pieces (avery level-headed camper carries figs among his supplies), cover them with cold water, and let just come to a boil over a gentle fire. Put into dish and add 2 teaspoonfuls of sugar.

Set '\(\) pint milk on to boil; while heating, beat up 1 egg; add pinch of salt, tablespoonful of sugar, and teaspoonful of corn-sturch (or flour). Beat together, pour into milk as soon as it boils out; pour whole mixture over figs in dish.

STELLA MARIS.

"PADDLE AND PORTAGE."*

"PADDLE AND PORTAGE."*

READERS of the Forest and Stream need not be told that Mr. Steele has a decided taste for somewhat arduous wilderness exploration and adventure. Earlier files of this journal contain accounts of his Florida, Michigan and Maine excursions. A few years ago an extended canoe tour of 200 miles through the Maine forests was described in a handsomely illustrated volume, "Canoe and Camera." In the autumn of 1880 Mr. Steele supplemented that trip by another Maine expedition, from Mooschead Lake to the Aroostook River, the results of which are given in a volume which now lies before us, "Paddle and Portage." Mr. Steele's new book takes high rank among the beautiful books of the year, and easily goes to the head of its particular class. In fact we know of no illustrated book of American sport and travel that can at all begin to compare with it. A portable photographic apparatus formed part of the author's outfit, and Mr. Steele was successful in securing a large number of superb photographs of scenery and camp life, from which the illustrations of the boon have been engraved.

The route over which this trip was made is at best a most difficult one, and in the autumn of 1880 the hardships of the expedition were greatly increased by the low water. Streams were dried up, and instead of paddling their canoes, as they expected, they had to drag them over the dry land. The reader has not musp pages to turn before learning that the "portage" was vastly out of due proportion to the "paddle." and as we follow the party on their tollsome way, the query naturally suggests itself, why did they do it? By dint of much hard work, damming up streams and then floating down a short distance on the volume of water thus secured, sluicing beaver dums, and various other expedients, coming meanwhile to the very verge of starvation, they managed to literally "pull through," and finally emerged from the woods after a journey of four hundred miles.

The party consisted of five persons, the author, Mr. Lyman B. Goff, of Paw

after a journey of four hundred miles.

The party consisted of five persons, the author, Mr. Lyman B. Goff, of Pawtucket, R. I., the two guides, Hiram and John Mansell, and the Indian guide, Thomas Nichols. The guides proved to have been well chosen; they were reliable hardy men, and won the good opinion of the tourists.

The book is chatty and enlivened by frequent ''jest and story.' Its preparation has been a genuine labor of love, and from the frontispice to the finis its artistic work has been under the constant supervision of the author, who certainly may feel just pride in the appearance of the volume. Of the large map, 20 x 30in., accompanying the book, we have already spoken. It was compiled by Mr. Steele, and is the best map of the country published.

Below we give some brief extracts from the pages of

Below we give some brief extracts from the pages of "Paddle and Portage."

"We spent three days on Echo Lake hunting and trapping, and added three beaver to our collection of furs and stock of provisions, which latter was now rapidly decreasing. On breaking camp we explored the outlet of the lake, and finding the stream very dry, were obliged to build dams in order to sluice our canoes through this country to the Mansungun Lakes below.

Lakes below.

"I tell you that water is cold,' said John Mansell, as he waded ashore after putting the last mud and stone upon a dam opposite the camp. 'You don't call this a canoe tour, do you, Hiram' I should call it going overland to New Brunswick. Never did see such a dry time in my life.'

"The water having greatly increased during the night, we loaded our campes and placed them in line above the dam, each man, with the exception of the Colonel, being in his customary nosition.

customary position.

* "Paddle and Portage," from Moosehead Lake to the Aroostook River, Maine. By Thomas Sedgwick Steele, author of "Canoe and Camera," Map of Maine, etc. With over sixty illustrations and map of the canoe courses of Northern Maine. Boston: Estes & Lauriat, 1822, Price, \$1.50.

"'Are you all ready?' yelled the Colonel, standing on the top of the dam below us.

"'Ready!' was answered; and with the blade of his paddle he threw the mud and rocks to the right and left, and the pent-up waters of three days' detention swept us down the stream a long way on our voyage. The Colonel, dashing through the woods, regained his canoe at a bend in the river. But gradually the waters receded from under our barks, and we were again force' to take to the stream and lift our canoes over the cruel rocks, until we reached a broad expanse of the river below. This pond was the result of an enormous beaver dam four feet high and one hundred feet wide.

"'We better set our traps,' said Nichols; 'many beaver here; me catch some to night, a family of nme,' the Indian's accuracy regarding the points of woodcraft being at times wonderful. 'But we cannot proceed without water,' said the Colonel, observing the stream very dry below.

"We therefore set our traps and cut the dam to the width of over ten feet, through which the water rushed with velocity and floated us quickly to the Third Mansungun Lake. We were detained only by a few fallen trees, which the axe in the brawny hands of John Mansell soon cleared. Before it was light the next morning the Indian's cance was far away on the lake for an examination of the traps; he soon returned with four immense beavers, whose aggregate weight fell not short of two hundred pounds.

"'Me footed two more,' said the guide, exhibiting the webbed feet of the animals in corroboration of the fact; 'but they very quick—they get away. I see dam we cut last night, and it now just good as new.'

"Good as new!' we cchoed. 'Impossible.'

"True as me stand here,' said Nichols, at the same time glancing anxiously into the stewpan, to see if we had left him any beaver meat for breakfast. 'Beaver, they fell tree in night ten inch thick, gnaw it in lengths three feet long, plan them at cut, and heap with much bark, mud and sticks. Build dam up in one night. No think it myself, if not see i

"After our toil on Osgood Carry and the stream below, we rested over a week on these Mansungun lakes. The third Mansungun Lake, on which we first campled, is five miles long and two wide. This is connected by a narrow outlet with the second Mansungun Lake, which is about the same size as the other, while the first or lower lake is the smallest body of water, being about two miles long and one wide. I fished and hunted in short excursions from camp, and, with tourograph over my shoulder, I was constantly in search of the picturesque. Nichols had discovered a brook (the name of which we afterwards learned was Chase), tumbling down the side of a mountain near our camp, and as falls were a rarity on the route, I spent half a day in this gorge. About this region we had rare success in our hunting and trapping, and with many skins stretched on the drying hoops about camp, and fresh animals coming in to add to the stock, our quarters gradually assumed the appearance of a Hudson Bay trading-post." "After our toil on Osgood Carry and the stream below,

"'If moose so near,' said Nichols, one day, 'me better make horn and call moose to-night; no try, no get him.'
"We thought this a good scheme, and with the approval of all the Indau tramped off into the woods, and soon returned with a large piece of birch bark. Shaving the edges with his knife, he warmed it over the fire, and proceeded to roll it up into a great horn two feet in length, tapering it from six inches to one in diameter, and fastening the edges with wooden pegs.

pegs.

"Nichols and I were the only ones who went out on the hunt. Preparing ourselves after the evening repast, we stepped into our cances at 7:30 o'clock. It was not a remarkably severe night, but as I knew I should be obliged to remain for a long time in almost motionless position, I took precautions to wrap up extremely well, and before I returned, the nigt chill had penetrated through it all to the very vicinity of my bones. my bones

my bones.

"'Most ready?' asked the Indian, as in this clumsy and uncomfortable attire I rolled, rather than seated, myself in the bottom of the cance. 'Yes; all ready, Nichols!' and throwing the birch moose horn into the craft we paddled out into the lake, with the best wishes of the rest of the party from the shore.

"If we hear a shot,' yelled the Colonel, with a look of dubiousness, 'we will add an extra log to the fire.'

"And cut up the balance of our salt pork,' added Hiram, 'for moose steak is a little dry without it.'

"It was a clear night, and so still that the blows of an axe at camp could be easily heard two miles across the lake. The bright October moon was gradually creeping down the western sky, but shone enough to light us on our way many miles.

'She shone upon the lake That lay one smooth expanse of silver light; She shone upon the hills and rocks, and east Within their hollows and their hidden glens A blacker depth of shade.'

"The tall hemlocks that fringed the shore threw their shadows far out into the lake, and in these reflections the guide paddled from point to point.
"A slight rustle behind me, and the Indian draws forth the long birch horn, dips it noiselessly in the water, and for the first time in my existence I listen to the weird sound of the moose call. the moose call.

the moose call.

"Ugh—ugh—ugh—oo—oo—oo—oo—oo—ugh—ugh!
"Three plaintive 'ughs,' then a rolonged bellow, commencing in a low tone, increasing in power and volume to the end, and followed by two notes like the first. It rolled across the lake in every direction, was tossed from mountain tops to the inmost depths of the forests, echoing and rectioning. Then all was hushed, and we waited in silence the result. The stillness was something overpowering. We held our breaths. At times, however, it was harshly broken. Away toward the distant shore some sportive animal would splash in his gambols at the water's edge, or a muskrat could be distinctly heard gathering his evening meal; then the prow of the canoe would graze the rushes or the lily pads with a suddenness that was startling.

"Noiselessly the Indian plied his paddle, and we crept

"Noiselessly the Indian plied his paddle, and we crept silently on in the shadows. Again the horn was raised to his lips, and there came forth that strange midnight call, so melodious to my ears. This was repeated again and again for six successive hours, neither of us exchanging a word during the entire time.

"At last the stars alone cast their reflections in the glassy lake, and although from a distant mountain side we at last received an answer to our call, we could not draw the animal to the water's edge.

"We had paddled over ten miles. It was now 2 o'clock in

"We had placed over ten miles. It was now 2 o clock in the morning, and we returned to camp. I was too stiff to move, and the Indian lifted me from the cance to the shore, while I realized that I had experienced all the pleasures of moose hunting—save the moose."

"A council was held, and at the suggestion of Nichols, we at last decided to build sleds or 'shoes' for our canoes, and drag them through the bed of the stream twelve miles to the Aroostook River.

we at last decided to build sleds or 'shoes' for our canes, and drag them through the bed of the stream twelve miles to the Aroostook River.

"Little by little our provisions had given out. First the sugar, then the hardtack and coffee, while potatoes and Indian meal had been a thing of the past for many days. The trout had left the summer pools for their spawning beds, and notwithstanding the state of our larder, we had no time to ascertain their whereabouts. Occasionally we shot a duck or partridge; we added plenty of water to the stew, to make sufficient for the party, and in consequence had an unsubstantial meal. For many weeks we had subsisted almost entirely on the flesh of beavers, but now, being in haste, we had little time to set our traps.

"On the 20th of October starvation almost stared us in the face. Our breakfast this day consisted of the last portion of benver flesh and a cup of tea without milk or sugar.

"I believe I'd give ten dollars a mouthful for another meal like that, 'though it's only an appetizer,' said Iliram, arising from the frugal repast.

"'Iliram,' remarked the Colonel, 'puts me in mind of an Englishman I met some weeks ago at the Tremont Hotel, Boston. The gentleman sat at my table, and for four mornings in succession I had noticed him call for dried herrings and coffee, of which he made his entire neal. I was wonderfully interested, and on the fifth morning, to satisfy my curiosity, I had the audacity to question him: "I say, my friend, you must excuse me; but do you eat those herrings from a medicinal motive, or because you really love them." "Well," he answered with a drawl, "I don't exactly love them, but along about 11 o'clock in the morning there creeps over me such a glorious thirst that I wouldn't take fifty dollars for it."

"But thus was no time for story telling, and we immediately set to work on the 'shoes' for the canoes. The

over me such a glorious thirst that I wouldn't take fifty doilars for it.'"

"But this was no time for story telling, and we immediately set to work on the 'shoes' for the canoes. The guides soon felled a number of tall cedars and dragged them into camp. Then we split them into boards ten feet in length, half an inch in thickness, and tapering from four to two inches in width, the broadest extremities lapping one another at midships. Sixteen of these strips were necessary for each of the three canoes, and were fastened to their bottoms by being split at the edges and drawn tightly together with strips of cedar bark which ran through the slits, and passing upward were tied securely to the thwaris. Thus the graceful form of the birch was lost in the rough outline of a boat. For four days we labored incessantly at our task, and from the splitting of the great logs to the finishing of the wood, had as tools only an axe and a penkuife, "Fortunately partridges proved abundant, and on these we subsisted during our forced encampment. A fine otter four feet in length was shot near camp, but his flesh proved too fishy for us, half-famished as we were. A large hawk frightened by our voices, dropped from his talons a trout of over two pounds in weight, suggesting to our minds Israelitish experience.
"At last the 'shoeing' of the canoes was accomplished,

over two pounds in weight, suggesting to our minds Israelitish experience.

"At last the 'shoeing' of the canoes was accomplished,
and repacking our luggage, we paddled down the dead water
of Mansungun Stream, and passed falls five miles below.
Although the morning was lowery, we little thought we had
selected the worst day of the entire tour for the passage of
the river; but so it proved. Soon the heavens grew dark, the
birds sought shelter in the wooded depths, the wind howled
among the tall forest trees, and the rain, beginning first with
light showers, increased at last in volume to a perfect deluge.
In the midst of this we were obliged to disembark from our
canoes and drag them through the rocky bed of the river,
and the good results of the 'shoeing' at once became manifest.

"'You look out for the bow, me look out for stern,

fest.

"You look out for the bow, me look out for stern,' yelled Nichols, as crowding my cance forward over the ledges of rocks and through the shallow water of the stream we pushed onward, followed by the remainder of the party.
"We soon realized that we were in for hard work. Mile after mile we dragged the cances, at one moment plunging into some unseen hole almost to our waists, the next instant striking a ledge with hardly sufficient water to cover our feet, while the rain poured in torrents upon us. It was water above and water below, and when we were thoroughly wet, it made little difference from which source it came. Occasionally we reached water sufficiently deep to float us a short distance, but after a few trials we found it less fatiguing to remain in the stream all the time. I pulled and hauled unit every muscle seemed strung to the tension of a fiddle-string, and before the end of the ordeal I felt like a beast of burden. So did the others; but we never grumbled. A common feeling inspired us with the idea that it was heroic sport. "After nine hours of toil and discomfort, through difficulties that lasted for twelve miles, we reached the mouth of the stream, and camped at the junction of the Mansungun and Mil. noket rivers, our hardships forgotten in the first sight of the Aroostook waters.

"But for the cedar splits protecting the cances, they would hardly have withstood this rough experience, as the knifelike rocks had left deep impressions on them. Our rubbei bags had shielded our tents and blankets from the ill effects of the storm, but the tourograph had been floating unoserved in two inches of water, which destroyed a number of the plates, changing them from the 'dry' to the 'wet process of photography."

Down the St. Lawrence River.—Upon and after June 26, a steamer will leave Clayton, N. Y., at the head of the Thousand Islands, at 6 A. M., upon the arrival of the through steamboat express over the Utica & Black River Railroad, which brings passengers leaving New York at 6 P. M., and Ningara Falls at 7 P. M., the previous evening. The entire day is passed upon the comfortable shaded decks of the boat amid the superb scenery of this grand river, and Montreal is reached in time for supper. Messrs, Leve & Alden, the well-known tourist agents, are the general agents of this route, and full particulars, with descriptive guide, may be had regarding this trip at either their Boston, Naw York or Philadelphia offices.

Matural Historn.

ARCTIC EXPLORERS.

ARCTIC EXPLORERS.

In connection with Arctic expeditions that have from time to time been undertaken by various countries, one expecial feature has always presented itself to my mind. It has always appeared to me that the expeditions have not been composed of the right kind or stamp of men, and I have always, when reading the journals of any expedition that has fallen under my notice, been strongly impressed with the belief that, had the members of the expeditions referred to been composed of a different class of individuals, much better results would have been obtained, and nuch suffering and, in many cases, loss of valuable life avoided. My idea is that each Arctic expedition should include a certain proportion of a cluss of men commonly known as North American trappers, who, for a trip of this nature, possess certain qualities eminently fitting them to assist in undertakings of this kind.

I wish to be understood as casting no reflections upon the ability, hardihood, high moral and physical courage of seafaring men, but the very fact that they live for years as they do, braving the dangers of the seas and giving their entire time and attention to the duties and study of their profession, naturally deprives them of the advantages of learning the various expedients, contrivances and habits of landsmen.

naturally deprives them of the advantages of learning the various expedients, contrivances and habits of landsmen, who give all their attention to their own pursuits and only arise to prominence as guides and explorers, hunters and woodsmen, after spending the best part of their days following their own peculiar vocation. It needs no mention from my pen to direct attention at this late date to the various my pen to direct attention at this late date to the various brave, noble and heroic efforts of scafaring men who, in all ages of history, have done so much f r the advancement of science and commerce, and no encomiums would be too great to pay the tribute of praise to the names and memories of countless numbers of nautical men. But life is too short for individuals to climb to the top of the ladder of more than one profession, consequently a mixed commission, so to speak, embodying and combining the elements of the best skill and talent for both land and sea, is what is required in expeditions of the class I refer to, for they differ from most others, which are generally confined wholly either to a land or water journey.

or water journey.

Were seamen not among the bravest of the brave, they would naturally shrink from undertaking a voyage that at any time is liable to be changed to a land orice march, when their nautical lore and experience does not tell for much all their mattical lore and experience does not tell for much, and perhaps be thrown upon a land trip in an inhospitable country where to save their lives might be a matter that would tax the abilities and best efforts perhaps even of the very natives of the country, who notwithstanding a life of study of the various contrivances possible to be accomplished, have often sufficient to do to eke out a scanty subsistence during the long and dreary winters of northern latitudes.

Reverse the position and place men of the type of Kit Carson Daniel Boone, Joe Meek and other prominent trappers, at sea in a vessel of the best class, equipped and fitted with all the ap-pliances that science could suggest and money procure; leave them to their own devices, and what would they make of the them to their own devices, and what would they make of the situation? Go still farther, place them at a moment's warning in mid ocean in a ship's boat with scanty supply of provisions, insufficient supply of water, and what would they accomplish, or be expected to accomplish under such circumstances? And yet the hardy and intrepid navigator cast upon the ice is placed in almost as bad a situation in many ways as the landsmen would be in the former mentioned case.

On very noticeable circumstance is suprest to readers of

landsmen would be in the former mentioned case.

One very noticeable circumstance is apparent to readers of the various narratives of all former expeditions, and that is, that to such men as Ehierbing or Esquimaux Joe, who acompanied Capt. C. F. Hall, were due the salvation of the party, who, unaided by their efforts, would have surely perished by starvation, while Hans and Petersen, in the voyages of Kane and Hayes, showed no less prominence in their admirable fitness as members of a northern expedition. Indeed the annals of all the different exploring voyages term with abundant evidences of the necessity of incorporating with abundant evidences of the necessity of incorporating

with abundant evidences of the necessity of incorporating men of different classes in parties of the kind alluded to.

While reading Strain's narrative of the trip across the Isthmus of Darien, which terminated so disastrously to several of the party, I could not help being struck with the disadvantages he labored under for want of practical men as a component part of the command, for, while they were a component part of the command, for, while they were traversing a country having considerable game, the rivers of which affording a generous supply of fish, although provided with arms and ammunition, they were unable to secure enough food for their maintenance, and while possessing personal bravery, indomitable courage, ability to enough the desired endowed the courage of the course and control for the maintenance, and wine possessing personal bravery, indomitable courage, ability to encounter and endure great hardships, a large portion of the command died from hunger, after the loss of their single and only fish hook. Had such men as I have mentioned been attached to the party, how long would it have taken them to make other fish hooks out of portions of their guns or camp utensils, bones, etc.? The knowledge that a piece of wood or bone pointed at both ends, tied by the middle to a line, and when baited, laid alongside or parallel to the line, but when swallowed by a fish and a sharp twitch given would become a toggle fastened in the fish's gullet or maw, and consequently with gross feeding fish such as catfish and others inhabiting tropical waters, becomes one of the most efficient fish hooks to be had, might bave been the means of saving the entire party. Spears, gaffs, nets, traps and other appliances would have been within the scope of such men, who would have needed nothing but the wood that grew on the banks of the streams and an ordinary knife to fashion them into appliances for the capture of fish and game. Many of into appliances for the capture of fish and game. Many of the animals of North America being nocturnal in their hab-its, seldom offer an opportunity to mankind to secure food by shooting them, but traps, when set by experienced trap-pers, meet the difficulty, and supply food and clothing obtainable by no other means.

Nobody ever makes a trip, takes a hunt with, or remains in the company of an experienced hunter and trapper without learning new wrinkles and contrivances. Books do not treat of forest lore as they do of other sciences. The only place to obtain education in this branch is the school of experience, and the study is of such magnitude that it is never completed. Necessity being the mother of invention, perhaps there is no other class of men who are so often placed in positions requiring for success ability to adapt themselves to circumstances; hence the value of their services in all matters requiring prompt measures, decision, and capacity to make the best of the situation. How important it is, therefore, that the very best material should be selected for all such hazardous undertakings as arctic explorations. Nobody ever makes a trip, takes a hunt with, or remains

How many men of even average intelligence can procure fire without matches? and when procured, does it strike one man out of a thousand, when needing fire for warmth at night (clothing being insufficient), that the proper plan is to build two or more fires, and lie down between them and thus almost do away with the necessity for blankets at all? No, it does not; but he builds one big fire that he can't get near, if fuel be plenty, and the unfortunate person presents the unhappy condition of being nearly roasted on one side, while being nearly frozen on the other, and after various feats of ground and lofty tumbling, morning returns to find him more tired than when lying down the night previous. Many other examples of the devices, contrivances and shifts appertaining to a knowledge of forest life might be introduced here as illustrative of the correctness of the theory suffice.

duced here as illustrative of the correctness of the theory involved in this article, but those mentioned will perhaps suffice.

There are representative men of the class spoken of who will leave the settlements, make a trip through an uninhabited region (occupying months in duration) alone, and live well and be clad warmly, no matter how rigorous the season or inclement the weather, where to a party provided with a much better outfit such a journey would simply mean death by starvation, unless some of the party were skilled in the mysteries of wooderaft. The one would live, so to speak, upon the fat of the land; the others would scarcely see a bird or beast on the trip.

It is enough in all reason to send men out who are willing not only to brave the dangers of the seas with which they are acquainted, without endangering their valuable lives in a land or ice march of which they must, from the condition of their past lives, know little or nothing.

It may be said that the natives of the country are the best persons to be land in the capacity of guides, hunters and auxiliaries. This is decidedly wrong, the argument being good to a limited degree only. The white race the world over is superior as a class to any other; they are better skilled in the use of firearms, means of travel, endurance, and in many other ways. What a white trapper would learn in a few days in Greenland would enable him to discount the average native in anything, except perhaps the margement of a kayak or something of like nature. Then there learn in a few days in Greenland would enable him to dis-count the average native in anything, except perhaps the man-agement of a kayak or something of like nature. Then there is a moral courage that is associated with education and in-telligence, that frequently is of the utmost importance, which in matters requiring decision of character and judg-ment, more than makes up for a large amount of physical courage, since superstition, going hand in hand with ignor-ance, renders the uneducated native of very little account in many affairs.

ance, renders the uneducated native of very little account in many affairs.

I would not say by any means to exclude natives as forming part of the expedition, for their services hitherto have been of a very important character, but a desire to return to their homes and families, and various other reasons, cause them often for their own purposes to magnify dangers and otherwise mislead the persons in command, and often a fear of ridicule, or a desire on their part to keep certain matters execute prompts them to assign other motives for their wish to abandon further efforts toward the objects of their wish to abandon further efforts toward the objects of the undertaking. Again when the native is aware that the lives of the party are wholly in his hands, treachery is more apt to come to the surface than when he is aware that his services can if occasion require be dispensed with. Many Indians of my acquaintance could be easily secured to go on the warpath, encounter ferocious animals, run dangerous rapids and enter into other perilous undertakings involving great personal risks, but would shrink from warpath, encounter ferocious animais, run dangerous rapids and enter into other perilous undertakings involving great personal risks, but would shrink from and in most cases utterly refuse under any consideration whatever to simply visit certain lakes and other places inhabited according to their belief by Sla-li-cums or monsters, who cause all sorts of evils to be inflicted upon those during to intrude upon their

The true reason of their not undertaking a visit to such places would, however, be carefully concealed from any other than a particular friend in whom they had implied confidence. Nay, very often to merely mention the name of these imaginary monsters is productive of all sorts of calamconfidence. Nay, very otten to meany means these imaginary monsters is productive of all sorts of calamities to the offending mortal. Such matters in all ages and all lands are attributes of superstition and ignorance, and are perpetuated to a greater degree, even among enlightened nations, than many are aware and willing to admit. Take some natives along, by all means, if considered as adding to the strength of the expedition, but don't forget the trappers, who, if the north pole is ever to be reached by means of appliances now within human ken, will add an element of success to any undertaking in that direction of a greater value than I believe any other that can be secured.

The sufferings of the Jeannette's crew lend at the present time an increased interest to all concerned in providing ways and means for mitigating the perils and hardships consequent upon northern trips, and with a view of adding my mite, I am induced to use the best medium at my command as a means for expressing my ideas on the situation.

New Westminster, B. C., May 1, 1882.

Arrival of Spring Bruds.—Pay Ridge, L. I., June 4, 1882.—Below I give a list of some arrivals of birds during the past spring: Hermit thrush, April 8; brown thrusher, April 27; wood thrush, May 2; tawny, May 3; robin, all winter; catbird, May 2; brown creeper, March 2; golden crowned kinglet, April 18; ruby crowned, April 26; marsh hawk, April 21; tishhawk, April 2; sparrow-hawk, April 21; pigeon-hawk, April 8; tree-sparrow, Feb. 16; song-sparrow, Feb. 18; white-thosted, Feb. 28; fox-colored, May 8; towhee, April 26; white-crowned, May 23; chip-sparrow, April 22; field, May 23; yellow-bird, May 2; purple-finch, April 22; indigo-bird, April 20; pewee, May 2; kingbird, 7; wood-pewee, 22; great-crested, 21; warblers, golden crowned thrush, May 17; black and white creeper, April 29; nash-ville, May 10; yellow-rump, 10; black throated green, 17; black-throated blue 18; blue yellow-back, 20; chestnut-sided, 20; blackpoll, 20; blackburnian, 22; summer, 3; Maryland yellow-throat, April 30; green black-capped, May 20; redstart, 20; yellow-breasted clat, 3; blue-headed soltary virco, April 26; warbling, May 5; white-eyed, 13; yellow-throat, 20 red-eyed, 20; Baltimore oriole, May 2; orchard (male 6f second year), May 10; male full plumage, 13; purple-martin, May 21; white-bellied swallow, May 21; sand-martin, 20; barn-swallow, April 2; cow-bunting, April 3; rescheated grosbeak, male, May 8; female, May 10; redwing-blackbird, April 1; purple-grackle, 2; golden-winged and yellow-bellied woodpeckers, April 2; redhead, May 10; yellow-birded cuckoo, May 22; kingfisher, April 3; humming-bird, May 3; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 9; night hawk, May 6; swifts, April 29; green heron, May 6;

April 8: blackbreast, May 14: wild geese, flying north,

April 9: blackbreast, May 14; what geese, hying hord, April 9.—A. L. TOWNSEND. Niagara, May 29, 1882.—Below I give you the dates of the arrivals of a few of the earlier birds: blacbirds, Feb. 17; meadow-larks, last week in February; robin, March 1; swal-low, April 1; oriole, May 9.—W. S. L.

A MALLARD'S STRANGE NESTING PLACE.

OMETHING over a week ago some gentlemen OMETHING over a week ago some gentlemen were walking from a station in the eastern part of Colorado on the new extension of the B. and M. R. R. to Denver, to a ranchman's house a mile distant, when they flushed a female mallard in the open prairie. On going to the spot from whence she arose, they found that she had a nest containing eleven eggs and evidently was sitting. The prairie there was nearly barren and only a sprinkle of sage brush and grass weed to cover the sandy soil, and the ranchman declared positively there was not a lake, pond, slough or any leader of water within coveratem rules, the Platte River heing declared positively there was not a lake, pond, slough or any body of water within seventeen miles, the Platte River being thirty-five miles distant. He carried the eggs to his anch and put them under a hen he had sitting. The questions in this case are how the duck subsisted while she was sitting, and what she would have done with the young after hatching them out. How would she have gotten them to water? From all accounts there are more ducks breeding in this vicinity than ever known before, some few mallards, but chiefly teal and widgeon. On Sunday last I drove out to a little lake three miles from the city and flushed from one end of it twelve ducks, a pair of mallards and the rest appeared to be pintails, but were probably widgeon. They got up so far away that I could not decide positively as to their species.

of it twelve ducks, a pair of maintens and the less appears to be pintalls, but were probably widgeon. They got up so far away that I could not decide positively as to their species. I am sorry to say there are a pack of simpletons who are shooting ducks here now.

Chickens promise to be abundant.

Lincoln, Nebraska, June 20, 1882.

AN AVIAN GLUTTON.

PHILADELPHIA, Miss., June 12, 1882.

I SEND by this mail some skins that I pulled from a pair of birds that I shot. Although they are here by thousands from March until October, I am not sure that I have their right name. Please give me their name, and if there are any of the readers of Forest and Stream that can tell me of a good way to get rid of the wretches, the information will be thankfully received. As a general thing I am not in favor of destroying the small birds, but this little fellow come determined on missing from the time he gate.

tion will be thankfully received. As a general thing I am not in favor of destroying the small birds, but this little fellow seems determined on mischief from the time he gets here in early spring until the cold drives him to his winter home. Their earliest arrival in the spring can be noted by their chatter, which can be heard from early morning till dark around the bee-hives. Here they chase the 'busy bee' all day long, with as much determination on the destruction of the bees as some sportsmen (?) seem to have for the destruction of our game birds. It seems that the only idea that those birds have when so engaged, is to see which of them can make the largest bag (of bees) during the day, week or month, and I firmly believe from what I have learned of their destructive habits, and from some observations I have made around the bee hives, that they take a great deal more game (bees) than they can consume, and that it is left on the ground to rot.

When small fruits begin to ripen and the weather gets hot, they seem to lose a great portion of their love for bringing the busy bee to bag. This is caused in part by their efforts to get outside of so much fruit, and in part from their having but little time to spare from other mischief. They destroy a great quantity of cherries and other small fruits, but when grapes begin to ripen they are at once in their glory and will thank no one for cherries. Those who have never watched them at their destructive work can have no idea of the amount of grapes that these birds can destroy. Those that they destroy for me annually would make several barrels of wine, and if they were not watched and shot from morning till night they would never fail to take the whole crop. Did I say take the whole crop? If so I was wrong, for they simply destroy the most of it. I have often concealed myself among the grapevines and observed them at their destructive work to make sure that I did not accuse them wrongfully, and have many times seen these wretches aligh upon some twig or trellis arm j neath and seem to derive the greatest pleasure in having it trickle down their throats. From grape to grape and from cluster to cluster they would continue to pass and would clip and drink until they were full to their mouths, and then did they stop their wicked work? They would have been a little excusable for their wickedness if they had, but they do not. I have seen them when they were so full of grape juice that they could not swallow another drop, continue to clip holes in the tender skins of the grape, and then watch the glittering drops as they fellone by one into the dust, and seening to wish with all their hearts that their little stomachs were as large as all the oceans combined, and that all the rest of the world was grapes, and that the rivers were made for the especial purpose of pouring this juice into them.

When they had drained the fuice from all the grapes within

rest of the world was grapes, and that the rivers were made for the especial purpose of pouring this juice into them. When they had drained the juice from all the grapes within their reach they would commence to pull the pulps from the skins, and after holding them in their beaks for a few seconds, seem to grow sick at the idea of trying to swallow them, and would drop them on the grape pulp they would seem to regret it, and another was taken to be served in the same way, until all in reach were pulled out and dropped, and then the birds would either go off to rest awhile, or move to another lot of ripe clusters, and continue the destruction. This seems to be a hard accusation to bring against these little birds, but I can bring proof of what I say. I acknowledge my inability to drive these birds away with the shotgun. They are so numerous and so wild that it is a hard undertaking. After being shot at for a while they all become so shy that they cannot be approached while on the trees, and their flight, which is in pitches and jerks, make them hard to hit on the wing. I kill hundreds of them, but cannot destroy them as fast as I wish. They could be shot best while catting grapes if it were safe to shoot among the grapevines. When they are flushed they are sure to put a grapevine between me and them until they are count of reach of shot. Many other birds depredate upon my grapes, but all of the others combined do very little damage compared with these. Oh! how I wish that the specimen hunter would get among them, or that they would fall into

the hands of some of the State Societies for the Protection of Game to be used at their tournaments. I would use bird lime or strychnia were I not afraid of destroying many song and insectivorous birds. Will some one give me a remedy.

FOREST FIELD.

The skins sent on by "Forest Field" are those of the male and female summer redbird (*Pyranga astiva*), a species against which we have never any accusations like those of our correspondent brought up. We should be glad to learn more of the depredations of this species.]

ANONYMA.—Two or three anonymous contributions have been received at this office within a short time, which we been received at this office within a short time, which we wish had been signed. One of them over the name "Swallow" gave an account of the supposed hibernation of a "river swallow" in the mud of a Maine river, and the observation of the exit from the mud of two of the birds this spring. We should be only too glad to have our Maine friend send a detailed account of the circumstances, accompanied by his name, which of course will not be published if he objects. Another communication from "H. B. S." asks some questions about earth worms which we should be glad to reply to if we had the writer's name.

Game Bag and Gun.

JULY WOODCOCK SHOOTING.
July woodcock shooting is legal in eleven States, as follows, the sea son opening on the first of the month, unless otherwise designated:

Delaware, Illinois (4th), Indiana, Iowa (10th),

Minnesota (4th), Missouri, New Jersey, t Ohio (4th),

Maryland,* Pennsylvania (4th),
Rhode Island.
*Season opened June 10 in certain counties, and June 15 elsewhere;
in Wicomoco county it opens Sept. 1. +Closes Aug. 1 to Oct. 1.

BEARS.

EVERY sportsman, and all syrupathizers with those who suffer by death and accident, will sympathize with the widow and orphans of William Milliken, of Boston, Mass., who was torn to pieces by bears, on Pisco Lake, Adirondacks, on Juue 10. Given all possible sympathy to the dead and the living, hoping the mangled remains of the decased were well insured in the best accidental companies, I rise for a few remarks on the bear. I have known Bruin for the past forty years. I have met him on the trail, in Northern Michigan, Pennsylvania, and the North Woods. I have seen him in Wisconsin and Minnesota.

Ordinarily. Bruin is about as dangerous as a recoon or

the past forty years. I have met him on the trail, in Northern Michigan, Pennsylvania, and the North Woods. I have seen him in Wisconsin and Minnesota.

Ordinarily, Bruin is about as dangerous as a raccoon, of the festive woodchuck. But, it does happen, that the mother of any mammal will ignore danger to herself in defense of her young. Almost any animal will go wild and reckless of danger in defense of its young, and, the bear is powerful on muscle. Consequently, when a she bear turns on her tormeutors, it is well to keep back about 85 feet. She doesn't want to hurt anybody. She only wants to get her babes away from that fearful biped with the derby hat, and a dead rabbit cut on his hair.

If you humor her, you are safe enough. If you want to put four hounds on her, making the escape of her cubs at the least doubtful; well, "you takes your choice." If you drive her to desperation, and she has the grit to stand by her cubs, "better you stand a leedle back."

I have bagged a good deal of bear meat. I have been twice on a lone cruise in the North Woods. I saw several bears there—all intent on their own affairs.

So slight was the danger from wild animals there, and so childish seemed the immense armaments of the average tourist, that I came to leave, not only my rille, but the old revolver behind. And I found the 8-ounce rod and the pocket hatchet all sufficient for defense against wild beasts. All the same, a she bear with cubs may be dangerous. I will give three instances that I can youch for.

Forty years ago, "Jim Steele," with a record of seven panthers, twenty-one bears and 1,800 deer, resided at the mouth of "Asoph Run." He sent his son, aged fourteen, up the creek for the cows one evening. The boy came back frightened and crying, saying that a big bear had chased and nearly caught him. Old Jim took it in at once. "Jump of from under the bank, reared on her hind legs and showing all the teeth she had, growling, snarling and threatening made at the party. Old Jim took it in at once. "Jump onto my back." he

er. Thirty-three years ago, "Harry Ellis," born and bred Thirty-three years ago, "Harry Eilis," born and bred on Pine Creek, guided a party to the nuckleberry hills of the Barrens. While prospecting for the best berrying grounds, he was suddenly confronted by an immense bear which arose from behind a large fallen trunk, and rearing on her hind legs made directly at him, roaring, grunting, snarling and showing her best array of teeth. Harry seized and flourished a pine knot, whooping and yelling at the top of his voice as he ran backward at his best pace, for a few rods only, when the bear turned and quickly conveyed her two cubs out of

danger.
On the same range of hills I once went huckleberrying danger.

On the same range of hills I once went huckleberrying with farmer T., his wife and daughter, on invitation. I was invited because I had been there before and knew the hills like a book; also because I had a good shelter tent, a handy thing in case of a heavy shower. Our rig was a two horse farm wagon, the bottom of the wagon packed with inverted tubs and buckets, on which the party of four found seats as best they could. Distance to the ground twenty-one miles, fourteen of it on a good road, the last seven miles steep and rough log roads.

fourteen of it on a good road, the last seven miles steep and rough log roads.

By dint of starting at 3 A. M. and abusing the horses to unwonted speed we were on the ground and "onhitched" at 11 A. M., among herries so plenty that the ground was absolutely hidden by the dull green and rich blue bloom of leaves and herries. It was a short job to pick a bushel of herries on such ground; but I had been there before, and I thought I knew of a place, about three-quarters of a mile westward, where the herries were equally plenty, but larger. So Farmer T. suggested that I had better go over and see, bring back samples, etc. back samples.

ack samples, etc.

I took a largetin pail and started. Half way to the ground

there was a gulch—a gully they call it here—to be crossed, and this gulch was badly blocked with fallen timber. When near the bottom I halted to select the best route for getting by or over some fallen trees that lay in my path, when a very large, dingy-looking "brown-nosed" bear sprang on a fallen pine, sprang off again directly at me, got on to aer hind legs, and began to play the usual game of scare—showing all her teeth, making the savage, roaring, barking, growling noise common to enraged bears. On the instant I commenced a lively retrograde movement. Once I caught my heels and tumbled over backward, but got up suddenly. Had I staked my last dime on a free-for-all-go-as-you-please backward race, I couldn't have improved the time one second.

You see, as Mr. C. D. Warner remarks, "the bear was coming on."

It was a Chinese fight. Growling, snarling, teeth and claws on one side; whooping, yelling and pounding tin-ware on the other. Nobody hurt. Bear badly scared. As for myself, I wasn't scared a bit! Why my knees should have jack-knifed and kinder knocked together as I slowly climbed the side of the gulch on going back to the wagon, or why Farmer T. should have thought it worth while to ask what made me look so white, are questions too irrelevant for notice. Ho had heard the row distinctly, and was an old bear hunter. But some people like to appear sarcastic.

As for the bear; it goes without saying that when she I ad

made me look so white, are questions too irrelevant for notice. He had heard the row distinctly, and was an old bear hunter. But some people like to appear sarcastic.

As for the bear; it goes without saying that when she I ad sc—played me off a few rods, she got down on all fours and took herself out of that with her cubs for all she was worth. And the two women? Well, they found "pickin" good enough where they were, and for the rest of the day seldom got more than two yards away from the masculine element. At night they insisted on absurdly large fires, also that one of us "men folks" should keep constant watch and ward. We fixed the shelter tent nicely with a royal bed of hemlock browse, on which we put them to sleep as if they had been two infants. But they would not. I think there was not a half hour during the night in which one or the other of them did not come up on her "head's antipodes" with a snap like a jack-knife, and, peering into the outer darkness for bears, with a wild, disheveled look, proceed to make sarcastic remarks to me, or throw obloquy on my lurcher and still-hunt dog, Lupus.

Poor Lupus! Half greyhound, half terrier; perfect on deer; supposed to need only a chance to develop into a first-class bear dog. At the first glimpse of the bear he "lit out" like a streak of greased lightning. It must have been after 11 A. M. when the row occurred. At 1 P. M. he was at home in Wellsboro, with the last inch of his tail curled away under an old lounge, whence he refused to be coaxed by beef or blandishments until my return. "He builded better than

under an old lounge, whence he refused to be coaxed by beef or blandishments until my return. "He builded better than he knew." Had he clinched a cub, causing it to squall and cry, that muscular old brown nose might have made it sultry for somebody.

he knew." Had he clinched a cub, causing it to squall and cry, that muscular old brown nose might have made it sultry for somebody.

And not always will the mother bear stand by her cubs. Five or six years ago two young men were prospecting timber lands on the hills of Pine Creek, near Cedar Run. They had a still-hunt dog and rifle, and they came on an old she bear with her two cubs. The dog grappled one cub, the other climbed a tree, and the old bear ran for her life. The first cub was securely tied, and one of the men climbed the tree and dislodged the other. After using up two pairs of suspenders, the straps and strings of bullet pouch, powder horn, etc., both cubs were safely tied and both men were badly scratched. All the time the cubs had kept up a series of whines and cries, but the mother did not come back.

Last April, John W. Bache, of this place, while prospecting for coal, came across an old she bear with her two cubs. The old bear did not offer to defend her cubs, and Mr. Bache has had them here until last week, when he sold them for \$25, which, although considered cheap, is \$24.50 more than I would give. One experience with tame bears is enough for me.

I would give. One experience was taken to be for me.

And, while I am just as sorry as any hunter and stranger can be for Mr. Milliken and his bereaved family, I breathe the freer that there is one well-authenticated bear story in which the bear killed the man.

[Our correspondent's "freer breathing" is in this case premature. Later reports say that Mr. Milliken emerged in safety from the North Woods, and the fellow who started the story about him is in greater danger from Mr. Milliken than the latter ever was from the bear.]

How Massachusetts regards it: Boston, June 22, 1882.— Is not that the worst bear story ever out? Query: Was there ever a "bear story truthfully told? Beautiful weather here in Boston, and everything is lovely.—E. M. M.

MARKET SHOOTING IN NERRASKA

MARKET SHOOTING IN NEBRASKA.

Editor Forest and Stream:

A short time since I happened to be looking over a copy of the New York Clipper, where I saw an item substantially as follows: "Mr. Blank Blank," the celebrated wing shot, has been hired, together with several others, to go to Nebraska this scason to shoot prairic chickens for the New York market." I have concluded to take this opportunity of imparting a little information to 'Mr. Blank Blank, 'et. al. relative to our game laws and the laws relating to the transportation of game in this State, etc. I quote verbatim from the Annotated Statutes of Nebraska, of 1881 (containing the last session's laws), pages 377 and 378: "It shall be unlawful for any person "* * to kill, ensaner or trap any wild grouse between the first day of February and the lifteenth day of August in each year." "It shall also be unlawful for any person, agent or employe of any association, corporation, railroad company or express company to receive, carry, transport or ship any such animal or bird at any time of the year." This last quotation refers to all game birds or animals mentioned in the game laws. The law then proceeds to affix the penalty for violation of any of these enactments. I will further inform "Mr. B. B.," and his friends that we have in this place a Sportsmen's Club, and that there are similar clubs all over the State, organized mainly for the purpose of seeing that our game laws are enforced; also that we propose to keep a sharp lookout for all "market hunters" and violators of said laws, whether from New York, Nebraska, or elsewhere; and finally, that this information is all given gratuitously, cheerfully and without malice.

J. B. Farnsworth, M. D. Farnsworth, M. D. Farnsworth, M. D. Farnsworth, M. D. Farnsworth, M. Gun in this way: Wipe the muzzle off

I CLEAN MY GUN in this way: Wipe the muzzle off clean and blow three or four good long breaths through each barrel, which will moisten the burnt powder. Let the barrels lie a minute or two to give time to moisten before wiping out. I have found this method works to a charm in the field or return from the hunt.—AN OUTSIDER.

GAME IN CALIFORNIA.

Editor Forest and Stream:

GAME IN CALIFORNIA.

Editor Forest and Stream:

In reply to your inquiry I beg to say that the inclosed is a full and correct copy of the present game and fish law of California; that is, it is the law as expressed by the Legislature, but strange to say, there is a class of persons here who seem to hold about the same sentiments regarding the relations of the several counties to the State as are still held by those people who believe in the doctrine of States' rights.

To be more explicit—in several of the counties of this State the local boards of supervisors have taken it upon themselves to ignore the authority of the Legislature and have assumed the right to make game laws to suit themselves, or rather the whims of certain persons who have no appreciation of the necessity for game protection and want to continue the slaughter into the breeding season. In the main, the provisions of our game laws are well considered, and if respected there would be no danger of any appreciable diminution in the quantity of wild game for many, many years to come, if indeed a marked increase would not result. It is true that the close season for quail, grouse, ducks, etc., might be extended a few weeks later in the full and made to take effect a few weeks earlier in the spring, with benefit to all who look to field shooting for a pastine and amusement. But instead of extending the protecting arm of the law over the game, the chief efforts of a large number of men, including these supervisors, are directed toward a contrary result. For instance, the deer law is made to take effect on the 1st of November and continue until the 1st of July of the following year. Everybody who has hunted deer in this State and is familiar with their habits knows that the rutting season begins in November, and that the young are not large enough, as a general thing, to shoot before July, and often they are not then. But see what these supervisors (I allude now to those of EI Dorado, Nevada and Placer) have done. The counties named are all foothill l

State! What would the people of the Eastern States think of such officers?

Again, they have done the same thing in regard to the dove law. The Legislature very wisely concluded two years ago, to restrict the season in which these birds might be killed, and inserted in the general law a provision (as will be seen by reference thereto) to the effect that they should not be killed between January 1 and July 1 of each year. The supervisors of the counties above named—of Placer and Nevada, at all events—have decreed that they may be shot as early as the 1st of June, and a Nevada county paper boastingly announced the other day that the doves had come in plentiful numbers, and the "sportsmen" there were killing upward of five hundred a day! The same story comes from Placer county, only in an exaggerated form. A gentleman who was up there last week informs me that thousands of the birds are slaughtered every day, and the despicable work is upheld and sanctioned by the law officer of the county. Now, be it known that this is the breeding season of the doves, and it is safe to say that every female has either a nest of eggs or a brood of young. Think of the number exterminated by this process, and then estimate how long it will take to complete the job of whiping out the whole species. If the doves were like other birds that go far up into the mountains to rear their young, it would not be so bad, but on the contrary their nests are thickest where the country is most settled. They always seek the hay and grain fields, and thus are at the mercy of every man and boy in town and country who can handle a gun.

The question might naturally be asked, "What is the State Sportsmen's Association about that the tidest where the country is most settled. They always seek the hay not take hold and

most settled. They always seek the nay and grain licius, and thus are at the mercy of every man and boy in town and country who can handle a gun.

The question might naturally be asked, "What is the State Sportsmen's Association about that it does not take hold and punish those who violate the laws?" The truth is that the State Association can accomplish little without the aid and co-operation of local clubs, and in the counties where these illegal practices are carried on the local clubs are as deep in the mud as others are in the mire. Moreover the district attorneys of the counties and the supervisors would resist all attempts at prosecution, and the matter would have to be carried through several courts before the question of jurisdiction could be determined. At the recent State Sportsmen's Convention, however, the matter was discussed, and it was resolved to petition the next Legislature to pass such laws as will in the future prevent the possibility of any clash of authority. Some ten years ago there was in force a provision in a law of the State defining the powers of boards of supervisors, which gave them authority "in counties where local laws for the protection of game existed," to suspend the operation of the State law, But this provision has been time and again in lifted by subsequent legislation of ageneral character. There were also at that time several counties excepted from the operation of the game law, but all this was long since done away with, and there now exists but one general law for the whole State, as is expressly required by the new constitution, adopted three years ago.

I am no lawyer, but if the district attorneys of the counties named have no better knowledge of law and the relations existing between old and new legislative acts affecting the same subject, to say nothing of the requirements of the Constitution, than to advise their boards of supervisors to override the authority of the Legislature, I think they had better "sell out" and allow the same number of schoolboys to

administer their offices. I have fought this usurpation of power for the past year, and have done my utmost to cause public opinion to shame these parties into doing their duty, but so long as they are upheld by a gang of shooters at home who are constantly athirst for gore, they will probably persist in their course until brought up by the Legislature with a round turn

eist in their course until brought up by the Legislature with a round turn.

You may wonder how it is that, under the circumstances, we have any game left in California. I can hardly explain; it must be all owing to "our glorious climate" which has thus far produced faster than the slayer could kill. But the latter have the upper hand at last, and all kinds of wild game (ducks and geese excepted) is yearly diminishing in numbers. Qualis are killed at all seasons, especially by a certain class of dure shooters, sains are nursued as late in the spring

ducks and geese excepted) is yearly diminishing in numbers. Quails are killed at all seasons, especially by a certain class of dove shooters; snipe are pursued as late in the spring as a bird can be found and shot over their nests, while no attempt is made to disguise the fact that deer of both sexes re killed every month in the year, notwithstanding there has been for the last six years a prohibitory law in regard to does and fawns, regardless of seasons. Of course a rapid decrease in the supply of these species of gome is going on all the time, and it is already a rare thing for a person to be able to secure a fair bag of either in a day's hunt. Indeed, in a few years from now deer will be rarely seen in the Coast Range or the foothills of the Sierras, and the parties who have been slaughtering them by the thousands on thousands yearly for their hides alone will be driven to sawing wood or some other respectable method of making livings for themselves.

A large number of mallards and blue-winged teal are breeding in the tule marshes of the Sacramento and San Joaquin valleys this summer, and by the middle of August many of the young will be able to take wing. About that time the tules will be full of sneaking fellows, gun in hand, bent on scooping in whole broods of the toothsome "floppers." Of course they must be delicious enting, these young juicy fowls, but it is positively shameful that men cannot keep their hands off them until they get their growth and can afford good eport for the gnner. A decent respect for the game laws, born of an honest desire to have game pretected during the breeding season, has denied me the luxury, during a residence in California of twenty-eight years, of having once tasted the flesh of a young "flopper," and I never expect to. Many others, like myself, who believe in keeping the laws inviolate, lose the cream of the shooting every year, because for a month or more before the close season expires parties pursue the ducks and qualis in their favorite haunts, and by the time shoo

evil.

was my intention, before concluding this letter, to have It was my intention, before concluding this relief, to have given you an it ea of how dove-shooting (in easion) is carried on in this State, but it is already too long, and I will defer the subject until another time. In two weeks from now the season will open, and if the birds are not all killed off in the meantime, I will tell you where I find them, under what conditions, in what numbers, etc.

N. E. White.

Sagramento, California, June 14, 1882.

HINTS ON CAMPING OUT.

HINTS ON CAMPING OUT.

In your May 11 issue you speak of the number of campers out as growing less, and add, "The tourist who has tried camping out once is much inclined to go to a hotel afterward, if he can find one to go to."

We think that is quite true of the average tourist, for he is a very common sort of fellow, and likes a good bed and a good table, and a good crowd around to talk and tell big stories, or to be gulled by bigger ones told by the professional notel guide, who has helped to dissrust him by his villatinous cooking and slovenly way of taking care of his passenger while camping out. Then, again, if the hotel is in the vicinity of game or fish, it is quite as cheap, if the tourist trusts to his own luck and does not employ a guide, who frequently is in the employ of another man—i. e., he is subsidized not to "give away the best holes," but reserve them for his regular customer.

As we have said, many are disgusted by falling into bad hands on their first trip, and again we think many might be made "sick" by following the varied advice given in the papers, and by men who claim to know all about it.

In your paper alone we have read some very strange advice. One man recommends spruce logs for a camp fire. To be sure they burn tolerably well, but they will cover the nulucky camper all night long with snaps and burn holes through every bit of cotton cloth within pistol shot of the fire. White birch is absolutely reliable for camp wood. It won't snap; we have used a tent in front of a fire for six weeks and not a spark has injured it. Yellow birch or maple are good, but white birch is "par excellence."

We also find a man who advices in cold blood persons to trust themselves in a shanty covered with fur boughs in the form of a thatch. If simply to keep off the dew, such a camp would be sufficient, but the man doesn't live who can make a camp of any kind of boughs growing in the State of Maine, that will shed the water of a shower even half an hour long. We have tried it raithfully, and have seen it

the next trip.

We notice a man recommends a rope for a tent pole.

We notice a man recommends a rope for a tent pole. One of the first things to do is to secure a level spot for the tent floor, and to find such a place between two trees is not easy in our forests, and again, the rope will slacken in dry weather and the tent "hop" in the middle, and no man can make a straight line of a rope. The ridge of a tent ought to

ne. e have holes two inches in diameter made in the ends We have holes two inches in diameter made in the ends of our tents, and pass the ridge pole through there, letting it stick out a foot or two at each end. If on a cance trip, the setting pole of the birch answers well; but any smooth pole is as good. Then we cut four crotches or forks as long as the side of the tent. Two of these at each end, set opposite each other with the forks under the ridge pole, and the body of the pole on the same angle with the tent, holds the ridge pole firmly in place, as they act like guys or braces. The poles at each angle of the tent also protects it, and afford a place to have a triples in dry weather. In this way one poles at each angle of the tent also protects it, and afford a place to hang articles in dry weather. In this way, one need not "tote" cumbersome poles along. A good spot can be selected. No danger of injuring the tent (if the ridge pole is smooth), for the supports are outside of it, and no wind can blow it down, for each pole acts as a brace. Beside you get rid of the upright pole in the middle of the door of the tent.

One word in regard to clothing. The "dead grass"

colored suits of canvas, now sold by the ton, are well enough in many places; but for still hunting in our woods one may as well take a red flag and a band of music as to attempt to get along unobserved and still. The color can be seen as far as almost any other among the gray trees, and every twig and bush that touches you will scratch and make as much noise as the crack of a whip across a clown's back. As least it will seem so to one trying to creep up to a herd of caribou. Soft gray woolen is the only dress suitable for our shooting, and we wouldn't give a dollar a ton for cunvas among the trees, especially after the snowfalls, when hunting is at its very best.

For the feet, one should not neglect taking good grained leather boots or high shoes; yet a pair of common coarse rubber shoes will many days be the very best covering. Have them large enough to wear two pair of good Canada woolen stockings, and the corrugated bottom will stick to smooth surfaces, rocks, logs, etc., and give sure footing many times better than any other foot rig.

WATERVILLE, Maine.

THE YELOWSTONE CLUB.

Editor Forest and Stream:
In your issue of May 11 I find a very pleasant notice of the "Yellowstone Valley Hunting Club." I wish, as one of the officers of the club, to tender you an invitation to hunt the new week or so this fall. We will endeavor to corrall the new an experienced the "Yellowstone Valley Hunting Club." I wish, as one of the officers of the club, to tender you an invitation to hunt with us a week or so this fall. We will endeavor to corrall some deer, antelope and buffalo, and have an experienced hand hold your shooting-iron, and you can pump away to your heart's content. Unless you are a better shot than the average "tenderfoot," there will be some game left after you get through. Eastern hunters have no idea of the extent of this Territory or of the amount of game there is in the Northwest; and we give you the laugh when you talk of exterminating the game in this country. We have two herds of buffalo near here. The Yellowstone herd, sixty miles south of Glendive, contains over 300,000; the Missouri herd has about 490,000, and is from thirty to 300 miles away. These herds are scattered over a tract of country several hundred miles square, over hills and valleys, bad lands and timber. Among the buffalo are droves of antelope, frequently 500 in a flock. The whitetail deer are in bottom lands, in the brush, along a thousand streams; but few, comparatively, ever heard the whiz of a bullet. The blacktail deer are on high, rolling prairie, and at the head of ravines and among the bud lands. The mountain sheep or big horns are among the pushes bed long the supposition of the sea minals are shy and hard to get.

the roughest bad amos or bitails. All of these aminums when shy and hard to get.

There has been so much disappointment among the "tenderfeet" in finding game, and so much said about exorbitant charges by guides, that a few old-timers organized the "Yellowstone Valley Hunting Club," for the express purpose of furnishing the means at a stated price; for instance, the club does not allow charges made by its members only at a certain with A pranty and eminment complete cost \$3 per day; Intrinsing the measure of the does not allow charges made by its members only at a certain rite. A pony and equipment complete cost \$3 per day; guide, with tent and camp utensils, \$5 per day. For a large party, heavy team, tents, cook, and supplies and help, all included, at \$2 each person per day as a boarding outfill we warrant plenty of game in sight, and perfect safety from Indians or road agents. If you are chased by a buffalo bull, that is your own affair; at the same time we will be on hand to help you out. Yours for the hunt, H. S. Back. to help you out. Yours for the hunt,
GLENDIVE, Montana Territory, June 15, 1882

MAINE'S "VISITING SPORTSMEN,"

WE read Mr. Hubbard's paper with much interest, and can endorse his view of the value of game to the State. We believe with him that the real profit to our people is in selling the game and fish "running," or as cattle dealers say,

'on the hoof."

If our visiting sportsmen could get over that mania for big bags and stop catching trout when they had all they could eat, and not waste them, and would pay more attention to our game laws, there would be nothing to complain

Most of our visitors are active professional or busin

of.

Most of our visitors are active professional or business men who take only one vacation, and they want that filled up. They are in the habit of getting their money's worth in all other bargains, and whenever they visit Maine they want all there is to be had.

No matter at what season of the year they visit us, they are apt to want to catch trout and shoot deer, caribou and moose. If they could just remember that trout and deer are not raised on the same patch of ground, and ripen at different seasons, it would aid our guides and frontiersmen very much in keeping the laws faithfully, and would in a few years change the whole matter.

It is a very common thing for a man to say to his guide in August "I want to shoot a deer," or perhaps a moose. The guide will reply, "It is against the law." "Oh, well, if there is any trouble I will pay the fine. I'd sooner pay a fine than not kill a deer." Of course that is demoralizing to the guides, and is a source of trouble to game constables. You cannot very well upbraid a man for killing moose in the deep snow of February and March, if you show the utmost disregard for all laws in July and August. You say "1 only want a little venison for my stalle." He replies, "I only want a few moose skins and some meat for my family." If sportsmen would divide their trips, make one in its season for trout and another for game, and regard our just and proper laws and teach others to do so, it would end the whole trouble, but restrictive laws of all kinds are excellent for our neighbors, we don't need them ourselves. or our neighbors, we don't need them ourselves WATERVILLE, Maine.

LOUISIANA.—New Orleans, June 20.—It is with great pleasure I am able to say that our season so far has been excellent for quail, and the prospect for a good supply of this grand game bird was never better. While traveling through the country their clear notes can be heard on all sides. Wild turkeys are also breeding, and good sport can be depended on this fall .- E. ODELL

PENNSYLVANIA WOODCOCK.—Philadelphia, June 24.—We look for but little woodcock shooting around us this July. The birds are literally all drowned out. Should any have escaped, the grounds are so uniformly wet that those that remain will be scattered over an immense tract of country, all of it at this time such good feeding ground. The sportsman will find but few in a day's transp.—Homo.

PENNSYLVANIA QUAIL.—A Bradford county, Pa., correspondent says that the Tonawanda Valley quail shooting will be unusually fine the coming season. He is in the vicinity of the town of Canton and knows what he is talking about.

CHAP. VI.

THE density of its vapors is a peculiarity of Adironda.

Once, while I was crossing on one of the larger lakes, I was caught in a fog which was so thick that I could not see omy hand at half-arm's length before me, and was soon completely lost and without the slightest idea in what direction our camp lay. After groping about vainly for an hour or more, I thought I would fire my rifle and see if I could not get a response from my companions, but there was no more report than if I had discharged it under water. I had held the gun nearly upright, and happening to look upward, I saw that the ball had cut a hole through the fog bank to the blue sky. Taking a hint from this, I fired in different directions toward the sky, hoping to get a gleam of the sun through a bullet hole, and having so found its position in the firmament, be able to sh. pe my course. But I soon found that I was wasting my ammunition to no purpose in such haphazard experiments. I then fired a point-blank shot from my shoulder, and as I expected, saw a blank hole where my ball had penetrated the fog in front of me. Into this I set my nose, and so kept it while I pushed the boat steadily forward for perhaps one hundred yards, when the end of my nose struck the ball, fast lodged in the dense vapor. Then I carefully fired again in the same direction, with the same result, and after half a dozen such nosings out of my bullets, had the satisfaction of feeling the boat's bottom grate upon the pebbly shore, and directly landed, by unaccountable good fortune, within ten rods of our camp, where I heard the muffled voices of my comrades and made my way to them, almost exhausted with hunger and the fatigue of such continuous pushing against the almost solid fog. Looking back on my course, my track showed itself as a long, narrow cavern.

immost exhaused what hunger and the latigue of such con my course, my track showed itself as a long, narrow cavern.

I knew a marten trapper who, while following his 'blazed' line of traps, was caught in one of these fogs, which, congealing by cold weather suddenly coming on, he was obliged to chop his way through to his camp. If it had not been for the marked trees to guide him, he must certainly have perished. Smoke has sometimes the same solidity in certain conditions of the atmosphere. I have seen great branches of trees carried away by the volume of smoke from a camp fire, and once, when surrounded by a forest fire, I climbed a tall tree and walked off on the top of the smoke clouds to a place of safety. I do not remember having sees any mention of this phenomenon by any tourist in Adironda, not even by the Rev. W. M. M. Hurry, who is usually as observing as he is always truthful.

I once camped with a hunting party on the shore of a little lake in that region, and we soon noticed that about dark every night, after a strange rushing sound and a prodigious spiashing, the water would rise, by accurate measurement, two feet and eleven inches, and so remain till daylight, when it would subside to its usual level. We wondered greatly, for we could not believe that a small inland lake could be subject to the tidal influences which control the ocean, and were quite at a loss to account for this periodical rise and fall. But at last we discovered that it was caused by the immense number of wild ducks which settled in the lake every night and left it at the earliest dawn On the occasion of our solving the mystery, these water fowl had become so wedged in that they had no room to take flight, and were quite unable to do so till we had drawn out by their necks a great many, which we killed, and had enough to supply our camp with roast duck for a week, though there were ten of us, all blessed with good appetites, and we ate only the breasts.

[After the above was in type we received the following note from Maj. Verity

Camp Hire Hlickenings.

"That reminds me."

"That reminds me."

WE have all heard of the maiden lady who, when praying for a husband, answered the owls, "Who! who!" with the words, "Anybody, oh Lord, anybody!" One would hardly expect a cool-headed man of mature years to be so rattled at the idea of being lost as to so answer the broad-faced bird, but such is a fact. Mr. B. was bewildered in a slough where he and a friend had been duck shooting. As it began to grow dark an old owl sang out, "Who! who!" "It's us, and we are lost" valled B

w-h-o! who!"
"It's us, and we are lost," yelled B.
He knew before the words had fairly escaped him that he had made a mistake that would cost him many a "set em"
"He has not been disappointed. No NAME.

Among the cherished recollections of my early days are the many choice and wonderful tales that I used to hear while sitting by the old box stove in the country store. What a mirth-loving crowd gathered each evening around the generous fire, and what incredible stories they used to tell. Old Henry Caldwell, or "Cud" as everyone called him, was by far the best racconteur that resorted there. His fame had extended far and wide, and although other villages had sent their best taren to vancuish him with "well told nim, was by far the best raconteur that resorted 'there. His fame had extended far and wide, and although other villages had sent their best men to vanquish him with "well told tales," he was never defeated. There was a freshness and piquancy in his manner of relating a story that carried all before it. No one could relate at incident, no matter how startling its character, but he was reminded of something similar, even more wonderful in detail, which, related in his ni titable manner, never failed to overwhelm his adversary with crushing defeat. Well do I remember an incident that illustrates the power that this ruling passion had over him. We were as usual enjoying a social time at the store when a boy came in flushed with pride in the capture of his first rabbit, and after an animated description of the chase and final capture of his victim by digging him out, he wound up with, "You oughter have heard him squeal when I got hold of him." True to his instincts "Cud" remarked: "That reminds me that when I jerked the hook into that big pickerel the other day he squealed just like a rabbit."

Angling is a rest to the mind, a cheerer to the spirits, a diverter of sadness, a calmer of unquiet thoughts, a moderator of passions, a procurer of contentedness. It is like the virtue of humility, which has a world of blessings attending upon it.—Sir Henry Wotton.

THE SKOODOOWOBSKOOK.

In the course of the debate on the River and Harbor bill the other day, Hon. S. S. Cox, of New York, caused the clerk of the House to read the following beautiful poem, which originally graced the columns of our luminous contemporary the Sun, and is now perpetuated in the Congressional Record. The blending of sentiment and fish is very beautiful:

O maid with the hair that is yellow,
'Tis time that your home you forsook;
Come over and live with a feilow By the beautiful Skoodoowobskook

II.

And there where the grasses the brooks kiss. In the prettiest kind of a nook,
Where the swift-running Skoodoowobskooksis
Pours into the Skoodoowobskook.

III. Our lives like their streams shall commingle, For heaven no further we'll look; Then come-it is wrong to live single-O come to the Skoodoowobskook

IV. In this lovely terrestrial Eden I'll teach you to fish with a hook:
The fishes are plenty, O maiden,
In the crystalline Skoodoowobskook!

Our food shall be trout from the waters, Which you to your sweet taste shall cook; Come, fairest of Uncle Sam's daughters. To the banks of the Skoodoowo

NOTES ON THE "BOOK OF THE BLACK BASS!

BY D. W. CROSS.

[Editor Forest and Stream:

EST D. W. CROSS.

[Editor Forest and Stream:
I submit to your readers the following timely criticisms on my "Book of the Black Bass," by D. W. Cross, Esq., of Cleveland, Ohio, author of "Fifty Years With the Rod and Gun." Mr. Cross is a veteran sportsuan, of great experience in all matters pertaining to shooting and fishing. His little work on the Rod and Gun contains more practical information to the square inch than any work published, especially on wing shooting, which is based upon true scientific principles. My own comments are enclosed in brackets.—J. A. HENSHALL.]

BOOK OF THE BLACK BASS, pp. 185. "Micropterus salmodés (Lac.), Henshall, the large-mouthed black bass, or, as it is sometimes called, the Oswego bass."

Last summer I caught a great many black bass on the rocky shores of Lake Ontario, between Oswego and Salmon rivers, also many in Salmon River, below the Pulaski Dam, and it appeared to me that all were the small-mouthed bass. The Oswego River is a rapid one, and does not appear to me to be a fearwhile recent for the key went of the present of the prese

rocky shores of Lake Omtailo, between Oswego and Salmon rivers, also many in Salmon River, below the Pulaski Dam, and it appeared to me that all were the small-mouthed bass. The Oswego River is a rapid one, and does not appear to me to be a favorable resort for the big-mouthed bass.

[Mr. Cross's conclusions are correct; most of the bass in Oswego River belong to the small-mouthed species. Nevertheless, the large-mouthed bass is quite generally called the Oswego bass throughout the West and Northwest, which many anglers attribute to its being found in Oswego "Lake," in New York; but this is entirely erroneous, there being no such lake in that State. It is one of the many names of the black bass which should be wiped out. The distinctive and descriptive names, "Small-mouthed" are the only ones that should be used.]

Page 164, "After h tching, the young fry remain over the bed from two to seven days, usually three or four, when they retire into deep water, or take refuge in the weeds, or under stones, logs, tare other hiding places."

Your description of choice of location, making nests, incubation, time, etc., shows correct and careful observations of their habits. But, really, do the young retire into deep water? So far as my experience and observation go (and I took particular pains to watch the young fry last summer, and many times prior) the young fry seek the shoal water near the banks, and in the bayous, where hiding places are the best, and where they are least liable to be gobbled up by their numerous enemies. Look at that a little more, and see how it is. Not very material, except in planting them.

[The fry are usually observed in shallow water, among the weeds, because the observer is usually on shore. But I have often seen the young fry on the surface of the deepest portion of lakes and ponds, and especially was this the case in Florida the past spring (March and April), where I frequently observed the newly hatched fry in the middle, or deepest, portion of the streams and bayous. And this is no doub

found in the deepest portions at these seasons; they are found on the shoals and other feeding grounds. The young fry are very active, and are constantly on the move.]

Page 251. "The reel should be so placed as to be underneath when reeling up the line."

Sound! Another reason is: when it is used on top, the wet line clings to the rod and reels up hard.

Page 273. "Black bass leaders should be from six to nine feet long."

And you recommend putting the flies three or four feet.

Page 273. ""Black bass leaders should be from six to nine feet long."

And you recommend putting the flies three or four feet apart. That is all good. But, did you ever try only three and a half feet of salmon gut, with two flies (all that should ever be used), the flies twenty-seven inches apart? Reasons: Too long a casting line increases the chances of breakage, and the bass will not shy a line when fastened to a shorter leader. If the flies be too far apart, in playing the bass, the unoccupied hook is more liable to hitch on weeds or snags. Twenty-seven inches apart will permit you to land a bass with your net from either fly without endangering the hitching of the other in the net, or on the bottom, weeds, etc. Hence I have adopted three and a half feet with two loops twenty-seven inches apart, with snells not more than five inches long (three is better), in all my bass fishing. For trout, I use a nine feet leader with from three to five flies, twenty-seven inches for the first, and twenty-two inches apart for the balance. When snells are six to eight inches, they are apt to twist about the line and knot.

[In my special instructions for fly-fishing, I advise (pp. 370) a six feet leader and but two flies; and snells for flies (pp. 277) from three to six inches long. The snells sux to eight inches long (pp. 275) refer to bait fishing, as will be seen.]

Page 296. "Flies should be small, rather than large."

eight inches long (pp. 275) refer to bait fishing, as will be seen.]

Page 296. "Flies should be small, rather than large."
Your remarks on flies are very full and instructive. But —here comes that everlasting "but"—does not the size of the fly depend a good deal on the character of the water? If still and clear, a smaller fly might do; but the bass has a mouth, which (like the immortal Henry Clay's) speaks for itself, and is adequate to take in a large bait. You cannot have a large hook on a small fly very well; Nos. 3 to 6 Sproat hooks are pretty sure to catch and hold, while smaller may fail. In waters ruffled by winds, or on rapid streams, I have always found large flies the most successful. Herewith I send you a specimen or two that have proved very killing with me, on our club grounds, Sandusky Bay, Ohio, and on the waters and shores of Lake Ontario, north of Oswego.

of the waters and shotes of Lake Officiation, florth of [The flies sent by Mr. Cross were of the same size that I use and recommend (pp. 296 and pp. 300) for cloudy days, and high or rough water. For bright days, with clear, low or fine water, I recommend (pp. 296) small flies. I recommend, first, Sproat hooks, next O'Shaughnessy, for flies; from Nos. 2 to 5 (pp. 299), "the latter being the smallest that should be used under ordinary circumstances, though, for the smallest flies, Nos. 6 and 7 may be employed."] Page 320, "To hook the live uninow."

I do not now fish for bass, much, with the minnow, but when I do, I invariably run the hook through the mouth carefully out at the gills, close to the cheek, and draw the snood through far enough to run the hook under the skin at the back fm, in a way so as not to double up or injure the

shoot through far enough to run the nook under the skin at the back fin, in a way so as not to double up or injure the minnow. He will live and play, and you will be almost sure to hook your fish every time. If hooked through the lips (a good way in still water), and the minnow is large, the fish often grabs below the hook, when away go both minnow and home. The writer processor was

and bass; often when rises are scarce.

[I find that hooking through the lips is the best way, all things considered, as I recommend. I advise Mr. Cross's method (pp. 436), for spinning or trolling with the live min-

method (pp. 436), for spinning or trolling with the live minnow.]
Page 331—"Landing net handle."
I use one for wading, especially in swift water and rocky bottom, long enough for a support, with a steel spike screwed into the lower end. I have it hollow, and long enough to insert a small brass, copper or tin tube large enough to hold one bamboo tip. The tube is made perfectly water-tight, otherwise water will get in and the tip will be spoiled. When on land, I stick the spike (five inches long and tapering) into the ground while playing and killing my fish, or, if wading, lean it on my arm; then I have support in swift water, and what is better, always have an extra tip handy. Try it.
Page 340—"Minnow pails."

if wading, lean it on my arm; then I have support in swint water, and what is better, always have an extra tip handy. Try it.

Page 340—"Minnow pails."

Many years ago I used to carry my minnows several miles to favorite bass grounds, when, if shut up they would die, or, if open, the water would slop over in the carriage; so I devised a minnow pail which proved successful in keeping minnows alive, and no water was spilled: The outside bucket was made tapering, of heavy tin, 14 inches across the bottom, 8 inches across the top, and about 10 inches high, with a stout bail, and handle of wood. Inside of this I put a straight bucket about half an inch less than the diameter of the top of the outside bucket, and an inch and a half shorter, and perforated with many holes on top, sides and bottom. On this there is a sliding door to put in and take out the minnows (just as you describe it), and a small bail that will fit inside the cover of the outside pail. The water (when in a carriage) will strike the slauting sides of the outside pail and fall back, while the minnows will live without change of water, even if riding all day.

Page 373. "Keep out of sight of the fish as much as possible, for herein lies the greatest secret of success in angling."

You here strike the key-note of success for either bass or

ling."
You here strike the key-note of success for either bass or You here strike the key-note of success for either base or trout fishing. But, really, is the bass as shy and scary a fish as the trout? My experience runs the other way. A bass will scare as quick, but he won't stay scared. He will come out, if he hides from the scare, in from five to fifteen minutes; but not so with the trout, you must wait hours instead of minutes after you have scared him. The bass is a bolder fish; will tackle anything, and is inclined to show his pluck. Think of it.

Think of it.

[I have thought of it, a great deal, and have expressed the same opinion as Mr. Cross (on pp. 373, 374 and 403). I hold that the bass is as wary, but not so timid as the trout, and withal is more knowing.]

Page 374. "On when and where to fish."

Page 374. "On when and where to fish."
Your remarks as to the best time and the best places show to me how much you have been there. I agree with you heartily, that to know always vibere to fish, requires more "gumption" than to know how to handle a fly-rod in the most skillful manner. In my experience, whatever that may be worth, I have found just at dawn and at twilight, especially in still water and on a still day, the best time. In a good breeze, any time. This, I believe, confirms your practice. On some grounds a good breeze is indispensable to success, in bass and trout fishing.

Page 380. "Inch for inch, and pound for pound, the black bass is the gamest fish that swims."

Fred Mather, Dr. Garlick (the father of fishculture in America), Dr. E. Sterling, and many others, agree with you in this. I cannot telt you how many trout and bass I have caught and timed, and how difficult, sometimes, to determine which had "got the case." Both are gamy enough for all the sport and excitement the most ardent sportsman could wish. I must confess, however, that gamy as the bass is, the trout of equal weight is his superior both in time of endurance and muscular activity. But the difference, weight for weight, is so little, that no two true sportsmen will cross swords over the question of superiority. The California mountain trout, J feel quite certain, will ultimately become the rival of the black bass. It thrives in warmer weather than the brook trout, grows faster, and is hardy and prolific. It and the black bass will ultimately become the game fish of America.

[If the same tackle, or at least the same red is used, the black bass will not suffer by a comparison with the trout; on the contrary, where the two fish are of equal weight, the bass will fight as long, or even longer than the brook trout, and will prove the hardest customer to manage. I mean no disparagement to the brook trout; but the black bass should receive his due. I sincerely hope that Mr. Cross's anticipations regarding the "rainbow trout" of California will be more than realized; but there seems to be much difference of opinion as to its gaminess, as well as to its successful introduction to our waters. We will, at all events, hope for the best; at the same time I will here reiterate my opinion that the black bass will eventually become the leading game-fish of America.]

of America.]

TROUT AND TROUT STREAMS.

TROUT AND TROUT STREAMS.

I HAVE read with interest Mr. Blackford's article on trout culture, and acknowledge him to be good authority on everythine pertuining to fish and fishculture, yet I claim the privilege of differing from him.

Mr. Blackford says brook trout are no more plentiful, or cheaper now than a dozen years ago. If so, how happens it that brook trout sent to him on the 1st of last April netted the raiser but a 'trifle over sixty cents a pound? Ten to twelve years ago I sold trout in New York and Boston at seventy-five cents a pound, and have sold them as high as one dollar a pound. I think they must be more plentiful, or else people have taken a dislike to them, which I hardly think possible.

Mr. Blackford says that the brook trout, from their shyness, disappear from the streams as soon as civilization comes near them. The fact is the brook trout are the most easily domesticated of any fish with which I am acquainted. The trout in my pools are so tame that they will take food from my hand, and every morning as I pass by the pools, they leap out of the water and cut up all sorts of anties, as if to say good morning.

The cause of the disappearance of and the failure in restocking our streams with brook trout, is that the streams, the waters of which were once suited for them, are no longer so, by reason of the dams that have been built on them, flowing large ponds, thereby exposing a very much larger surface to the heat of the summer sun, and the water that formerly maintained a temperature as low as fifty-five degrees in midsummer, now rises as high as eighty degrees, rendering it unfit for the brook trout to live in. Brook trout will not thrive in water above sixty-five degrees in temperature.

I know of one stream in this town where before any dams were built upon it, the trout were so plenty that the farmers fed them to their pigs. Now, there are three dems on the stream, flowing ponds of an aggregate area of not less than 500 acres, and not a trout can be found in the stream.

This is simply

Is now definited up and user for some kind of instinated ring.

Restore the waters of our streams to their original temperature and purity, and with restocking and judicious fishing
they will furnish as many trout as any streams of their size in
the wilds of Canada, even if they should flow through the most
thickly settled part of the country.

W. L. Gilbert.

Old Colony Trout Ponds, Plymouth, Mass.

FISHING ABOUT PITTSBURGH.

FISHING ABOUT PITISBURGH.

Define this city on business, and while looking over the Forest AND STREAM of a friend, I called his attention to a letter in it from a stranger in Pittsburgh, and my friend remarked, "Why, who of the readers of Forest AND STREAM have not heard of the glorious times spent with the strong the property of the many fishing clubs of our city, and the many points near by, and right here, where may be found the adolen perch, the gamy bass, the flavory salmon, the beautiful sunfish, and the greatest of all, the trout streams of the neighborhood. Upon these streams, to be successful, the angler will find opportunity for the exercise of all his skill. But if one wil-hes for fish, and but little sport, let him paddle of the muddy Monongahela, and drift down into the still muddier waters of the Ohio, and there he will, as is well known, that the four-pound Monongahela chult, the five-pound cartie, and, although 'tis said the sucker will not take the hook, in these waters the man after meat can, notwithstanding all that is said about this fish, find it in large quantities, It is related of a fishing party that camped upon the banks of the Monongahela that they took some mud catfish weighing twenty pounds, and not a few of the Monongahela chub weighing eight and ten pounds. So large are some of the catfish caught here that it has given rise to many stories about their fabulous size. In many cases these false are true. "An old ferryman on the Allegheny tells of and exhibits a pair of boots made from the skin of one of these fish taken by him last season in that stream. He fishes for no other kind, and the secret of his success with that rarticular fish, he claims, is in the bait he uses. Regularly does the old man take his tramp for the woods near by, and from there he brings the skin of one or more 'coons. With these skins, properly preserved, he baits for the catfish. He declares no other fish will take it, and, for some reason, only the larger of those. This manuer of fishing, the old man says,

ghiogheny; nor of the rapid stream of Sunfish, the solemn waters of Black Creek, the rocky walled waters near the Cascades, or furthor up the Allegheny, the enchanting waters of Silver Falls outlet, the last the home of the "speckled beauties

beautics."
Now, is not this city peculiarly blessed with places where the lover of the rod may enjoy himself? and I say, for what more may the angler ask?
But my friend says, "Write, and be assured before coming."

ing." Pittsburgh, Pa. Traveler.

Tell "Stranger," who asks for information about angling in the vicinity of Pittsburgh, to call at No. 79 Mulberry street, and ask for Harry Irwin, and he can post him. Call about 6:45 P M.

AMONG THE PICKEREL.

Though thou fishest only for trout and salmon, despise not thy humble brother of the angle who findeth pleasure in taking even so mean a fish as the bullhead or pickerel.

mean a fish as the bullhead or pickerel.

A UTUMN is with us. The bass have retired to Horicon's tranquil depths, and gathered in schools, meditating on the narrow escapes of the last season. Overhead in the clear water they see the form of our friend with the open countenance (the pickerel) lazily floating past. He does not care for schooling, and even now is waiting for some one to play hook-ey with him. That is certainly a barb-arous joke. We must draw the line somewhere, and as the breeze has hauled round to southeast, Basin Bay will be as likely a spot as we can find. A long pull dead to windward, with a gentle sprinkle now and again, as the wind cuts the crest of a wave and slaps it vengefully down on our backs, and we round the point; a few strokes and we glide into smooth water, a sheet of about ten acres in extent, land-locked on three sides, but open to the east. This is Basin Bay, famous for its big pickerel.

round the point; a few strokes and we glide into smooth water, a sheet of about ten acres in extent, land-locked on three sides, but open to the east. This is Basin Bay, famous for its big pickerel.

Out in the lake the white caps are flashing in the sun, while here all is calm as a poud, the only break on the still surface being the occasional play of a cat's paw that, tempted by the quiet beauty of the scene, has left its boisterous company outside, and wandering in, now dances duintily to and fro over the water. With a good stout line out we start diagonally across to the other shore, keeping the spoon just off the grassy bed on the bottom, in range with a dead cedar, backed by a tall maple a short distance from it, which, glorious in its rich attire, blazes like a beacon in the woods. Over and back!—evidently they are asleep below there! What's the time? Haif-past eleven? Soon show up now! Try it again and with a little more line this time. An inspection shows the spoon hidden in a handful of long, green, trailing strings. Scraping the bottom, hey? Now it is buzzing nicely; give a little more, then! and with 125 feet of string out we start again, and this time on the skirt of the grass we strike them. T-s-s-ook! and the old bamboo rod bends like a bow, just enough spring in it to hook' em without tearing out. The line is taut with the strain, and the drops which cling to it sparkle like diamonds in the bright sunshine as they chase each other down it subrating length. Laying the rod in the bottom of the boat you grasp the line, and hand over hand, in comes your fish. Splash; sook; soo, "let him run; let him run; con the shim, quick!" This time only a feeble struggle; and now he comes rapidly to hand under your steady pull, his mud-colored back making a ripple on the surface. Here he is alongside, and grasping the stretcher you stun him with a sharp, quick blow on the head; then seizing him firmly, and thrusting your thumb and fight into the sockets of his deep-set eyes, lift 'him out. Careful handling saved

the hooks fall from his jaws and rattic snarpy as only semithe thwart.

There is nothing in pickerel fishing like the wild dash
and frantic jump of the bass; but a big one will "strike like
a major," and his spasmodic starts for liberty will often take
the novice by surprise, otherwise he comes in like a watersoaked log. Another thing in his favor is his size, ten or a
dozen of the real old sort of seven to nine pounders make a
nice show, and when spread out in front of the hotel on the
grass, amid the "Olb" and "Ah's" of the ladies, you may
select the big one of the lot, and gently stroking his chin, recite Gordon's epitaph:

Here lies the holy of Robert Gordon,

Here lies the body of Robert Gordo Here lies the body of Kovert conton, Mouth—almighty, and teeth accordin', Stranger, step lightly o'er this wonder, If he opens his jaws, you're gone, by thunder! DICK.

PHILADELPHIA FISHING NOTES.

A LL through the shad-fishing season at Gloucester, N. J., black bass, out of season, have been taken in the big seine, and marketed, not in great quantities, to be sure, but when the net was first hauled, some female bass heavy with spawn were caught. This is not generally known, from the fact that the catch is all dipped from the bag of the seine into the market boat, twenty or thirty yards from shore, and cannot be seen. Had I not been told by one of the fishermen L would not have known. Last year several salmon were cannot be seen. Had I not been told by one of the fishermen I would not have known. Last year several salmon were caught at Gloucester, but this season none have shown themselves in the net. Weakfish are still being caught by the thousands down our bay by the net fishermen of Slaughter Neck. The bulk of fish taken are used for manure, and are purchased by the farmers for a small sum.

farmers for a small sum.

A few sheep's-head are being taken at Little Egg Harbor, but the run is small. Next mouth the larger fish will show themselves. I would recommend Capt. Joe Shords and Geo. Morris as pilots for any of your readers who may want to test their patience at this sport. Both can be engaged at Tuckerton, N. J. The great trouble with me when sheep's-head fishing at this point was not the lack of fish or their biting, but for a long time never knew when they were taking my bait. I have since learned.

HOMO.

PIME IN ONEIDA LAKE.—Chittenango, N. Y., June 24.—In Oneida Lake, which is five miles from here, there has not been within fifteen years as good fishing as there is now. It is common to eatch from tifty to one hundred pike in a day's fishing. They will average about two pounds each. We think here that it is owing to having hunted up the nets, which has been done successfully. Let the good work go on. Lake Port is the point I have reference to.—L. E. S.

THE GRAYLING, in upper Michigan waters, are biting The Grayling, in upper Michigan waters, are biting vigorously. Several parties from Toledo are now encamped on the bank of the Au Sable, thirty miles from Grayling, and report fine sport. One party of four, just returned, caught 471 during four days' work. Grayling are monopolizing all the interest formerly manifested in St. Clair Flats bars.—Whire (Toledo, June 20, 1882).

VIRGINIA TROUTING.—We are told that good trout fishing is to be found in Dry Run, Rockingham county, Va., in the vicinity of Rawley Springs.

Hishculture.

SALMON AT THE McCLOUD HATCHERY.

SALMON AT THE McCLOUD HATCHERY.

THE following notes on the catching of breeding salmon at the U. S. Salmon Hatching Station on the McCloud River, California, during the season of 1881, may be of interest.

The number of ripe salmon caught at each haul in the seine commenced to increase about the middle of August, and on the eighteenth of August I thought it safe to begin to collect salmon eggs for the hatching house. On that day we took one hundred and forty thousand (140,000) eggs, the parent salmon appearing to be very thick in the river. The next day we took two hundred and twenty-five thousand (225,000), and by September 2, we had exceeded half a million a day. The next day we took more yet, and from this time till we stopped fishing we could have taken a million ad day, if necessary. Ripe salmon never were so abundant before in the McCloud River during the fishing season. We caught frequently at one haul of the seine more than we used to catch a few years ago in twenty-four hours. The salmon were very large too, the average weight of the spawned fish being several pounds more than last year, and the average number of eggs to the fish being 4.205, against about 3,000 in 1880, and a still smaller number in 1870.

usn being 4.205, against about 3,000 in 1830, and a still smaller number in 1870. In consequence of the abundance of spawning fish, combined with their large size and average of eggs, the fishing season was made comparatively easy this year. When salmon are scarce we have been in the habit of drawing the seine continually, night and day, through the twenty-four hours. When they are plentiful, the regular time- for drawing the seine is from four A. M. to ten P. M. This year, on account of the extraordiny abundance of the fish, we frequently had to make but two or three hauls a day, and even at this rate we took all the eggs needed, (seven million five hundred thousand) before the spawning season was half over, a piece of good luck that never came within our experience before.

a piece of good luck that never came within our experience before.

I may add here that this vast increase in the number of salmon in the river is the direct result of the artificial hatching of young salmon at this place. For several years past the United States Fish Commission has presented to the State of California two million (2,000,000) salmon eggs or more each year. These eggs the State Fish Commission has hatched each year atits own expense, and has placed the young salmon in tributaries of the Sacramento. This artificial stocking of the river has resulted in a wonderful and wholly unprecedented increase of salmon in Sacramento. So great has been the increase that the annual catch of salmon in the Sacramento River is worth nearly half a million dollars more than it was seven years ago, before the hatching operations were resorted to. This one result of the work done by the United States Fish Commission on the McCloud River would obviously be ample compensation for all the outlay which has been made there, supposing that it were attended with no other results.

THE McDONALD FISHWAY.

Manchester, Va., June 15, 1882. Editor Forest and Stream:

MANCHESTER, VA., June 15, 1882.

MANCHESTER, VA., June 15, 1882.

Some time since I wrote you concerning the McDonald fishway at Bosher's dam on the Jamos River, promising then to give you further information as to its working during the present running season. I have paid considerable attention to the way this spring, and am entirely convinced of its complete efficiency. I have had the gates shut down at various times, and have almost invariably found more or less rish on the fore bay at the head of the ladder and upon the ladder itself. I have never seen a shad upon it, but there have been so very few shad up there this season (being but three caught in that part of the river, with nets, that I have heard of), that it would have required constant watching to have discovered one, except by the merest chance. If any shad have ever gotten to the foot of the hadder I have no question they have gone up, for there is absolutely nothing to prevent them. The smaller dams between Bosher's and tide-water have been very much built up and added to within the last twelve months and I think that is mainly the reason of the scarcity of shad higher up the river. There is an effort being made now to have the McDonald fishways put upon these dams in time for another season, and if successful I have no doubt we season.

In my former letter I said I believed I could push a boat un

eason. In my former letter I said I believed I could push a b

In my former letter I said I believed I could push a boat up the ladder if there was plenty of water. I accomplished that feat this spring, shoving one with a pole entirely to the top, the weight of the boat and myself going up an incline being the only difficulty, the current being positively nothing.

All of the fishes common to the river, such as mullets, yellow suckers, carp, perch, bass, gars, catfish and e-ds have been seen upon the ladder in quantities. Upon shutting the gates down at one time, there were found nineteen mullets and one yellow sucker at the top of the ladder, stopped in the act of passing

and one yellow sucker at the top of the ladder, stopped in the act of passing.

The Richmond and Alleghany Railroad Company, whose duty it is to construct these fishways on the James, having railed to run a deflecting wall from the foot of the ladder to turn the current from the ladder into the main stream coming over the dam, which when done, I've no doubt, will make the way much more effective, enabling the rish to find their way more readily to the foot of the ladder. When the railroad company build ladders on the other dams on the James, which the law requires them to do within another year, I have little doubt that the shad, as of yore, will be regular visitors to our mountain regions. That the McDonald fishway presents an efficient and economical means of getting them there, there is no doubt, and it only remains to have the ladders put up to accomplish the fact.

FISHERIES OF THE GREAT LAKES.—Toledo, O., June 9, 1882.—Editor Forest and Stream: We have read the article FISHERIES OF THE GREAT LAKES.—Totedo. O., June 19, 1882.—Editor Forest and Stream: We have read the article from Mr. D. Y. Howell, in your issue of June 1, which we think gives a very fair solution of the vexed fish question. The views as there expressed meets the general approbation of the fishing interests at this end of Lake Eric. We indorse it fully.—J. H. McLean & Co.

CONNECTICUT.—Superintendent of State Fish Hatcheries Henry S. Fenton reports that in the State 535,000 brook trout 295,000 Penobscot salmon and 111,000 land-locked salmon eggs have been planted. Up to date, 1,2000,000 shad have been hatched and placed in the rivers.

THE BRANTFORD, ONT., Caledonian Society and Lacrosso Club will hold their athletic games July 18.

SPANIEL CLASSIFICATION AT THE NEW YORK

SPANIEL CLASSIFICATION AT THE NEW YORK DOG SHOW.

THE writer being a greenhorn as regards spaniels, invested five half-dollars for as many separate admissions to the last New York Bench Show, and devoted from two to four hours on each occasion to the examination of the dogs on exhibition. Being specially interested in the spaniel class, most of his time was spent in examining the dogs coming under this category, his object being to acquire information regarding this class, and of studying the characteristics of the different varieties. As a greenlorn, he ventures a few criticisms, to be taken for what they may be worth, and subject to correction when wrons.

category, his object being to acquire information regarding this class, and of studying the characteristics of the different varieties. As a greenhorn, he ventures a few criticisms, to be taken for what they may be worth, and subject to correction when wrong.

"Class 54. Irish Water Spaniels." In this class we find entry No. 646, Rover. This was certainly a handsome dog, and the writer envied the owner of it. But what was it? It was a liver dog, with wavy (not curly) hair and a bushy tail, looking as much like an Irish water spaniel, as the dog is generally described, as a half-bred liver setter would. Now this dog was clearly either a mongrel of some sort (like the "English retriever") or else belonged to a breed not described by any authority that I have been able to consult. In either case he had no business in the class in which he was entered, and I ask whose fault it was that he was entered in the pointer class, or a bull-tierrier in the bull class—or is there some one whose business it is to see that dogs are correctly entered? One would naturally suppose that this function belonged to the superintendent or to a competent deputy who would examine each dog on its arrival, and if heoriectly entered by their owner, assign them to their proper class. The dog in question was certainly a beauty, and I herewith ask its owner what it is, and how it came to be in class No. 54? "Class 55. Spaniels other than black) over 280s." In this class we find entry No. 655, Nellie. This bitch, when brought into the judging ring, looked about ofteen pounds, and the writer will give up as a guesser if she weighed an ounce above 280s. How then is she entered in this class? Entry 656, same class, is "Ten pupples nine weeks old." This entry was probably correct, provided they bunched the whole litter to hack up the weight, but why, may I ask, were they not placed in "Class 59, spaniels pupples (any color) under 12 months?"

In the same, "Class 55, spaniels (other than black) over 280s. How then is she entered in this class? Entry

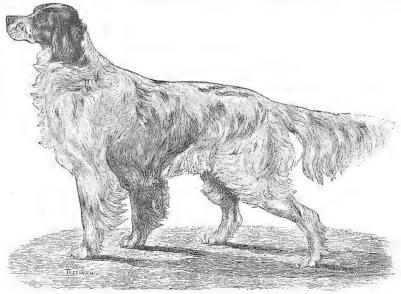

present rules for judging the blacks will inevitably get the prizes.

The result of this will be that commercial breeders will soon breed the blacks exclusively, and that the old style cocker will be at a discount, and be only bred by amateurs who believe the latter to be superior for sporting purposes. If now the black spaniel is the better dog for a sportsman's use, let some one who knows say so, or give his reasons. As a green-horn I offer no opinion on the subject, but look for light to experts. I would like to ask another question. Why is a black spaniel under 25lbs, called a "black cocker," and how was the weight in this breed of dogs, if the a distinct breed, raised to between 40 and 50lbs? Where does the black come from and what are its special advantages? Compared with liver, or liver and white, is the black superior in nose, in tractability, in endurance or in adaptability to pursuit of more varieties of game! The prediction has been made that the spaniel before many years will supplant both the setter and pointer as a sportsman's companion in the Eastern and Middle States, and it therefore becomes a pressing question as to what variety of spaniel will on the whole prove most useful. If the blacks, let us know it, and transfer the liver and whites to the non-sporting and fancy class, and let them be bred simply as house dogs of good looks and pleasant disposition. The matter, however, ought to be definitely settled, not by a show of hands merely, but by good and sufficient argument. Passing to "Class 56, cocker spaniels fother than black, under 25lbs," we find entry No. 6%, seven puppies. Surely when there is a puppy class, these should have been entered in it. I am aware that an owner has the option of entering a puppy in an adult class, but think that the rule permitting it should be rescinded. "Class 50, spaniel puppies (any color) under 12 months," permits a minghing of water spaniels, black spaniels, field spaniels and cocker spaniels; that is, dogs which, when adult, may vary from 20 to 50lbs,—a uzes. The result of this will be that commercial breeders will soon

"points" varying decidedly in each of the varieties menfroned.

Reviewing the matter, we find but six classes allotted to
spaniels, while twenty are given to setters, and yet the different varieties of setters resemble each other more closely than
some of the varieties of spaniels. We hope, therefore, that
at some future show the spaniel classes will be sub-divided,
with separate classes for dogs and bitches and puppies of
each variety—possibly also champion classes—and also that
there will be some one whose business it is to see that dogs are
not manifestly misplaced as regards classification. As to
points for judging let, those who admire the black spaniel
agree upon a standard, and those who prefer the liver and
liver and white agree upon one, and not as at the last Cleveland show attempt to judge both by the same. This is clearly
necessary, as the black spaniel, whether he be over or under
zelbs, is quite a different dog from the other. Which is the
better and more useful type of dog the writer does not attempt to judge, being only a

MR. A. J. KELLY, who has for some time been connected with the Baltimore Kennel Club, as trainer, has resigned the position, and will leave July 1.

MR. A. M. TUCKER'S ENGLISH SETTER "DASH III."

DASH III.

THE picture of Dash III. is a speaking likeness of the grand old dog and reflects much credit upon the artist, Mr. Harry Tallman. Dash III. is a white with black markings English setter of good size. He was whelped April. 1876, by Laverack's Blue Prince, out of J. Armstrong's Old Kate, and is owned by Mr. A. M. Tucker, of Charlestown, Mass. He was imported Sept. 16, 1878, by the Harvard Kennel Club, of Cambridge, Mass., which paid Mr. Llewellin the highest price that up to that time had been given for a setter to come to this country. He is not only a bench show winner, but a field trial winner as well, having, with Drake, won the brace stakes at Nashville, Tenn., in 1878, shortly after his arrival here, with only two weeks' experience on our game, and a handicap of two and a half points for not retrieving, beating such noted dozs as Gladstone and Lincoln, Paris and Clip, Joe, Jr. and Buck, Jr., Erin and Bow, and several other good ones; the brace making the score of fifty-six and a half points out of a possible sixty-six. He was also entered with his daughter, Countess May, in the National Brace Stakes, at Vincennes, Ind., 1880, but, owing to a cut in his foot, he was very lame and plainly unfitted for work, and was not placed. His bench show winnings are: Second, Carlisle, Eng., 1877; first. Philadelphia, 1878; also the special rits, Boston, 1879; also divided first with the Irish setter, Ben, the Gordon setter, Grouse, and the pointer Faust, in the So0 prize for the best setter or pointer, and taking first with Countess for the best brace at the same show. He also won at this show the special prize for the best dog that had won first at a field trial. The progeny of Dash III. have also made their mark, both in the field and on the bench, no less than three of them winning a place at trials, Countess May (dead) dividing second and third with Marchioness Peg in the National Derby at Patoka in 1879, Pollux winning the Eastern Field Trials Derby at Robins Island in 1881, and Bessie winning second at G

A TALK ABOUT DOGS.

A TALK ABOUT DOGS.

THE first of a course of lectures, the profit from which it is intended to apply to aid in the construction of a suitable house for the youn; Burmese elephants, Rama and Sita, now in the Zoological Gardens, Dublin, was recently delivered at Trinity College, Dublin, by Rev. Samuel Haughton, M.D. We find the chatty discourse of the Doctor reported in the London Live Stock Journal. He said:

Science taught that the dog was the descendant of the wolf, naturalized and domesticated by man. No other animals that they were aware of, besides the wolf and the jackal, could claim ancestry with the dog. If he were to say that the dog came into the world to be the companion of man, he would not exaggerate much more than Prof. Owen, who said that the turbot came into the world to be the iood of man. Wolves and jackals do not bark—they velp in packs. The dog introduced into Australia, has developed into the dingo. He had dissected hundreds of wolves, dogs, jackals and dingoes, and the anatomy of the latter was not distinct from that of the wolf. Some years ago he communicated his ideas on this subject to Mr. Darwin, and he said that the reversion of the dog back to the dingo required very serious explanation to be consistent with his well-known theories. The dog was always spoken of in one sense in the Bible—as a term of contempt, just as he was at present spoken of in the East—as, say, the scavenger of the city. He had selected three illustrations of the different types of dogs from his own experience, and on this subject he had given a warning by persons who understood dogs. They asked him, "Are you going to tell stories that you read about then represented in the little of the read of

helieve one word you say. However, he would run that xisk.

A great many dogs have ways of their own, and man forms no part of their life. There are dogs which have come into the world for the sole purpose of killing rats, and these have a vague, unsatisfied experience, until they discover that purpose. Then they are happy, and man becomes a mere machine for supplying rats. Other dogs come into the world for the purpose of herding sheep, and, though man thinks them very intelligent, they are not subservient to man's will in the shape of the third type to which he would refer. The third type was the dog that comes into the world and remains in it for the sole purpose of finding out the man or woman to whom he is to devota his life, and, if necessary, sacrifice it. First he would deal with the rat-killing dog. He had never spoken of this before, and they might regard it as a perfectly fresh contribution to the literature of dogs. His dog Bob was,

or rather ought to have been, a black and tan terrier, which was given to him by an ironworker in Lancashire whose sick child he had attended and saved—at least the father thought he saved it, which was the same thing. The man gave him what was the highest gift in his power to bestow, "the black and tan up that is not black and tan"—so he described it. "Sin," he said, "if you are troubled with rats, that will be a lovely dog," Well the pup didn't seem to have much in him; ran away from every little cur in the street; did not show any spirit at all; hadn't even the pluck to bite the leg of a visitor. There was in those old days a dissecting porter named Evans, who derived a considerable income from providing rats, and one day he said to him, "Evans, before I drown the dog, get me a rat". The man brought five rats, and the moment the dog saw them he flattened himself out like a plate on the floor, a rat came out of the trap, and was at once tossed into the air in a fashion that drew from the lecturer the remark, "Now that dog is recollecting what his father and grandfather did before him."

One day meeting Judge Longfield, who had a fox-terrier from the County Cork, they had a talk about their respective animals—and us a result of the conversation they made a match. It got wind that Haughton and Judge Longfield had a ratting match in the park, and there was a large audience of medical students. Well, fourteen rats were let out altogether, and Bob killed eleven to Judge Longfield's dog's three. He described another match between Bob and a dog owned by an English gentleman, in which a ferret was used to chase out the rats, and which resulted in Bob's winning a wager which was sent as a contribution to Dun's Hospital.

He then spoke of the second or sleep-herding type of dog. He met last summer in Bangor a very fine collie sheep dog. The farmer who owned him had a farm near Beaumaris, and one in Carnaryonshire, and had refused an offer of £50 for him. But when he transferred himself and the sheep and dog to Carnaryo

one who required them. In this way the dog's desire for herding sheep was satisfied, and he cared nothing for his master.

The lecturer now came to the highest of all types of dog—that which attaches itself to an individual master and will often lay down his hit for him. The dog of this type that most impressed him was one he met with in the Isle of Skye. Some lifteen of sixteen years ago he was yachting with some friends on the west coast of Scotland. They got on board at Pc. tree a pilot who had an excellent acquaintance with the ochs there, and who had toothache in the canine tooth of what he described as his "port bow." He told the man that there was a gentleman with them who would cure ann—one, in fact, whose greatest pleasure on earth consisted in drawing teeth. Well, this man's sister came to see him, and at their request he (Dr. Haughton) went to see her children, who were ill.

They started one morning, the man having brought with him a Skye terrier, for a tramp of six or seven miles over the mountains. The track at one place lay through a pass in which no stranger could have found his way. When they arrived at the place they passed close to the tails of cows which were kept on the premises, and into the part of the house where the sick persons lay. He then turned down the bed-clothes, and found to his extreme horror that they were in very scrious smallpox. Having given some directions as to the treatment of the children, he asked how he was to get back. The man took down a collar from a nail, said something in Gaelic to the dog, and put the collar around his neck. That moment the dog became an altered dog. He jumped upon the lecturer, and said in his dog language, "I am yours; do what you like with me." They then set out, and so doubt, and fine and made up some medicines for the sick children, he would have had to sleep all night in the delile. When he canne in again the skipper said that the dog would not taste the food that had been offered to him, but the moment the bottles were fastened to troop a

DAISY.—Washingtonville, Ohio, June 21.—Editor Forest and Stream: Your report of the Cleveland bench show says that Daisy, winner of second in English setter bitch puppy class, is by Belton. This is a mistake; she is by my Felton out of my Jesse Turner. Please rectify the mistake, and oblige G. W. BALLANTINE. [We are not answerable for the mistake, as she is put down in the catalogue as by Belton.]

SPANIEL NUDGING AT CLEVELAND.

Editor Forest and Stream:

CLEVELAND, O., June 20.

Editor Forest and Stream:

I am anxious for a little information regarding the spaniel question. In the first place, I would like to know why the spaniels in Little information regarding the spaniel question. In the first place, I would like to know why the spaniels in Little and the spaniels in Little
THE CHICKEN TRIALS.

OUR readers should bear in mind that the entries for the Derby close next Saturday, July 1, and all who wish to enter their dogs must do so on or before that day. Everything promises well for a good meeting. Birds in the vicinity of Fairmont are reported very plenty. The following well-known gentlemen have consented to act as judges: Mr. D. C. Bergunthal, Indianapolis, Ind.; Mr. Theo. Morford, Newton, N. J., and Hon. B. E. B. Kennedy, Omaha, Neb. The following additional Derby entries have been received since our last:

15. Willard Bros. enter Remus (Zip—Juno), whelped May 22, 1881. 1881

J. Palmer O'Neil enters Acme (Thunder—Bess), whelped April 13

April 17, 1881.

17. W. C. Berringer enters Monte Christo (Thunder—Bess), whelped April 17, 1881.

whelped April 17, 1831.

MR. GOODSELL'S RECENT IMPORTATION.—Belthus, the Laverack setter dog purchased last spring by Mr. J. H. Goodsell, of this city, from Mr. James Hogarth, of Kendal, Eng., arrived in New York June 16, on the steamship State of Pennsylvania. Belthus was bred by Mr. J. B. Cockerton, and is now fifteen months old. He is by Fletcher's champion Rock (E. K. C. S. B. 4,280) out of Meg, full sister to Flash II. (E. K. C. S. B. 10,187). He won first in the puppy class at Edinburgh in January. He is a very handsome blue belton, with black ears, and is an exceedingly well-formed animal, of large size, with immense bone. He gives promise, when mature, of making it warm for the best of them on the bench mature, of making it warm for the best of them on the bench his other field qualities prove equal to his stylish way of going we shall expect to see him in the front rank. Mr. Goodsell will at one of since bitches to him, and we shall watch the result with much interest, as we believe the progeny will be something above the average.

EASTERN FIELD TRIALS.—The entries for the Eastern Field Trials Derby close next Saturday, July 1, and all who are intending to enter their dogs should not forget the data. Quite a number of entries have already been received, and we trust that many more will come in. This is one of the important events of the year, and winners of a place in this stake, aside from the intrinsic value of the prizes, will achieve honors of which they may well be proud. We hope to be able to give a full list of the entries next week.

THE BEAGLE BEAUTY.—Granby, Conn., June 20, 1892.—
Editor Forest and Streum: Mr. J. G. Morrison, of Ashland,
N. H., who bred Beauty (the beagle pup winning second prize
in class 65 at late New York show), has just written me that
her owner, John Aspinwall, Barrytown, N. Y., made a mistake in entering her as sired by Ringwood. She was sired by
Flute, who was also sire of Bush, winner of first in same class.
—N. ELMORE.

SETTERS FOR SALE.—Mr. E. A. Herzberg, of Brooklyn, offers his entire kennel for sale, with the exception of Emperor Fred, and his old favorite, Jessie. This is a good opportunity for any one in want of well-bred animals, as Mr. Herzberg will sell at reasonable prices.

Answers to Correspondents.

RIFLE PRACTICE AT WEST POINT.

RANGE AND GALLERY.

RIFLE PRACTICE AT WEST POINT.

West Pointy, June 12, 1882.

The some days past the papers have been dilied with glowing accounts of the doings of the young men attached to the Military Academy. The daily life of the cadets has been set forth with much particularity, and a good deal of their nightly life as well, judging future commanders of our armies have been praised without stnt, until the general reader would come to think that there was result nothing more to be desired in the oducation of these young men. They do indeed get many of the elements of a thepercical military and the properties of the stratement of the properties of the stratement of the properties of the stratement of the properties of the carties surface. They become fine horsemen, and they have neat little rifles with which they go through the mantismen, and a company of good sharp-shooters could knock over the entire battalion of cadets, with all they are not marksmen, and a company of good sharp-shooters could knock over the entire battalion of cadets, with all Spatials to use officer of the post, and an instructor of tactics as well, the question was asked what opportunities the young men had obscienced by the properties of

SOME POINTS OF THE MATCH.

SOME POINTS OF THE MATCH.

THE managers of the British team which is to visit America in September next are working with a vigor which promises success. They have little to say to the American committee on the match, all the correspondence on the subject being of a semi-confidential nature, and passing from one individual on this side to another individual on the other. One of the most recent of these communications appears below. The points involved are to be discussed by the Executive Committee of the N. R. A. of America, and the conclusions will appear in our next.

Dear General Wingate:
Very many thanks for your recent letters. Word near the conclusions will see the conclusions will appear the conclusions will appear in our next.

communications appears octoo. The points movine are to be discussed by the Executive Committee of the N. R. A. of America, and the conclusions will appear in our next.

Deep General Management of the American property of the conclusions will appear in our next.

Very many thanks for your recent letters. We of course anticipated that the match is to be shot at Creedmoor, notwithstanding newspaper statements. At the same time we thought it necessary to be assured of the fact. You say that the Long Island Rallway will do all you require for the actual meeting; but will they be running suitable trains during the few proceding weeks? This is a serious question for us, and must very much influence our choice of quarters. Wherever we go we must be within easy reach of the range (for distort) for one of the course of the range (for distort) for one idea of our team shooting any other match than the one we come to shoot, and, as at present advised, we should not accept any challenge such as you hint at in yours of May 7. At places the same time we do not pledge ourselves that no members of our team shall shoot in other matches, should any be proposed to us.

You may take it as certain that the "twelve," who shoot in our match will not shoot as the brilish team in other matches; we could not not one that the course of the read of the range of

events you will understand why we cannot pledge ourselves to bring a team for the Palme, although we shall be glad to do so if there are no obstacles in the way. Honce I ask if we can have a match if we can get a team together. I Inclose a paper of questions which I will ask you to reply to at your early convenience. I put them in this form for convenience sake. With kind remembrance to yourself and Mrs. Wingate, Believe me, yours very sincerolly, Tankes B. Waller.

1. The date of the match.
2. Thuretable of railroad to and from Garden City.
3. Whether there is any suitable locality for quarters of the British team as accessible to Creedmoor as Garden City.
4. What facilities for practice can be given at Creedmoor previous A. What facilities for practice can be given at Creedmoor previous at Sundard Creedmoor previous at Long range, and, whether on such days the targets will be ours for the whole day.

Note.—We ask you to do the utmost you can for us in the matter of practice. We shall have sixteen men practising together, and if we have a Palma team as well, we shall want them to practice on other days than those devoted to military teams.
5. Whether the block foresight allowed by the British National Riffe Association will be permitted in the match. (This foresight is made by filing away the come or wedge on the military sight, so as to leave centre of latter, so that in alming it resembles a line pin sight. With this the back sight is altered by outing away a square notch in the upper part of the sliding bar, so that in alming, the square block is seen with a margin on each side. "Although I think the conditions of the match allow of this sight arrangement being used, we have not authorized it until we hear from you that you have no objectious to it."

6. Do you object to "Silver's anti-recoil heel plate" being fixed permanently on the heel of the rifle. (This is a patch of undia rubber fixed between the butt of the rifle and the metal heel plate for the purpose of lessening the recoil, and the metal heel plate for the rubber of the sealing the recoil, and the metal heel plate for the sights, each color being used pure; the mixture of black and white so as to produce gray, not being allowed by the British N. R. A. Please state your agreement as to this in detail.

8. Do you allow the use of theoretheoptic eye shade. (This is a plain perforated disk similar to the peep sight on the match rifle, and a either fixed on the cap peak by the hinge constituting a universal joint, or held in the eye like an eyeglass, and is allowed at Wimbledon.

CREEDMOOR PROGRAMME.

CATURDAY, July 1.—"No Cleaning" March. Six competitors and one final competition, arranged with the view of determining the best methods for military match shooting, without cleaning, except between ranges. 80, 990 and 1,000/36. Any position and any rifle. Military rifles to receive an allowance of one point on each shot fired. Seven shots and two sighting shots are allowed to the competition of the competition of the competition of the competition of the competition. The entries required to make a match. Entrance fee, Si; except in final competitions, when the entrance fee will be \$2. Winners of one or more competitions to be admitted to the final competition. Competitions shall submit to the executive officer for examination their ammunition whenever required, and shall furnish full information in any requested particular as to its preparation, etc.

This match is open to everybody, but particularly to beginners coached by veteran riflemen, the object of the originator of the match and of the N. R. A being to encourage and educate young riflemen, Open to teams of two men, one of whom has never won a prize in any rifle match, at any open-air range. Individuals may belong to more than one team. Each team will shoot together, five shots each man at allowance of one point on each five shots fived. The members of one team may use the same rifle. Entries (for the team) \$1 each. An allowance of one point on each five shots fived. The members of one team may use the same rifle. Entries (for the team) \$1 each. Resentries permitted. The three highest scores of each team, made on any day or days of the competitions, to be added together and counted as one score in determining winners of prizes; \$100 cash, presented by Gen. Edward L. Molineux, President N. R. A. and other prizes offered by the Association, to be availed to the fine day of the entry of the prizes offered by the competition of prizes in any p

spector of Rifle Practice, S. N. Y. The badge to become the property of the competitor who, at the close of the season of 1882, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide. Winners of former champion marksman's badges to be bandicapped five points at each competition. Ten other prizes (silver medials) presented by the N. R. A. to the ten highest competitors in order of merit. The same man can win only one medal during

tors in order of merit. The same man can win only one medial during the season.

The "Qualification" Match of 1882.—First Competition.—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (lacket, cap and belt) may count score made as qualifying them to the state Remington Rife. 100 and 330/ds.; standing at 100, kneeling at 330/ds. Fire shots at each distance with any relitary rifle. Entries 50 cents each. Re-entries permitted at the distrain on of the Executive Officer, but only the highest score to out. To the competition in each competition making the five highest aggregates cores, sixty per cent. of the entrance money will be equally divided.

competitors in each configuration of the entrance money will be equally gates cores, sixty per cent, of the entrance money will be equally gates cores, sixty per cent, of the shots, any's four shots. Four inch cartons only to count. Entires, 50 cents each. Not more than six re-entries permitted on one day. At the end of four matches, the peritions, to be accarded 20 per cent, of the total entrance fees received; the next greatest number 15 per cent, and the next 5 per cent. At each competition the first man to receive 10 per cent, the next 5 per cent, the next according to the second of the count of the total entrance fees.

they were enroused in the National Competition. Conditions as "Duryea Skirmishers" Match.—Fifth competition. Conditions as in previous competitions. Prizes, a silver medal offered by Gen. Hiram Duryea, and 15 and 10 per cent. of the entrance fees respectively.

In provide competitions. Prizes, a silver metal offered by freatham competitions of per cent. of the entrance fees respectively.

Wednesday, 19th.—"The Educational" Match.—Fourth competition. Conditions as on Saturday, 8th. Distribution of prizes at 5 o clock. The "Lion" Match.—First competition. To be shot for twice each month unless otherwise announced, and to be awarded that competition who shall win it three times, not necessarily consecutive. Open one of the contract o

ance rees received will be divided equally among the ten highest petitors. e "Raphlity" Match.—Second competition. Conditions as on Irday, 8th.

BOSTON vs. NEW YORK.—The long-range match which was shot on June 14, between teams of the Walnut HII marksmen and the Amateur Club of this city, resulted in favor of the Bostonians by a landsome lead. The weather conditions were not of the best. The score stood:

Total.

The match between the Massachusetts and Newport teams at Walmuter and the Massachusetts and Newport teams at Walmuter and the Massachusetts are team insisted on using either the ring or Massachusetts target, and as
the home team has had no practice on these targets lately it would
not agree to the change. The Newport clib will practice during the
summer and hopes to send one and perhaps two teams to the fall
meeting at Creedmoor. Mr. Farrow intends to start a shooting
school and it is expected that a number of new shots will be brought
out.

OUT.

NO IRISH TEAM.—In response to an urgent letter from the president of the Amateur Rifle Club inviting the Irish riflemen to try conclusions at long range before the Creedmoor buts in September next, the following letter has been received: "Dublin, Friday, June 2.—My Dear Colonel: Through your letter of invitation to an Irish rifle team to revisit America this year, before the Council of the Irish Rifle Association, specially called together for the purpose of considering your proposal. We are most desirous to again visit America.

LYNN CENTRAI, GLUB.—The weekly shoot of the Lynn Central Club was well attended Tuesday. About twenty shooters were present to practice for the tournament. The first shoot was the team match. The result was 40 uto of a possible 50, at clay pigeons. The next was ten pigeons and soro at glass balls for a medal score. There were eight sweeps at pigeons and soro at glass halls. The results second was the ready of the state of the decision, the team refused to enter. Mr. Johnson succeeded in taking the Individual Championship medal the first day of the shoot.

Match at clay pigeons.

ne carriages. WASHINGTON, D. C., June 24, 1882.—The members of the Capital fity Gun Club made the following scores at 20 balls each. Card otary trap, screened, at 18yds.

CLINTON, Mass., June 20.—The Clinton Sportsmen's Club has organized with the following officers: President, G. Walton Goss: Vice President, Charles Frazer, Seoretary, Geo. L. Avery, Treasurr, W. F. Bowers, Directors, F. E. Carr, J. D. Hayes, G. W. Truell. They now have eighteen members enrolled. The range is near Sylvan Grove. They propose to meet on the second and fourth Thursdays of each month to break glass balls.

of each month to break glass balls.

GLASS BALLS.—The generous challenge issued by the Algonquin Club to any club in the U.S. to shoot them a friendly match at glass balls, has been accepted by both the "Jersey City Heights" and the Palisade clubs. The match is 10 men a side, 20 balls each, 3 Bogardus traps, to take place on the grounds of the Algonquin Club, Weehawkien (ferry from New York foot of Forty-second street, N. R.), the Jersey boys will have a bot time. At the Algonquin club, well known as right good fellows, a grand time is expected.

VALKYR'S LOST RACE.

VALKYH'S LOST HAGE.

Editor Forest and Stream:
You were right in your conjecture that something was wrong with Valkyr in the recent Seawanhaka Corinthian matches. She had been allout for twenty-one days, and her bottom had become very foul. It was intended to heal ther out for a much-needed cleaning, but nothing came of it, and rather than appear disinclined to meet the field, it was decided to let hergo as sho was, with the result that she was beaten badly by boats she had outsailed upon other occasions.

Nep.

FASTERN VACHT CLUB-JUNE 21.

EASTERN YACHT CLUB—JUNE 21.

THE annual match was sailed in Marbichead Bay, June 24, and was witnessed by numerous spectators ashore, and a large fiect of yachts and steatuers were out accompanying the racers. The outer daggie met with an accident and failed to finish, though her sailing gave evidences of good speed. Itesper won in first-class sloops and cutters, and is a yacht of the "netilium type." The Herreshoff Shadow did some fine sailing, as is her wont, and we should say the improvements made last wintor were a success. The taird class was composed of small cutters, the prize going to the Beetle. Summary as under:

BOSTON YACHT CLUB.

over the course aboard the steamer Nat Wales. The judges, Messes. Thos. Dean, Eben Denton and Coolidge Barnard, had lively work cut out for them at the finish taking tunes, as the lyther work cut in bunches, each displaying the numbers of the first of the work of the control of the wales and so far as the spectator is concerned, fewer yachts would have been better relished. Adrienne made her time off big Alice. Anna sloor, now owned by the Commodore of the Hull Y. C. disposed of Recreation. Lillie handsomely beat both Hera and Viking, which proves her to be one of the best about Boston, and perhaps the most dangerous customer a foreign 10-ton cutter could find to tackle in American waters. Sunbeam protested Banneret, and gor second money to swell her long list of winnings, and Nouparell had the usual number of victims at her mercy among the small fry. We append the summary:

prepared for aught but dawdling away time in zephyrs or swinging at their anchors in a sheltered harbor. Instead of arguing backwards, as does the World reporter, against safeguards for recuring immunity from capating because partial provisions have been found insufficient, the better aense of the community will, with us, insist than the Marie possessed. As for citing the Mistake as an opposing example, it is as ridiculous as it is irrelevant. The crui ing yachts, large and small, are not very likely to venture upon shifting sand bags because a racing machine upset and did not sink. The thees of holding up the Mistake as a praisworthy oxcuption from disaster is wholly unwarranted, and apt to be frangth with than the hasty pen of an incompetent reporter. It is no new discovery that boars like Marie should sink when filled. Every sloop, every schooner, every cutter under the sun would do just the same thing. Neither is it a discovery that sand-bag machines will float for a time after capaixing, if lucky enough to spill their hags in rolling over. Every informed person knew this all along, and expected nothing by large doors with the cablin, has been brought home by this accident in a way which will, we trust, bring about another of the many reforms treged in these columns. Cockpits, if needed, should be kept small and sparts from the cabin, or the door-sill should reach nearly to the leach. The sterling qualities of a yacht ought not to be sacrideed to sensious proferences for "comfort," at risk to the life of the boat and her crew.

The starters for this matt. Cought.

M.W. Conway. ... 3 06 30 Etelka ... 3 24 50 Julia ... 3 30 5 Julia ... 3 10 64 Clouds had been banking up and shortly after the round a heavy squall of wind and rain burst upon the fleet. Some lowered, but a fow triel to carry through. Marie, with light sails drawing, was knocked down and failed to recover, not because too deep or with too much bullast outside, but for just the opposite reason; for she was still too closely allied to the shoal draft breed, and though right in principle as far as it had been followed, she suifered because the principle had not received sufficiently complete application in her construction, and as secondary reasons because she carried on too health and false without hindrance when on her side. Mistako, in rolling over, and fortunately spilling her bags, thereby saving her rolling over, and fortunately spilling her bags, thereby saving her life at Least until next time, when equally good fortune may not be hers. The crows were rescued by the club steamer. After the squall had subsided, sail was again made by the rest and the match brought to a close as under:

WHY SHE CAPSIZED.

WHY SHE CAPSIZED.

Exitor Forest and Stream.

An learn in yours of Team.

An learn in yours of Team.

An learn in yours of Team I says Dr. Merritt's charpic capaized on Lake farritt obtained on her trial trip, and that the Call gives the reason as being that none of the case lead was stowed. You say the capaize was in spite of an iron centerboard. Let me tell you why it was. In the first place it was not a trial trip. The boat was slid off the skids into the lake with no ballast of any kind in her. A strong breeze was blowing, and she slid off to learnd. Two "square-rigged" men were aboard, not used to small boats. They made sail ochristen the yacht. There was only a foot of vater where they were, and they could not lower the iron board at all, because there was not the center case. The two spars were 6in. in diameter, and 33ft. long, for a light 23ft. boat. When sail was spread, a pull turned the yacht right over on her side. My impression is, that one of those narrow, deep cutters of yours would have laid on her side without any pull about it will be a supply abourd. Any yachtsman who knew anything about rigging is simply abourd. Any yachtsman who knew anything about rigging could have bettered it. I do not pretend to be an advocate of sharples, because I know nothing of them practically; nor do I care to go to see all one particularly. But I believe in giving the devail his skillful men and no ballast had more to do with this boat's capaize than any inherent qualities of the boat herself.

SACCELITO.

SANCELITO.

A WORD FOR THE "DISH" BOAT.

A WORD FOR THE "DISH" BOAT.

Billior Forest and Stream;

I will much the Josie Norcross, 18ft, long, 9ft, beam, and 16in, deep, against any shape of her size. The mode of measuring size or bulk to be determined by foosier size. The mode of measuring size or bulk to be determined by foosier size. The mode of measuring size or bulk to be determined by foosier and unusually sharp at her ends. A mere skeleton as to size, but heavily and securely built, and ultra "dish." Her record speaks for itself, her best point of sailling, especially when compared with boats almost one-third larger—yet no longer—is heading a sea in a stiff breeze. She carries 6x0bts, dead weight, I will sail her with only two men in each boat, with 50yds, of sail, or less. Sand bags or other shifting ballast to be left on shore. I propose to use one sail only, wille my competitors may use as many sails as a shoal, wide boat—all top and no bottom—does so well? ** (6. W. [Our argument has not been to show that shoal, wide boats cannot sail, but rather that deep boats can, and being preferable in other respects, should no longer be kept under a cloud by a misapprehension concerning their speed. There are no boats of the Norcross's size of the opposite type, but if it. (i. W. will experiment with model yeachts, his conclusions will probably be much the same as our own. What may be permissible in an open beatfor river work could hardly sait the necessities of the yachtsman intending to remain out any length of time.]

MAGGIE IN BOSTON.

Editor Forest and Stream:
From all I can gather concerning the recent Eastern Y. C. race, the imported 15-ton cutter Maggie would, but for the accident, have won on time allowance. Our rule is two-thirds the mean length plus beam, and as it takes no account of depth, is rather favorable to the cutter. The Shadow made the best race with her.

Jame 94.

AMERICAN CANOE ASSOCIATION.

THE third annual meet and regatta of the association is fixed for Angust 8 to August 12, inclusive. Rendezous at the Canoe Islands, Lake George. Programme as follows:
Tuesday, August 8, 10 A. M.—Preliminary meeting of association at the Islands. 8 to 6 P. M., ladies' reception.
Wednesday, Thursday and Friday, August 9, 10 and 11.—Regatta of Crosbyeide from 10 A. M. to 1 P. M.
Saturday, August 18.—10 A. M., annual meeting of the A. C. A. at the Cabin.
The regratta will be held under the exact.

Saturday, August 12-12-13. The Cabin.

The regatta will be held under the new sailing regulations of the A. C. A. At c regatta will be called under the new saling reginations of the Races will be called promptly at the hours named, unless the weather makes it impossible.

"Lorina," the large island, will be open for encampment of the A. C. A. during the whole month of August.

10 A. M., roview of entire fleet, in divisions by class.

11 A. M., Junior Class 2, 1 mile padding.

12 M., Junior Class 2, 1 mile padding.

12 M., Junior Class 2, 1 mile padding.

12 M., Junior Class 2, 1 mile padding.

THURSDAY, AUGUST 10.

10 A. M., Regular Class 3 and 4, 1½ miles paddling.

10:3) A. M., Regular Class 2, 1½ miles sailing.

11:30 A. M., Junior Class 3, 1½ miles sailing.

12:30 P. M., all cances, ½ mile paddling, ½ milesail, capsize and come in with all gear.

ome in with all gear.

10 A M., Regular Class 2, 1½ miles paddling.
10:39 A. M., Regular Class 3, 1½ miles asiling.
10:39 A. M., Regular Class 4, 5 miles sailing.
11:39 A. M., Regular Class 4, 5 miles sailing.
12:39 P. M., all cances, 1½ miles paddling, 1½ miles sail. The disunce in sailing races may be reduced should the wind be light.

FRIESS.

For the regular regatta the prizes will be flags only. Special prizes of minor value may be offered for competition. Mr. J. H. Rushton offers three fine paddles.

Geo. B. ELLARD, W. P. STEPHENS, LUCIEN WULSIN,

NEW YORK CANOE CLUB, JUNE 24.

NEW YORK CANOF CLUB, JUNE 24.

THE annual regatia was held last Saturday off the club house, Staten Island. Much interest was manifested in the performance were lines for Vice-tommodors C. P. Ondin, the other narrower and longer for Mr. Wm. Whitlock. From the manner in which both acted it is safe to say that the Pearls will soon be recognized as the standard saliing canoe. So much thought and experiment has been expended upon canoes of this order by Mr. Tredwen and others abroad that there is little room for improvement without going beyond the bounds of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the classification adopted by the A. C. A. Tombour of the line for the first match, open to third and fourth classes, A. C. A. Tules. Entries—C. B. Vaux, Shadow canoe Dot. M. Van Renssellaer, Jersey Blue canoe Esmeralds; J. F. Newman, Shadow canoe Whim; W. Whitlock, Fearl canoe Ripple and C. P. Oudin, Pearl canoe Tramp. Esmeralda was quicket avary, with Dot second. The power of the two Fearls soon told, for though salling hands of the builder, both had outrum the other models and made the short leg or two from the lighthouse to the buoy in close company, with Ripple a trifle the better. On the reach home she gained somewhat, leading Tramp over the line some thirty seconds, the rest foliowing over the line at longer intervals. It is hard to judge between these two from a single trial. Tramp is lift, long, with Sain beam, and Ripple is lift the better. On the reach home she gained somewhat, leading Tramp over the line some thirty seconds, the rest foliowing over the line at longer intervals. It is hard to judge between these two rooms a si

SALEM BAY YACHT CLUB.—The matches postponed from the 5th were sailed June 22. Wind brisk from W. Entries filled for two classes. Third class for keels, sloops and cats 30 to 28ft, and fourth class for boats under 20ft. Course from club house, through main ship channel, leaving Bowditch ledge to starboard, then to Lowell Island, leaving black buoy on Cut Throat ledge and the Brimbles buoy to port: thence home, leaving Lowell Island to starboard; seven niles. For fourth class, from club house down main channel, Bowless, from the house down main channel, Bowless, and the starboard, and house; five unites. Gun was given at 239 P. M., and Mule got away liveliest, followed by Coquette, Mab, Emma, Posy, Comet and Nell. Mule led all round, with Coquette a good second. Comet ran by her class quite readily, and won as she liked. HAVEE INTERNATIONAL.—The programme for the annual international matches at Havre can be seen at our office. They are set to 40 tons and 6 to 15 tons. Course for all but hast about 30 miles; for small yachts about 30 miles. Two prizes in each class; three for small yachts. Yawls sail at three-quarter and schooners at three-mail yachts. Yawls sail at three-quarter and schooners at three-

fifths their tonnage. All rigs allowed in each class. Flying start to one gun. No restriction as to sail. Entrance fee \$5 for members of the Havre Club, for others \$10. Entrace fee \$5 for members of the Havre Club, for others \$10. Entrace close Friday, July \$1. Address the Hon. Secretary, Wm. Langstaff, Hotel-de-Ville, Havre. As a number of American yachts are now in Cowes waters, it is to be hoped that some one will show up at the line. Schooner building since the Sappho victories in 1870 has made wonderfulstrides abroad, and it would be interesting to know whether our Wanderer or Intrepid could dispose of the modern lead keels as readily as Sappho did with the olden time Cambria and Livonia.

and it would be inderesting to know merkens our wanderer or intrepid could dispose of the modern lead keels as readily as Sappho did
with the olden time Cambria and Livonia.
WILLIAMSBURG YACHT CLUB.—The club, after an interval of
five years, sailed its eleventh match, on the Sound, June 20. Wind
freaß from northweat, tids three-quarters ebb. Course from club
house, Greenpoint, through Hell Gate, around Stepping Stones buoy
and home. Starters: Catom isloops—blotamora, 33th., H. Zoblets,
Lizzie
deo. Travia. Corinne k., 34ft, open boat, and Tiprop, 18tt. States as a starters and the interval of the numbrous sand-bag tossers of
former times, and the increased favor bestowed upon cabin yachts,
is as marked in this club as among others. It has even been found
impossible to get a single entry for the Hariem River Challenge Cup,
and the proposed races for that trophy have had to be postponed
several times. True to nature, the Lone Star experized before the
judges steamer, and treated all hands to au llistration of the only
commendable point an open sand-bagger can lay claim to—the whole
commendable point an open sand-bagger can lay claim to—the whole
found recklessness and brave scannabily. Besides they show the
catamarans J. soio. 40th. F. Hughes, and Primo, 33th. J. Callan, were
matched by themselves. The steamer Oriental took guests and judges
over the course. At the signal cables were slipped, Peerless took the
lead under reefed mainsail and bobbed jib, followed by Metamora,
Sorcoress and Lizzie V., in the order named. The catamarans were
sent away dying, Jessie with a single reef down and her big sister with
the second earring hauled out. When up to the Brothers the sloops
got the wind quartering, and see jibopalis, Metamora, Irida
Jessie had the beet, and shot away from the another than the
leads were shaken out upon nearing Whitestone, and gedfropsails
easayed, both Peerless and Sorceress carrying away their topmasis.
From Throng's Neck to the Stepping Stones nark it was sharp on the
wind, the round being acco

Esne, sloop, all lead ballast, and with longer counter; Psyche, sloop, half-ballast, lead, on keep Rear-Commodore Trott, Mary, sloop, flush-decked, new, Lieutenants and the commodore trotter, Mary, sloop, flush-decked, new, Lieutenants and the counterpart of

Sail and find her all that can be wished for."—S.

Y. R. A.—We have received from the secretary a copy of the British Yacht Racing Association's rules for the current year. The book contains list of members, officers, yachts measured and statistical racing data of last season, besides tables of tixe allowance for tomage and standard sailing rules, which have now become all but universal in the yachting world at home and abroad. President, H. R. H. the Frince of Wales; Vice-Fresidents, the Marquis of Exetor and Lieut. Gold General Baring. Honorary Treasurer, Lieut. Col. Leach, R. E.; Secretary, Dixon Komp, Esq., 101 Palace Gardons Torrace, Kensington, London; Measurer, J. Pearor Webi, Esq. The council is composed of twenty-five yachtemon whose names are household words in yachting circles, including the Marquis of Alisa, Count Marquis of Exeter, Wing, the Marquis of Exeter, Wing, the Marquis of Exeter, Wing, the Marquis of Exeter, Wing, St. On Levid Bardon Powell, Esq., John Richardson, Esq., Frank Willian, Esq., and others.

others.

CANAL TOLLS FOR CANOES.—Editor Forest and Stream: The following is an extract from a letter from Mr. Edmund Sawage, beputy Auditor of the Canal Board, S. N. Y. "It cancelsts do not attempt to use the locks, but will carry their craft around them, they will not be required to pay toll, nor is it likely that they will be molested in any manner, if they do not interrupt the legitimate business of the canals. They will doubtless receive courteous treatment from all employes of the State. But should they meet with any trouble, it would be well for them to communicate with the department. "Cancelsta will find the lock tenders and other employes of the canal ever ready to lend a helping hand in carrying cances from one level to another, when their business will allow of it.—C. A. NEIDE, Secretary A. C. A.

KEMPS, VACHT AND ROAT SAMING.

NEIDE, Secretary A. C. A.

KEMPS YACHT AND BOAT SAILING.—A new and enlarged or third edition of Dixon Kemp's Yacht and Boat Sailing is soon to appear. From advance sheets we have seen, the additions will be especially welcomed by those fond of small yachts, and happy only in doing their own work about their ship. There will, be plans of American canoes, the sand-barger Parole, by way of politing a moral we suppose, a sharple, complete directions for building and rigging the plans of several typical British cruisers of moderate tonnage.

of moderate connage.

ATLANTIC YACHT CLUB.—The club book for the year shows 161 members and a squadron of 19 schooners, 43 sloops, 5 cat boats and 2 steamers. The book contains the revised sailing rules, signals, burgees, constitutions, by-laws, etc. The argument concerning the club measurement rule is dogmatic and quite a specimen of brevity, but not especially clear, much less logical or convincing.

but not especially clear, much less logical or convincing.

A. C. A. REGATTA.—Editor Forest and Stream: Complaint-made leaf year of the distance canceists had to paddie, from Canoo Islands to the race course off Crosbysade. Sir. Walsin, of Regatta Committee, states that the difficulty will be obviated by h ing a steamer on hand to carry all who wish from the camp to course.—C. A. Nede, Secretary.

course.—C. A. Neune, Secretary.

DAUNTLESS.—Commodore J. R. Waller has sold his schooner Dauntless to Caldwell H. Colt, of Hartford, owner of the sloop Wizzard. Mr. Colt proposes to cruise to Europe in his new acquisition next year, after giving her a thorough overhaul. Whether Mr. Waller proposes to build or buy we have not yet heard.

YACHTING GAZETTE.—The London Yachting Gazette comes to us enlarged to double the original size, an omen of prosperity sarned by dint of persevering work. Our contemporary deserves the success it has achieved in face of great difficulties, and we hope to find it upon our table every week for many a year to come.

is upon our table every week for many a year to come.

MADGE—Mr. Auchincloss, acting for Mr. Coates, has paid the duty of \$35 on this cutter, and she is now for sale. Boston gentlemen have been in negotiations. Price asked is \$8,300. She is still laid up at Newport.

DORGHESTER YACHT CLUR—The club book for 1882 lists a fleet of 12 schooners, 3 steamers and 67 sloops, cutters and cate. All the schooners are keels! The roll of members foots up 187.

INTREPID—Mr. Lloyd Phoenix, owing to serious illness, will give up yachting for a season, and his fine schooner will sail from Cowes for this port to be laid up.

LAID OVER,—Many valued communications will receive attention when the racing season slacks.

PUBLISHER'S DEPARTMENT.

WE have seen the new split-bamboo trout and "Henshall Pattern" built and minnow casting rods, manufactured by Messrs. Wm Mills & Son, which, for style and finish, are not surpassed by anything so far shown in the market, and fully justify us in recommending them to the notice of anglers. Messrs. Mills & Son laws platissued a new seventy-page illustrated catalogue, which contains a full description and cuts of all kinds of fishing tackle. It will be mailed to any address on receipt of one three-cent stamp.

Parker Gun.

MELBOURNE, AUSIKALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside shose of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past-sixteen years and stood the severest test, and have won mere laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

PARKER BROS., Meriden, Conn.

CRUTTENDEN

This cut is an exact representation of this rod, which

CANNOT BE FQUALED FOR THE MONEY.

It has Nickie Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of Rod. Tull Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which never allow the joints to get stuck together by swelling of same if they should get wet. But stained dark, polished and wound with cane and silk, giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart white uring it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten ounces. This is the best made, best finished rod for the money in the United States, and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one frout or one Bass Tip for \$5.00. Trout Tips, each, \$1.00. Bass Tips, each, 75cts, Trout Tips, one-half Bamboo, each, \$1.50. Bass Tips, each, 75cts, Trout Tips, one-half Bamboo, each, \$1.50. Gumnaking and repairing of all kinds by J. W. Livingston, formerly with Parker Bros., Conn. Cartalogue Sent Fred.

REPAIRING OF ALL KINDS.

We make a specialty of Wood and Rod Mountings for Amateur Rod Makers. Our Celebrated Bethabara Wood is far superior to anything known for making rods, being stronger than pile tomboo, and has the stronger than pile tomboo, and has the stronger than pile tomboo, and has the stronger than pile tomboo, and has the stronger than pile tomboo, and has the stronger than pile tomboo, and has the stronger than the stronger t

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies
are to be attached by which the size of the line at
such point is doubled, the result being that the wear
upon it by chafing from the loop of the fly-snell is
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a
cast about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface.

In addition to this its difficult to hold the loop
of the leader in the act of looping the snell to it
sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not
sufficiently rigid. By doubling the thickness of
the leader at the point of attachment of the fly,
as a single piece of gut is not
sufficiently rigid. By doubling the thickness of
the leader at the point of attachment of the fly
avoid these objections. The drawing Fig. 1 represufficiently rigid. By doubling the thickness of
the leader made in accordance with my invention,
while Fig. 3 shows the manner of looping the leader
in the act of attaching the fly. In these drawings,
4, Fig. 1, denotes a leader of silkworm gut adapted
to the purposes of fly-fishing for trout or bass, and
as heretofore made, such leader being composed
of several lengths of gul knotical together, as shown
as hore the leader, as shown at c. In carrying my
invention into practice, I add to the leader A at one
or more points (according to the number of flies to
be used in the cast in addition to the stretcher) an
additional piece of gut A, which I term a "reenforce," thus doubling the body of the leader
about the leader, as shown at c. In carrying my
invention into practice, I add to the leader at at one
or more points (according to the number of flies to
be used in the cast in addition to the stretcher) an
additional piece of gut A, which I term a "reenforce," thus doubling the body of the leader
asch points. This re-enforce may be a

of the mes from the case of the advantage there is in using there. All fly fishers will readily see the advantage there is in using the cases they to apply a "fly" or to remove it without implicing the strength or durability of the leaders. Length 3, 0, 9 ft., made of superior silk worm gut in all varieties.

FIRING IN THE AIR.

T is a dreadful waste of ammunition and it should cease. It is forty or fifty years since real efforts began to be made by the shooting and angling public to protect the game which, even at that time, was presaging by its increasing scarcity, that state of things which has since come to pass. Not to go back to the ancient days of game plenty, those times when our grandfathers and greatgrandfathers could kill deer within a mile of their homes, and were sometimes in winter forced to take to the trees by the pressing attentions of the wolves, it is within the memory of many men who are not yet too old to do their day's tramping, that game was so abundant that an assistant was required to carry along the bag which was to hold the quail or woodcock secured in a day's shooting. The sentiment in favor of game protection among the better class of sportsmen, although no doubt it existed long before that time, did not crystallize, so to speak, did not have any general support, until the time of the publication of Frank Forester's writings. Herbert's enthusiasm and his happy style aroused the first interest in these matters, and from his time to the present day the interest in them has been steadily, if slowly, increasing.

It was natural enough that the movement in favor of game protection should first take shape in the enactment of protective laws, which provided penalties against the killing of game at certain seasons when it was least fit for use. method of protection, while it was well enough as far as it went, did not go far enough, since in most instances neither machinery nor money were provided for the carrying out of the provisions of the law. In this respect the enactments for protection present a curious anomaly, differing as they do from any other statutes passed by the Legislatures of the various States. The clamor for reasonable and proper laws statesmen are willing to yield to, but it does not appear, except in rare instances, that appropriations of money to enforce such laws have ever been either asked for or granted. The fact is that those interested in the subject have fallen into a rut, from which they do not seem able to extricate themselves, and so, at every session of the Legislatures of the different States, we hear of proposed alterations and amendments of the laws, which those who advance them apparently think, will cure all our present evils. Tinkering with the game laws has become a regular part of the programme of

our legislative bodies. Now, no one will say that our game laws, as they at present stand in the various sections of our country, are at all what they should be, but if they were properly and sternly enforced, they would do a vast amount of good, instead of, as is now too often the case, accomplishing nothing at all. The laws should be short and simple so that they can be easily understood by all, and so that under their provisions convictions may be easy and there may be no loophole for the escape of the offender. A cumbersome and intricate law, full of exceptions and special provisions, should be made by all means avoided. But it is a great mistake, and we wish we could induce every one to think so, to apply for relief in this way only. Why can we not next year leave the laws as they are, and devote ourselves with all our energy to securing appropriations and the appointment of officers to enforce those that we already have? This expenditure of effort to secure changes in the laws is a waste; it is firing in the air.

The efforts to secure enactments which are perfect is very well, but long before they have been passed the need for them will have ceased, for the game will have all disappeared. We should begin now at the right end, and make provision for the enforcement of such laws as we have, and then, after having inculcated in the public a wholesome respect for, and fear of, the law, it will be time enough to make efforts to improve them. It is a shame and a disgrace that, as is now usually the case, the enforcement of the statutes should be left wholly to private individuals, societies and corporations. And it is not only a shame, but it is the worst possible thing that could happen for the general shooting and fishing public, since, as we have more than once shown, the natural result of such a state of things is to induce wealthy clubs and corporations to secure the most desirable shooting grounds, which are thus of course closed to the public at large. Cases of this kind are constantly being brought to our notice, and the rapidity with which this movement is now going on shows that the appreciation of the existing state of things is widespread. The matter is one which touches so nearly every one who at all depends upon shooting or angling for his amusement and recreation, that it is difficult to account for the apathy that appears to exist among sportsmen in regard to it. We can understand why the club member, who can go in September to his marsh on the lakes and later in the season to the points and uplands of the Southern States for his shooting, should be careless in the matter, but how the man whose occupations only permit him to take an occasional day or two in the country near his home, can view with equanimity the gradual disappearance of game we do not exactly see course, this is a matter that interests sportsmen, and them alone. If the prospect is a satisfactory one to them, no doubt it is equally so to the rest of the community, but it certainly seems a pity that the result, which is inevitable unless some earnest action is taken, should come to pass. Things grow worse each year, game is less abundant and harder to find.

In the meantime, we cannot urge too strongly upon those who have already put their hands to the plow, who have actively interested themselves in seeing that the laws are enforced, the necessity of not looking back, of not ceasing from the labor of love which they have undertaken. For the present our hopes rest on them, and each man should do his best. But next fall and winter, when the Legislatures meet, let us all try to do something which will really tell, and no longer fire into the air.

"Hamak."—This is the latest accepted form of the word, variously spelled "hammock," "hummock," and, as we find it in Webster, "hommock." The spelling "hamak," adopted by our correspondent "S." in his "Bits of Florida Experience," two weeks ago, is defended by him in a note, in which he says: "My authority is Will. Wallace Harney, the scholar, correspondent and poet, who first used the word hamak,' giving it as his opinion that it was Seminole in its origin, meaning swampy hard-wood land-or descriptive of that peculiar combination of dark rich soil, either low or high, grown with hickories, magnolias, palms, bays, several kinds of oak and vines galore. I don't think there is such a word as 'hommock.' Neither 'hammock,' nor 'hummock' describe such lands at all. And knowing Mr. Harney's reputation for lore and research, I followed his example, thinking, if a word was to be invented, hamak was better than any. Mr. H. has lived in South Florida many

MAJ. JOSEPH VERITY SAYS: A small flight of ducks is better than a big flight of fancy, .

HOOP SNAKE SEASON.

WITH the first of the real hot days of summer, the editor, country or city, brings out his scrap book, and begins to draw on his reserve stock of snake stories. earliest and most attractive of these is the hoop snake tale; it is also the one which has the least basis of fact to rest upon. Newspaper cuttings, accompanied by letters of inquiry, are accumulating on our table, and, while perhaps it would be as well to consign all the matter referring to this subject to the seclusion which a waste paper basket grants, it is possibly our duty to make one more effort to stamp out the erroneous belief in the existence of this animal.

Mr. A. Pope was no doubt right in a general way when he informed the world that "truth crushed to earth will rise again," and further, that

Error, wounded, writhes in pain, And dies amid her worshipers;

but it would have been a good-natured and graceful act in him to have suggested that Error, although she may at last die, has more lives and is far harder to kill than the average city cat.

The hoop snake myth belongs to the same class of lies with that of the hair snake, and is equally hard to kill. The average scribe does not, we presume, care whether it is true or not, or perhaps with that tenderness of conscience which so distinguishes the journalist of to-day, he fears to keep from his readers something that may be of value, and being ignorant on the subject himself, he leaves to them the labor of sifting the true from the false. These particular stories get into the papers and are copied far and wide, thus adding each season some credulous converts to the believers in the myth. A Watertown, N. Y., correspondent sends us a slip cut from the Utica Herald of June 13, which reads:

Hoop snakes have recently been seen in Orange county. One was illed last week which measured three feet in length. This snake killed last week which measured three feet in length. This snake had a hard, fine-pointed, bone-like substance at the end of its tail, with which it strikes. It forms itself in the shape of a hoop, and speeds over the ground at a lively rate; but it is only necessary to step one side to avoid it, it being impossible to alter its course when rolling.

The paternity of this extract is fortunately easily determined by comparing it with a cutting from the New York Sun of two or three days previous, which says:

Newburgh, June 10.—The question raised as to whether there are hoop snakes in this section of the country can be answered in the affirmative. Some years ago a young lady living on her father's farm affirmative. Some years ago a young lady living on her father's farm at Shawangunk, Ulster county, twelve miles back of this city, was chased down a lane by one, and when she swerved to one side it rolled swiftly by. One was seen on Saturday last. It measured about three feet in length, and was killed on the farm of William Startup, on the north plank road, near Middletown, this county. This snake has a hard, fine-pointed, horn-like substance at the end of its tail, with which it strikes. Some people are of the opinion that the talk of this peculiar species of snakes are poisonous, while others between the perfectly harmless. They form thempelare into believe them to be perfectly harmless. They form themselves into the shape of a hoop and speed over the ground at a lively rate; but it the snape of a noop and spectore the ground at a rively rate; but it is only necessary to step one side to avoid them, it apparently being impossible for them to alter their course when rolling. No one in this section has ever been known to have received dangerous injuries from this kind of a snake.

A Kansas City, Mo., correspondent calls our attention to other extracts from the Sun, some of which we reproduce:

In answer to "E. S.'s" inquiry about hoop snakes, I would say that I have seen a dark-colored snake in Dakota take its tail in its anave seen a dark-colored snake in Dakota take its tail in its mouth and roll along like a hoop. They are also found in Australia.—A: O. T. New York, June 8.

"E. S." seems to regard hoop snakes as a myth. I, too, for years listened to stories about them with incredulity; but my experience with one last August, while rusticating on Rockett Farm, Somers, Westchester county, fully convinced me that there was such a snake. Westchester county, fully convinced me that there was such a snake. While rambling on the farm one day, I saw across my path what I took to be a black snake I shied a stone at it, and, to my horror, it coiled up like a hoop and began to roll toward me. I jumped aside and it darted past me like an arrow. Too frightened to investigate, I beat a retreat to the farmhouse and told my experience. I was there told that it was a species of black snake that, when angered, puts its tail into its mouth and forms itself into a hoop, and then rolls until it has sufficient velocity to throw its body, straight as as a lance, at the object of a large. Its straight has the revent is a sufficient velocity to throw its body, straight as as a lance, at the object of attack. Its stroke is painful, but the wound is not ous. As the snake keeps on a straight track, it is easily avoided by stepping to one side. These snakes are generally about four feet feet long .- HATTER.

HOBOKEN, June 8.

HODGEN, June a. Seeing the inquiry in to-day's Sun asking if there are such things as hoop snakes, and where they can be found, I reply. They may be found in Moodus, Conn., and other parts of that State.—A. J. ROBERTS.

It is scarcely necessary to inform our correspondents of the fact that there is no authenticated instance on record of a hoop snake having been seen by any competent observer. The whole story is a myth, a tigment of the imagination.

THE HOOP SNAKE DOES NOT EXIST. Read in another column the story of "Byrne's" search for

A PRACTICAL SUGGESTION.—Great numbers of deer are killed in the spring months in the Adirondacks. Some facts relative to this slaughter are given elsewhere by our correspondent, "Adrion Ondack." He mentions one case of a party who killed a doe bearing two fawns. Measures should be taken to suppress this detestable business. It would seem to be the proper thing for the "New York State Association for the Protection of Fish and Game" to give the matter their attention. They can remedy the abuse and save these deer from the June night butchers. This is a "practical suggestion," though it may be thought impertment as well. We shall be happy to give to the New York State Association for the Protection of Fish and Game more explicit directions as to the exact localities where these outrages have been and are now being committed.

THE NEW YORK WOODCOCK SEASON opens August 1st We are told that in some parts of the State there is promise of an excellent woodcock and ruffed grouse season,

FOREST AND STREAM FABLES.

VIL-THE SOCIETY OF PERCH FOR THE PROTECTION OF MIN-NOWS.

ONCE upon a time the Perch became aware that the Pike Were getting all the minnows, catching them in season and out of season, till it was certain that if the work of destruction went on much longer there would be nothing but worms and flies, or starvation, for the Perch.

So they put their gills together to devise some means whereby the evil might be made an end of. After much talk After much talk over various plans they settled upon that of forming a Society of Perch for the Protection of Minnows, and at once organized, with a President, Vice-President, Secretary, Treasurer, Prudential Committee, and so on till there was not a full grown Perch among them but had an office of some sort. Several wide-mouthed Perch made long speeches, and the others waved their fins in applause, and all concluded that the Minnows were safe, and that thereafter no Pike would be so bold as to dare to touch one.

Then they adjourned to feast on a great supply of worms provided by one of the members, and after that spent two or three days in racing with one another, and trying which could most skillfully snap a fly from the edge of a lily pad.

But all this while the Pike went on gobbling the Minnow just as if nothing had happened.

MORAL.

Resolutions, speeches, feasts and trials of skill will not do everything for the protection of Fish and Game.

The Sportsman Tourist.

For many years I have felt a deep interest in the conservation of our forests and the planting of trees. The wealth, beauty, fertility and healthfulness of the country largely depend upon it. My indignation is yearly aroused by the needless sacrifice of some noble oak or elm, and especially of the white pine, the grandest tree in our woods, which I would not exchange for Oriental palms. My thanks woods, which i would not extending to foreign plant a group of trees in my honor. I could ask no better memorial. I have always admired the good taste of the Sakokis Indians, around Sebago Lake, who, when their chief died, dug around a beech tree, swaying it down, and when there can dealy dig around a secretic sologia books, and placed his body in the rent, and then let the noble tree fall back into its original place—a green and beautiful monument for the son of the forest.—John G. Whittier.

THE GREAT SWAMP.

BY A. MULE.

BUT few persons can pass into the Great Swamp without a certain weird, mysterious, sensation. The plungs, almost immediately, from the open fields and sunted vegetation of the uplands into for file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into file morans is apt to impress the condition of the uplands into the condition of the uplands into the condition of the uplands into the condition of the uplands into the condition of the uplands into the condition of the uplands into the condition of the uplands into the uplands into the uplands into the condition of the uplands into the uplands

there in a carriage beneath the interlocked trees, upon a road smooth, elastic, level and free of dust, and to smell the fragrant odors breathed lavishly by every swamp in spring, is one of the most delightful experiences. When the winter rains set in, however, it only requires forty-eight hours to make this beautiful country one sen of nasty, villations, sticky mud, whose omnipresence and persistence there until next June are simply detestable, and render wheeled travel almost impracticable.

practicable.

And looking at the matter purely from a sportsman's standpoint, this is not the worst; for there is no hunting in the summer. We would try the bear if practicable, but the heat would kill the dogs. Even Brer Bear himself retires to a cool recess as a summer retreat, while the gnats, mosquires and ticks make it lively for mun, dog, deer and turkey altogether. For a short while in November and December we have cool, frosty nights, genial days, dry weather and general paradise for the hunter. But also, these "fift e'er one can point the place," and we are left to stump about in the mud and rain

attogether. For a short while in November and December we have cool, frosty nights, genial days, dry weather and general paradise for the hunter. But alas, these "fift e'er one can point the place," and we are left to stump about in the mud and rain

What a country for a hunter this must have been before the white man got hold of it! It was altogether different in its general features. But I shall discuss this hereafter.

Of course it settled slowly, having always had the reputation abroad of being quite unhealthy. So news was news in those days, and hospitality was paid by conversation just as it should be. The peddler—the land speculator—the traveler in general performed the office of news-bringer and were welcomed and begged to stop as a favor.

Our friend old Shelb, was then young Shelb,, but was then as now a clear-eyed, honest soul with a strong disposition to speak his piece out if he felt strongly.

His nearest neighbor was nearly twenty miles away, and a friendly rub against a fresh mind occasionally was very agreeable even to the quiet hunter.

So it was with sincere pleasure one long summer's afternoon that he saw a solitary horseman riding down the road toward his house. He rose from his chair—met the well-dressed stranger outside the gate and cordially insisted on having him stay for the night at least.

To this, as it was late, the traveler cooly assented, but did not respond warmly to the greetings of his host. Shelb, put up the horse himself—carried saddle and bags to the porch—gave City a big tansy julep and a turkey-tail fan, and then saked "Whaf's the news?" The stranger replied civilly but distantly that he "did not know."

"Anything late from Mexico?" Stranger didn't know.

In vain did the simple woodsman ply his unlucky guest with all sorts of questions, calculated as he thought to lessen his shyness. Finally the stranger deliberately asked Me. "to shut up and not bother him and he would pay double fare for the night's lodging."

Shelb, rose without a word and brought saddle and luggage be

the ladies, than any distinct decinration of improper gaillanties.

At all events, about this time he found himself located temporarily near Huntsville, Ala., and the possessor of a wall-eyed mare, a hundred dollars and more time than he needed by two mont'ss. So, he says, he concluded to pay a visit to fold Hickory at the Hermitage, near Nashville, as the great head of the whole fraternity.

This was not a morning call by any means, but we will pass the details. He stayed two days and a night at the Hermitage, welcomed as only that wonderful man could. He relates much and frequently about this visit, but one little incident shows wilfy the common people loved Jackson. There were blue finger-bowls on the table at dinner, and a rough old farmer who was there used his for a drinking glass. A smile and sneer went round the board full of fine people, and Shelb, says he even smiled himself, as he knew better than that.

Getting separated from S— (by necident, of course), he got lost. Then he blew his horn, but though answered every time, yet somehow the responses did not lead him out of the brake. Round and round he went for all of that blessed day on the inside, while a nigger rode a mule round and round outside, and so blew him about at pleasure—Tom S— at home reading light literature. Toward night S— went up and brought him out, quite grim, but undismayed.

Next day, fishing on the lake for a rest, as he could not swim, he was rash to try the gig from a bean pod of a dugout, and got turned over, of course. At least that is what happened.

happened.

Tired of both bear and fish, he rested under the big tree and lazily admired nature. And a tame but mischievous bear got loose and admired him; not wisely but too well. The bear had been trained by the devils of young niggers to wrestle, and as Nimrod motioned her off with horrible gestures, she accepted the challenge and went for him with an Latin bure.

tures, she accepted the challenge and went for him with an Injin hug.

Tattered and torn, and all forlorn, he finally seeks his balmy raw hide and sweet sleep. Alas, by some perverse fate, a glass box of peculiar shape falls with a smash at his feet, while the dusky coils, the sparkling eye and the thrilling rattle give warning that the awful rattlesnake is loose and locked in a small dark room with him. He didn't know the snake had no fangs and was harmless, but he felt fully able to go through the panels of the door, and so went.

A very little of this goes a great ways, even though perpetrated by a gentleman of the softest manners, and amid the officious condolence of a hundred impish niggers. The mice was recognized at last.

officious condolence of a hundred impish niggers. The mice was recognized at last.

The day Nimrod was to leave he got a dinner fit for the gods. The true inwardness of the thing developed in the white-chal servants, the glass and silver, the general richness of an opulent buchelor's establishment.

And Nimrod was well-bred on the whole. He said nothing about the situation until he took his host's hand for an adicu, "I promised you §3 a day, I believe!" he said, smiling. "You certainly did."

"Well, I shall not pay you a cent, for you have made very much more than that out of me already. Good by!"

ADIRONDACK SURVEY NOTES.

ADIRONDACK SURVEY NOTES.

THE Adirondack survey, to which I have the honor to be temporarily attached, assembled at North Creek, the northern terminus of the Adirondack Railread, on June 16, and took the stage to North River, five miles up, in the afternoon. Here we met several men who had been in the woods, but had been driven out by the black flies, which they reported as something worse than usual. Remaining at the hotel all night to arrange and assort our baggage, we took the stage next day for Blue Mountain Lake, a distance of some twenty-five miles, where we were to meet our guides and start for the woods. After leaving the river and passing the first ridge Mr. Colvin pointed out a large mountain on our left which he had located, but which had no name. Upon inquiry of our driver he told us that he had never heard any name for it. Then the superintendent of the survey offered me the honor of naming it. Here was a dilemma for a man innocent of the names which are in vogue among respectable mountains! If it had been a fish, a dog, a child, or most any animate object, a name would have occurred without hesitation; but to be god-father to a mountain was staggering. It could not well be called "trout mountain," for there were probably few trout on its summit, and for my life no other name occurred. Seeing a crow far up the side I asked if any of the mountains bore its sable to gonomen, and upon receiving a negative reply, christened it "Crow Mountain," all the party, even to the driver, saluting it by uncovering. And Crow Mountain it will be hereafter, both in the reports and to the tourists who ride with that driver.

The road is good to Blue Mountain, where we arrived at

it "Crow Mountain," all the party, even to the driver, saluting it by uncovering. And Crow Mountain it will be hereafter, both in the reports and to the tourists who ride with that driver.

The road is good to Blue Mountain, where we arrived at dusk, after passing through a heavy thunder-storm which echoed and re-echoed from the grand old hills in salvos, which would appal those who do not love this display of nature's force. The rain softened theroad so that our heavy baggage wagon broke down, but, thanks to the curtains of the stage, did not wet us. We remained over night at the Prospect House, whose size and style astonished one who expected backwoods simplicity. It resembles a large seaside hotel and can accommodate six hundred guests; electric lights, colored waiters, and all the pomp and circumstance of a city house, it struck me as a place where city idlers could play at visiting the woods and yet live in the city. The fact is that one must go far in to escape the horrors of the piano and the telegraph, both of which are here. This, however, is what the great majority of people want, so the only growl at that which we old campaigners can get in, is that it is a profanation of the temple, an invasion of the sanctity of the woods by people who are not in sympathy with the genius of the place. There are one or two smaller hotels here, but even they offer you tollet scap to wash with and I draw the line of civilization at yellow scap, and only find myself "in the woods" when this or the soft article is offered for your ablutions; that is, if you indulge in such luxuries as a morning wash with scap. A plunge in the lake is toilet enough, without the aid of saponaccous compounds, be they "yellow," soft or scented.

There are both black bass and trout in Blpe Mountain Lake, but I contented myself with specimens of "inferior" fishes which went into the alcohol tank for future reference. The number of visitors here must soon reduce the supply of angling fish unless culture is resorted to, and this the hotel men w

"CAMPS OF THE KINGFISHERS."

IN SEVERAL PARTS-PART V.

THE next morning we talked it all over again while Frank got breakfast ready. The fishing was good in the next three lakes above, but if we went up we wanted to go to the head of Six Mile, where Frank said the fishing was the best. but pulling up stream through the narrow, crooked rivers with loaded boats was not a job we hankered after.

The fishing in the lake on which we were camped amounted to about archiver. No doubt there are along of fish in

The fishing in the lake on which we were camped amounted to about nothing. No doubt there are plenty of fish in neighbor Sisson's lake, but while we stayed they were entirely off their feed; they had become shy perhaps by the water being lished and thrashed over for three weeks by a party who were there just before us.

Remembering the splendid sport the Scribe, Jim and the writer had the year before at the foot of Central, and as we would have the river currents in our favor, it was agreed that we go below and camp at the mouth of the little stream where nigh about a year before I had eaten my solitary lunch under a leaning tree on a certain rainy Monday.

Besides, it was rather remarkable that among all the many bass we had taken in these upper waters there was not a single small-mouthed bass to be credited to any of our rods, and we wanted some small-mouths, as we had a fancy they were gamer than their cousins of the large-mouthed tribe. I have no doubt but there are thousands of small-mouths in the upper lakes, but we did not happen to take a solitary speci-

have no doubt but there are thousands of small-mouths in the upper lakes, but we did not happen to take a solitary specimen. The large-mouths of these lakes are chock-full of fight, but I am certain (and I am sustained in the opinion by Old Knots, who is a careful observer), that they don't possess the vigor and staying qualities of the others—the Micropherus sulmoites—and they are certainly not so land-some a fish. And then, our mouths, both large and small, were watering for a mess o' trout, and Cedar River (cold streaks chase each other up and down Jim's back even now at the bare mention of it) would be in easy reach of the lower camp. We got ready to go below. Alegk came down to say good morning, and after holding a brief conference with Frank and the Scribe, at the end of the table, he and I took a boat and crossed the lake to get the frogs, settle up with neighbor Sisson, and borrow a big, broad-bottomed skiff in which to move the packing boxes—a nuisance, by the way, on account of their size.

Sisson, and borrow a big, broad-bottomed skiff in which to move the packing boxes—a nuisance, by the way, on account of their size.

We put the frogs in a shoe-box, over which a piece of mosquito bur had been previously tacked to prevent them from jumping out, and by the time we had recrossed the lake, the other boys had tents down and everything ready to load. We hired Aleck to take a load in his boat, and when all was ready, we pulled away from the pleasant camp with genuine regrets, Frank in the lead in one of the small boats, Jim following in another, Aleck, with Brother R. perched on top of a trunk in his boat a good third, while the writer, in the big boat, and Dan and the Scribe in the other small one brought up the tail end of the line.

In moving below I, was sorry to disappoint the "little maid of St, Clair's," for had we camped up there, as I had promised her we would, I have no doubt but she and old Kinglisher would have had many wise talks and famous romps together. The disappointment, I am sure, was two-sided. Half-way down the river, leading out of Sisson's, Aleck went back into the brush a quarter of a mile and got a neighbor—a Mr. Carey—to come and pull the big boat the rest of the way, as Jim and the Scribe had gauged themselves to give out at Central Lake, which would leave Aleck, Frank and the writer to take care of the five boats, Brother R. having never learned the "knack of oarin."

Jim gave out promptly on time at Central, and would have accomplished it sooner had there been anyone in the boat with him. He got fast in the river once coming down, the current getting the best of him and jamming his boat crosswise of the stream, the bow sticking fast on one bank, and the stern on the other.

He told us afterward that having no one there to help him

boat crosswise of the stream, the ow salvaing last on one bank, and the stern on the other, no one there to help him get the boat off, he just sat still and "cussed" it off, after which it kept the stream as any well-behaved boat should. At Central he was taken in tow—boat and all—by Carey for an additional fee, and for the rest of the way down he communed with nature and sucked comfort from his briar-This was one of Jim's best "holts," and he did not lose his

for an additional fee, and for the rest of the way down he communed with nature and sucked comfort from his briarroot.

This was one of Jim's best ''holts,'' and he did not lose his grip on it until the boat grated on the sand at the mouth of the stream where we were to make camp.

I worked my passage down in Commodore Sloan's boat, Knots and I, by "spelling" each other occasionally, making casy work of the five miles pull.

A short distance below deep water point we came on Frank at a 'landing,'' holding converse with a neatly attired little lady, who at sight of us vanished in the woods, while Frank pulled out lustily for the shining strip of sandy beach a hundred rods or so below at the mouth of the stream where we were to make camp.

A day or two after, she, with a companion, paid us a visit at camp, and we soon after learned, through some gossipy neighbors, that she was a young school ma'am teaching half a score of fledgling Michiganders of the neighborhood, and that she boarded at the farm house back from the landing where we had first seen her, and that Frank had quite a hankerin' after her, and that he had the bulge on all the other beaux of the settlement, and they wouldn't wonder if they made a match of it, and so on, etc.

From all this, the reason seemed plain to us why the young scamp had been so extremely willing to move camp down the lakes instead of up, and his frequent absence from camp after supper was the more readily accounted for. He usually took the milk bucket with him—for a blind—and somehow the cows got into the habit of coming up so late that he rarely got back before ten or eleven o'clock at night. Cows will do this sometimes just to accommodate young people who have a hankerin' after each other. But Frank is a splendid young fellow and bears an excellent reputation among his neighbors, and the bright-cycel little school teacher may be assured of the good wishes of "the Kingfishers," if on our return next year we find Frank has persuaded her to teach him to work in double harness.

our three tents, and it appeared was shaped up for our

our three tents, and it appeared was suaped up an our especial comfort.

Standing under one corner of the kitchen fly we could reach down and fill a dipper with the purest and coldest water from the whimpering little stream, that sang for us a rippling melody the live-long day and hulled us to sleep with soothing murmurs at night. In this, nature's refrigerator, we kept our milk bucket and butter crock—the milk sweet and cold, and the butter so hard that "smearing" it was out of the mestion.

cold, and the butter so hard that "smearing" it was out of the question.

Among the submerged roots of a cedar a few yards above, the Scribe found a cooling refuge for a half dozen vials of medicine labeled, "Dry Mum," or "Roarin' Modoc," or it may have been opodeldoe—I don't happen to call it to mind just now, but if "Roarin' Modoc" produces hilarity and "feller feelin," with a soporific tendency, then it must have been Roarin' Modoc. Anyhow, the Scribe kept mum as to the whereabouts of his medicine chest.

With plants of whale and day scalar groups within twenty. With plenty of shade and dry cedar enough within twenty

With pienty of shade and dry cedar enough within twenty yards of the tents to keep us in firewood for a year and good neighbors in half a mile, it was a camp, as Dan said, "Just to our pleasement," and we took comfort to ourselves that we had cast our lines in such pleasant places.

A couple of our neighbors who had dropped around to see

A couple of our neighbors who had dropped around to see the new campers were engaged by Frank to bring some hay or straw for the beds and milk for supper and breakfast, and while the others added a few touches to the camp and put things to rights for the night, I showed a boat just outside the rushes in front of the tents to try for a bass or two

put things to rights for the night, I shoved a boat just outside the rushes in front of the tents to try for a base or two for the evening and morning meal.

Just here, and a few rods further up the bay, I had taken my best bass the previous year and I was eager to find out if some of the same kind yed lingered in their old haunts.

At the very first east, when the frog was barely a foot under water, the line was jerked through the guides at a rate that made the reel handle whistle, and in a minute I was in as beautiful a fight with as game a bass as ever broke water and made an angler's heart stand still.

"Look at Hickory!—he's got 'im—fish for supper—stay with him, old mackerel—bet you lose him—nothin' but a pickerel," and other encouraging remarks came from the shore, but they fell on heedless ears, as I was profoundly busy with a wary and powerful fish, full of tricks and shifts to circumvent his enemy and escape from the fix he found himself in by his over fondness for speckled frog. At the end of perhaps ten minutes I lifted from the water by his lower jaw and held up to the view of the boys on shore, a small-mouthed black bass that weighed, when I went ashore, just five pounds and twelve ounces, and then a shout went up from that camp that would have lifted the roof, had there been one over their heads.

A little further along the means and in the contents of four

in from that camp that would have lifted the root, nad there been one over their heads.

A little further along the rushes I took another of four pounds eight ounces, and another that weighed a trifle over five pounds, there glorious bass and all small-mouths.

Fishing a couple of hundred yards around the bay and back without another strike, and having enough for present needs, I went ashore and not long after we were sorting the bones from as delicious a mess o' bass as ever came browned

from frying pan.

That night the swish of a gentle surf on the beach, the sighing of the wind through the cedars and the tinkle of the sighing of the wind through the cedars and the tinkie of the little stream back of the camp, brought us sweet and restful sleep, and our beds were as soft down from the breast of mother earth. We were up early next morning, and while Frank got breakfast, tackle was looked over, frogs sorted and everything made ready for our first foray from "lower camp."

KINGFISHER.

TO BE CONTINUED.

Aatural History.

BYRNE'S SEARCH FOR THE HOOP SNAKE.

SNAKE.

YRNE has been for many years in search of the "hoop snake," so well known to many of our early Western settlers. He has interviewed a very great number of these old settlers, who have often seen and destroyed this fearful replile, but could never quite get around in time to see the dreadful thing itself. He recollects walking three or four miles and back, one very hot morning in towa, twenty-live years or more ago, to view the remains of a very large one that a young man declared he had killed the evening before. That young man said:

"I was a walkin' brisky like 'long a narrer path in the woods, with a good chunk of a hickory cane in my hand (I allers carries a good club when in the woods in summer time for fear of the critters), when I luked ahead, and that stretched out on er old log was the biggest hoop snake I ever saw in my life. He war all kivered with bright red, silver, yaller and black spots in kind of diamonds like. He war long and very slender—I shud think twelve to fourteen feet long. The hoop snake saw me about the same time I did him, threw up his head and tail backwards loike, catched his tail in his mouf, an' come rolling rite toward me so fast that he fairly sissed through the air. I seed it war no use to run, so stud reddy for him, and when he cum in reach, I struck at him with my club with all my might, then whurled and run. I run quite a piece and then turned around reddy for none to he make right where I struck at him with my club with all my might, then whurled and run. I run quite a piece and then turned around reddy fur another bout. But I seed the hoop snake right where I had struck at him, whirlin' an' twistin' about, making the bresh and leaves fly in a fearful way. As he growed more quieter I went up cluster and found that he were about dead. When he quit squirmin' and tarin' about, I went rite up to him and found that I had struck him in the small of the neck just below the head, and knocked his head clean off, then his head the woff, the spike in the end of his tail struck inter the hard path so deep as to hold him fast, and I coulan't pull it out to save my life."

Byrne was younger then than now, and a little more impressible. He had heard his father often ridicule and call simpletons the believers in hoop snakes. He had great faith in the good sound sense of his only father, but this young

Byrne was younger then than now, and a little more impressible. He had heard his father often ridicule and call simpletons the believers in hoop snakes. He had great faith in the good sound sense of his only father, but this young man was so ingenious and leeked so innocent, told such a straight circumstantial story, that he thought the "old man" was mistaken, and liable to "pass over the range" with a false impression in his mind about one of the wonders of this earth. So he determined to possess, if possible, the mortal remains of "that ar hoop snake," and carry them back to Illinois, and show the old gentleman he had been mistaken. this earth. So in the solution of "that ar noop leak to Illinois, and show the old gentleman ne noo mistaken.
"So you left the hoop snake there with his tail driven into the path, did you?" said I.
"Why, yes; I couldn't pull it out."

"You could find the place where you killed it, in the morn-

"100 coma ma the place "ing, can you not?"
"Oh, yaas, no trouble 'bout that."
"Did you find the snake's head?" said I.
"Oh, yaas, I found hit about fifty yards away."
"What did you do with it?"

On, yass, I toudd he about hity yards away.

"What did you do with it?"

"Why, left it there with the rest of him."

"Will you go out with me in the morning and show me

"Will you go out with me in the morning and show me where that dead hoop snake is?"

"I dassent leve me work. Dad wouldn't stand it."

"I will pay your father for your day's work, and give you a dollar also, if you will go out with me and get it."

Now, if I had been as well experienced in lazy, lying young men's ways, then as now, I would have noticed the bright cumning twinkle in that young hoosier's eye, or if I had lived or traveled in Ar-kan-saw, where long-range lying is generally practised as a fine art pastime, I would not have been taken in so easily. My "cub" answered: "Wal, I guess I'll go, if yer kin fix it with dad." I fixed things all right with "dad," and we started out to bring in the remains destined to give science a shocking sensation. On our way out I asked the young man if the remains helpd profusely in its dying struggles. "Oh, yes," said he, "hit bled all over the leaves and bresh, thick." And many more questions, the answers to all convincing me the more firmly that he was exactly truthful.
"A cuthey plenty in this timber?" said I.

its dying struggles. "Oh, yes," said he, "hit bled all over the leaves and bresh, thick." And many more questions, the answers to all convincing me the more firmly that he was exactly truthful.

"As they plenty in this timber?" said I.

"Is what plenty? Hoop snakes. Wal, yes, powerful plenty, but not sich big uns as the one I killed last night, but small uns and purty big uns are very plenty."

"Are the smaller ones dangerous?" said I.

"Wal, yaas, I should say they war; one six foot long will drive his spike cleer thru a man, an' kill him as quick as if struck by litenin,"

I confess I was a little shaky on this march through the woods. I had cut me a good hickory staff when starting, and was careful to keep the corpus of my guide in front of me, and my eye keenly in search of any bright, flashing hoop that might start swiffly toward us. The unconcern and bravery of my guide astonished me, but then, I thought, he is used to it. When we had traveled about a couple of miles, my truthful young friend would stop every little bit, as if to take his bearings, then go on again. At last he stopped, and pointing to a large log beside the path, about lifty yards away, exclaimed, "There's where he laid, on that log, and there, near that sapling (about half-way), is where I killed him." We advanced enrefully to the sapling, but found no remains; no dead hoop snake, no "bresh" beaten down and torn up, no blood "all over the leaves and bresh."

"Everything was in its natural order and condition; no sign of any struggle whatever. "This is the place, is it?" said I.

"That's what's botherin" me, "said my young friend.

"You said it drove its tail into the ground so hard that you could not pull it out. Where's the hole?" said I.

"That's what's botherin" me, "said my young friend.

"You said it drove its tail into the ground so hard that you could not pull it out. Where's the hole?" said I.

"Why, where is the hoop snake?" said I.

"But the blood," said I, "the hole, but without success. "Wall this beats all nater," said he. "

"Mow the ——I do you suppose I know; you don't spip pose a feller's bound to know everything, do you? Come let's go fishing; I knows the quickerest place to ketch bullheads in the world."

And poor Byrne has been studying and wondering, until his head has grown gray, how that hoop snake pulled its mate's tail out of that hard path.

And then again, in the spring of '57, Byrne was in Nebraska. In the limestone bluffs along the Big Middy, just below the month of the Platte, the crevices in the rocks were a great winter resort for hibernating animals of all kinds, especially snakes. Of these the great yellow or mountain rattle snake (Crotatus conflictuatus) was very numerous. Byrne's young mind at once become intensely interested in the fascinating science of herpetology. He was seized with a dearre to gather in a few pairs of the largest of these rattlers for seed, to sow in the rich and beautiful land of the Illini, bis home, where the sweet creatures were already growing quite scarce. He succeeded admirably, and day by day his snake menageric, in a glass-fronted box, on a flat rock juiting out of the bluff near the steamer landing, grew more attractive in quantity and quality. There he exhibited to the gaping crowds three brace of rattlers, culled from hundreds, yea, thousands, for their great size and beauty. While snake hunting, he discovered a very curious fact, namely, that there was another snake there of exactly the shape, size, color and motions of the yellow rattle snake, and occupying the same territory and places, that one could not tell from the rattler without seeing the tip of its tail, and then only by the absence of the rattle snake. This snake had no fangs, and therefore was not venomous. Another instance, this, of mockery or mimicry of a deadly thing being the protection of an innocent, defenseless thing. But to my story:

I boarded with old Uncle Abe, with a lot of bucks, mostly quiet, intelligent, laboring men. My "footin" "around among the snakes was the cause of a great many lies, great and

whacker" called "Hauk," who was "breaking prairie." I was anxious to hear from Hauk. I knew that I would get some good, solid facts in herpetology if we could get him wound up and going. The hoop suake business had been touched on lightly a few times, but I had not given the boys any encourment. This evening hoop snakes incidentally came up again, and I bowled them over rather roughly. Old Hank

sat smoking his after-supper pipe. He slowly took it from his mouth, and looking at me, said:
"Young man, I'se afcared you are just a leetle bit too smart; think you know just a leetle too much."
"Why, Hank," said I, "you have never seen a hoop snake, have you?"
"Wall, I should rather say I had; hundreds of 'em; that's just why I left lowa. There was so many of the pesky crifters there"

critters there."

There was business again for the young naturalist—another chance to learn of the wonderful and deadly hoop

'Why, they are not dangerous are they, Hank?" asked

other chance to learn of the wonderful and deadly hoop snake.

"Why, they are not dangerous are they, Hank?" asked one.

"You just bet your sweet life they be dangerous. If one of them thar critters strikes that sharp spike on the end of his tail thru'a feller, he's deader'n if six minner balls had gone thru' him," said Hank.

"How do they fight?" said another.

"Why," said Hank, "if they happen to be mad and see a feller a comin', they whirl both ends'up, take their tail in their mouth like a hoop, and roll rite at you like a streak of greased lightnin', and when they are near enough, let go their tail and run the spike on the end of it right through you—even if it don't go through you, if it only sticks through the skin—the spike has a very small hole through its tip, out of which the snake will squirt you full of pizen. I will never forgit how near I was bein' kilt by one in Iowa; it fairly makes the chills run over me jist to think on it."

"Pell us all about it. Hank." said several at once.

"Now, boys, I don't like to tell about that scrape evenin's, for I don't sleep well arter it, but seeing as how to-morrer is Sunday I will let her go: I commenced breakin' prerairie in Ingianny when I were fourteen year old. I broke all through Illinoy and Iowa, and now I am away out heah in Nebraskah at the same old trade. In Ingianny we had lots of great yaller rattlesnakes, and I was bited several times by em, but I allers had a jug of whisky banged on any plow beam, and when I'de get bit, I'de worry down about a quart of that and go on with my work. But I could hardly make a livin'a-breakin' in Illinois, for the little black rattlesnakes were so thick on the prerary they nearly bruk me up; they bit so often yesee it tuk so much whisky to cure me. Whisky was only two bits a gallin', but when it tuk three or four gallin' a day to cure a feller of snaik bites, it counted up. Besides, I had the shakes a good deal thar, so I had to quit and go to Iowa. There I got along fust rate for several years, until I got a job awa

job away out in the center of the State, near the tumber. Thar I heard of hoop snalks for the first time, but bless you I wasent afcared of hoop snalks or any other kind of snalks, without it's boar constructors or some of them bigern enough to swaller a feller. Well, I used to turn my seven yoke of steers out in the woods to pasture over night. They would stray off sometimes considerable durin' the night, and I would have to go out very airly in the mawnin' and look 'em up. The old man I was breaking for warned me that it was not jist safe to do so on foot, for he said the hoop snalks were very sassy, lively. cross and dangerous mawnin's. But I wasent afeared; I did not even take a club with me.

"Wall, one mawnin' a pair of my steers had strayed away from the rest, and I went further back in the timber to look for them. I turned my cattil in the timber because the green head flies were awful bad on the perarie. I traveled along a path for some distance, when I stopped and leaned back against a white-oak tree, about three feet through, to listen and rest. After standing there for some little time, I looked down along the path, and saw laying on a log in the bright mawnin' sun sunthin' that glistened bright. It was all kinds of bright toolors. I soon saw it was a snaik—an awful purty colored snaik. All at once it looked up, saw me, whipped up its head at d tail together, caught its tail in its mouth, and came rolling right at me like a hoop, so fast that it fairly hissed through tho air. Just in time I saw my danger; that the terrible, deadly hoop snaik was coming for me, and just in the nick of time I sprung from between it and the tree. As I run, I heard a report like the keen crack of a rifle. After running a little piece, I looked back and saw the hoop snaik squirming and slashing around the tree in a fearful way. I stopped and watched it for quite a in a fearful way. I stopped and watched it for quite a in a fearful way. I stopped and washe matter; and I am a dod rotted liar if the critter had not driven t

"Did you see any more hoop snakes there after that?" said I.

"Yes hundreds of them, big and little, but, none quite so large as the one that killed the tree. I allers carried a good club when I was in the woods, and killed a good many of them. They are very dumpish and easily killed after the middle of the day, and not at all dangerous. They never roll after noon. But after that cre cuss killed the tree instead of me I allers felt a little narvous when in the woods and weren't never satisfied until I cum away."

This was all told with the seriousness of a Methodist class leader, and the calm truthitulness of an elderly man, and I am confident that there was not a person in Hank's audience, except Byrne, that doubted one word the old man said. "Hank," said I, "I suppose those hoop snakes are yet plenty in that part of Iowa?"

"Yes, one of my old pards came from that last summer;

"Yes, one of my old pards came from thar last summer; he had a good job thar, bu, sed he was feered to stop on account of the cussed things."

"If you were there now," said I, "you could kill some,

"If you were there now," said I, "you could kill some, afternoons, without any danger."

"O, yes," said Hank, "no troub'e about that at al."

"Well," says I, "I have got \$500 in gold, a good horse and buggy, and a lunndred and sixty acres pre-emption of as fine land as there is in Cass county. I know it's no great stake, but it's something; now you are getting a little old for prairie breaking; you can hire a young bull-whacker to break up the quarter; you can build you a snug house with the money and drive into town every day with the horse and buggy to see the boys, and live like a prince. I know it's not much, but I will give it all freely for a hoop snake, dead or alive, and I think I can find scientific institutions that will give \$100 apiece for several more. I will take any size, genuine hoop snake, from five to eleven feet and eighteen inches long. Say Hank, do please drop everything else and get one: I will break prairie for you while you are gone."

"And I." spoke up Capt. Dan Able, "will give my steamboat the Edinburg (the jovial captain had stepped off to see his old friend Judge McComas, and had slipped up unseen to hear Hank's story) for that spike he has up-stairs in his trunk."

At this Hank bridled up with his cyee snapping a little. "As for you, Mr. Posey, [meaning me—it was the only name I was known by there—I had told one of the boys who wanted to put on airs that I was from Ingiany, Posey county, boop-pole precinct], "if yer wants hoop snakes so bad, you jist ketch them for yourself. As for you, Cap, you jist hard yer seek and the stumbled up stairs to bed; and then and there that very evening, his name was changed from euphonius Hank to "Old Spike Tail," by common consent.

And Byrne has been wandering over the earth, up and down, lo! these twenty-five long years, still anxiously searching for that thing so common everywhere, one to two hundred miles away, the veritable and true hoop snake. And to capture that snake he is even risking the spending of a summer here, where snakes, fleas, tic

fearful stock?

Well, I thought I was done, but I find myself in trouble again. I took this over to read it to my friend Ben, good hone:t soul (he don't know anything about hoop snakes or anything else in particular). He said it was "very good, very good, but I never saw any, so don't know." While we were sitting there discussing it and fighting skeeturs, Ben said, "Here comes old man Frank; he can tell us all about them. Now this same man Frank has run saw-mills and trapped in all the Western States and Territories, and if one will follow up the very he has lived in each place and

will follow up the years he has lived in each place, and count them up, he will be found to be about 750 years old.
"Good evening, Capt. Frank." "Good evening, Colonel," said he (we all get to be officers when we get down here, the lowest title for a gentleman of leisure like Byrne being

Colonel).

"Did you ever see a hoop snake, Captain?" said I.

"Yes, but not since I left Nevada. We had lots of 'em
out there; some called 'em hoop snakes, others rollin' snakes."

"What were they like?" said I. "Were they big and dangerous? What color were they? Tell me all you know about them.

gerous? What color were they? Tell me all you know about them."

"Well, a full grown hoop snake out thar was about twelve to fourteen feet long, brownish black, with a pure white stripe nearly around the back of their head; they were not very thick, but looked rather slender, owing to being nearly of the same thickness their whole length. Their tail ended in two strong, sharp, very hard spikes, or in a fork, these spikes spread apart from each other at the points, so that when the snake struck them into anything they would not pull out. These hoop snakes were found only in the hills; they would lay away up on the side of a hill and watch only below them, where, if they saw anything they wished to strike or capture, they would erect both ends, lay their head back in the fork made by the two spikes (these spikes were about three inches long each) and then roll just like a hoop down the hill toward their prey; and then, whene within proper striking distance, strike those fearful spikes deep into the side of their victim, and then coil themselves around its neck, strangle it to death, and swallow it."

"Did you ever see them strike anthing?" said I.

"No, Colonel; I have seen them roll often, and often, but never saw them strike anything; but I have seen plenty of men who have; who have seen them strike and kill deer often."

"Did you ever know of them killing a person?"

Did you ever know of them killing a person?

"No, I never knew of sich, but I have heard mountaincers tell of such cases often."

tell of such cases often."

Well, here is trouble again. Byrne will know no more rest until he goes to Washington and prevails on Congress to appoint a commission to go to Nevada and study this new double-spiked hoop snake scientifically, and to smooth down the hillsides, free them from stones, so that the sweet creatures can roll smoothly down without dunger to life and limb, and capture what deer and men and things they may want for food. But I do hope the boys will not nickname our good old Captain, "Old Forked Tail."

Byrne.

Crockett's Bluff, Ark., June 17, 1882.

Depredations of the Squirrel.—Red Hook, N. Y., June 26, 1882.—Will you please inform me, through your journal, if squirrels drive birds away from a place? There have always been great quantities of robins about our place and no squirrels, but for the last two years some squirrels have apreared, and I often see them apparently robbing nests, and the old robins trying to drive them away. What makes me think that squirrels drive birds away is, because, at my grandfather's country seat, there are hundreds of squirmakes me think that squirrels drive birds away is, because, at my grandfather's country seat, there are hundreds of squirrels and no birds at all.—S. Sixpeon. [The small red squirrel is one of the worst enemies of our small birds during the nesting season, and does much to drive birds away from a place by robbing their nests of eggs and young. We have seen the squirrels take from the nests the eggs and young and devour them. At this season of the year, they seem to hunt through the trees systematically to find the nests. The robins fight them with a good deal of vigor, but of course the smaller birds are helpless against their attacks. FLORIDA GALLINULE NEAR HARRISBUG, PA,—In my last, Mr. T. P. Montgomery, while snipe-shooting in Witzel's swamp, near Harrisburg, Pa., shot a Florida gallinule (Gallinula galeata), which his dog stood. The bird was a full plumaged female and a very good specimen. Mr. Montgomery has had it mounted.

Bull Bars on City Roofs.—Philadelphia, Pa., June, 1882.—Your correspondent never knew before last week that what is known as the "bull bat," or "night hawk" frequently built their nests on the flat rooftops of city houses. In our city I am informed that more than one pair have begun operations, and have taken up their abode on the roof of two of the warehouses in the busy portion of Philadelphia.—Hamo -Howo

Game Bag and Gun.

JULY WOODCOCK SHOOTING.

July woodcock shooting is legal in eleven States, as follows, the sea on opening on the first of the month, unless otherwise designated:

Delaware. Illinois (4th), Indiana ingiana, Iowa (10th), Maryland,*

Minnesota (4th). Missouri, New Jersey,† Ohio (4th), Pennsylvania (4th), Rhode Island.

*Season opened June 10 in certain counties, and June 15 clsewhere; in Wicomoco county it opens Sept. 1. +Closes Aug. 1 to Oct. 1.

VIGOROUS LANGUAGE ON THE GROUSE QUESTION.

QUESTION.

Editor Forest and Stream:

As we who "shoot 'em settin" are held responsible by some correspondents for the decrease of grouse, I propose to show just exactly to what extent I murder them. Of the six seasons that elapsed between the completion of my ninth and fifteenth years I can give very little account. Part of the time I provided around with a forked stick and a relic of the old flint-lock period, and for another very considerable portion I picked them off with a double 20-bore Manton. I was too careless to keep any record of the number of birds killed, but I am pretty safe in saying that I killed a good many. I have hunted nine seasons out of the ten that have clapsed since '71, and for them I can give

Part of the time I prowled around with a forked stick and a relic of the old flint-lock period, and for another very considerable portion I picked them off with a double 20-bore Manton. I was too careless to keep any record of the number of birds killed, but I am pretty safe in saying that I killed a good many. I have hunted nine seasons out of the ten that have elapsed since "I, and for them I can give "chapter and verse." During that time I have killed 142 grouse, or an average of less than 16 to a season. The greatest bag I ever made in one day was 6 birds. The largest number killed in one season, 38; smallest, 2. From carefully gleaned information I believe that grouse were more plentiful here in '61 than at any other time during the last fifty years. Since I commenced to shoot, the seasons of greatest plenty were '67, '71 and '73, while '69 and '81 stand out in bold relief as the seasons of greatest scarcity.

It never seems to occur to some writers that man is often to hunt, I might shoot at grouse on the wing exclusively in order to make one bird last as long as possible. But I work from ten to seventeen hours out of twenty-four, for eleven months out of twelve, and by the time that month is subdivided, the grouse come in for a very small share. A few blank scores mean no birds for the season. The premise that every person is supposed to shoot on the wing, and consequently the tree-shooter is sailing under false colors, may be all right for New York, but "it would not do for Galway." Here, a person who said that he took no sitting shots, would be considered a lineal descendant of Ananias. Consequently, we nover feel "uncomfortable about the gills" when we pick up a murdered bird. They say we are meat hunters. True, we bring in meat for nearly every shot we fire, but I, for one, am a "boarder," and pay for my meat, and never sell my birds. Does any one suppose I am philanthropic enough to go to the woods for the sole purpose of replenishing the larders of my friends? No, sir; I go for the sport, but it ta

part.

I am no theologian, but for every passage of scripture that can be quoted in support of the "recreation" theory, I can find one that will justify killing for meat. For my part I am willing to plead guilty to the charge of selfishly destroylife for my own amusement.

Pot-hunter is another epithet that has been repeatedly fired that the Norw what is not hunter? It seems to be a word

life for my own amusement.

Pot-hunter is another epithet that has been repeatedly fired at us. Now, what is a pot-hunter? It seems to be a word that means anything at all, and yet nothing. I believe that every man constructs his own standard, and either carefully adjusts it so as not to include himself, or uses it solely for the benefit of others. My definition is, "one who hunts in season and out for greed of fillthy lucre;" but some scribes could truthfully describe him as "a person who does not do just as we say we do." It is surprising what an amonnt of capital some writers make of this one small word. Like the "nevermore" of the "Raven," it is their refrain—their sole stock and trade, doubtless, "caught from some unhappy master," and repeated parrot-like whenever occasion seemed to require. An old adage says, "every bullet has its billet." I think that this erratic projectile with which so many charge their abuse-fring artillery, too often bears the name and image of its user; and like a boomerang, returns to the place whence it started. One of the component parts of the character of man is, what is popularly called "human nature," therefore we may expect to see the perfect sportsman soon after the appearance of the perfect man. "There is some soul of goodness in things evil, would men observingly distil it out," and it does not necessaily follow that the man whom I stigmatized as a pot-hunter, would steal a brick house or commit any crime, any more readily than I would. A case came under my notice where an eighteen-year-old boy fractured a limb while "cruising" alone in the woods. A stranger carried him two miles to hie camp and nursed him as teuderly as his own mother would have done had she been there. Yet his man would cut the throat of a crusted deer with a savage delight, that could not be excelled by the most untutored Indian. Its it only for the dollars and cents that the game brings that the most despised market hunter goes to the woods? He is drawn by the same instinct that impels the sportsman,

of destructiveness abnormally developed." The market hunter enjoys himself as well as the sportsman, but he combines business with pleasure, and often is so narrow-minded and greedy as to eat the egg that hatches the golden goose, for fear he will not get a chance to rake in the goose at its maturity. The true sportsman has broader views, and is a sportsman in just so far as he overcomes these selfish traits. Selfishuses is at the hottom of the so-called not-hunting

maturity. The frue sportsman has broader views, and is a sportsman in just so far as he overcomes these selfish traits. Selfishness is at the bottom of the so-called pot-hunting, and few there be who are not more or less tainted with it. I have seen people who professed to have overcome it utterly; but they would usually stand a good deal of watching in a horse trade. Can a man who sells his birds be a true sportsman? If not, why?

I liked Nessmuk's "Grouse Homily." He awakened an interest and touched a chord that no other correspondent ever did, and I never saw an article from his pen in any paper, be it about "unshkable canoes" or the "ignoble catty" that I did not read twice. He is a man to whom I would lend my little gray mare. I can give him no higher commendation. I wish some of our friends who denounce ground and tree-shooting would answer one of his questions and show good logical reasons therefor. How is it that a man who shoots three sitting grouse is a pot-hunter, and he who shoots six on the wing a sportsman? And while their hand is in will they tell us also in what way the former individual is more destructive to grouse than the latter? Must a man cease to take sitting shots because some game destroyers do so? Then, why not argue that no reputable man should use a razor, because a darkey committed murder with one?

inyers do so? Then, why not argue that no reputable man should use a razor, because a darkey committed murder with one?

We sometimes see sensational passages like the following: "The grouse or the pot-hunter must go—shall it be the grouse?" etc., but we never see any suggestions anent the pot-hunter's extermination. Do they propose to do it by enacting a law that grouse shall hereafter be shot only on the wing? Perhaps they intend to evangelize him, and if so, calling him hard names is a poor way to commence. If he is the creature they paint him, moral suasion would have no more effect on him than the point of a needle would on a square of Nicholson pavement. A young "school marm" once asked a successful pedagogue if he believed in ruling a school by love. "Yes," he replied, "but have explicit rules and keep a rod convenient all the same." It is so with the preservation of game—we want good laws strictly enforced. In this country we want a law allowing grouse to be shot only in October and November. This would stop the shooting of half-grown birds for market, and also killing them from tree tops when feeding in winter. The high price paid for these birds in the Boston market virtually puts a premium on their destruction; so a non-export law would be a good thing, but I doubt if we ever could get it.

And now, in conclusion, let me say to those who take good thing, but I doubt if we ever could get it.

And now, in conclusion, let me say to those who take pleasure in seeing their setters and pointers work, remember that all of us are not situated so as to keep them.

If you take pleasure in seeing a grouse do his worst, judge not too hastily the man who does not. Those who live in stone houses should not throw glass, for it is sometimes thrown back, and though it breaketh against the hard wall, small pieces of it frequently, "turn up" where least expected.

McDonald's Corner, N. B., May 26.

"R. E. R.," in his article on "drumming grouse," in the

"R. E. R.," in his article on "drumming grouse," in the issue of Forest and Stream, April 6, coincides precisely with my views, that the scarcity of that noble bird is not owing to the pot-hunter, hawk, owl, fox, or wing shot, but what part the diminutive, yet active tick plays in the perceptible decrease of this game bird of all game birds, "its hard to tell. But the writer believes it has far more to do with the destruction of this bird than all other nuisances and coming a paragraphs."

ceptible decrease of this game bird of all game birds, "its hard to tell. But the writer believes it has far more to do with the destruction of this bird than all other nuisances and enemies named.

As to the extermination of these birds (if they are exterminated) being caused by "yaller dogs," pot-hunters, or wing shots, it's all nonsense. That the grouse has in the last two years disappeared, is an undisputed fact; not only in our Eastern States, but throughout the entire West; for I can saidly verify it myself. Having for many years controlled certain swamps and covers by renting them, and posting my own notices, allowing no one to hunt in them except with my permission (and I can assure you no market nunter or huntsman with "yaller dog" was ever allowed the privilege of filling his game bag or coat pockets in those covers), the grouse, nevertheless, disappeared. These grounds are situated in Ulster county, N. Y., and are considered the best in that section for woodcock; and five or six years ago any day, an ordinary shot, in those glorious, ever memorable covers, could "down" his eight and ten grouse, and bag his dozen woodcock. Last year, although fair woodcock shooting could be had, not one grouse was flushed by myself individually, therefore none shot. Where had they gone? None had hunted in there for years but myself and one or two intimate companions; nevertheless, suddenly, with a mysterious air, like a planatom in the night, they silently disappeared—where, few can tell.

Although agreeing with "R. E. R." as, to the seurcity of grouse, would in justice to "Nessmuk" say, grouse while drumming can be heard, in my opinion, fully a mile, but it all depends upon the day and the weather. Let us here imagine one of those exhilarating mornings, one of those calm, clear, brisk and soothing morning, the air silent and tranquil, with once in a while a whispering breeze, bearing to us fragrance and peace; the dew is dripping, the birds are singing, life seems like living for, and we are content with the world an

twisting through the tangled undergrowth, darting through the forest's limbs, escaping bravely many an ounce of death-dealing pollets. There he stands in all his nobleness, now strutting, now listening, he quickly stops, and bringing his wings with a motion which gains a lightning-like rapidity up and down against his sides, until there is almost a roar. Reader, upon that particular morning, unless that particular grouse is inlested with those traditional ticks, his drumming can be heard a mile, in my estimation more. The writer grouse is infested with those traditional ticks, his drumming can be heard a mile, in my estimation more. The writer has hunted with many a sportsman, many a fine shot; men who would not think of doing a mean or a small act, men who would not think of shooting a sitting woodcock, quail or songster, like many a so-called "true sportsman," togged out in velveteen and leggings, breech-loaders, and fancy, secret-pocketed game bags, take a delight in doing. Did you ask have I ever been with one who would not knock over a sitting grouse, if in season? I can truthfully answer no. They all do it. Such chances come only once in a long time, and, in my opinion, are generally improved,

July 3, 1876, I took myself to Ulster County, N. Y., as was my wont, generally spending winter West and summer East. Summer "cock" sh. oting had that year been banished, and September 1 set as the lawful date to commence the havoc and fusilade. Having not kept myself posted as to the change in this law, I found myself ahead of time two months. Nothing daunted, however, decided to occupy my time as best I could in fishing, the Esopus affording some good sport in that line. August 26 finally came, and a woman in that section being very ill, and in need of some delicacy, decided to kill her a woodcock. My firm resolution was not to kill over one bird, and to make myself more certain on this point, took a little, light, single muzzle-loading gum my father had given me, as my first gun to practice. I had, as I said before, one barrel; that barrel, of course, had only one charge in it, thinking I would wait until I had a good open shot, and so be more certain to make the one load I said before, one barrel; that barrel, of course, had only one charge in it, thinking I would wait until I had a good open shot, and so be more certain to make the one load effective. Walking across a field (which lay between the farm house where I boarded) into a strip of woods, upon the edge of which lay a good "cock cover," I suddenly heard a cluck, cluck, and looking in the direction from whence it came, I beheld a grouse—a single, solitary, lonely grouse, crouching to elude my sight. Immediately thinking a grouse would do as well as a woodcock, I raised my gun, held on the bird, fired, heard a mighty flapping, stepped forward and picked up six grouse—five shot by mistake, but nevertheless killed. Now pot-hunting that day caused the death of five grouse, not counting the sixth, but also came very near enriching the county treasury \$150. The judge, however, considering the circumstances, and my tender years, wrote me a private note advising me to skip to New York, and I "skipped," and from that day to this have been careful not to take pot-shots when shooting for sickness out of scason. Would say, have never sold a bird in my life, being always free with them in cases of sickness.

But unto this day, when I see a grouse sitting and it's lawful to kill them, it is generally my bird, and do not consider it a disgrace; why should I? Nine out of every ten grouse sit for me and it's my game.

Come, brother sportsmen, let us be candid. No one is

1 would not think of hunting with a "yaller dog," let a grouse sit for me and it's my game.

Come, brother sportsmen, let us be candid. No one is responsible for your own statements and articles but your-self; so be candid, honest and sincere in them, and run no fear or danger of being cornered, as was our pleasant and agreeable writer, "Chasseur."

B. A. Mayor.

Austin, Mower County, Minn.

In your issue of May 11 I am made to say, "We have got to learn that the grouse disappeared in a single season," What I wrote was, "We have yet to learn that the grouse disappeared in a single season," which reverses the sense of the sentence. Again, I wrote, "The benificent and painless sport of hounding deer," and he substituted "hunting deer," By the way, a brace of my "advanced" setters stiting by when the article was read aloud, implore you to substitute "pointing dog" for "pointer dog," lest people regard me as an "exclusive pointer man."

I fear "Nessmuk" mistook the spirit of my reply to his article, as certainly nothing personally uncomplimentary

Ashfield, Mass., May 28.

an "exclusive pointer man."

I fear "Nessmuk" mistook the spirit of my reply to his article, as certainly nothing personally uncomplimentary was intended, and if a passage of two was left a trifle pointed —perhaps intended as "counters"—it was all written in the heat of debate and with no thought of impeaching the integrity of one whom I have always regarded as, and still believe to be, one of "nature's noblemen." Of course the fact that our experiences differ somewhat may be partially explained by differences in locality and habits of observation, and as for the balance let us hope that neither of us have been losers by a little friendly discussion and comparing of notes. As "Nessmuk" says, "Probably we could talk together without disagreeing very widely when it comes to the bedrock of true sportsmanship—preservation of our fastfailing game and humanity." I assure him that nothing would give me greater pleasure than to exchange with him the grip of the brotherhood and sit down for a good old-fashioned chat. Doubtless our "differences" would as rapidly dissolve as do those of actual participants in our "late unpleasantness," when given a chance of fellowship and free expression of feeling. I have yet to find aught of malice toward an honorable foe lingering in the bosom of the hona fide soldier. Ruffeld, Mass., May 28.

In Forest and Stream of April 20, there appears a short article entitled "Pot-Hunters." Now I think it very foolish to include as pot-hunters all who take sitting shots, and some of the "gentlemen sportsmen" so called, could with advan-tage take a lesson or two from the one kind of pot-hunter the tage take a lesson or two from the one kind of pot-hunter the article in question so well describes. I have been acquainted with a number, (including myself) who in some unguarded moment under the influence of the excitement incident to the occasion, have committed the unpardonable indiscretion of shooting at (with more or less success), some individual of the feathered persuasion, which had carelessly allowed the hunter to approach near enough for a shot before taking to wine

wing.

I have a friend of mine in mind whom I should not blame for taking advantage of such a shot. Although he is a prominent member of a sportsman's club, and owner of dog and gun, I have yet to hear in any of his numerous hunting excursions an authentic report of his killing a bird while on the wing. I have heard an eye witness state that he has seen tears of shame stand in the eyes of poor old Rough, as he pointed the birds that his master tried in vain to shoot; and his record at glass balls and clay pigeons stands without a rival for misses and unaccountable hits. But he dearly loves to tramp through the woods, and although his game bag was never no very great encumbrance, he generally managed to make it sound at night as though he had been very thorough in his work. But I would not for anything have him suspect that I have exposed him in this way, for in his official capacity he might make things warm for me.

There are a great many fond of the gun, who are very poor wing shots. They do not have time to practice and become expert; and if in their hunting excursions which occur annually they accidentally get a sitting shot at a partridge, I for one am ready to pardon them, as it is but natural for a man to want to bring home game once in a while to show his provess.

And then how proudly the amateur exhibits to his admirhave a friend of mine in mind whom I should not blame

And then how proudly the amateur exhibits to his admir-ing friends the contents of his game bag, as handing out some defunct specimen of the feathered tribe, he regales his

some defunct specimen of the reathered tribe, he regales his hearers with wondrous tales of hair-breadth escapes from misses, and lightning shots in the bush. Some of the old heads also are not bashful in the least, as will be seen by a perusal of the interesting letters found in your columns every week.

By the way, where are the bear hunters that flourished awhile ago in FOREST AND STREAM? Stir them up and let us hear an old screamer from Byrne.

"They tug, they strain! down, down they go, The bash above, Judge Bill below."

The bash above, Judge Bill below."

We are having a very backward spring, with the outlook for game this fall very poor.

The South Abington Sportsman's Club are doing all they can to prevent the killing of game this season, and to this end have circulated posters throughout the county having the game laws plainly printed thereon, with the request that the club be notified of any violation of the law. The club also contemplate the erection of a club house at some suitable point on the sea coast easy of access, and where a variety of game may be met with.

FIRE-HUNTING WOODCOCK.

FIRE-HUNTING WOODCOCK.

THE notes on this subject already published in this journal, may be supplemented by the following extracts from Audubon and Herbert. In his "Onithological Biography," published in 1885, Audubon says: "It is, however, killed in almost incredible numbers, from the beginning of July until late in winter, in different parts of the Union, and our markets are amply supplied with it during its season. You may at all times see gunners returning from their sports with a load of woodcocks, composed of several dozens; nay, adepts in the sport have been known to kill upwards of a hundred in the course of a day, being assisted by relays of dogs, and perhaps a change of guns. In lower Louisiana they are shaughtered under night by men carrying lighted forches, which so surprise the poor things that they stand gazing on the light until knocked dead with a pole or cane. This, however, takes place only on the sugar and cotton plantations."

The description given by Herbert is as follows, being written in 1845:
"In conclusion—I find, on reference to my last article on this subject that I made allusion to a mode of killing the

written in 1845:

"In conclusion—I find, on reference to my last article on this subject that I made allusion to a mode of killing the woodcock commonly practised in Southern States, which is so singular, and so completely at variance with all ideas of sporting in these regions, that it deserves mention, and will, I doubt not, be interesting to many readers who may never have heard of such a process—which, unheard of, they certainly never would imagine.

"This process is termed fire-hunting; it is carried on, of course, at night, and arises from the habits of the bird in that section of the country, which differ wholly from its usages white here.

"In Louisiana and Mississippi, where, chiefly, this mode of sporting prevails, the woodcock lies during the day time entirely in the dense canebrakes and impenetrable swamps which intersect and divide the cultivated lands and rich plautations, and wherein it would be almost impossible and altogether wary and unprofitable to attempt to follow him, as he could hardly be killed on the wing in such a covert as is there found, while the toil would be incomparably greater than the pleasure of the pursuit.

is there found, while the toil would be incomparably greater than the pleasure of the pursuit.

"No sooner is it dark, however, than out the woodcocks come by thousands from their fastnesses, and, pitching down on all sides in the old fields and maize stubbles, apply themselves to nibbling and boring in the soft rich loam for their succulent worm diet.

"Hereupon the fire-hunt commences. With gun and game bag, powder-flask and shot pouch, and all appliances and means secundum artem, the sportsman sallies forth; but no silky-haired, high-strung, sagacious setter—no satinskinned, rat-tailed, obedient pointer follows his master heels. In lieu of Don or Sancho, an old, crafty, grizzlepated, merry negro comes forth, equipped with the brazen to a pole of some ten or twelve feet in length, and filled with lightwood, pine knots, or such like bright-burning combustibles

tibles

"Arrived on the feeding-ground, a light is applied; the quick fuel sends out a broad, ruidly glare; and as the bearer slowly circumambulates the field, a circle of intense lustre is shed for ten yards around him, readering every object more clearly visible than at noon-day. The shooter walks close to the fire bearer, on his right hand, and ever and anon, as the circular glare passes along over the surface of the ground, his eye detects the woodcock, crouching close to the carth, and gazing with its full, fascinated eye upon the strange illumination. The next instant, up it springs, dizzy and confused; and soaring upward toward the light, it is seen for a second, and then is lost in the surrounding darkness; but of that one quick second the sportsman takes advantage, and by a snap-shot cuts him down with a light charge—never killing a bird at above ten paces distant, and often bagging his hundred in a single evening's work.

"This mode of cock-shooting arises, as it is evident, exercessitate rei, and may, for a while, be sufficiently exciting. It must, however, lack all that variety which is the great charm of our Northern shooting—variety which siske great charm of our Northern shooting—variety which arises from the working of the emulous, obedient and well-trained dogs, in observing whose exquisite instinct, fine attitudes and beautiful docility, ne judice, lies half the pleasure of field sports—variety which, together with the lovely scenery, the brisk, breezy air, and the exulting sense of personal independence and personal power springing from these and from the glow of cheerful exercise, renders these sports, to active, energetic and enthusiastic minds, the first of pleasures and almost a necessary relief from the dull monotony of every-day existence." es 'Arrived on the feeding-ground, a light is applied; the

every-day existence.

Austin, Nev., June 22.—During May we had excellent dove shooting, bags of from fifty to eighty being a good day's work. A shoot for the supper came off, but was delayed one week too long, as the birds had commenced to pair and were scarce. Only 206 counts were made by eight shooters. Had it occurred a week sooner the count would have been over 600. We are now enjoying some trout fishing, but our spring, or rather summer, is late, and it is yet quite cool.—Wachinewaii.

ILLINOIS QUAIL.—An observant friend on whom I rely tells me that while on the Indianapolis & St. L Railroad, on his way from the capital of Indiana to Louis, he saw a great number of quail in pairs, which train frightened from near the track into the fields near From their actions, they had evidently paired, and he tells me he knows of no place he would sounce select for a November shoot than portions of the country he passed through—namely, the lower portion of the State of Illinois,—

JUNE DEER SHOOTING.

JUNE DEER SHOOTING.

THAVE not seen the deer signs so plenty in many years as they are about Blue Mountain and the Level this season. I came across fresh deer tracks wherever I went. I did not get sight of one myself, but a gentleman who went up with me, saw three on the borders of a small pond where he went to fish one afternoon. Many of the tracks that I saw had just been made by deer that had heard as coming and had just left. For the last two winters there has not been, on account of the light fall of snow, any crusting of deer to speak of in the Addrondacks, at least in that portion of them known as the St. Regis district. This, no doubt, is the main cause of their being so plenty here this season. The deer winter in the great tracts of the forest that are in the north-western portion of the St. Regis district, and in the spring come out to the openings along the river and the pouds to feed on the tender grass that grows on their banks. But the night hunters, who are nearly as bad as the crusters, and who destroy more deer than all the rest of the hunters combined, not excepting the crusters, are already at work and have slaughtered quite a number this spring already. While there I saw no less than a dozen or more pass on their way to the Sixteon-niel Level or some of the ponds near the head, with their guns, headlights, etc., for night hunting.

These might hunters are nearly all residents of this or St. Lawrence county. The majority that I saw were from the latter county. They go in to kill all the deer they can without regard to age or sex. A year ago last season they killed upwards of sixty on the Level and vicinity before the first of August. They began the slaughter as early as the middle upwards of sixty on the Level and vicinity before the first of August. They began the slaughter as early as the middle dupwards of sixty on the Level and vicinity before the first of August. They began the slaughter will alt his time of the season paddle a boat to within a few yards of them at night.

Now I would li

Now I would like to ask what credit is it to a hunter, or

the senson paddle a boat to within a few yards of them at night.

Now I would like to ask what credit is it to a hunter, or what skill is displayed in shooting a charge of buckshot (often from both barrels), into a deer that is standing still and gazing at your headlight, at that distance?

If they would only kill one deer and then stop so as to have a little venison to cat it would not be so bad. But they will, like the two mentioned above, who killed one of them four and the other three in one night, kill all that they can. Neither of these men cared for more than a meal or two of venison, which one deer would have supplied in plenty. The rest were all killed for merely the sake of killing to count, to boast of, or to have it go out that they were great deer slayers or noted hunters, &c. But if they expected to gain or receive any credit as noted deer hunters, which, no doubt, they did, I can tell them that they fell far short of their expectations. For whatever their friends or acquaintances may have said in regard to the matter to their face, I have heard many of them while conversing with myself and others in relation to it condemn the act as wanton and cruel. Even some of those who practice early hunting. I have heard speak of it in terms that were not very comphmental to them they would have thought had they but heard them. These two hunters are residents of this vicinity. And I have known of their hunting deer nore or less every fall for several years back. But during the whole time I have only known or heard of one deer being killed by either of them after the first of August. One of them, I believe, did manage to kill one some time in that month, some years ago. It is the same thing with the most of the early hunters. They are not able to kill a deer, except by chance, during the law-ful season for hunting, so they hunt them in the spring and summer at a time that they are about as tame as sheep and full as easily killed.

If this early deer hunting is not stopped soon there will be none left long any

THE LONDON, ONT., SOCIETY.

THE LONDON, ONT., SOCIETY.

THE regular annual meeting of the Fish and Game Protective Society met at the Revere House, this city, last evening, June 28, Dr. Niven in the chair.

On notion it was decided that the secretary represent to the Dominion Government that large quantities of game birds are annually being shot and exported to the United States, and request that they take some action to prevent the exportation of these birds. The secretary was also instructed to communicate with Mr. Witcher, Deputy Minister of Fishertes, to urge amendment of the base law, so that the close season will be extended to the 15th of June. The following officers were appointed for the ensuing year: W. C. L. Gill, President: Dr. Woodruff, First Vice; P. McCann, Second Vice; D. Skirving, Secretary-treasurer. Executive Committee—Tr. H. Smallmani; Robt. Vallance, Dr. Niven, John Puddicombe, Geo. Kelley, C. A. Stene, R. Mercer, A. Chisholm and John Cousins.

The following annual report was read by the secretary, Mr. D. S. Skirving, and adopted:

Mr. Pletsident AND Gentlemen—I have much pleasure in submitting our seventh annual report, which, though it may seem barren of incidents usual in like documents, such as an account of the number of victims offered up on the "stone of sacrifice," otherwise the bar of the Police Court, as infringers of the nuajesty of the Game Laws, and the amount of currency of which they would consequently have been depleted and compelled to contribute toward the support of our Dominion as "spoilers," not pillars, of the State, according to the enormity of their offenses or their deeply reportant pleadings for mercy and their promises to do so no more till next time, still contains matters of interest to our society.

our society.

There have been, since our last report, a large number of posters distributed throughout the district, containing information as to the close seasons for fish and game and other subject in connection with the Game Laws. As these posters were not or destroyed they are replaced by others

upon application to the secretary or other officers of the soupon application to the secretary or other officers of the so-ciety, and from the generally fair knowledge of the close seasons, and the desire to observe them possessed by the farming community in general, principally derived from the information thus given to them, would lead to the belief that the efforts of our society have been very much appreci-

We have not had one prosecution since our last report for

that the efforts of our society have been very much appreciated.

We have not had one prosecution since our last report for infringement of the game law or the insectivorous birds' protection act, which is certainly a good record to give for the district under the protection of our society, and conclusive evidence that our society has exercised a wholescominfluence over those who formerly were tempted to shoot during the close scasons. Also providing that "game protective societies" are an absolute necessity in a game country to see that the game laws are enforced. On the cordial coperation of the farming community depends in a great measure the successful carrying out of these laws, and if they will protect the game birds that remain all the year around and breed in Ontario, and will prevent professional shooters and pot-hunters, both in and out of season, from clearing the fields and woods of every thing they can find in the shape of game, and allow only those who are genuine sportsmen to shoot on their farms, we shall in a year or two have abundance of quall and grouse in this country. The last winter having been so mild, we hear on all sides that young broods will be numerous this season and that the prospects for sport next fall are good.

Salipe have been plentiful, and their return in the fall in large quantities may be reasonably expected. We have to relicrate the remarks made in former reports that it is extremely desirable the shooting season for all game birds except quair should commence on 1st September. The reason therefor is obvious to all sportsmen. Close season to commence on 1st January following, and no effort should be spared until the Legislature grants the request. Some parties to the east of here wish the law to remain as it is, while we in the west wish it altered. The law could be sured until the Legislature grants the request. Some parties to the east of here wish the law to remain as it is, while we in the west wish it altered. The have could be sayed until the Legislature grants the

ostensibly for use tax.

U. S. markets. Some steps should be taken to prevent table sort of thing.

Our worthy Fishery Inspector, Mr. P. McCann, reports having exercised much vigilance during the past twelve months, and that he has prosecuted, caused to be fined or otherwise punished eleven parties for catching bass in the close season, and for spearing fish. He reports the fishways on the River Thames as being in good order.

Mr. E. Raymond reports that a large number of skunks have been destroyed in this section during the past season, as over 2,000 skins have been brought to him for purchase. In conclusion, it is hoped that our society, organized entirely for the benefit of the genuine sportsmen and the game-loving community in general, will be largely supported in future. entirely for the bench of the game-loving community in general, will be largely outported in future.

As far as our finances are concerned, we have had sufficient funds to meet our expenses during the past year.

D. Serrving, Sec.-Treas.

D. Setrivia, Sec.-Treas.

London, Ont., June 29.

The Situation in Westfield.—Commenting on a recent editorial in this journal, Mr. John J. Willis, president of the Westfield (New Jorsey) Society, says in the Monitor, of that town: "In view of the fact that a few evil-disposed persons in the community have openly expressed themselves in antagonism of this society's modes of enforcing the game laws, the above extract is peculiarly pertinent. As the matter stands in this town at present, on one side is a powerful society of seventy members, the whole of the farming and land-holding class, all the respectable laboring men, uncehanics, and young men; on the other, probably not over a dozen men and boys, whose natural destination sooner or later will be in the direction of Trenton. It is now pretty well understood that the whole efforts of the society for the past three years has been exercised for the general good and for no selfish motives. Because it has been found necessary to lease a few farms in order to protect the game birds and fish, that have cost much money and trouble to procure and care for, that is no ground for anyone saying that we are trying to establish a system such as prevails in England. Our leased property does not cover a tenth of the township. And shooting even by members of the society will be forbidden whenever the board of directors see fit to so-order for the preservation of the stock for another season. It remains to be seen if the few spoken of can successfully carry out even a portion of their threats. The whole force and tunds of this society will, if necessary, be devoted to the strict enforcement of the laws, and the sooner we are able to secure such evidence, necessary to enable us to prosecute, the better. It remains to be seen who wishes to present himself threat for honors in a contest against 'We, the people.'

Onio Woodcock Grounds—I am informed by reliable parties that excellent summer woodcock shooting may be had this summer on the line of the Pan Handle Railroad, between Scio and Dennison, Ohio. Between these towns there are five or six miles of low bottom land with alder thickets. A creek called the Stillwater runs through it, and I am told many woodcock have settled down in this section of the country to breed. Your correspondent passed through the region not long since, noticed the capital grounds, and made inquiries in reference to them, and leanued that the country is seldom visited by sportsmen for summer woodcock shooting. As for accommodations I am not able to speak, but should imagine they would be poor, unless quarters could be obtained at some farm house.—Homo. Ощо Woodcock Growns -I am informed by reliable

MEMPHIS SPORTSMEN,—The Memphis (Tenn.) Free Trade MEMPHIS SPORTSMEN.—The Memphis (Tenn.) Free Treate says: There is a club of gentlemen in this city who, some nine years ago, resolved to enjoy life at least one week out of the year, in which business, wives, dignity and mental discipline are metaphorically thrown to the dogs, and a comfortable insouciance takes their place. Dr. R. W. Mitchell is President; W. A. Wheatley, Secretary and Treasurer; J. S. Wilkins, Uncle George Mitchell, John Overton, Jr., D. H. Poston, W. B. Galbreath, A. C. Treadwell, Henry M. James, R. D. Jordan, Judge S. P. Walker, and J. A. Taylor are members. About the middle of October these gentlemen meet together and plot against the machinations of their wives, who wish to keep them at home, but in valu. They club the sum of \$50 apiece, charter a train, and skip out on Saturday to the prairies of Arkansas on a grand hunting expedition. The following is a page from their expense book, which accounts for the objections their respective wives raise whenever their liege subjects go a-hunting Item 1. A piece of pork to grease sore thumbs with, 10 cents. Item 2. A bottle of sweet oil to grease gun barrels, 25 cents. Item 3. Grocery bill: 1 box of crackers, I cheese, I ham, 10 lbs. sugar, 51bs. coffee, 21bs. stick candy, 210 lbs. powder, 1 can conclused milk, total, \$89.84. Item 4. Bill of sundries at Vaccaro's and B. J. Semmes, to wit, I flask of Aqua Vina, for sore throat, \$109.93. The other items do not amount to much—unless it is item 13: 1 box liniment for wounded prairie chickens, 17 cents. These gentlemen spend one week shooting. They scored on one occasion 1,180 prairie chickens, twenty deer, and 150 head of sundry anitmals. making a total of 1,350 head. They take with them the very best dogs in the country.

Connecticut Lakes.—Connecticut Lake, June 26.—In your last issue I saw a mournful reference to missing notes from this locality. Let your correspondent appear in the flesh and he will find us at home in his favorite resort. I occupied some portion of last week in cutting out the windfalls of the past winter from the winding stream where "R," found his first moose. His boat rests quietly on the waters of one of those ponds where our united strength gave out en route. One caribou has laid his antiers at our feet in it last October, but no hunters of old does, with their playful fawns, can count the hides they have taken there. It, with many others near, rests in quiet seelusion, except from the crust hunter; for his hard luck we can thank a more eificient law maker than exists in our legislative halls. Our snow falls were too light within the past few years to catch, but but not to prevent an attempt on their part. One band of five moose was followed for a week this spring, when the snow began to disappear; and our wolf returned too much worn out to bring in a horn with eleven points, found among the "signs."—Nep Morron.

New Jersey Notes.—New Village, Warren County, N. J., June 26.—I send herewith a few notes and the prospects for game in this county. Our quail shooting for the past two years has been tame. Birds generally plenty about May and July, but with November were very scirce. Last fall but very few were shot in any part of the county. Some particular spots, known only to a limited few, afforded a day's shooting, the bag generally counting about a dozen birds. Grouse (pheasant) are very scarce. Woodcock may now be seen in some favorite places, and will afford a little sport in July. This will atone in part for the loss in quait. Very few woodcock are ever found here in October or November. Rabbits are plenty and have excellent cover. Hundreds may be shot in November if one has a good hound. Of troutfishing we have none. Most of our tishing is done along the streams in Pa., or on the ponds and bices for pickerel, and in the Delaware for bass. The largest bass yet caught was at Carpenterville, and weighed four and one-half pounds. A dead one weighing seven pounds was found there floating on the water near shore.—P. II.

Camp Hire Hlickerings.

"That reminds me."

"That reminds me."

WAS standing in the doorway of the Peabody Hotel A after an early breakfast one morning, when I saw a curious little drama all by myself.

It had rained the night before and then frozen so as to leave an icy covering over everything, the pavements especially being of glassy smoothness. A very large, heavy gentleman of cheerful aspect came out of the door about the same time, and we stood for a moment hesitating before trusting to the sidewalk.

Just then there turned the corner and came picking his way up the street one of the tidiest, nattiest, pop-eved little

way up the street one of the tidiest, nattiest, pop-eyed little men I ever saw. He was very careful indeed, and managed all right until just opposite us, when he slipped, grabbed at the air, and went down with an audible bump. My fat neighbor laughed. The little man rose in fury. "By Heavens, Sirrah, when a man laughs I like to see him laugh at something!!!" He sputtered in wrath and a wet seat to Heavens, Sirrah, when a man laughs I like to see him laugh of something! H' He sputtered in wrath and a wet seat to his breeches. But seeing the situation was unpleasant, the portly gentleman deemed it best to simply walk away. So buttoning his coat closer he stepped out. Alas, this did not heal the breech. For he searcely took three steps when he got the worst fall I ever saw. Slipped—backed—kicked up—rolled over and over, and butted the curbstone trying to get up. Hat smashed—boot-beel knocked off, and a big, blockly careful on the get up. Hat smashed—non-book.
No, no, the little man didn't laugh. No, he just hugged the kaup-post and screamed.
I went back into the hotel and waited for a thaw.
A. Mulle. get up. Hat bloody scratch

We were sitting round the fire one evening in rather a quiet mood, talking rather listlessly upon minor topics, when the conversation drifted upon the ice, and several feats of skating were related, each one more remarkable than its predecessor. At last one of the party who had been distanced in two or three heats, asserted that he had skatled across a portion of ice so thin that his skates cut through at every stroke. Cud, who had been nodding in his chair, and seemingly paying no attention to the conversation, here straightened up and remarked: "Talk of skating on thin jee: you should have seen me skate across old Quidnie pond last winter. Why, the ice was so thin that when I got out in the middle of the pond is bent so they couldn't see me from the shore." from the shore!

Cats were the subject of discussion one evening, and the Cats were the subject of discussion one evening, and the boys came out strong with a string of capital tales. Finally one of the veterans related a little anecdote, wherein his favorite cat—who was hopeless!/ behind a squirrel she was chasing across the yard—had been intercepted by him and seized by the tail, and slung with such momentum that when she struck she at once overhauled and seized her prey. This brancht, Chd to his feet.

she struck she at once overhauted and seized ner prey. Ans brought Cud to his feet.

"That reminds me," said he, "of the scrape that brother Bill and I had with our old cat on the Fourth of July. The boys had been firing a causon just back of our house, and had left it there. Bill and I thought that we would have a little celebration on our own hook. So we got about a quart of powder and loaded up the old gun. Just as we had got the wad down, old Tabby came purring round, when Bill—

who was always a bit queer—grabbed her, and chucking her into the muzzle, rammed her home. We then rigged up a slow match, and touching fire to it, scampered for the hillside toward which the gun was pointed. We hadn't much more than got there when we saw that old twenty-four hist more than ten feet, and, as the smoke cleared a little, we saw old Tab a-coming, first sideways and then endways, with a year, yeav at every turn. Pretty soon she struck on top of the knoll, and Je-ru-sa-lem how she did run!"

TEN-OUNCE RODS vs. FIVE-OUNCE RODS.

Editor Forest and Stream .

Editor Forest and Stream:

I regret greatly the harshness of some of the remarks of Dr. J. A. Henshall, in his letter upon "Light Rods," published in your issue of June 22, and my first impulse was to leave his otherwise interesting and valuable letter unanswered, because of his rudeness; but as my silence might be misconstrued, and as I am inclined to think that the Doctor does not appreciate nor care for the great weight of his words any more than he does for that of his rods, I will notwithstanding the improper parts of his letter, look again at his main point. The Doctor's whole letter is an amusing instance of his preference for heavy rods and coarse tackle. He slashes around in the most vigorous manner like a rustic fisherman with a ponderous hickory pole, and I do believe that he is entirely unconscious of it. He "courts and invites manly, fair-minded and straightforward criticism upon anything he has written," but it is Gil Blas and the Bishop over again, and woe betide the hold man, unknown to fame and Dr. Henshall, who may dare to differ with the Doctor in opinion or presume to say openly that the Doctor had expressed a preference to a certain weight of rod—that man is not manly, nor fair-minded, nor straightforward. The Doctor is so undoubtedly perfectly correct in everything laid down in his book, however, that no other reader of Forest AND STREAM will ever hereafter be found to criticise it in any part. He slashes around in the most vigorous manner like a rustic

of Förest and Stieam will ever hereafter be found to criticise it in any part.

The Doctor in his letter goes on to say that I disproved nothing he had written, and proved nothing of my own knowledge and experience; and that he knows nothing whatever about me. As it is a matter of opinion whether rods should be light, I am willing to admit that my saying so does not make it so, although I did think I knew something about ly rols; but, of course, if Dr. Henshall says he thinks they should be heavy, that proves it; for we all know Dr. Henshall all our lives; the land has resounded with his mane and fame for thirty-five years past shall says he thinks they should be heavy, that proves it; for we all know Dr. Henshall all our lives; the land has resounded with his name and fame for thirty-five years past—the woods have been full of him, as it were. This eminently fair-minded Doctor, who does not garble, presented in his letter "to the impartial reader, in justice to himself," we extracts from his book, but be carefully left out the extract which I, in the most unmanly, unfair and crooked manner, had quoted in full in my first letter. I began by saying: "How amusing are his supercillous remarks (at page 220) upon the proper weight, or rather lightness of trout rods. The Doctor has written an excellent work on black bass, and he says: 'I would here enter my protest against the lightest and withiest trout fly rods, weighing from six to seven ounces, being used or recommended for black bass fishing. So far so good. But then he goes on with this absurdity: 'Such rods are but toys at the best, and only admissible for fingerlings or trout weighing from half a pound downward. I know that some anglers make a boast of using such rods, but it is on a par with some gunners pound downward. pound downward. I know that some anglers make a boast of using such rods, but it is on a par with some gunners who rush to the extreme in light shotguns, and claim that a sixteen or twenty liore is capable of as good general execution as the larger gauges. Now, these are both palpable fallacies, as great as that of "sending a boy to a mill" in the "History of the Four Kings," as many have found to their cost."

cost."

How came the manly, and fair-minded and straightforward Doctor to leave out this extract from his book from his letter of June 22? Because I had already printed it? Then wherein have I misstated him?

I must request the readers of Forest AND STREAM to take

I must request the readers of Forest and Stream to take my letter of June 8, and read it in connection with Dr. Henshall's letter in the paper of June 22.

I never caught a black bass weighing twelve to fourteen pounds, such as the Doctor speaks of, never saw one, never heard of one before. But as I have this winter, over my pipe, concluded that a large percentage of the pleasure consists in guessing at the weight of the fish you catch, and of the fish you lose, I have resolved to throw away my precedent of the property of the preceding with my cyc hereafter, in the usual way. It pains me to think what a toil of pleasure Dr. Henshall must have had, and how the flexors and extensors of his arms must me to think what a toll of pleasure Dr. Henshall must have had, and how the flexors and extensors of his arms must have suffered when he took that thirty-pound redish on an eight-ounce rod in Florida; and when he played those three-pound trout in Lake Superior, on a five-ounce cedar lead-pencil. According to the Doctor's theory, as laid down by himself (please read his letter, and see that I do not garble), his pleasure would have been greatly enhanced with a tenounce rod, and he wouldn't "mind a little extra straining of the brachial museles."

But let nobody dare say that the Doctor prefers the latter course; that would not be a manly nor fair-minded, nor straightforward criticism. And do not understand the Doctor as asying that in his varied experience he has caught Maryland gudgeon weighing less than one ounce on a bait rod weighing two pounds, or a forty-pound bass on a two-ounce fly rod, because he did not say that, although it reads a little that way; but he did delicately handle and kill a thirty-pound redfish on an eight-ounce rod. And of course (as he says so it must be so), "Any expert fly-fisher can occasionally kill in onen water a threa-pound trout on a five-ounce says so it must be so), "'Any expert fly-fisher can occasionally kill, in open water, a three-pound trout on a five-ounce rod—it is no great feat." Oh! Of course not! We all do it! Certainly! Every gentleman who reads this thinks nothing of doing it. A common, tame, ordinary three-pound trout on a five-ounce rod! Pshaw! That's no great feat! I did think, until the Doctor ordered it otherwise in his letter of June 22, that such a feat was worth to me fifty dollars cash down, for the pleasure of it, every time.) I have thrown a fly for twenty-six years. As to the weight least! I did think, until the Doctor ordered it otherwise in his letter of June 22, that such a feat was worth to me fifty dollars cash down, for the pleasure of it, every time.) I have thrown a fly for twenty-six years. As to the weight of my rod—Fred Mather weighed, last year, the one with which I have fished in the company of various gentlemen for four years past. That rod threw and recovered and killed, with forty-six feet water-proof silk-line out, last season, in presence of Mr. J. S. Van Cleef, of Poughkeepsic; Mr. David W. Judd, of New York, and of other gentlemen. It was all the line on my reel; I measured it. The rod can do more. Mr. Van Cleef threw his fly much further. If I am not mistaken his rod weighs within half an ounce of mine. We did not take the trouble to stand up to do it, neither; we sat down in the boat comfortably, and used only the fore-arm. The Doctor's saying that a long line cannot be lifted neatly, nor a smooth, straight cast of any considerable length be made, with such rods, only shows that he does not know how. But I must be careful. Such a remark as that is not manly, nor fair, nor straightforward. And then again it cannot be true.

As I carefully excepted black bass from my criticism in my first letter, I submit to the Doctor's statement that an eight-ounce rod is light enough for them; but any one who has used a five or six-ounce fly rod for trout knows what an immense relief it is to the wrist and to the big muscle from the thumb (the Doctor; would call it the extensor secundi internodii pollicis), and how greatly preferable to a rod of eight ounces. Of course, if a man is going to use his whole arm and all his strength at every cast he will need the heavier rod preferred by the Doctor; but that is entirely unecessary in casting the fly for all ordinary practical trout fishing; and to "still maintain that fly rods weighing from four to seven ounces are toy rods, and not suitable for ** ** trout that weigh upward of a pound' only shows

fishing; and to "still maintain that fly rods weighing from four to seven ounces are toy rods, and not suitable for "* ** trout that weigh upward of a pound" only shows ignorance or want of skill, or vain obstinacy, on the part of the person maintaining it. If to practically and successfully use a five-ounce fly rod with trout of all the sizes that come in the State of New York, in preference to uselessly tiring my arm with an eight-ounce rod, is to be one of "the coxcombs and dilettanti of the fraternity," then I am one of them. It is certainly not I, but it is the Doctor who "prates of delicately handling and killing three-pound trout on four and five-ounce rods, as every day occurrences."

I have very very seldom seen a trout of that weight, but I know my rod and what it has stood, and what it can do; and two gentlemen, members of the Willewenoc Club, within twenty feet of me, saw me hook at one cast and kill three large trout on my five-ounce rod. The account appeared in Forrest And Stitem, at the time. It is the Doctor who

and two gentlemen, members of the Willewemoe Club, within twenty feet of me, saw me hook at one cast and kill three large trout on my five-ounce rod. The account appeared in Forest and Stream at the time. It is the Doctor who makes (in his letter of June 22) the modes assertion that "it is no great feat" for "any expert dy-fisher to occasionally kill, in open water, a three-pound trout on a five-ounce rod." That is a proposition which I never made and to which I do not subscribe, (which is probably unmanly, unfair, and not straightforward in me). But I think that it is a great feat, and that but comparatively few possess the skill, and fewer have the chance; but that the majority of the Willewemoe Club can do it I am convinced, from having watched them throw the fly and handle very heavy fish, and the only fisherman whom I ever heard complain of the fatigue of fighting a large fish with a light rod is Dr. J. A. Henshall.

If it be not an unmanly, unfair and crooked inference. From his own statements that he has more pleasure in getting tired with a heavy rod than with a heavy fish—then it seems to me that he is to be pitied for depriving himself of great pleasure by his inconsistency. The Doctor in his letter pleads ignorance of the "Bowery style" in billiards. That is just it. There never was a man yet who played in that style, or fished in that style, or wrote in that style, but claimed that he was ignorant of it. It consists in junning and driving the balls furiously, without delicacy of touch, hoping they'll count somewhere around the table. It consists in starting out to crush any one who has been so insolent and presumptuous as to differ with the views of the great man who has printed them in a book, by unfairly saying that the critic is unmanly, unfair, and not straightforward—that he has "garbled" the extracts he has made [at the same time suppressing the very extract that the critic criticised); it consists in preferring to tire flexor and extensor muscles with an eight to ten ounce fly rod for trout,

And all the time the person who practises the "Bowery style" thinks he's the finest player in the country, and is unable to perceive the clumsiness and unpleasant impression made by his manner of play.

Let those who choose "yank" out the big fish with a pole; for me, I prefer to be one of the dilettenth whom the Doctor depises; and may I waste much time in my life trying to lead hear than or a few and helf cause and

depises; and may I waste much time in my life trying to land heavy trout on a four-and a-half-ounce rod.

The Doctor will be astonished should he come to learn how many gentlemen have given up the heavy, fatiguing ten and eight-ounce rods, and who habitually use the four to six ounce. Does the Doctor know what is the leverage on a rod of only six ounces? I will tell him; on a fly rod of eleven feet in length, weighing 64 ounces, having on it a No. 4 reel and line weighing 44 ounces (grip above the reel. of course), the leverage is twenty-two ounces, that is, if the rod be held level; upright of course there is no leverage; if the rod were held most of the time at an angle of forty-five degrees, the average power exerted would be eleven ounces; but the rod is held lower, nearer thirty degrees, and it is safe to say that on such a light rod, a power of one pound is constantly straining on the muscles.

I will tabulate rods, the leverage of which has been ascer-

I will tabulate rods, the leverage of which has been ascer

tained.	Length.	Weight.	Reel and Line.	Leverage
No. 1.	12 ft.	9160z.	6½60z.	Sloz.
No. 2.	1136ft.	71/20Z.	Soz.	26oz.
No. 8,	11ft.	6130z.	4840z.	2204.
No. 4.	10ft.	41,20Z,	33.60z.	16oz.
No. ñ.	9}áft.	40%.	83.goz.	130Z.

The average leverage, holding the rods at an angle of 30deg, from the horizontal, is fairly two-thirds of the foregoing. Rod No. 1 is a standard black bass rod. Upon a No. 2 was caught and killed, without gaff or net, a salmon which weighed thirty-three pounds. No. 3 is the "standard" going. Rod No. 1 is a standard black bass rod. Upon a No. 2 was caught and killed, without gaff or net, a salmon which weighed thirty-three pounds. No. 3 is the "standard" trout rod at present in this part of the country. A "standard" rod of 1847, (sent in for repair) has also been tested. Length, 18ft., weight, 17-joz., weight of reel and line, 70z.; leverage, 5 pounds; (as the reel is above the hand) this rod of 1847 is not so strong, nor will it stand work, nor can it cast as far as the 11ft. standard of to-day. A 10oz. rod is now almost as obsolete as that one of 1847. The Doctor, you observe, prefers to have 46 ounces rather than 24 ounces to strain him all day when he goes fishing.

Now I know that sitting down, I can with the No. 5 throw a fly forty-six feet; and that is very much farther than is necessary or usual in trout fishing. It is not necessary to stand up to throw a good fly if you use the right kind of light rod; the Doctor's illustration of fly-casting in his book may be the thing for black bass (though I think he is wrong even there—it does not need so much arm and muscle), but it is totally unnecessary for trout (unless you use one of the

even there—it does not need so much arm and muscle), but it is totally unnecessary for trout (unless you use one of the Doctor's bean-pole ten-ounce rods).

Why are split bamboo rods so much liked? Because they are light. They are not "withe-like." that is, if I understand what the Doctor means by "withe-like." But many gentlemen prefer an ash butt with lancewood second joint and tip to any split bamboo rod. I do myself: it is a little stiffer in proportion to its weight (for the wooden rod can be and is made as light as the split bamboo). I will put in the Doctor's hand, at some convenient place, a rod of sash and lancewood of any light weight he may name, down to four and a quarter ounces, and leave it to him—not as a matter of captious dispute, but on his honor, to say whether or not it is "withe-like." I would like the Doctor to state just how many different light rods he has ever handled—their weight of captious dispute, but on his honor, to say whether or not it is "withe-like." I would like the Doctor to state just how many different light rods he has ever handled—their weight and make. I cannot but think from the Doctor's talk the never handled more than one, and that a poor one.

The principles of a good fly rod have been reduced to axioms by William Mitchell, of New York, who is the father of the American fly rod manufacture. His axioms

are:

1. The less number of pieces in which a rod is made, the more perfect will be its action, and the less its liability to get out of order.

2. The more homogeneous the materials of which the rod is made, if it have sufficient elasticity and strength, the longer will it stand the necessary strain without injury.

3. The more impervious to the action of water, dampness, or change of atmosphere, the longer will the rod retain its elasticity and perfect action.

its elasticity and perfect action.

4. All weight in wood or metal in a rod, above the grip, which does not strengthen the rod, weakens it, and, with all weight added below the grip to balance the rod, is so much

4. All weight in wood or metal in a rod, above the grip, which does not strengthen the rod, weakens it, and, with all weight added below the grip to balance the rod, is so much useless weight.

5. The rod possessing sufficient elasticity and strength with lightness, and which is the least liable to get out of order from any cause, and which, when broken, is the easiest to repair (right on the stream), is the nearest to perfection that a rod can be made.

These are self-evident propositions. And you may add to them another, viz.; that in any given rod, when, under the necessary strain, any part does not bend, that part does not bear its proportion of the strain, and the latter is transferred to the next adjacent weaker part (which is the spot where the rod will break, if at all); so that an absolutely perfect rod should be springy from tip to heel-plate of butt. It has been proved by the experience of many gentlemen whose names I could give if I had their permission, that several ounces of useless wood can be pared off, both above the grip and below, without weakening the rod, while it adds enormously to the pleasure and comfort of the fly-fisher.

The Doctor had better take up his billiard playing again; it will not only strengthen his flexors, etc., but will bring back delicacy of touch and pleasure in it, since he uses a fourteen-ounce cue.

The "animus" of my first letter was simply to refute the Doctor's absurd statement, on page 229 of his book, that "such rods (trout fly rods weighing from six to seven ounces) are but toys at the best, and only admissible for fingerlings, or trout weighing from half a pound downwards." Those are the words of his that sounded to me like the cavil of ignorant vanily or of vain ignorance.

What surprises me is that with all the Doctor's extensive and varied and somewhat remarkable experiences he should prefer to the himself out with a heavy rod instead of a heavy ish. Still I do not think it unmanly, nor untair, nor crooked, nor dishonest in him to state his preference for t

THE THOUSAND ISLANDS.

THE THOUSAND ISLANDS.

I HAD the pleasure of spending last week at the Thousand Islands, and thought you might wish to hear the result of our trip. We left New York the evening of June 18 on the New York Central, arriving at Clayton Monday morning at 10:30. Friend Johnson, of the Walton House, had men and boats in waiting, so we lost no time in getting our fishing rig out and starting off. The wind was high and cold, and the fishing indifferent. In fact we had no pleasant weather until Thursday, and then the fish began to take. We confined ourselves to the black bass, and Thursday and Friday did very well, our party on the latter day taking some one hundred and twenty-five small-mouthed bass, but none over 24 lbs. I think that now it will be safe to count on good fishing. The scarlet bits and gitzaly king were the favorites, though the addition of a small minnow proved exceedingly attractive to the bass.

The plauntom minnow and pearlspoon were very taking

The phantom minnow and pearlspoon were very taking al-

nlso.

The trip was a most enjoyable one. The superb air, total absence of insect pests, and delightful dinners on the islands, go to make Clayton one of the most delightful of summer resorts. I notice that the majority of anglers have discarded all trolling and bait rods, finding a stiff split bamboo fly-rod the most perfect tool for black bass fishing, no matter what bait is used.

New York, Juno 21.

MONTREAL, Canada, June 28 .- Fish are being caught in this district averaging much heavier weights than for many years past.—R. 11, K.

THE "BLUE GILL" MINNOW PAIL.

THE "BLUE GILL" MINNOW PAIL.

The minnow pail described by "Al. Fresco" in your issue of June 8, '82, we know to be an excellent article, having used the "idea" of false bottom nearly five years. We, however, do not approve of holes near the top, considering them of no benefit save to unnecessarily utilize space and create genuine "splashers." All needed light and air is furnished minnow pails by well perforated lids, the diameter of the holes not being less than that of ordinary general use lead pencils.

As it is often desired to keep minnows over night, or for several days, permit us, if not trespassing on your columns, to send you on paper our "Blue Gill" bucket. We give the principle, and not the dimensions, the latter is left by the wayside. "Everyone has his own notion" and can size up to suit fancy or whim. Our outside bucket is a plain, ordinary one, substantially and well made; a perforated bucket, one and a half inches shorter, fits snugly inside, another perforated bucket is fitted within the latter, so arranged as to draw out telescope fashion without separating. When the perforated buckets are closed they are not as long by one and a half inches as the outeror male buckets. Any style top, lid or fastening may be used as suits the taste. Ours fastens with lock. Having a supply of minnows on hand (imagination at the present moment) to preserve in good lively condition, the telescope is pulled and cast into the water, giving 100 per cent. more room for the game fish's "sweet morsel" to sport in and make room for each other, and of course a chance to avoid accidents that generally happen to a poorly regulated, overcrowded bucket. The "clubes," and "shiners," and such must have room to get around, in order to flourish in confinement.

At this point the writer is reminded of a "yarn" related bucket. The "clubes," and "shiners," and such must have room to get around, in order to flourish in confinement.

At this point the writer is reminded of a "yarn" related by a dear farmer friend, now hald to rest. P

LITTLE WIND RIVER TROUTING.

Editor Forest and Stream:

Permit me to quote a few lines from an article published in the New York Herald of this date, and headed "Fishing in the West":

"No Seth Green is needed here to breed fish for us. The good Lord has stocked our rivers and streamsfull to overflowing with the speckled beauties as fine as the eye of the angler ver beheld."

Two days later we ground the distinct.

r beheld
'Two days later we crossed the divide and encamped in a "Two days later we crossed the divide and encamped in a beautiful cottonwood grove on the banks of Little Wind River. I had often heard of the trout in this river and at once made arrangements for a general fish. Part of the officers were to go up the stream and part to fish down, while Jackson and myself, advised by Crutcher the guide, had determined to fish in a little stream called Trout Creek. The one who took the greatest amount of trout in pounds was to have a feast, and the one who secured the largest single trout to be given a fine buffalo robe. The sun was just rising when we set out up the beautiful valley. Parting at the forks of the trail with our friends, they went down to the river while Jackson and I turned toward the hills."

"We were soon at work lifting out the speckled denizons. Taking my post behind a leaning cottonwood tree, I let my line drop over the bank, and hardly had it touched the water before there was a splash, a jerk, and I landed a halfpounder."

"But I forget quite. From my perch behind the cottonwood stump I cast again and again, each time hooking my

before there was a splash, a jerk, and I landed a half-pounder."

"But I forget quite. From my perch behind the cotton-wood stump I cast again and again, each time hooking my nimble victim, until eleven had been landed from the oachole. They were not large trout, perhaps from half to three-quarters of a pound. Just right for table use and very fat, their sleek sides and deep vermillion spots glistening like silver in the sunlight. Half an hour later I overtook Jackson and found him with a full string. We emptied our strings twice into the ambulance, and then we lunched under the shade of a wide spreading cottonwood tree.

"Two nours later the driver came to say if we intended to ride home in the ambulance we must stop fishing, as we had all the springs which our own weight would bear. Every one who has seen a government army ambulance knows the seats run lengthwise; and sure enough the space between the seats was well filled with trout. I could hardly realize that we had taken so many; but there they were.

"It was not yet quite three o'clock when we arrived at Crutcher's house, but some of the party were there before us, each one having taken great abundance of fish. Leutenant Dinwiddie had the largest trout, having taken a three-pounder. Jackson and I had by far the largest number and the greatest weight, he claiming seventy-six pounds when they were divided. I had sixty-lour."

Now referring to the first quotation, no man can breed fish enougl to repair such ravages as the one described above, nor will the good Lord smile upon such reckless waste of His good gifts.

There are many passages in this article that indicate in the writer the possession of good, honest, sportsmanlikained.

Thus are many passages in this article that indicate in the writer the possession of good, honest, sportsmanlike instincts,

but 'the work above described was not done by the same man who wrote the following, which, however, I extract from the same letter, or if it was, he was possessed by very different spirits at the different times:

"My first experience at trout fishing out West was in the Wind River country. We had camped late one night on the Big Popongic River, and the guides told me it was a famous trout stream. In the morning I rose at reveille and taking my rod went down the stream and east the line, bailing with a grasshopper. Hardly had the bait touched the water before it was taken under by a trout. Another and another was taken until I had six, when I went back to camp to have them cooked for my breakfast. These trout were one to one and one-half pounders, red speckled, and their neat hard, firm and sweet. They were as good as any brook trout I had ever eaten."

That was honest, fair sportsmanship—but the ambulance full—that was a little too much for sport.

RULLAND, Vt., June 12.

RUTLAND, Vt., June 12.

TROUT AT MEACHAM LAKE.

TROUT AT MEACHAM LAKE.

WHILE our spring fishing season has been a very lively one, there have been no very large catches of trout by one individual. Mr. John S. Barnes, of Wall street, made the best—eighteen pounds in four hours fishing—with the fly. At about the same time, Wm. Man, also of Wall street, caught sixteen pounds with the fly.

The season has been a queer one in many respects. With the thermometer indicating 28 degs, raw north wind, we have had our best fly-fishing. Uncle Reuben Wood caught quite a lot of trout May 3, with his R. W. fly, when the water was full of floating bits of ice. Several times I have caught them among the ice with the red bibs. The season, as some one expressed it, has "busted" a great many of the fine theories of both guides and fishermen. The day Mr. Man caught his basketful, the guide, who claims to know all there is worth knowing about the trout in this locality, told Mr. Man caught his basketful, the guide, who claims to know all there is worth knowing about the trout in this locality, told Mr. Man there was no use trying the fish with a fly in that particular place, as he would not get a trout. And so it has been all the season. Where we least expected them we have made the best catches.

While no one made a great haul there have been a great. While no one made a great haul, there have been a great

many trout taken, as there have been a great many fishermen. Mr. Geddes made the best day's trolling, taking

many trout taken, as there have been a great many fishermen. Mr. Geddes made the best day's trolling, taking thirteen salmon trout in one day.

Just now we are having good fly-fishing in the lake, near the house. The laddes catch a great many trolling, with files. I have been greatly interested in the discussions in regard to the California mountain trout. While I cannot make up my mind that he is as good as our native trout, I think him a great addition to our stock of trout, as he will live and thrive in waters where our trout will not grow; and in localities where they have no trout, most people are very glad to get a fish which the trout fisher despises. In many places the bull-head is thought the best fish that swims, and as an illustration of this: Five years ago I put seven pouts into a pond half a mile from the lake, where there were a very few large trout that we could not catch. Last season parties used to come twenty-five miles, build a fire on the bank and fish all night, often taking away two bushels of pouts—the result of one night's fishing—saying nothing about the wagon loads of fun. This year some of the pouts caught weigh two pounds each.

of fun. This year some of the pouts caught weigh two pounds each.

There are hundreds of ponds in the State where trout will not live, which now contain no fish of any value to any one. Many of them would be fine places for other fish. Why not look them up and learn what fish would grow there, then stock them? Somebody would be very much pleased with pouts even, and where they cost so little I think it would pay.

A. R. FULLER.

MEACHAM LAKE, New York, June 16.

MEACHAM LAKE, New York, June 16.

[Parties can leave New York, Boston or Albany at six o'clock in the evening and dine the next day at Meacham Lake. It and the waters about it are well stocked with trout and salmon, and local sentiment enforces observance of the game laws. Artificial propag-tion of fish is carried on yearly by the proprietor, and under this arrangement the fishing improves every season.]

MOOSEHEAD LAKE.

MOOSEHEAD LAKE.

THE season of fly fishing at this popular resort has opened later than usual. Only within a week has the trout taken with zest the artificial deception, but to-day the angler is well rewarded for his efforts. Trolling with the fly and bait-fishing until now has met with the greatest success, but the pleasure and excitement of catching one trout with the fly, is double that of either of the other two methods.

The indications to-day point to the best of fly-fishing during the entire month of July, which is something very unusual with this region, the 10th of that month being the ordinary limit. A party of six yesterday captured ninetyone trout, from one and one-quarter to two and one-half pounds. These were all taken with a fly, the red lackle and blue jay being the leading colors, although a number were taken with the white miller

A lady fishing (with bait) landed twenty-cight trout that weighed fifty-two pounds, five of the trout turning the scales at three pounds each.

In addition to the sad death of the guide, Capt. Hiram Mansell, previously reported in your paper, Mr. H. Wilson, who keeps the house at the east outlet of the Kennebec River, lost (the first of the month) all the fingers of his right hand at the sawmill adjoining his place, while Silas Oscunk herhine, a celebrated Indian guide, was thrown from a tree last winter and instantly killed.

OSWEGO BASS FISHING.

OSWEGO BASS FISHING.

COMEWHERE in the long list of pleasant fishing resorts for the summer months which the happy reader may accumulate in the perusal of his Forest and Stream, now fairly breathing the fragrant ozone and life of the rivers and woods, I desire to write the name of this frontier city. We are not upon the salt water, it is true, nor even close to the great forests; but for a day or a week of delightful rest and enjoyable bass fishing I believe that we offer the best opportunities of any settled locality in the State. Our river is now filled with gamy fish that rise readily to the fly, and range from one to three and a half and four pounds in welght, while the lake shoals within a dozen miles, either cast or west, along the coast fairly teem with great schools of black, Oswego and striped bass. Within the past ten days three eatches have been made upon the shoals, averaging eighty

pounds each, while every night the sportsmen return from points two and three miles above the city on the Oswego River with twelve and fifteen pound creels filled with fish taken with the fly.

Three weeks since your correspondent spent a day upon the headwaters of the Mad River after trout, killing about seven pounds of the speckled beauties, of an average weight of from five to eight ounces, while many streams within a dozen miles afford a half day's good sport at any time during the season.

the season. We caught salmon within the city limits last year; we have repeated the exploit this spring; and when our McDonald fishways are in place, as they will undoubtedly be before fall, we shall expect to add this king of fish to the list of Oswego attractions.

Prospects for fall shooting are good. Partridge and ducks are nesting all about us, and in safety. F. E, H.

Oswego, N. Y., June 25.

NOTES FROM KENNEBAGO,

A T daylight, June 18, I was aroused from sleep by the A T daylight, June 18. I was aroused from sleep by the guides, who were stirring thus early to dress and pack fish for those parties who were going out that morning. It is but a few sleps to the outlet of a brook where the trout are corraled in pens and crates, so I followed to witness the modus operandi. As the fish were taken out they were killed by a stroke on the head with a club. Only those of half a pound weight and upward were despatched; all small ones were returned to the lake. The amount of trout there corraled was simply enormous. Nearly every day parties go out and take along one or more boxes of trout. Some days the boxes amount to a horse load.

After a late breakfast, with B. M. Darling, a member of the quill-driving guild, for companion, a start was made for a day with the trout ourselves. Without attempting in detail the sport was all that could be desired, and at 3 o'clock P. M. we recled up our lines. Our fish car contained fortycight beauties, from three pounds down to one-half pound weight, all smaller than the latter size were at once returned. We were surrounded by other parties who kept up the fight with the game fish till sunset. After reeling we crossed over the foot of the lake and lensurely rowed up to camp on the west shore.

We reached camp in season to care for rods and tackle, perform our ablutions and have a good smoke while sitting on the veranda watchins the varying shadows on West

We reached camp in season to care for rods and tackle, perform our ablutions and have a good smoke while sitting on the veranda watching the varying shadows on West Mountain in the setting sun, and the returning boats as they filed singly into the cove. As each party arrived those about the camp went down to view the fish as the cars were transferred from the lake to the hook. Not a car had less than forty, and some had over sixty, fine fish, some exceeding three pounds weight.

Trout here one not as large as at the lower lakes but in

three pounds weight.

Trout here are not as large as at the lower lakes, but in May and September some are caught every season of five and six pounds. Here, too, one can take them all season through with the fly, and the beauty of all is there are no fish but trout. The scenery here is grand beyond description, and, although the visitors here increase in numbers from year to year there is no perceptible diminution in quantity or size of trout. To account for this we consider the many ponds and streams from the divide on the north which takes in the famous Seven Pondsas well as the chain of large lakes below, all of which contribute to this favorite home of Sathno Jonials. It is beyond the power of a woodsman's pen to adenulis. It is beyond the power of a woodsman's pen to adequately describe the beauties of this resort, and it needs to be

natis. It is beyond the power of a woodsman's pen to adequately describe the beauties of this resort, and it needs to be seen to be fully appreciated.

From Forest Retreat, the fine camp of the Messrs, Richardson & Grant, the route is easy to the Seven, Ponds—most of the route is by boat. There the above named firm are equally at home, and provided with fine boats and camps. They were the pioneers in opening up the county for sportsmen. From Kenebago to the ponds the scenery is charming, and large game, as well as trout, abound. More than a dozen deer have already been seen at and near Kennebago, and the present week, a party en route to Seven Ponds saw four moose on the stream—one large bull, a cow ant two calves. Caribou do not show themselves on the streams in summer like deer and moose, but the woods are full of them, as can be shown in the winter season. The proprietors of Forest Retreat have increased the capacity of their camp the past winter to a large extent, and added many improvements. Let none suppose that the foregoing is a puff, as it is written unsolicited and without the knowledge of the proprietors. Moreover, I pay my bills there as do others; and in proof that the sport is all I paint it, I start the very moment this served is completed on a ten-mile tramp for another whirl there with the gamy trout.

Warfield.

Warfield.

THE PISCATAQUIS SOCIETY.

THE PISCATAQUIS SOCIETY.

The annual meeting of the Piscataquis Game and Fish Protective Society of this town was held at the office of J. F. Sprague, Esq., counsel of the society. The officers elected for the ensuing year were: Freeman B. Shedd, of Lowell, Mass., and Crowell C. Hall, of Monson, Me., Vice-President; Edward T. Rowell, of Lowell, Mass., and Crowell C. Hall, of Monson, Me., Vice-Presidents; E. R. Haynes, of Monson, Secretary; Fred J. Wilkins, of Monson, Treasurer; John F. Sprague, of Monson, Counsel; Executive Coumittee—John F. Sprague, E. R. Haynes, A. W. Chapin; Directors—II. A. Hildreth, E. D. Holden, G. S. Cushing, C. H. Latham, G. A. Matthews, O. A. Dennen, C. S. Pullen, J. C. Tripp, E. M. Bray, C. M. Coombs, G. F. Jackson.

It was voted that the treasurer be authorized to procure of the Mount Kineo Hatchery 5,000 to 10,000 trout, or as many as possible, to be put into Hebron Lake; that the counsel be requested to prosecute all violations of the game and fish laws of this State which come to his knowledge; that the executive committee make arrangements to procure what trout they can for the purpose of re-stocking Hebron and Monson lakes for the coming year.

The following resolutions received a unanimous passage: Resolved, That this Society believe that the public interests demand the passage of a law by the Legislature of Maine, which shall prevent fishing from Oct. I to May I in one or more of the most important lakes or ponds around Monson for a period of not less than ten years, and also a law prohibiting the selling and transportation of the trout beyond the limits of the State which may be taken in any of the waters in this immediate vicinity.

Resolved, That the officers of this Society be and are here by directed to draft such laws and adopt proper measures to secure their passage at the next session of the Legislature.

Resolved. That this society is requested to petition the next

Legislature of Maine for an appropriation of a reasonable

Legislature of Maine for an appropriation of a reasonable sum of money to aid in carrying on the propagation of trout and salmon in Piscataquis county.

President Shedd of Lowell, Mass., in an able and interesting address to the society alluded in a happy manner to the sugerior attractions of forest, mountain, stream and lake in the vicinity of Monson, which are rapidly becoming famous in the sporting world and among the lovers of nature. He congratulated the citizens of Monson upon the fact that a first-class and elegant summer hotel here is now assured, and propheside that not only its social benefits but also the vast business advantages which our people would derive from it, would repay them a thousand fold for their untiring and liberal efforts in this direction.

He urged upon the members the importance of the objects of the society, and hoped that they would never lessen their exertions to re-stock our numerous lakes and ponds, and that their ardor for a rigid enforcement of the fish and game laws of Maine would always increase and never diminish. His forcible denunciation of all poachers, whether they are "visiting sportsmen from the city or pot-hunters from the backwoods," were severe, though just.

The address was listened to with much interest, and received many well deserved praises.

The meeting was a profitable and interesting one. A great deal of interest was manifested.

E. R. HANNES, Secretary.

E. R. Haynes, Secretary. Monson, Mr., June 13, 1881

WEST VIRGINIA TROUT STREAMS.

I HAVE just come from a trout and bass fish in the Al-leghanies. It is no use fishing in the Greenbriar in the summer time for bass. Insect life is so profuse and plenti-ful that the fish have no incentive to take either bait or the

ful that the fish have no incentive to take either bait or the fig. As well, indeed, set a rabbit gum to catch hares in midsummer as to whip the Greenbriar River for bass at the warm season. In the late spring or early fall, when a frost has rendered torpid the multitudinous flies, grubs, caterpillars, id onne genus, then the angler can have royal sport.

In many of the streams within fifty to seventy-five miles from here there is splendid trout fishing. In some future communication I will give full particulars, so that the followers of ye art of angling can tell exactly where to go. I speak by the card when I say that West Virginia stands ahead of any State this side of the Rockies for its abundance of that delicate, toothsome fish known as the speckled or of that delicate, toothsome fish known as the speckled or

brook trout

The great profuseness of its mountain streams, its pure waters, wild, inaccessible country, and general uncomeatableness keeps away the pot fishermen, and only the true angler, who can afford to camp out and rough it, can have an opportunity to whip the mountain streams.

White Sulphur Springs, W. Va., June 13.

SALMON IN MAINE.

SALMON IN MAINE.

WE are having a good run of salmon this year, very largely fish of our own planting. The wardens report an unusual number gone directly up the river. We fancy that we note a difference in the labits of the fish planted by us above the fishways. They seem to be in a certain sense educated, do not lie around below the tide water dam, as did and do the old fish hatched before the construction of the water-works dam. They go more directly up the stream, and through the fishways and sluices. Anglers fishing for white perch have taken several on baits, both angleworm and bits of fish. One has also been taken on an artificial minnow. A fine shad was brought to us that was tempted by an angleworm.

Mr. Stanley and myself have this spring planted in Maine waters one million and three-quarters salmon, 85.000 lambocked salmon and 5,000 rainbow trout fry. The sea salmon have been planted in the Penobscot, Presumpscot, Androscogin and Kennebec rivers. Some forty land-locked salmon of from two to four pounds have thus far been taken this season in the Rangeley waters. One of four pounds is reported as taken at Moosehead. The novelty of our Penobscot salmon rising to bait has caused a good deal of stir among our anglers, and several lines have been lost and things made lively to innocent fishermen who indulged no higher ambition than a string of perch or pickerel.

E. M. Stilwelle.

Bangon, Me., June 27.

Tennessee Notes.—A number of parties have been out lately to Buffalo, Turnbull, Harpeth, Sycamore, White Oak, Flint River, Jones and Crow Creek, camping and fishing for several days at a time; they all report fine sport and a most delightful time generally. To go on such an expedition in this State is simply a royal treat, because it is a happy combination of wild and civilized life. Within a mile or two of camp, on almost any of the above named streams are well-to-do farmers, where all the luxuries and refinement of gentle life can be enjoyed, after a day's hard work angling, and when tired of that, return to camp with all its romantic surroundings of worldly dangers and pleasures. Col. Geo. F. Akers is meeting with quite an ovation from his brother Commissioners in Kentucky and Illinois. While in the former State he was of the party under Col. Griffith which deposited a great number of shad in the Ohio and Upper Cumberland rivers, and while in Chicago was the guest of Dr. Rowe, and was treated to a day's angling in the lake. Fish are reported very abundant in all our streams, and could the laws be enforced would soon be as plentiful as they were before the wholesale slaughter of them began by the pot-fishers.—J. D. H.

FISHING AT GRAND LAKE STREAM, MAINE.—The fishing has been very unequal, but on the whole uncommonly good. One week it was reported that fishermen fished in the lake from the stream to Whitney Cave without getting a rise. Next week in one day three fishermen took eighty-four fish. The young fry (yearlings probably) have been exceedingly abundant about the dam, and the boys of the village have destroyed great numbers of them. There is no section in the law forbidding the killing of salmon or trout fry, but this omission will probably be remedied at the next session of the Legislature.—C. G. A.

Salmon At Dennysville, Maine.—Several gentlemen have been enjoying fine sport at Dennysville, taking salmon with the fly. Mr. Benjamin Lincoln, a resident of the place who has taken great interest in the fisheries, says they have not been so plenty for twenty years. The increase is attributed to the planting of 30,000 young several years ago. Alewives have been plenty at Dennysville, and have been increasing for several years.—C. G. A.

THE SKOODOOWOBSKOOK AGAIN.

r Forest and Stream:

In your issue of yesterday the lines on the "Skoodoowabskook, in your issue of yesterday the lines on the "Skoodoowabskook, were read by us with interest, they seemed familiar, and as you will be a seemed familiar, and as you will be a seemed familiar, and as you have is what I find until the "Tender Lines." Unfortunately lid not preserve the name of the paper from whence they werlipped, some three years ago.

I.

Sweet maiden of Passamaquoddy, Shall we seek for communion of souls. Where the deep Mississippi wanders, Or the distant Saskatchewan flows?

II.

Ah no! for in Maine, I will find thee, A sweetly sequestered nook, Where the fair winding Skoodoowabskooksis, Conjoins with the Skoodoowabskook. III.

Let others sing loudly of Saco, Of Quoddy and Tattamagouche Of Kennebekasis and Quaco, Of Morigonishe and Buctouche,

of Nashwaak and Maguadivique, Of Memmerimamericook, There's none like the Skoodoowabskooksis, Excepting the Skoodoowabskook.

Excepting the Skoodoowabskook.

This may be the original to which you referred when stating that the Sun had published them. You will see the similarity which made them seem familiar to me when reading them in the Forest ANS STREAM; they must have come from the same pen, or are we to think that a pirate craft has sailed o'er the Skoodoowobskook, and limposed on the Sun! New York, June 30.

Hishculture.

BLACK BASS IN THE SCOTCH LOCHS.

A NGLERS and dishculturists may be interested to be in formed of the successful transportation of the comin American game fish (the large-mouthed black bass (Micropterus sulmoides, Lac.) Henshall) and the small-mouthed black bass, Micropterus dolomieu (Lacepede), from New York the Liverpool.

bass, Micropterus dolomieu (Lacepede), from New York to Liverpool.

During the visit of His Grace the Duke of Sutherland to America last year, he for the first time became aware of the unequalled game characteristics of the fish, and its well-known edible qualities. He requested his friend, S. L. Marlow, Esq., of New York, to send him some alive at the earliest opportunity. This request Mr. Barlow communicated to our mutual friend, Eugene G. Blackford, Esq., of Fulton Market, the well-known ichthyologist, and treasurer of the American Fishcultural Association and the famous Ichthyophagous Club.

No one experienced in the transportation for long distances.

Market, the well-known ienthyologist, and treasurer of the American Fishcultural Association and the famous Ichthyophagous Club.

No one experienced in the transportation for long distances of living fish offered, until the date of my annual trip, and I gladly consented to assume the responsibility. My experience of 1857 in transporting alive a pair of brook trout (Satreliuns fontinalis) weighing, respectively, the male twelve pounds, and the female eight and a quarter pounds, from the Rangeley Lakes, in Maine, to my pond at Stanley, N. J., and later (1869) black bass (M. dolomieu) thirty-one in number, from the private pond of Walter Brown, Esq., of Newburgh, N. Y., to Lake Maranacook, Winthrop, Kennebec country, Maine—the carliest introduction into that State—enabled me to feel some confidence in my ability to perform this far greater task.

Mr. Blackford supplied six bass, weighing from one-half pound to a pound, being all left from the large number, fully fifty, exhibited at his annual trout show. I addressed a letter to my friend, Professor Spencer F, Baird, U. S. Commissioner of Fish and F, sheries, requesting a donation from the U. S. Fish Ponds, Druid Hill Park, Baltimore, April II. At noon, 15th, three cans, containing twelve small black bass and five large ones were delivered on board steamship Spain.

Mr. Blackford's were in two cans. The five cans were alike made of strong tin, encased in wood, having handles, and contained ten gallons of water. The tops were provided with perforated covers. They are of the form now generally used by fishculturists.

Through the courtesy of F. W. J. Hurst, Esq., the efficient

made of strong tin, encased in wood, having handles, and contained ten gallons of water. The tops were provided with perforated covers. They are of the form now generally used by fishculturists.

Through the courtesy of F. W. J. Hurst, Esq., the efficient agent of the National line, instructions were given to grant every needed facility on shipboard.

The cans were placed side by side along the partition adjacent to the main saloon, and securely fastened. Arrangements were made for attendance of day and night men, whose duties were to a frate the water every hour. This was effected in the simplest and best way known at present, viz., by dipping out of the cans and pouring back again from a height of two feet. A long-handled quart dipper was used. I prescribed a sufficient number of dips to completely change the water in the cans hourly. This necessitated the handling by the quart measure of filty gallons hourly—twelve hundred daily, and twelve thousand gallons, three hundred barrels during the trip, representing over four tons per day, and forty tons in ten days.

The actual time occupied in this service by the assistants was twelve hours daily. In addition to this, I frequently enerated the water, when upon examination I found one or more of the large bass near the top, indicating exhaustion of oxygen. Six times daily I took the temperature regulated, either by the aeration or the addition of ice, that it only varied three degrees from frdegs.—

Six times daily I took the temperature in the addition of ice, that it only varied three degrees from frdegs.—

i. e., from Hdegs. to Sodegs.—never remaining at the higher point for more than an hour. This may be considered a remarkable achievement, in view of the fact that the temperature of the atmosphere was frequently over sixty.

Other than the occasional coming to the surface of the three larges ones, no serious difficulty appeared until April 22. About three A. M., the night assistant noticed that two were evidently failing. He redoubled his efforts and one revi

at the bottom, seeming to enjoy their novel voyage across the wide Atlantic.

At the valuable suggestion of Capt. R. W. Grace, of the Spain, the cans were raised from the floor about an inch, on strips, permitting ventilation. The wooden cases were constantly wetted, the evaporation causing a lower temperature. Every piece of ice used was carefully washed, and small quantities added at a time. A bullseye lantern permitted examination of the interior of the cans. The thermometer used was a novelby. I procured it from Messrs, W. H. Schlefelin & Co., the day I sailed. It was in a square wooden case, with openings left to expose the bulb and indicator. A convenient handle at the top permitted it to be used with ease, A record of temperatures was made several

times daily; also of the addition of ice and fresh water, and other notable facts were written down.

Exceeding interest in the novel experiment was manifested by passengers, officers, crew, and even by the large number of persons in the steerage. Constant inquiries were made as to their condition, and deep sympathy was expressed when the death occurred.

At Queenstown, I telegraphed to the Duke of Sutherland their safe arrival, also addressing him a letter requesting him to send by his messenger to Liverpool twenty-two platina tags, inscribed with the weight of each bass and date of depositing in his waters. I also suggested that a portion be placed in the ponds on his estate at Trentham, between liverpool and London, and that the balance be exhibited at Edinburgh Fishery Exhibition which opened the 12th inst.

Mr. Blackford also put in my care a box containing four fine Hudson River shad (Alosa sapidissimus); two red snappers (Luighaus blackfordii); and one striped bass (Roccus linearus). Two of the former were for the Prince of Wales, and the balance for the Edinburgh Exhibition. I expressed the shad from Liverpool to the France of Wales, care of the Duke of Sutherland, London, and the balance to Edinburgh. As they were well packed in ice by Mr. Blackford in Now York, and were constantly covered in the center of the great ice room of the Spain, the: were in fine condition.

So far as I am informed this is the third lot of black bass to cross the Atlantic. The preceding ones were taken in 1878 and 1879 by Mr. Silk, fishenthurist for the Marquis of Exeter, and placed in a take at Stamford. They were all very small, however, and he lost a large number in transportation. The last lot singularly enough were taken over in the Spain.

To the best of my knowledge this is the first time that fresh water fish as large as these have been transportation. The sate of the royal salmon or the dainty trout. It is still more needed in the United Kingdom, where but two really game fish now exist. It will rapidly increase and

another generation arrives, be as abundant in Europe as in America.

In conclusion, I take great pleasure in expressing my deep sense of obligation to the officers and servants of the grand steamship Spain for their unfailing efforts to aid me in this important mission. I would also acknowledge the efficient and wise counsel of my friends Messrs, Henry Draper, C. Frederic Wetmore, F. Pelham Marshall, S. W. Johnson and John Carter, fr., of New York city; Dr. R. A. C. Dillon, of Rio Janeiro; Rev. J. P. Smith, and C. Grange, of Baltimore; Rev. P. D. De Lom, of London, England; John H. Mugford, of Brooklyn, and E. Hieks, Granville, Ohio; W. H. Janye, Newport, England; Harry Minshall, Stockport, England, and others.

On Board B. S. Spain, St. George's Channel, April 24, 1882. On Board S. S. Spain, St. George's Channel, April 24, 1882.

ON BOARD S. S. SPAIN, St. George's Channel. April 24, 1882.
P. S.—A second bass died before reaching Liverpool. The balance, in charge of Donald McKay, the Duke of Sutherland's isheulturist, were safely transported to Golspie, Sutherland, and deposited in a loch. En route the fish were entered at the Edinburgh Fishery Exhibition, where they received much attention.

As the guest of his Grace the Duke of Sutherland, I spent a delightful week at Dunrobin Castle.

The two black bass which died, a male and female, have been elegantly mounted by Rowland Ward & Son, and will be on exhibition at the offices of the London International Pishery Exhibition of 1883, 24 Haymarket, where they can be inspected by any persons interested until Sept. 1, 1882.

One has been accepted by Dr. Gunthler for final deposit in the British Museum, the other will be sent to the National Museum, Washington, U. S. A.

SALMON BREEDING ON THE PENORSCOT

SALMON.BREEDING ON THE PENOBSCOT.

THE establishment in Bucksport and Orland is now thoroughly equipped, and no work of consequence has been done this year, except the collection of actult salmon for the canning season. About 500 have already been secured. They average a little smaller than usual. Last year they averaged the heaviest ever known. These fluctuations in size are frequently very marked, but no cause for them has been discovered. This year there has been another peculiarity. The salmon taken early in the season were nearly all small, whereas in ordinary years the earliest are much the heaviest, as well as longest. There will be, for instance, in the April and May ish a much larger proportion of lish that weigh from eighteen to twenty-four pounds than in June, when the most of them range from ten to thirteen. It is possible, however, that the peculiarity noted this year may be local to a small district near Bucksport, whence the information was received.

Shini district near backspars, where the received.

The State commissioners have this year hatched their salmon for the Penolscot at Enfield, thirty-five miles above Bangor. They were mostly turned into the Mattawamkeag River (the largest tributary of the Penolscot) at Danforth and Bancrott. There were 500,000 eggs in all sent to Enfield, and the loss was quite small.

C. G. ATKINS.

A NEW AND VALUABLE FOOD FISH.

A NEW AND VALUABLE FOOD FISH.

(APT. George A. Johnson, of the schooner Augusta H. Johnson, of this port, who recently arrived from a fresh halibut trip to the Grand Bank, has been the first to discover and make known the highly valuable qualities, as a food fish, of the Grenadier macranes. On his last cruise Capt. Johnson had some of these fish cooked, and finding them much better than halibut, turbot, or any other sea tish he had ever eaten, he cleaned and iced fitteen or twenty of them to bring home. These he distributed among his friends who unanimously agree that they have never enten any finer fish. I chanced to be one of the fortunate few who obtained a specimen, and can therefore speak from experience as to the good qualities of the grenadier, at least, when fried. I have never eaten a sea fish which I would prefer, and in point of richness and flavor I think it scarcely second to the brook trout. There now seems strong reasons for supposing that the grenadier which, only four years ago, was one of the rarest fishes in scientific collections, may become one of our most highly prized food fishes. Capt. Johnson intends to bring home serval hundred from the Bank on his next trip, and these will be distributed to some of the principal caterers in the country. Previous to 18% the presence of the "ine fish"—as the grenadier is called by the fishermen on account of its rough, sharp-pointed scales—in American waters was scarcely known to any one but the Gloucester halibut fishermen, who caught them on their trawks in the deep water from 100 to 500 fathoms) along the slopes of the outer fishing banks, but either throw them away, or used them for but.

During the summer of "8, and since that time, many specimens were brought in and presented to the U. S. Fish Commission for scientific purposes, though it appears none of the lishermen thought of cating them."

The grenadier is not usually found in abundance like the cod, haddock, etc., but more or less can always be taken on the halibut grounds resorted to by the

freshness and flavor much longer than almost any other species of the same size. This is an important fact, since, were it otherwise, the fishermen would not be able to bring them to market in a fresh condition from the distant fishing grounds. It is quite possible that hereafter, "when the lehthyophagous dines," the grenadier may occupy a prominent place among the edibles, and certainly no one of that famous fish-eating society may consider himself a martyr to his principles if he is not called upon to sample a less palatile dish.

J. W. C.

GLOUCESTER, Mass., June 26, 1882.

RETURN OF MARKED SALMON.

RETURN OF MARKED SALMON.

IN October and November, 1880, several hundred salmon were marked at the Bucksport-Orland (Mo.), establishmunt by the method formerly employed there, namely, by a platinum toy the method formerly employed there, namely, by a platinum tag attached by a platinum wire to the rear margin of the main dorsal fin, each tag being stamped with a number which was recorded at the time of marking, together with a description of the fish. The result of this experiment has continued earlier conclusions as to the biology of the species. They visit the rivers for the purpose of spawning every second year, and no oftener.

Up to this time (June 26,) five salmon have been taken with tags on. The following statement exhibiting the growth of each, so far as known, may be of interest:

	When V					M.	as r
No. Sex. 1136Female 1135Female 1239Female	" 29	Lbs. 754 755	In.	1852.	. Where, 7 Searsport 9 Buckspor	1. 1654	In. 85½ 34
1274Male			301/4	** 13			3916

The other salmon was taken at Bucksport in June, but the particulars are not yet known.

I have seen other salmon that bore unmistakable marks of having been tagged, and doubtless many have been caught that had lost the tag so early after their liberation that no scar remained.

Bucksport, Maine.

Bucasport, Maine.

We received a present a few days since of a very fine fish taken at Stockton, from Charles Hazeltine, Esq., of Belfast, Lt was a female salmon of 17½ lbs., hearing a metal tag numbered 1136. In reply to a note requesting a history of the fish, to Chas. 6. Atkins, Esq., of Bucksport, he furnished the following interesting statement: "The salmon bearing the tag 1136 was one of the two which I find on the record under that number, first, of Oct. 28, 1830, a female of 7½ lbs., 30 inches long; second, Nov. I. 1830, a female of 7½ lbs., in inches long; second, Nov. I. 1830, a female of 18½ lbs., in inches long; the duplication of the number 1136 on the record was undoubtedly an error, one of the above being marked 1126, and read off wrong when the record was made. But the above two fish being as nearly alike, we know very closely the growth of the one marked and its history. It was therefore liberated in November, 1830, and returned in June, 1832, having gained 9 or 101bs, in weight.

ALEXANDRA PALACE DOG SHOW.

WE are indebted to the London Field for the report of the Kennel Club show, which was held at the Alexandra Palace commencing on Tuesday, June 12. For want of space we omit the comments upon all of the classes except the pointers, setters and spaniels.

The meteenth exhibition of the Kennel Club commenced auspiciously on Tuesday last at the Alexandra Palace, for the morning was tine, although it unfortunately surned out a wet afternoon, and it was well known that the large number of 1221 dogs had been entered for competition. It was, therefore, only reasonable that the visitors who journeyed down by the "early special" should have indulged in prophecies of a very pleasant show; and it is still further gratifying to be able to state that their expectations were rully borne out, as there is no denying that many of the arrangements were better than in former years. Mr. Stephen, the secretary, to begin with, deserves the thanks of exhibitors for the trouble he took to insure the comfort of themselves and their dogs; and the large addition made to the number of judging rings is a move quite in the right direction. In paying this tribute to the advantage of these arrangements—which are, we should imagine, the result of a profitable study of those in vogue at Darington, the latter being the only show at which we can remember to have seen six rings in use at once—we take the credit for a considerable amount of self-abnegation, for the process of getting up our report was rendered very arduous. It is always an upfull task for the representative of a paper to keep his eyes on what is going on during the judging, but what was once a difficulty has now become a labor. Still, things worked well, and use said before, an improvement has been brought about.

Mr. Taunton, as manager, was very energetie; and was well backed up hy T. Edwards. As far as we condisce, the supply of keepers was fully equal to the demand

handsome varnished ones, and almost all the dogs were well separated by wire rails. The effect of the varnished benches was very good, and we heard many exhibitors expressing approval of them. The supply of water and of bedding was unlimited, and from what we saw we must repeat, without reserve, that the arrangements were all that could be wished, and reflect great credit on Mr. Ceutt, Spratt's manager.

We had written thus far on Tuestay evening. It may incredore be surnised that the expectations of a thoroughly edgovable show were rudely shattered by the events of Thursdorff of the country of the state of t

ordinary and unhealthy state of affairs. As one of the oldest and most respected breeders remarked to us, "The sky is full of clouds, perhaps a little thunder will clear them all away." We trust it will.

In champion large-sized pointers, Bang II. scored an almost bloodless victory, his solitary opponent, Marquis, being very moderate. The winner was looking better than we have ever seen him, and his grand chest and shoulders are unvialled, but his head wants character. In the large-sized dog class Mr. C. C. Norrish was well to the front with a first rate puppy, called draphic, whose head is extremely good; his legs, feet, and chest, too, are first-rate, and with time he should develop into something very much out of the common. Second went to the leggy Lord Rackingham, and third to an orange and white, who is good in his body, but very so-so in his head piece. The commended Masster Wazg was very much out of condition, and after the winner we funcient the unnoticed Beau II. as much as any. This dog was unnecountably passed over, as Mr. Whitchouse had determined upon giving him something well worthy of his acceptance, but in some inexplainable manner, and very greatly to his regret, missed him afterwards. As we have this on the best authority, we trust that Col. Starkie will be in some manner recompensed for his disappointment if he reads these lines. Mr. Norrish was again to the from with the very showy lemon and white Bery! in the large-sized bitch class. The bitch struck us amazingly; she has quality combined with substance, and is good in head, legs, feet, and stern. Tidings, who came next, has a nice head and fair body, but is somewhat marred by a peculiar stern, and not the best of hind quarters. Lady Olive, the third-prize winner, fails in her head, but is good in head, legs, feet, and stern. Tidings, who came next, has a nice head and fair body, but is somewhat marred by a peculiar stern, and not the best of hind quarters. Lady olive, the third-prize winner, fails in her head, but is good in head, legs, f

or night have been higher in the preceding class, where she obtained a vhe. Sam price, who came second, is very coarse for a puppy, and has too much leather about him.

Setters.—English champion dogs were badly judged; the winner, Royal IV., is heavy in head, and interior to Prince Royal and Remus. The bitch class contained one name only, and, therefore, Puzzle walked over for the four pounds. In the open dog class Mr. T. Cunnington scored a well-deserved win with Sir Alister, a dog we always liked. He is an elder brother of Prince Solm's Tam o' Braunfels, who ran so well at Shrewsbury and Blandford Field Trials. Royalty is, to

our mind, too thick in head, and her eyes, like her dam's, are too light. Duke of Cartmell would be improved if he showed more quality in bis head, and Pent Bondhue wants more feather, and might be better on his pasterns.

There was a rattling good American dog called Duke of Beaufort, shown by Mr. Goodsell, of New York, who ought to have got something, for he is good in head, has rare shoulders, and excellent hindquarters. He looked rough and untitly in his coat, however, and it seemed inclined to curl, which no doubt kept him back; but he is a good setter, and does his sire, Pride of the Border, credit. In the bitches Mr. Llewellin won with Dashing Paltrey, who is good all over, and well deserved her place. Novelty is rather on the small side, but was well selected for second, as she shows a heap of setter character; but Fashinoable Lady, the next in order, was shown in bad condition, and was lucky to get amongst the money at all, though, under other circumstances, sho would have been quite one of the best. Wild Daisy, he, would do with a better-shaped head; but Daisy II. is very smart, and none would have grumbled if she had been higher up. Mr. Bowers got he with Besset IV., to whose tor-knot we have an objection; but, on the other hand, we think him burly used when Heather Belle was passed over, for her quality certainly deserved a notice. Mr. Statters's Jane, had by. The puppies were very moderate, Jasper Remus, the winner, being coarse in head, with a bad eye, and also light him to be been been done to the lire. Bisloy, who is coarse in head, with a bad eye, and las light him to be been been done though his head is rendered less attractive by his rather light eye. But we liked very much, and can only presume that he was without a card on account of the white on his cleas.

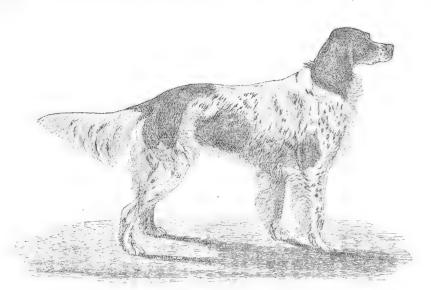

The bitches were a much better lot, but we liked the second prize, Kate Iv., who is grand in coat and color, and very good in other points, to the winner, Norwich Bloom, whom we do not think by any means a good one. To begin with, we ob

smeiters on ner face being especially objectionable. Lådy Palmerston II. has the expression of her countenance spoiled by her overhanging exchrows, which give her face a very sour expression. Bounce, he, is good in her headpiece, and might have been higher up. The puppies were a bad lot; the winner we have already alluded to, but the second prize, Patti, is weedy.

Irish water spani: Is were more numerous than usual, but Mickey Free had things pretty much his own way, and Mr. Skidmore's grand dog was never looking better. Second went to Molly Brallaghan, a very fair stamp of hitch, but not near Mickey in coot or fore legs—in fact, we rather inclined to the good-headed young Hilda for this place; but it must have been a near thing between them.

The spaniel classes were well represented, but began badly, for champion clumbers failed to gain an entry. The decisions in the open dogs were by no means well received, the two most fancied dogs—John o' Gaunt, and his son Tower—being left out in the cold. Wynn, who won, is long-faced and snipey; but Bachelor, who was next in order, is just the reverse in these respects, for his head is undeniably a good one, and we should have put him third. Baronet, the third prize, wants bone and color, so was lucky to be where he was. Tower is good, all over, and so, with the exception of his color and size for he is just a trifle small, is his sire, John o' Gaunt, who is the best clumber on the bench in our opinion. The winning birch has a bad stamp of head, and Dora is not good anough for the show bench; Coral, in fact, had the most correct head, and was about the best. Bachelor III, won in the Sussex: he is a good dog, but his ears are set on too high; and Quince II. has too much daylight under him. Dash V. might be more golden in color, but he is a well-mande dog and well worth his he. In the bitches Brida II., very much out of coat, beat her solitary opponent, the weedy Busy, very casily. The latter, we may add, is by the Black Kaffir, who in turn was got by Dachelor. Now we wan

PROPOSED IRISH SETTER CLUB.

PROPOSED IRISH SETTER CLUB.

The following letter, which we clip from the tire Stock Journal, we carnestly commend to the attention of the lovers of this grand breed of dogs, and would suggest that similar action be taken in this country, not only by those interested in the Irish setters, but that the lovers of all the different breeds and strains of dogs whose identity and characteristics are worth preserving should organize clubs upon a broad, national basis, and with the sole object in view of maintaining the purity, and improving the good qualities of their especial favorites. We should like to see this matter fully discussed in the columns of Forest and Steedard and trust that the lovers of "man's best friend" will come forward and propose some plan of organization that will meet the approval of all, and that the good works may go on until each and every dog in the land shall, by the comeliness of his form and the excellence of his abilities, attest the wistom of the benificent and fostering care that brings to him his perfect day. The letter is as follows:

Sim-Having been requested by several gentlemen interested in the breed to take the necessary steps for the formation of an Irish Setter Club, I have much pleasure in doing so, and solicit the favor of your kind assistance by the publication of this letter in your columns.

That Irish setters require more protection than individual owne's can positively give them, renders the formation of a club not only necessary, but essential to the preservation of the breed.

The object for which the club is to be established will be amongst others' the preservation of the purity of the breed, and its acknowledged excellence for sporting purposes; the establishment of field trials in Ireland; the settling of a scale of points for the guidance of breeders, which it is hoped will be adopted by judges when judging Irish setters at shows; and to apply the funds to be realized by members' subscriptions (which is hoped will be hoped by judges when judging Irish setters at

DAWN.

Our illustration this week is of the black, blue and ten English setter bitch Dawn, winner of first at the bist New York show in the imported English setter bitch class. She is owned by Mr. H. Bailey Harrison, of Tilsonburg, Canada. She is three years old and is by the celebrated Gladstone out of Clip, who are both winners in the field and on the bench. Dawn is a fine upstanding bitch of large size, exceedingly well formed, and is said to be an excellent tield performer with a wonderful turn of speed. She is a handsome animal and has a grant appearance that is very taking. The cut is from a sketch by Harry Tallman.

HOBOKEN DOG POISONERS.

HOBOKEN DOC POISONERS.

Etitor Forest and Stream!

Last Monday evening, the 26th of June, some miscreant poisoned my old champion English setter Jersey Duke, and his promising daughter, Jersey Madd. The latter died before we had any idea that either was poisoned, but Duke was luckily saved. The circumstances were as follows: About 5 of clock in the evening, when with several brothers and riends of mine on the front veranda of my residence, in West Hoboken, N. J., the dogs were let out of their kennel, which is surrounded by high fences and at least 120 feet from the street, and allowed to be with us in the garden. As quite a miniber of dogs had been poisoned in the streets of late, we were careful not to allow then out of the gate, and the only time when either of the four dogs about us were at all on the sidewalk was when they jumped from the veranda over the fence. They were immediately cylled in, and not one of them was more than a half-dozen feet from my fence. As I had to go out, I personally put them in the kennel and closed the gate, and while doing so noticed nothing strange in either of them. I had hardly gone from home a quarter of an homewhen a friend came with the news that Madd had given one fearful yell and dropped dead in the kennel. When I got home I immediately noticed strong symptoms of poisoning on Duke, and gave him without delay all the sweet oil I had in the house—about a cupful, and followed it my with a mixed dose of greace, hot water and salt, and thereafter gave quite a quantity of strong whisky. The dog fought with all his might against the administering of these emetics, and I had to fairly lift him off his feet. When I gave him the Drst oil he staggered around the room, tai drawn in, hind legs paralyzed and drawn forward, and he fell repeatedly list on his bely. He seemed to suffer fearful pain, and was very much excited. After a while he grew quiter, but did not vomit till several hours afterward. For two days after he showed the excited. After a while he grew goided a Committee ne

boom. West Hoboken, N. J., July 2.

THE CHICKEN TRIALS.

THE following additional entries for the Derby have been THE following additional entries for the Derby have been received:

18. W. B. Gates enters Carrie L., sotter bitch, whelped April 18, 1881, by Count Noble out of Peep o' Day.

19. W. B. Mallory enters Pink B., setter dog, whelped May 13, 1881, by Gladstone out of Countess Key.

20. David Furgesson enters Frank, setter dog, whelped June 15, 1881, by Carl out of Queen.

21. Dr. C. H. Tidds enters Minnie, setter bitch, whelped Dec. 18, 1881, by The Counter of Counters May 18, 1881, by Ered of Alama May.

23. J. J. French enters Prairie Rose, pointer bitch, whelped April 4, 1831, by Rival, Jr., out of Queen Hamlet.

24. A. M. Weinhardt enters Day Crockett, setter dog, whelped Nov. 2, 1881, by Sam II. out of Fan.

Jos. H. Diew, Secretary.

DR. PILGRIM'S BITCH.—Washington, D. C.—Can any of your readers give me information about a bitch once owned by Dr. Pilgrim, of Brooklyn, N. Y.? I should like her pedigree and a history of her public performances.—J. H. E. [Will some one supply the desired information]

suze of cocker spaniels.—With your permission I should like to say a word or two re the above subject and the letter from Mr. Jacobs, in your issue of the 2th ult. I was much surprised to see by Mr. Jacobs's letter that Mr. Langdale (who has taken a very great interest in spaniels for many years) was of opinion that a cocker should weigh 28bs., and an very pleased to see that Mr. Langdale put the matter right in your last issue. I should now like just to mention that, in my opinion, a cocker spaniel dog in show condition should never exceed 20bs, and I think Mr. Jacobs to pinion that a cocker should weigh 28bs, is certainly more absurd than the weight now fixed by the Kennel Chub at their shows, which Mr. Jacobs terms "absurd." "Stomelenge," in his last dog book, published in 1872, selects a cocker weighing 197, the first linestration. The Birmingham show committee, when they had a class for cockers, liked the weight at 23bs, for his linestration. The Birmingham show committee lave tried at their shows classes at 23bs, 22bs, and 20bs, for blow prize list, as we read in the Kennel Club committee lave tried at their shows classes at 23bs, 22bs, and 20bs, The Kennel Club blow prize list, as we read in the Kennel Glub committee I see the names of three gentlemen whose spaniels I have seen exhibited at the large London dog shows before we had the Kennel Club London shows. These facts I think, must be sufficient to show that if Mr. Jacobs thinks 20bs, an absurd weight for a cocker spaniel, there are plenty of other people who know something of spaniels that do not. That the cocker is a most useful spaniel is not, I think, disputed, and it is certain that it has been more talked about this last year or so than for many years. The Americans, who are first in so many things nowadays, are giving the cocker extra attention, and I should much like to see our large shows follow suit by making a dog and bitch class, and the weight 25bs, for dogs and 25bs, for birches. Mr. Langdale, I notice, suggests that the Kennel Club at

PARIS DOG SHOW.—The dog show held in Paris, June 3, judging from the meager reports that we find in the English papers appears to have been quite a success, nearly 500 dogs being on exhibition, many of them excellent specimens. The attendance was also very good, much better than at the show last year. The success was very encouraging to the enthusiastic managers who have labored under difficulties that were almost insormountable, and they feel no little pride in the fact that the Paris dog show bids fair to become a permanent institution, and they trust that through its influence a marked improvement will soon be manifest in the different breeds of dogs. We are unable to give the breeding or even the names of the winners, as the prizes that are announced are only mentioned as being awarded to the owners. We shall probably receive fuller details soon which will enable us to lay before our readers a full report of the proceedings.

GORDON SETTER LOST.—Mr. L. M. Levering, of Baltimore. Md., writes us that his Gordon setter dog has strayed or been stolen. The dog is about four years old, of medium size, stands 24 inches high, weighs about 45 pounds, and is broken. Any one knowing of his whereabouts will confer a favor by addressing his owner, P. O. box 492. Baltimore, Md.

KENNEL NOTES.

We wish to impress upon the minds of those who send us items for our Kermel Notes, that to avoid mistakes all names should be written in prixer Letterists, as we find it very easy to make mistakes where this is not done. We also would like to be informed whether the animals unaile or fernale, and to know the date of his A. Carrelli study of the notes in this number of the paper will show just what is wanted.

the notes in this number of the paper will show just what is wanted.

RANGE AND GALLERY.

ALBANY, June 30.—The first extreme mid-range match of the sea-Alban V. June 39.— The first extreme mutrange mactor of the son was well patronized yesterday. The rifferent brought out their Creedmoor gaus and curled themselves on the grassin allooneeivable shapes, looking for bulkseyes and nothing else. The weather and wind were all that could have been desired, but the targets were at times lighted up with a strong dazzling sunlight, and shortly after, under the black shadow of a passing cloud. The composition was won by Wm. T. Miles, of Greenbush, with a full score, closely followed by the veteran Goiger, of Hudson, who had an unfortunate slip on his second round. The scores were as follows.

T Miles, S C		 	75
Jeiger, R. S		 	74
n E Fitch, R C		 555555555555545-2	777
Miles, Hep C		54545545555555	4.5

This competitors withdraw.

At four o'clock a subscription match of 300 yards was called. A form o'clock as prize to the conditions which had been so brisk wind had sprung up, and the conditions which had been so successfully fought in the mid-range match could not be so easily overcome at the extreme short range. In addition, the men were a little shoulder-sore from the severe pounding they had received in this previous match. Shortly after the match was called nearly all present had entered, and the dring points were lively places for the average usually obtained at that distance. The following scores were made:

ALBANY, June 29.—The Captain John Daly Match was shot at Rensselaer-wyck this afternoon. The day was quite warm, and the bright sunlight on the targets gave them a dazzling appearance, and the bullseye appeared a mere speck. A gentle breeze was blowing, so that after once getting the elevation and the proper allowance for windage, good holding was all that was required to bring up the white disk. The usual military position, head to the target; is required in the match, so that the chances of a large string of bullseyes is reduced somewhat from what could be expected if any position, but the chances of a large string of bullseyes is reduced somewhat from what could be expected if any position to the control of the co

*Allowance to military rifles.
The targets weed occupied nearly all the afternoon with this match, at in consequence the W. G. Paddock match, which had been set at down for competition, was postponed until some other time.

BOSTON, June 28.—The long range men did not have a very favorable time at Wainut Hill to-day. The weather conditions were not good, the wind being very variable, the dial showing from 12 to 6 check. The wayne street.

Shortly after the start a nice crisp breeze set in from southwest and all hands set to working down the river in short boards with a favoring ebb. Down the bay the wind fightened up and left them entirely in the Narrows, but outside they picked up a southwesterly shirt which carried them around the lower mark and lifted them home with a free sheet. The can buoy No. 13 was rounded at the follow-

HOW MAGGIE SAILED.

HOW MAGGIE SAILED.

BUT for the untoward breaking of Maggie's jaws in the recent matches of the Eastern Y. C., she would have bacged first money, as she seemed a very hard one to beat, almost holding her own with Mr. Abbot's big Addie, 70t. over all, and 59tt. load line, and disposing readily of yachts of her own size like the fast Kirbybuilt Anna, and likewise beating larger boats, including the fast Hesper, 43ft. load line. We quote an interesting passage from the South Boston Inquirer, from which it will be seen that the beautiful "fitteen" led ble whole pack to the first mrit, and was set of the first mark, and was set of the first mark in the leading and the latter's topsall when the accident to Maggie's gaff cost her the initial race in American waters, which she seemed to have well in hand at the time; 'OC course the principle interest was in the leading yachts, and the Maggie, as she shot rapidly ahead and gained the lead, was cagerily watched, overy point in her sailing being carefully noted. From the Pig-stakes to Egg Rock it was a beat to windward, and here the magnifierent handling of the Shadow showed itself as she stole up upon the Maggie, gaining a minute and a half upon her to the rock. With the Maggie, addie and Anna, the three leading yachts, it was almost a neck and neck race to Egg Rock. The Maggie of the listed in the properties of the Maggie, and the other yachts followed with their balloons set, and the spectacle of the sixteen craft, all running free, with their lofty canvas boming grandly and every stitch drawing was a beautiful one.

"The contest was between the Addie and the Maggie. The former's

CENTERBOARD FOR CANOES.

THE aloption of centerboards for cancer resolves itself into the question whether weatherliness only is wanted or low weight in addition. For racing purposes, where "power" is a great factor in holding speed in light winds and in driving through seas where the water is ruffled, all will choose a board of great weight, such as those to be seen in the Tramp and Ripple, the Pearl models recently added to the N. Y. C. C. These "boards" are of lead and weigh 90 lbs., the limit set by the A. C. A. classification. When dropped to the full

depth of 18 in. below keel, allowed by the same rules, they not only hold to windward but form a very material addition to stability and sail. Where racing is the enument borton, these heavy contrivances will be given the prefer to the control of

wind of the color.

The other.

To ordinary boats the board consists of two thin plates or leaves made of stort sheet steel, which can be allowed to drop or folded at will by lever at the bottom of the box and held in any position by a tightner-serve on the opposite side. The box is 2fin, long and 8m, high, made of galvanized from. It is secured over a 5jin, slot in the keet by server with the opposite side. The box is 2fin, long and 8m, high, made of galvanized from. It is secured over a 5jin, slot in the keet by server and plant. The base of the box across stanges is only 15j wide, so it may be applied to almost any keet, for the flanges may project slightly beyond without harm. The use of the board transforms every rowboat into a fair sailer, and by locating it under a thwart is practically out of the way. We should sky no yach's yawl should be without one, as its advantages are so manifest and its simplicity and cheapness apply using four leaves dia, wide, neight of a fair sailer, and the proper distribution of the proper of the control of the proper of the four have an area of three-quarters to one foot in canoes and from one to two feet in rowboats, according to the size used. These boards are manifestered by Atwood Bross, Clayton, N. Y., and have been applied with much success to numerous boots upon the St. Lawrence especially about the Thousand Islands. We think their merits deserve this description, that their introduction may be furthered.

THE Herresbofts have delivered this new high speed steam yacht to her owner, H. H. Warner, of Rochester, N. Y. Like all their hundivors, the Siesta presents unmerous features original with the Bristol builders. In point of model she is totally different from the usual run of overgrown knunches, still built about New York in the ciumsy fashions of our forefathers. The Siesta is sharp as a knife, with U frames throughout, and moderate hollow to her lines. Her speed is derived from very light displacement and small wet surface, owing to the use of composite construction and tone Herreshoff coil bodier and their light weight engines. Sile is lightly built but of bottom and their light weight engines. Sile is lightly built but of the stand far rougher usage than the heavier loads with the distyle oak frame, yellow pine plank and iron spike fastening. She is 98it, long over all, 71th, beam, and 9ft, deep. Her great beam is mainly across deeth, her sides have considerable flare. These proportions were determined upon by Mr. Nathaniel Herreshoff ather extended experiments made a year ago. The boiler is of the circular coil pattern, inteasy, while cylinders 10½ and 18m. diameter by 18m, stroke, and cussing, with cylinders 10½ and 18m. diameter by 18m, stroke, and cussing, with cylinders 10½ and 18m. diameter by 18m, stroke, and which is highly satisfactory. The screw is 5m, diameter with 50m, pinen, four bladet.

The hull has angle iron frame 'x3m, with reverse frames, and floor plates 3-tion, thick. Sies is planked with oak and pme, screwbolled to the frame. Rudder, screw and skag are of bronze. Rigged as a pole-schooler, has a gig, diny and a 3m-3½st, steam cutter at davis, the latter capable of making mine miles an hour. As the Siesti is designed for the St. Lawrence River, she has been given ample head room and venillation below by a deck house fore and all wan a pilot with the kilkthen beneath, and a pantry, forecastle, etc., forward of the latter. The main saloon is reached by a companion from aft the latter. The

THE cable brings news of the worful defeat of Mr. Gower's Rhode Island cathout Gleam by the new Southampton built Mocking-bird, over a course in the Solent, July 4. The Gleam never had a show from first to last, but was thrashed on every point, Mocking-bird winning with the greatest of case, having 19½ minutes to her good. Another fond delusion has been ruthlessly swept away by the test of cold facts, and we stand beaten at our own game of rouding America? Are we to see the chapter wound ap against us by a big entire this fall, or will Madge, Maggie and Gleam sharpen our buildiers' wits equal to such an occasion?

RESULTS' OF BAD CLASSIFICATION.

Editor Forest and Stream.

The once flourishing Delaware River Y. C., of Philadelphia, went ont of existence because 20th, boats had to contend against 28th boats. At the Cooper's Point Y. C. regatta, June 26, out of a fleet of B boats and 9 entries, 5 boats only came to the start. It was a spirited race and pretty to look at, but the club (the oldest on the river As its start and the start of the cooper's property of

WHY MYSTERY LOST HER MAST

WHY MYSTERY LOST HER MAST.

It is an impossibility to follow individual yeachs in many matches,
It is the floct is often strung out over miles or sailing several contents,
and committee stemmers are not always managed with tact to obtain
the best view of the race. Hence we are obliged to publish some
statements from second hand for what they are worth, or leave the
reports incomplete. As Forest and Strikandesires justice to all, our
columns are open to corrections when in fault. In the New York Y.

Gregories of the strike of the results of the strike of the property carried away
from the content of the strike o

found with the builder, who did all and more than his contract called for:

Editor Forest and Stream:

I notice by the Fordst and Stream of the past week that you at tribute the accident to the Mystery as being caused by her outfil being all too light. Her bowspirt was not carried away or any piece being all too light. Her bowspirt was not carried away or any piece broken. Her mast was carried away about thirty feet from her deek. Deep the proof toogle stick, but it could not hold her stills up without any good tongle stick, but it could not hold her stills up without any support toogle stick, but it could not hold her stills up without any seed to the proof toogle stick, but it could not hold for any without any seed to the proof to the still the still to still the still the started in the race, and that was before we had any wind to speak of.

I consider her mast, and in fact all her rig, as it was on the morning of the race, if it had been sufficiently stretched and set up, to be suitable for such a boat, and stout enough for all occasions.

Aloxzo E. Smith, yacht builder, Islip, L. L.

COOPER'S POINT Y. C .- JUNE 26.

COOPER'S POINT Y. C.—JUNE 26.

Edilor Forest and Stream:
This club sailed its ammual regatta on the Delaware June 26, with the result that the big boat wins. Better classification must be adopted, in which size shall be taken into account, or Delaware racing will suffer. Course from Cooper's Point to Chester buoy and back. Out a feet of 16 boats only 5 started at 11 A. M., in the following order: Coliil, Mack, Brenner, Springer, and Schuck last. Elbidie, wind light from southwest. The race was interesting on account of the lightness of the wind. It seemed to be any one's race to the yachts moved off lively, the Springer passing nount lower may considerably ahead of the fleet with Coliil second, Brenner third, with intervals of one minute each. Mack carried way, and went only of the race at Gloucester going down. The winning boats passed around home stake boat: Springer at 4:50 and Coliil at 5:3, a Captain.

CATAIN.

SOUTHERN YACHT CLUIL.—The sweepstakes for \$500 between Lady Emma and Silence and the match for a pennant presented by Com. A. A. Maginnis, open to club yachts, was sailed on Lake Panchartrani, June 29; course fifteen miles, three times around a five-mile triangle. Entries—Silence, 27ft, 21a., A. C. Brewster; Lady Emma, 27ft, 29(in. J. B. McConnell, La Belle, 29ft, 61a., E. A. T. McCutchow; Zoe, 3fft., Henry Denegre; Linwood, 28ft, 61a., E. Hogan; and Swelyn, 27ft., John Philips. The gun was given at 35f;29, and the Lady and Silence get away from an anchor, the Latter taking the lend in a moderate southeast wind. The cabin bodis were sent of not 4f;30, likewise from an anchor, Linwood being was about close band to the exactory stake, then the strength of the castory stake, then the strength of the castory stake. Then the strength of the westward mark. While running with the wind quartering the Lady drew up on Silence and the race became exciting. Sile seemed good at the work and showed the course around the second stake. A few short hitches and then a long leg brought the first round to a close as follows:

Indy Emma 4 55 49	Zoe 5 06	41
Silence	Evelyn 5 09	134
La Belle 5 01 41	Linwood	0:
The wind hauled to southwest no	aking it dead before the wind	to

The wind hauled to southwest making it dead before the wind to the East mark. Lady Emma boomed out a balloon jibtopsail, and Silence followed later. With a beam wind to the is second stake both held about the same, and the excitement of the crowds ashore was kept up to a high pitch. The second round was completed in the same order as the first, and on the third things became desperate between the two lenders, who had bunded each other within a few seconds all day. Then silence got blanketed by a trading schooner, and came income seconds to the weather of the second on the starbeard, and had to put around under the leady forming off on the starbeard, and had to put around under the leady forming off on the starbeard, and had to put around under the leady forming off on the starbeard, and had to put around under the leady forming off on the starbeard, and had to put around under the leady forming off on the starbeard, and had to put around under the leady forming off on the starbeard and had to put around under the leady of the best of the seconds all the seconds and the seconds around the course on record in American waters. But a few lengths, often only feet, separated the two ellippers from the gun to go to the finish. The final times were as follows:

Lady Emma,	6:84:04%	Zoe	1:58:16
Sileneo	6:81:50	Evelyn	:00:07
La Belle	6;55;24	Linwood	60:02:
Only one other race w	as faster t	han the above, and that was	when

Only one other race was raster than the above, and that was when there was a gale blowing, when the Cydnus beat the Lady Emma, Albertine, Pluck and Luck and Startle, on May 25, 1839, when the running time was 2:33:05. In this race it was 2:36:44½.

Albertine, Pluck and Luck and Starlie, on May 25, 1832, when the running time was 2:23:256. In this race it was 2:53:544.

HULL YACHT CLUB.—For the challenge pennant of the club, June 21, there was quite a good master, open to club, yachts only. Namerous entries failed to start, owing to the calm in the meeting. Namerous entries failed to start, owing to the calm in the meeting. Starting them from reaching the course. None of the first and second class were able to appear in time. Courses as follows: For third class, from judges' line to West Gut, passing out and leaving Pettick's Island on starboard, thence N. E. by N. 34 mile to black buoy on Wilson's Rocks, leaving it on the starboard; thence to Hunt's Ledge buoy, off Tody Rocks planey, rounding and leaving it on the starboard, to the planeys of the pettick's Island on the starboard, to the planeys of the pettick's Island on the Starboard, to the planeys of the pettick's Island on the Starboard, to the planeys of the pettick's Island on the Starboard, to the planeys of the pettick's Island on the Starboard, to the planeys of the pettick's Island on the Starboard in the port, to White Flag off Starberry Hill, rounding and leaving it on no port, to Fig Rocks Beacon, leaving it on starboard to judges' boat, passing between it and red lag, 36, nattical miles. The start was the pettick's Island, leaving it on starboard to judges, a custom starboard to judges and starboard to made the my starboard to pudges and the pettick's Island, leaving it on starboard to judges of the fore under the impulse of variable airs. On the home stretch the breeze picked up a trifle and brought the match to a close, Thisber was becalmed before reaching West Gut, the lightest boats slipping to the fore under the impulse of variable airs. On the home service the breeze picked up a trifle and brought the match to a close, Thisber will be the pettick's and Dandelion taking the permant in their classes. The regetta committee was accommoditied aboard Con. Lambert's sloop Anna. Judges-Tr. F

Section 12 honorary and 75 regular members, and the section of the three cardinal dimensions divided by 190. Time allowance according to Y. R. A. scale. Races this season will be found among our fixtures.

SOUTHERN CHALLENGE CUP,—The Southern Yacht Clubsailed for the challence cup over the regular Penchartrain course of for the challenge cup over the regular Penchartrain course of Lablande, 29f., 115m, with Carney as skipper. Mephisto, Alex. Brewster; Rubic, 23ft., J. B. McConnell and Gipsy. They were sent away from moorings to one gun at 332:19 with a moderate wind from west southwest, Gipsy being quickest followed by Mephisto, Pluck and Rubic last. Beoms over the port quarter took them to the first stake, by which time Pluck had disposed of the rest and never again lost her lead. Gipsy and Rubic had is hot to the next mark. It was clear handed burner, and Alephisto in split of seam bags to windwards a short leg for reducing the water between herself and the leader. The first round was finished by Pluck at 421:39; Mephisto, 4:22:31. Rubic, 4:28:90 and Gipsy, 4:28:39. Gipsy then held too high for her good hat made up on the free stretch to second stake, running by little Rubic once more. Pluck increased her lend when Zaphisto took a bad knockolown, from which she recovered only by the skillful took a bad knockolown, from which she recovered only by the skillful took a bad knockolown, from which she recovered only by the skillful took of bad knockolown, from which she recovered only by the skillful clost some 29km, by an extra hitch. The second round was accomplished as follows; Pluck, 5:31:40; Mephisto, 5:37:19; Gipsy, 5:40:33. And Rubic, 5:47:31. The third and last round was completedwithout material change, Pluck and Luck making her time of 6m. 5%. off the little Gipsy, and landing the challenge trophy. This cup must be won thrice in succession to become property. Times of Rubic, 6:37:42. The Hiller khad herefore im .8k, 147:25.
Resident Timekeepers—Henry Bounabel, P. B. Caulfield and Wm. M. Smith.

KNICKERBOCKER CANOE CLUB.—The first annual June regata of the club was held Wednesday, June 28, off the club house, foot of Eighty-sixth street, North River, 43 P. M. There were five reases on the programme, the last being open to all comers, under sail and paddle both. No time allowance. Paddling race for Rob Roys over a half-mile course, won by the Snattamuck, E. A. Hoffman, Jr., in 6 minutes 39 seconds; the Oscoela, A. Erentano, second, in 7 min. Paddling race or Snadows over a half-mile course, won by the Snattamuck, E. A. Hoffman, Jr., second, in Smith. 35-sec.; the Padiside, H. T. Keyser, Hird, in 9min. Sailing race over a three-quarter-mile course, won by the Coquette, C. E. Warren, in 5min. 33-sec.; the Saskatchewan, R. J. Wilkins, second; the Falisade, E. T. Keyser, third, and the Oscoela, J. D. Butter, and the Padistande, E. T. Keyser, third, and the Oscoela, J. D. Butter, and the Padistande, E. T. Keyser, third, and the Oscoela, J. D. Butter, and the Coquette, Hoffman and Warren, in 5min. 3-sec. and 3 buter, second, in 8min. 3 sace, second; in said, severe and Butler, second, in 5min. 3 sace, and 3 buter, second, in Min. 3 sace, second; Mascor, S. Loowenthal, third, and Coquette, E. A. Hoffman, fourth.

QUINCY YACHT CLUB.—The annual match of this sac.

QUINCY YACHT CLUB,—The anual match of this club was sailed June 2f in a good wind from the westward; courses, 734 and 6 miles, Result as follows, going to Anny and Dandellon:

Zeter ... C. Morris.24 5 3 48 49 3 35 05 PRATTIS COAST PH.OT. A new odition of this handy little volume has made its appearance. The nuthor, being an experienced capitalian composition of the interior of the substitution of the contribution
pless generally, and of F. W. Lincoln & Co., Boston, Boston, THEVES.—A number of small yachts have been stolen from their moorings off City Point, Boston, and a catbout from the basin of the Seawaniaska Y. C. Staten Island. There is one of the Seawaniaska Y. C. Staten Island. There is one of the seawaniask and the first opportunity offering. Owners have a right to protect their property affort, at all hazards, as well as their houses ashore, and a sudden closing of a boat-stealer's career, upon good cause, would be a public benefaction. It would be a good plan if yacht owners would make up a purse to put detectives upon the track of the thieves and see to it that the full weight of the law overlakes them, as the property of all is put in jeopardy if the rogues are allowed to go unpunished.

go unpaidshed.

LIVE START—Concerning the start from an anchor revived by the Boston V. C. in their great match June 17, the Boston Herold has this to say: "The start was made in a new and novel manner, entirely out of the general rule, the yachts being required to start from an anchor with all soils down, thus giving an excellent exhibition of the efficiency of the crows in making sail. When the word was given a most exciting scene was witnessed, each crew naturally reing with the others to 'mastle wil' their sails, and gain whatever supremacy they might by their celerity. In some cases the hall-lards were led through snatch blocks, and a 'walk away' was made with the slack, running the sails up with almost lightning raphility."

with the slack, running the sails up with almost lightning rapidity." SEWANIAKA YACHT CAHB.—The annual cruise has been fixed for July 12, and the club anatolnes for small bonts and camoes in New York Bay for July 22. Since non-small bonts and camoes in New York Bay for July 23. Since non-small bonts and camoes in New York Bay for July 23. Since non-small to be considered was yield out on protest from Fannis for carrying balloon jib in the Carbathian match, June 17, whereupon Fannis's owners generously withdrew their protest and declined to receive the cup under the circumstances. It therefore newer's to the club to be sailed again during the cruise or in the fall. New numbers elected: D. S. Baniss, W. V. Chapin, J. A. Murray, H. Conger Galley, S. M. Roosevelt and D. M. Stinson.

NOLTROYS WATER STOLS.—The distance of the according to the con-

NOIFTON'S WATER STOPS.—The devices of the ennocist are deep. Col. Class. Ledyard Norton, editor of the American Commiss, after protracted search for an efficient drip stop for paddles, advises the following: If you have no bubbes of your own, cell at a drug store piec out two-well, call them rubber nozzles, much sought after in raising the new generation in its earlier stages—slice of the small ends, stip over the paddle and they will fit like cups, an effective preventive to dripping. A testimonial to the Colone's genius is in order,

ECLIPSE.—In recent reports the sloop Eclipse, Mr. E. A. Willard, has been set down as a shoat bout. As a matter of fact, according to measurements by A. Cary Smith, she has 6ft, Sysh. in depth of hold on a load line of 50tt. Bein, and traws 6ft in main the last of the following the first of 50tt. Bein, and traws 6ft in load line, has only 5ft, hold and craws but 4ft. and the big Gracie with about 70t load line has but 6ft. Sin, hold and draws but 6fgt. By the way, how long is the error about Gracie's load line going to be perpetuated in club books, Olsen's List, and records generally? She is invariably put down as 60.9ft., whereas she is some 9ft longer.

NEW STEAM YACHTA—The largest wooden steam yachtbuilt in New York was launched June 29 from the yard of Sam. Pine, Greenpoint. She is built for Mr. 6. Wilcox, and is of the mand river type, low sided and shoul wift of the Sam, Pine, Greenpoint. She is built want of sufficient depth of both. Large fractions to make up for the want of sufficient depth of both. Large fractions of the state of the sum of the sufficient depth of both. Large fractions of the critical type with cylinders 14 and 24a. diameter and 16th., stroke. Two boilers of the Scotch tubular type to carry 129 las, as working pressure. Wheel four bladed, 5tt. diam. and 9tt. pitch.

FORGUNS.—An accident to the signal gun abourd the Addie Elmer, recently on a cruice with the New Club from Boston, came near proving faat. The gun flew into a large would have it, not in the direction of the crew. The small case lack would have it, not in the direction of the crew. The small case lack would have it, not in the direction of the crew. The small charges used accidents would be more frequent. Yachis he mean are cautioned against purchasing guns from cheap ship chandlery stores along the river from or from patronizing junk shops. Reliable dealers like Hartley & Graham, of New York, or Wm. Red. & Sons, of Boston, are the only houses in whose guns confidence can be placed.

be placed.

MAGGIE'S RACE.—A correspondent inquires whether the Maggie was beaten in the Eastern Y. C. race or not before the accident to her jaws of her gail. She was not. On the contrary, she had the race well in hand. The Addile, 50ft. on load line, had a moderate lead the late of the state of the state of the late of the state of the late of the la

tomage or rengu.

EASTEIN CLUBS.—The membership of Eastern yacht clubs is as follows: Eastern, 437, the largest club in point of numbers in America; Hall, 351, 8ve Bedford, 23; portland, 151; South Boston, 140; Lyrun, 189; Eastern Edities, 151; Quiney, 93; Salem Bay, 89; Cape Ann., 72; West Lyrun, 78; Banker Lyrun, 78; Harker Hill, 55; Haverbill, 35; Provincetown and Washington Village, 25 ouch.

SMOOTH SKIX.—F. JOYNECON BRIG TRANSMISSION, AMAGE PROCESSION SMOOTH SKIX.—F. JOYNEC, of Glene Falls, has been gesting special tools to make a new flush lap in the skin of cances and light boats. Half the thickness of the streaks is cut away, an thoy fay ogether with edges square, leaving flush surface inside and out, and naking a tight and strong seara, also allowing the frames to lay lair all the plank from keel to gunwalo.

HULL YACHT CLUB.—Editor Forest and Stream: The following changes have been agreed upon in Eastern fixtures:
The open regata of the Hull Y. C. as advertised for Aug. 19, will take place that day, the Beverly Y. C. postponing their regata from the 19th to the 20th, the Hull Y. C. 1 turn changing the first championship from the 26th to the 32d August.

LONG GAFFS, SHORT BOOMS.—Sloop Fairy, Vice-Commodore, C. A. Perkins, Hull Y. C., has received an entirely new rig from McManus & Son, Boston. The boom was shortened three feel, and the gaff increased a like amount. The new sail is a great improvement upon the old narrow-headed fit of last year.

NEW YORK YACHT CLUB.—The club book for the year shows as schooners, 27 sloops, 6 cutters, 28 steamers and 3 steam launches. The tounage is the leaviest by Far of any club in America. There are 31 honorary, 37 life and 373 regular members—a total of 493 members, and a fleet of 114 vessels.

BERKELBY CANDE CLUB. The students of the Berkeley Dis-inity School of Middletown, Coma, have organized a canoo chib with the following officers: Commodore, W. H. Larone; Vice-Commodore, W. E. Patvine; Treasurer, C. J. Mason, Secretary, J. W. Peck.

PATCHOOUE YACHT CLUB.—Has been recoully organized at Patchogue, South Sile, L. 1., officers as follows; Commodore, Capt. Harry Deancy Vice-Commodore A. C. Mot; Rear-Commodore, K. W. Kowley; Secretary, W. J. Carter; Treasurer, Alfred Price; Meas-urer, Gilbert Smith.

BAY REGATTA.—It is announced that interested persons propose arranging for a public bay regatta in August. We trust the funds will be raised by these expecting to profit from such an event, and that no hat be passed around begging from the public in general.

that no hat be pessed around begging from the public in general.

PENNSYLVANIA YACHY CLUBE.—The new club burges is triangular in shape, red field, white triangle on luff containing a blue keystome. We have already referred to the restriction soft to said mera in this club limiting bolt rope to 5fft. 6ln. See issue of Fch. 17, 1881.

SAN FRANCISCO CANOE CLUB—Has seven members and sover emoses with "will" Brooks as Commodore who, by theiway, is the "leading man" with the paddle, and through whose proselyting efforts canoeing on the pacific is about to take a fresh start.

INTERNATIONAL CUP.—H. R. II. Prince of Wales, Commodore Royal Yacht Squadron, offers[a cup to be sailed for by yachts over thirty tons belonging to any recognized yacht club, British or foreign.

oreign.

RACING.—Matches wore sailed July 4 by a large number of clubs,
eports of which will appear in our next issue. The Knickerbocker
and East River fleets left on the 1st for a three-days' cruise east-

ward. WAIF.—The new ten-ton cutter built by Poillon, of Brooklyn, for fr. Gouverneur Kortright has been christened Waif. She is 39.5ft, wer all, 32ft, load line, 11.4ft, beam, 6ft, draft with keel.

TOPSAIL SCHOONERS.—There are now two American topsail, schooners affont, Wanderer, 197 tons, E. D. Morgan, Jr., N. Y. Y. C. and Nokomis, 116 tons, W. A. W. Stewart, S. C. Y. C.

ANOTHER.—Schooner Triton, Geo. A. Thayer, A. Y. C., has sent her big jib ashore and set up a stay for a full due. The single jibs are about downed on schooners as well as on sloops.

HAZEL.—The new 27ft, sand-bagger, built by Isaac McGlehan, of Pannapo, has a hoist of 23ft, to mainsail, 23ft, boom, 20ft, gaff and 30ft, jib.

NEW HAVEN YACHT CLUB.—The club burgee is a triangular flag, blue ground, white cross, with red star in center of cross.

The Horse in Motion.—The July Century contains an entertaining paper by Colonel George E. Waring, reviewing Stillman's recently published work on "The Horse in Motion," and reproducing many of the photographs taken at the private race-course of Governor Leland Stanford, of California, by Mr. Muybridge, a photographer of San Francisco. The method by which the photographs have been taken—the result of years of experiment—is substantially as follows: At one side of the track is a long building arranged for photographic work, containing a battery of twenty-four exmerts, all alike, and standing one foot apart. On the other side of the track is a screen of white muslin and a footboard. The screen is marked with vertical and horizontal lines, and the footboard bears numbers indicating separate intervals of one foot each. The instantaneous shutters of the camera are operated by electricity, and their movement is governed by such powerful springs that the exposure is estimated to be about one five-thousandth of a second. The contact by which the shutters are sprung is made by the breaking of a thread drawn across the track at about the height of the horse's breast, there being one thread for each camera. In his flight through the air, therefore, he brings each of the twenty-four cameras to bear upon him at the moment when he passes in front of it, and that camera represents his position at that instant. The series of representations indicates the consecutive positions at each of the twenty-four enemes to the author of the wheel, indicating an extremely short exposure. In a series showing a horse trotting at speed, the follow of the wheel, indicating an extremely short exposure. In a fast run, the tuits of the horse's tail, as it wayes with his stride, are clearly marked.

FINE HAND-MADE

All these reels are made, with best quality screws, so that they can be taken apart if necessary. Any of these reels may have either clicks or drags added, or be nickeled at 50 cents for each addition.

SHIELDS'

American Improved Gut Leader

CASTING LINE. Rig. L

My invention consists in adding to a leader a reenforce at the several points where the upper fles
are to be attached, by which the size of the line at
such point is doubled, the result being that the wear
upon it by chafing from the loop of the firs-nell is
greatly prolonged, and the doubling of the leader
in the act of looping on such snell greatly facilitated. Heretofore, in looping the upper flies of a
cust about a leader of single gut, the latter soon
becomes badly chafed and its enameled surface
worn off.

tated. Heretofore, in looping the upper flies of a cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

In the leader in the act of looping the suell to it is difficult to hold the loop of the fly as a single piece of gut is not sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a leader made in accordance with my invention, while Fig. 3 shows the manner of looping the leader. Fig. 3 of shows the manner of looping the leader as heretofore in use. Fig. 2 is a leader made in accordance with my invention, while Fig. 3 shows the manner of looping the leader as heretofore made, such leader being composed of several lengths of gut knotted together, as shown at b, and the snell attached to the fly being looped about the leader, as shown at c. In carrying my invention into practice, I add to the leader A at one or more points (according to the number of flies to be used in the cast in additional the leader of the such in the cast in additional the leader as such points. This re-enforce may be added in several ways, but a simple and easy one is that shown in Fig. 2, in which two adjacent ends of two strands of gut are laid side by side and knotted together, as shown at of pig. 2, in which two adjacent ends of two strands of gut are laid side by side and knotted together, as shown at a fig. 3, and then one generally practiced, both with my leader and those has shown at Fig. 3, and then apply the fly by massing such loop et hrough the loop of the seller into aloop has single gut, by a loop of the seller and reader in the loop of the leader from a loop of the snell to which the fly is attached, and after passing the fly hough the loop of the leader from a loop of the snell to which the fly is attached, and after passing the fly hough

e. 's will readily see the advantage there

Ill ny neares win reamy see the lavamage there in using them.

The easiest way to apply a "illy" or to remove it thout impairing the strength or durability of the ders. Length 3, 6, 3 ft., made of superior silk rm gut in all varieties.

SHORE BIRD SHOOTING.

THE days will soon be here when it will be in order to polish up the shotgun, to load the shells, and to look over the stools and see that the hinges of the metal ones are in good working order, and that they are all, wooden as well as tin, provided with sticks. The seasor for shore bird shooting will be here before long, and the enthusiastic gunner, whose weapon has for months been laid aside, or only used on glass balls, will be making pilgrimages to the beaches and marshes along the coast, where the willets. dowitchers, yelpers and other beach birds are wont to stop and feed. Beach bird shooting is pleasant and pretty sport, and serves well to keep a man's hand in practice at a season when there is no other shooting to be had. It is pleasant to sit upon the outer beach and listen to the thundering of the surf, to feel the cool salt breezes upon the cheek, to watch the dancing blue waters that stretch away to the eastward and speculate upon what is going on beyond them, and to note all the varied and constantly changing phases of marine life which successively present themselves to the When the flight is good there is excitement enough in watching for and calling in the birds, but when it slackens there is no dearth of objects to make the time pass quickly and pleasantly.

Very much of one's success in this kind of shooting de-

pends upon the ability to call the birds down to the gunner. It often happens that a flock may pass within sight of the decoys without observing them, and on such occasions a few call notes will always attract their attention to their mimic brethren, which they will at once seek to join. flock, which have run the gauntlet of guns from Maine to New Jersey, suspiciously passes by, a well-regulated and persuasive call or two will often induce them to turn and swing over the motionless counterfeits, so as to give the shooter the opportunity of getting in both barrels. frequently some of the less suspicious varieties will return, even after they have been shot at, and will attempt to alight near the blind. Unless, therefore, the shooter has full confidence in his own powers of calling, he should have the co-operation of some old bayman, for many of these individuals have attained almost perfection in this branch of their profession. It is, of course, much more satisfactory to depend on one's own exertions, but to successfully imi-

tate the notes of the different species requires an apprenticeship extending over years.

It was our good fortune, a few years ago, to go bay bird shooting with one of the most accomplished amateur sportsmen we have ever met, and the pleasure of seeing the skill with which he would work in a flock of wary jack or curlew would have amply repaid us for all the trouble and time of the trip, even if we had had no shooting.

Having your outfit arranged and bayman ready, there is one other essential to the sport, without which you cannot do much. You must have birds. The flight usually commences in July, but the largest and most reliable one is in August, usually from the tenth to the twentieth. Of course the date at which the birds come is not a fixed one, and de-pends to a great extent on the wetness or dryness of the eason, the meteorological conditions, and still others about which we are in ignorance. An easterly storm about the middle of August is likely to bring on the birds, as the say There are a host of localities along our coast, from Maine down to the Carolinas, where bay bird shooting may be had. Many of our readers know some favorite place to which year after year they are wont to repair for a few days of pleasant shooting. Many good grounds are not far distant from favorite seaside resorts, and the idlers on the beaches can kill time and the birds at the same moment We have not space to speak at any length of the sport, but for details in regard to it must refer our readers to the little book which we published last year, entitled "Shore Birds."

DESTRUCTION OF FOOD FISHES

WE have published accounts of the taking of valuable food fish by the purse-net men, who fish for menhaden from which to make oil, and of the grinding up of mackerel, bluefish, drum, etc., and their conversion into oil instead of food, for which they were intended. It has been denied that this has been done, and the argument has been used that if any fish were more valuable for food than for oil it would be sent to market. This may appear to be so at first, but the fish are taken, and while the steamer is looking for more they pass the point when they cease to be saleable. and are then thrown into the boiler.

This is an evil which should be stopped at once. The price of food is high enough now, and if fish are plenty let us have the benefit of it, and buy our mackerel for three cents a pound, instead of twelve to fifteen. The fact that menhaden are scarce and the oil works are in danger of standing idle is nothing to us. The oil men, having killed the menhaden goose, must not be allowed to begin upon another species to extract golden eggs. Let them abide by the consequences of their acts if they have killed off all the menhaden, which we doubt. In their greediness, the men on Long Island and elsewhere begin at the menhaden when the fish first appear, and keep it up all the time they are with They take them for manure when they are spring-poor, and never let them enter the bays for the purpose of spawning without harassing them with nets. We have no doubt that if the lish were left undisturbed until September there would be as much oil made each year, after a year or two, as there is now, and the fish would increase.

Our attention has been called to this matter by a correspondent who writes from Gloucester, Mass., who tells us that there is great excitement at that place on account of a threatened movement by the oil men on the schools of mackerel. He says that preparations are now being made to put a Tiverton, R. I., steamer into the catching, and manufacturing into oil, of the mackerel, thus diverting them from their legitimate use as food, and that the fishermen at Gloucester are indignant thereat.

Should this move be successful and meet with no opposition it is not to much too expect to see the whole fleet of steamers, numbering over one hundred, all engage in mackerel catching for oil. This, of course, will send up the price not only of this fish, but of all others, and eventually end in the extinction of the mackerel and the driving of thousands of men now engaged in their capture to supply the markets with them, to enforced idleness. No class of men should be allowed to pursue a course calculated to destroy one of our most valuable sources of food merely to fill their own pockets.

AUTHORITY OF SUPERVISORS .- We understand that several large bags of woodcock have been shot in the vicinity of Bridgehampton, Long Island. The explanation offered is that the supervisors have passed a special local law, making the woodcock season in Bridgehampton open July 1, instead of August 1, as elsewhere in the State. We do not does not amount to a row of pins. The supervisors have no authority to make any such local law, and it is consequently of no effect after it is made. Section 37 of the State Game Law says: "It shall be lawful for the Board of Supervisors of any county, at their annual meeting, to make any regulations or ordinances protecting other birds, fish, or game, than those mentioned in this act; and also for the further protection of such birds, fish, and game as are in this act mentioned, except wild deer, and to this end to prohibit hunting or fishing in particular localities or waters lying within their respective counties for limited periods and during certain months of the year, and to prescribe punishments and penalties for the violation thereof, and adopt all necessary measures for the enforcement of such ordinances and penalties." If the Bridgehampton supervisors think that this gives them any authority to open the woodcock season on July 1, they are much mistaken.

INCREASE OF SMALL BIRDS IN THE WEST.—In his "Kansas Notes," our correspondent "A. B. B." speaks of the increase of small birds in that country. The apparent increase in the number and variety of small birds to be found in a prairie country which has been recently planted with has taken place all through Kansas and Nebraska within our recollection, and is due, we imagine, chiefly to two causes: (1) the presence of birds of the timber, which have been attracted by the suitable shelter offered by the groves and the hedges, and (2) the fact that the birds of the plains are much more readily seen when in the trees than they are when as in a country without timber they can alight only on the ground. Bearing on his subject is a note just at hand from our Denver, Colorado, correspondent, "W. N. B.," who says: "As the country improves, birds are becoming plentiful, and we prize them very highly. It is not only for our pleasure, but to our interest to protect and

THE POISONED SCHUYLKILL -Reports from Philadelphia say that the fish in the Schuylkill River are dying in great numbers and are floating. They lodge along shore and decay and are polluting the air. Men have been seen gathering them, but the use they put them to is not known. At Reading the stench is the worst and at this point the black bass are suffering. It is thought that a lack of fishways prevent the fish from ascending to purer water. The Reading Board of Health are investigating the cause of the mor-The president of the Pottstown Water Company says that thousands of dead fish can be seen at that point, and he will have the water analyzed because the people are alarmed at the prospect of drinking polluted water. It is thought that poisoned water from an old mine near Pottstown has flown into the river. The water of this mine is impregnated with sulphate of lime.

THE HUDSON RIVER ASSOCIATION .- This society for the protection of fish and game has its headquarters at Newburg.
The president is Mr. John R. Wiltsie, of Newburg, one of the 'old school," who has shot and angled more seasons than some of the younger members of the society have lived, and is to-day a splendid example of physical vigor and perfect health. Mr. Wiltsie makes annual excursions to the Thousand Islands in company with Mr. Warner, of Rochester. The other officers of the society are: Jas. G. Wood, Vice-President, Poughkeepsie, N. Y.; P. H. Christie, Secretary, Clove, Dutchess county, N. Y.; Thos. C. Ring, Treasurer, Newburg, N. Y. The influence of the association is strong, and to their intelligent efforts is due a much better observance of the law then formerly existed. We have received from them a neat digest of the game laws printed for gratuitous distribution.

THE MINNESOTA STATE SPORTSMEN'S ASSOCIATION meet at Como to-day. The society will consider several important subjects, namely: "First, the replacing of the chicken open season to August 15. Second, the abolition of summer woodcock shooting. Third, the appointment by the State of game wardens for the enforcement of the game and fish laws, and the advisability of the united action of the association to carry out the laws." Much of the present interest in Minnesota game affairs is due to the energetic efforts of the secretary, Mr. W. S. Timberlake.

CAPT. CHAS. BENDIRE, formerly of Fort Walla Walla, Washington Territory, is now stationed at Fort Klamath, Oregon, in a region full of interest to the sportsman and naturalist. Fort Klamath is situated on the edge of one of the prettiest mountain valleys to be found in America; and question the existence of such a local law, but the law itself | the country is well supplied with game and fish.

W. M. LOCKE.-We learn by telegram of the death of our old friend and correspondent, W. M. Locke, late of White county, Ill. Mr. Locke was well and favorably kuown to many of our readers in Western New York, and we have hunted and fished with him in that region. He was the agent of the N. Y. C. R. R. at Honeoye Falls for many years, and lately held the same position at Marshall's Ferry He was about fifty years of age. Our telegram merely says: "Mort. Locke, leg crushed, locomotive, to-day (July 7), died under amputation." A more honest man and ardent sportsman never lived, and a kinder heart never beat.

THURLOW WEED'S PIGEON .- At the meeting of the Veterans of 1812, last week, Thurlow Weed, who is now in his eighty-fifth year, was led into the hall to join his comrades in their Fourth of July celebration. Mr. Weed was so blind that he could not recognize his friends; and when speaking to them of his infirmity he told of his pet pigeon which had been long accustomed to be greeted by him, and now, not comprehending why it was no longer noticed, was pining away with grief.

Open Seasons.—A comprehensive schedule of the open seasons for each variety of game and fish in the several States, Territories and Provinces will be published in our

Maj. Joseph Verity Says: Young man, don't adopt literature. Better drive a canal mule than to bestride Pegasus

"Camps of the Kingfishers."—The sixth part of "Camps of the Kingfishers" will be printed in our next issue.

PRAIRIE CHICKENS, -Will some of our Western readers tell us of the prairie chicken prospects?

The Sportsman Tourist.

RAMBLES THROUGH NEWFOUNDLAND.

THE labors of my other letter, I believe, ended with our cruel eviction of a family of four beaver, after which we returned to our camp in the dense evergreen "droke." There are a good many readers of Forest and Stream of the companionship of a party of sportsmen in the silent camp, in the silent forest, are after the day's delightful labors; nor need I tell them how blissful is the slumber that comes in from the mystic wood out of the stillness of the night and wooes the "senses into sweet forgetfulness." There is no harrowing nightmare in that sleep, no turnoil of bewildering dreams; and the hunter awakes from his slumber fresh and cheerful as the bird that goes with whirring wings through the trees in the early gray of the dawn. Before we composed ourselves to rest upon our couches of evergreens we cast lots to see who should rise first in the morning and get the breakfast, and the lot fell upon me. I arose in the gray light, replenished my fire, "picked" a pair of our willow grouse, drew them, and put them upon the camp spit, upon which so many a delicious piece of venison had doubtless been reasted. The birds were plump and fat, the ground on which they were shot being literally red with berries, so that with very little basting with butter I was enabled to produce a pair of roasts that would grace the table of a king. No great skill is required in such a cooking operation as this, the chief point being not to let your game burn.

While my companions lay snoring, and the music of my

While my companions lay snoring, and the music of my cooking went gloriously on, I stood for a moment outside the camp door and heard upon every hand upon the plains surrounding our forest-clump the crowing of willow grouse and rock plarmigan. The number of voices could not be less than several hundreds. At this hour of the morning the parmigan leave their coverts—whether the forest, the heath or brushwood—and fly out upon the plains or knolls, the cocks setting up a most vigorous crowing as they alight. They do not, till sumrise, stay half a minute at any point, but continue to rise and perch again, and this is the reason why the whole plains seemed to be talking in ptarmigan language.

why the whole plants seemed we stowed away our beaver skins in the camp and set out for Deer Valley. In this region, Deer Valley, is the headquarters during the autumn and greater part of winter, of the deer. I have seldom heard of a hunter going there and not finding one or more

herds.

We were only just clear of the woods when one of our party exclaimed, "Just in time," and poluting to a "deer lead" he showed us a number of fresh tracks leading towards the valley. "Peer lead" is the local name given to the numerous paths which are seen through so large a portion of the interior of Newfoundland. At nearly any point in the peninsula of Avalon, within from three to eight miles from the coust, the stranger is struck with the number of paths he finds here and there; winding across long stretches of marshes, crossing over a hill, or running down a valley through the wild flowers that grow upon the banks of a stream. I remember the first time I "went into the country." I was bewildered at the number of these wide paths I net, through the wild flowers that grow upon the banks of a stream. I remember the first time I "went into the country." I was bewildered at the number of these wide paths I bet, as I knew that the cattle kept by the people on the coast never came in here. These are all paths made by herds of deer in their marches from one locality to another, and it is remarkable that when a herd of deer sets out upon its march it will invariably go over this lead, which it will not leave unless when in the greatest confusion. Nor will, in the latter case, its absence be long, as, so soon as the animals collect their scattered wits after a rout they return again to their path.

The "lead" is usually about ten feet wide, and in districts where the deer are most plentiful, it resembles a cow-path

and is beaten down several inches below the surface. The deer itself, it may be said, is the caribou (cervus turandus), and is a species of reindeer. It is very important when you are attempting to "work in" upon a herd of deer, that you should not go to windward of them, as their scent is so very acute, that they will pick up their cars and be off. As the wind blew in the direction of the Valley from our point of travel, we therefore changed our course, taking a circuitous route around the hills that we might reach our grounds from the leeward. During that rout I shall be under the mark if I say we saw over a thousand grouse and rock plarmigan. They fiew in scores up in our faces out of the marshes and brushwood, and several of the hilltops and ridges were literally acrawl with them.

It was impossible to resist the temptation of shooting some of such tempting game, though every shot fired was at the

It was impossible to resist the temptation of shooting some of such tempting game, though every shot fired was at the risk of reaching the ears of the wary game of which we were immediately in quest. We killed about a dozen, however, distributing them among the bags of our party. A long stretch of small hills lying along a considerable laud elevation overlooked the Valley, and one higher than the rest commanded a view of the grazing ground of the deer for several miles east and west. From behind a hamak on this hill we reconnoirted with our glasses; and about a mile to the cast at a bend of the stream, saw a herd of about thirty deer grazing in the glorious morning, among the sweet grusses, semingly mindless of danger, save that now and again one of the leaders would toss his head into the air, snitling for a taint of the enemy.

of the leaders would toss his head into the air, sniffing for a taint of the enemy.

How to "work in" upon the herd was the problem now; and at length it was decided that one should crawl up to wards the flock, while the other two should take their stations in the bushes near the lead. One of our party knew that there was a large lead near where the flock was grazing, and that it ran along by a point around the hills about half a mile distant from where we lay. Thither we resolved to go, taking up our positions under suitable cover, while the "driver" was enjoined to keep near the lead in the other direction, so as not to permit the herd to go the opposite way.

direction, so as not to permit the herd to go the opposite way.

We separated, he going off at a run on his mission, we, reveiling in anticipations, betaking ourselves to our point. We found as had been anticipated the lead winding around the shoulder of the hills, and near it, growing several clumps of bushes. A patch of alder standing about twenty paces from the lead seemed the best suited for our purpose, and in it we ensconced ourselves, to await the arrival of the herd. After waiting about half an hour we heard a shot, and almost immediately another. Then I went out of covert a short way, and putting my ear to the ground heard a number of dull thuds, which I knew to be the distant trampling of the flock. I retired hastly, apprised my comrade, and we both with nervous hands put our pieces at full-cock. We were in such a position as to command a view of the lead vore which the deer were to come, for about a hundred yards. I kept watch, through an alder branch, for the approach of the herd. There was not a sound to be heard for some minutes as we lay here, saye, indeed, the excited throbbing of our hearts, and that we heard, and almost immediately I saw the deer.

They were approaching where we lay at a rapid trot, headed by a noble-looking where we lay at a rapid trot, headed by a noble-looking stap bearing his proudly-anticred head haughtily as a monarch. When the herd had reached within thrity paces of our covert, we saudenly rose, each giving a whistle at the same moment. Our sudden apparance and the whistles seemed to paralyze the whole herd, for there they stood stock still looking at us as if they were rooted to the ground. But they did not stand long in this way, for on going out we immediately drought the lock ran out upon a small marsh, reared twice several feet in the air, and the fell. The two shots immediately brought the lock to their senses, and they ran madly out from the lead and on around the hills, but did not get away ill we had cauptice our two remaining barrels into them. One deer fell.

and decided not to follow up either herd for the present. We could judge pretty accurately the direction in which they had run. The one we believed would be found about five miles distant in a valley near the headwaters of a river of considerable size, which ran out into the bay some miles

def miles distant in a valley near the headwaters of a river of considerable size, which ran out into the bay some miles southwest of Placentia.

The other-flock, it was probable, had gone to a point a couple of miles south of where we had found the stream dammed up by the beaver. Then the member of our party who had worked in on the deer remembered having heard that there was a snug little tilt in one of the "drokes" on the falling ground towards the valley where we had seen the herd grazing. We decided to try and find it, as the tramp back to our previous rendezvous was not desirable till we had appeased our hunger. We had only crossed over the nearest hill, and when descending the little valley, when we saw a flock of about fifteen wild geese stalking through the hummocks, feeding vigorously. Taking advantage of a clump of firs—called "var" by the inhabitants—we got within range, but before we could get a ground shot the wary birds were off. One fell, however, from my right barrel as the flock wound around the hill, and though all the rest of our muzzles blazed at them, this was the only one we secured. We were not long before we struck a faint path on the edge of what seemed the most likely "droke" for a "tilt," and following it through the dense fir and spruce wood for about a hundred paces, we came upon the cosiest little camp that could well be seen. Evidently it had been a long time since any hunter had put up there before, as long, wild grasses grew up about the rude door. There were the usual accompaniments of the Newfoundland camp; at a glance we could see glimmering through the trees whitings enough to do a party for a month's burning. Inside the tilt we found a sharp axe, a spade and a "grub," the two latter being intended for the eviction of beaver. We found all the necessaries of cooking utensils, and in half an hour a glorious picce of our fallow deer was spluttering before the bright blaze of the whiting fire. The senior member prepared the dinner, and we stretched upon some fresh broken fir bo

* * "Me tabula sacer Votiva paries indicat uvida Suspendisse potenti Vestimenta maris deo,

vestmenta maris dee,"

And contending that Milton's rendering of the phrase "simplex munditis" in the words "plain in thy neatness" in the ode was poor; "in point of fact, absolutely trash," he said. I told him that Pope wrote the line.
"A little learning is a dangerous thing," advisedly, after which he collapsed.

Now, from where we leav in our great water.

"simplex munditiis" in the words "plain in thy neatness," in the ode was poor; "in point of fact, absolutely trash," he said. I told him that Pope wrote the line.
"A little learning is a dangerous thing," advisedly, after which he collapsed.

Now, from where we lay in our gorgeous little sylvan camp, we could hear coming up through the trees the music of a large running brook, and the mere thought of fried speckled trout crossing my mind determined me to be at once engaged in cutting a small and shender fir sapling, upon which I tide a plain flyless hook, several having been discovered in the camp. My companion whom I had choked with the line from Pope was beside me in a moment, and together we started off in the direction from which we heard the sound of the running water come. We came down to a sparkling brook, that had all along its course quict little pools, overhang with alder boughs or young birches, and covered with the foan created where the brook brawled over the rocks. We baited our hooks with some of the doe's kidney, and cast out, with corks on, in school-boy fashion. The hooks were no sooner out than the corks went under water, and we landed a pair of speckled beauties, each about nine tuches long. We stayed about twenty minutes, during which we took about four dozen fish, the only delay being in baiting, casting and unhooking. The brook was literally alive with trout, and they jumped at the line and the cork and clear out of the water.

Returning to camp we found the venison haunch roasted, and the pan for the trout hot and ready. After we had ended that most delightful meal we decided to go in search of the wounded deer which had made such speed—progress on three legs. We soon found the trail, marked here and there by drops of blood which under the bright sun on the green grasses and woeds were seen very easily. After following the regular lead for about a mile, we found that the wounded deer turned in the direction of the large forest "droke" in which we had put up the first two nights; turned t

TORONTO, Canada,

CAMP FIRE IN THE GREAT SWAMP.

BY A. MULE.-PART I.

WE had arranged everything for a camp hunt of a week in our neighborhood, and only awaited the coming of the first frost, and the "dark of the moon" to start. Between the 1st of November and the 15th of December is our golden chance in the Swamp, and we rarely fail to take advantage of the cool frosty nights, clear fresh days and lovely dry weather to enjoy the sport and social re-union of a camp hunt.

The preparations in our case are simple enough, and yet thoroughly comfortable. In fact during such weather all one can use in camp is a blanket and plenty of food. Tents are useless—for a week one can manage with a flaunel shirt—and so I feel fully equipped for a short camp when I pack some mackinaw blankets, a lot of store grub, such as coffee, milk, sugar, etc., on a patient looking Balaam, all surmounted, of course, by the inevitable nigger and his axe.

The wished for morning came and the welcome sounds of old Shelb.'s horn came up faint, yet clear, through the blue dawn, its three long drawn notes giving the expected signal for the rendezvous. In the woods here the horn is a necessity. By an agreed code of signals an entire neighborhood is put into communication, and for miles around we know "what is up." The preparations in our case are simple enough, and yet

put into communication, and for miles around we know "what is up."

By an early start we got into camp some fifteen miles back in the canebrake at noon, and spent the rest of the day in preparation and looking about. We live well in camp, for what is the use of making a trip of pleasure rougher than necessary? Only a cockney can enjoy the dirt and privations of real roughing it—that is, to go into the woods with only the necessary, say a gun, a blanket, and a knife. That is romantic, I know, but "doosid" uncomfortable besides. We have everything to eat we can buy and transport, plenty of good cooks and keep them busy. Whisky we look on as a good thing, but it does not agree with the Swamp, and those who are healthiest there use least of it. The less there is in any camp the better for the camp.

good thing, but it does not agree with the Swamp, and those who are healthiest there use least of it. The less there is in any camp the better for the camp.

That camp is a sight for an artist to study. The many gay colored blankets scattered about, the animals tied to great vines and half hidden in the switch cane, the moving figures and wreathing smoke of the camp fires are relieved against the almost envernous shadows of the giant woods with their dusky wealth of purple, and brown, and gray, the clear greenish tint of the overarched lake, and occasionally a dazzling plat of sunshine thrown down through a rift like a golden shield upon the black soil.

Other things are there to make out a camp, but we care not to detail them. There are few guns, as the pistol is used for bear, and many dogs for the same purpose. The men must introduce themselves if they choose, or relate their own adventures. Suffice it to say, from the big, hearty, old Doctor to the cook everybody has to keep in good humor. No quarrels here, but courtesy and true kindness among all.

One night we had gathered about the fire and sat there enjoying the best part of any camp—the flow of ancedote und the sparkle of humor that is so charming when fresh from the waggish lips and so stale when put on paper.

"Say, Doctor, what became of your visitor from up country?"

"Say, Doctor, what became of your visitor from up country?"

"Why, he went home. The fact is some of the boys got hold of him coming down on the boat and stuffed him full of tales about the wild beasts here until he was afraid to walk out in my yard at night. I tried to soothe him down, but unfortunately he got into my study one day and there he saw not only the bottled specimens of prize snakes, and the stuffed wildcats and painters, but a beautiful collection of anatomical curiosities I have. The cats and snakes scared him, but the other varmints looked so horrible that he had a chill and left before I got home."

"Those Northern people must have a queer idea of this country. They make their wills I believe when they start South, and then load down with all the improved weapons they can carry. I had a cousin who came down here in 1866 looking out for a speculation in bottom lands. He was an educated gentleman from Massachusetts, and should have known more than he did. He was timid to excess about the people, the beasts, and getting lost in the swamps, although he was a brave soldier in the war. He carried a great, heavy double-barriede Express rifle, and would not move an inch without it."

"He yeas the fellow. Tom, that old Shuek Blewatt

double-barreled Express rifle, and would not move an inch without it."

"He was the fellow, Tom, that old Shuck Blewett swindled so badly on the land, wasn't he?"

"The very man. He went up to look at some land of Blewett's, and I cautioned him to buy land above overflow, and pointed out the water mark on the trees so plain a fool couldn't miss. But I am blessed if old Shuck didn't persuade him it was fog mark, where the fog settled, and sold him land twenty feet under water every spring."

"What did you say when he told you?"

"Oh, I congratulated him on having bought the best stock farm in the country. 'Stock farm! what do you neam!' said he. 'Why.' I said, 'if you will get some sea cows and hydraulic rams your fortune is made! He was very anxious to go hunting, so one day, as I was very busy, I put him and his big rifle on a horse and told Jerry to take him down to Shelb, there, for a hunt. The old man can best tell what happened."

Shelb. was, as usual, smoking a pipe and listening patiently. Being urged, however, he briefly gave the fortunes' of the Yankee.

can best fell what happened.

Shelb. was, as usual, smoking a pipe and listening patiently. Being urged, however, he briefly gave the fortunes of the Yankee.

"Well," said he slowly, "didn't much happen, but I don't doubt the gentleman thought a great deal did happen, and most of it to him. He had it fixed in his head that a black bear was one of the most savage beasts in the world, but he felt pretty sandy about the gizzard out of the woods, and wanted to kill a bear bad.

"Tom's nigger, Jerry, had sorter taken the wire edge off of him coming down. Some years ago Jerry got into a dispute with a steam gin and came as near being mixed up for hash as a nigger can be to live. So, to be sociable, Mr. Green "asked Jerry "what had searred him up so fearfully?" And the cussed nigger had told him that 'Murs Tom and Misser McP—, they done make him go in a bollow log after a bar, and the bar done nigh kill him, for true! With such tales as this, you can imagine how he felt when he got to my house.

"Early next morning we started. As we rode along. I ex-

house. "Early next morning we started. As we rode along, I explained to him that I would put him where he would be certain to get a shot. That was in the bed of a gully about six feet deep, with the cane meeting over the top and making a lovely stand, for I could lay a yard-stick down in there and run a bear right over it every time!
"As we went along further into the woods I noticed he was getting soberer and soberer. Finally he pulled up his lioss with a jerk and said, 'Look here, I'm going back!'

'Why,' I said; 'what for?' 'Well,' he said, 'l'm not agoing down into any such hole as that after bear. My gun might snap, or something, and then I never could get out of that d—d gulley. I'm going back.'

"Well, I laughed, but finally I explained to him that I meant to run the bear across the ravine and not down its length. Anyhow, he was suspicious, and wouldn't go until I promised him a stand under a tree.

"The dogs had scattered all about in the woods, and everything was very quiet, when a hound pup I had just got opened on a cricket's trail out in the bushes, with a dreadful drawn out note, as long as a grape-vine.

"Mr. Green stopped right away. 'Do you hear that!' says he.

the pup.
"Now you hear it, don't you? says he, with his eyes popped out. "'No,' says I, 'I can't hear anything for the infernal

pup. "Is that a dawg making that long drawn cry? said he, riding ahead. And I never dured to ask him what a cougar was, on Tom S—s account.
"I put him on a stand by a tree, where the limb was at least fifteen feet from the ground, for I suspicioned he would want to climb a tree after a while. Well, I had got off nearly a hundred yards, when he called me back.
"See here, Mr. McP.,' says he, 'do these bears here go in flocks?"
"You mean do they kill sheep?"

go in flocks?

"You mean do they kill sheep?

"Yo, sir. I mean do they go together in numbers?"

"Why,' said I, 'ive never saw more than three or
four together at once."

"Well,' said he, 'just look at the multitude of tracks
here. It is something frightful!"

"And sure enough there was a lot of tracks in a muddy
place there.

here. It is something frightful!

"And sure enough there was a lot of tracks in a muddy place there.

""Well," said I, 'a man scared at tracks can't be expected to do much killing of a bear.' However, I left him on the stand, and presently run a big he right over him. Bang, bang, went his gun, and I rode full run to see what he had got. By George, he had fired both barrels accidentally, in his nervousness, while trying to get up the tree, and there he was reared up agin his tree and still going through climbin' motions!"

"Lucky for him he didn't get hold of a bear I tackled once," said Jack F—— "I was walking around a cornfield one day just in the edge of the woods, when I heard a devil of a racket in the corn, and there came a fat old he, swaggering along like a lord, with a big watermelon under each arm, and one balanced on his head. I laughed and said to myself i would pay the old thief. So I hid behind a tree, and just as he came by, I stepped out and said very politely, 'Good morning, sir!' By gad, the old cuss never said a word, but he whaled away at me with one of the melons, and only by God's grace he missed, my head would have been smashed. I turned and ran all I knew how, but he chased me for a hundred yards, pelting me with both the other melons!"

"That is almost as good as my crows," said Tom S—.

other melons!"

"That is almost as good as my crows," said Tom S—.

"That is almost as good as my crows," said Tom S—.

"The crows were pulling up my corn at a great rate, when some genius told me to soak corn in whisky and scatter it where they could get it and they would go away. By Jove, when I went to see after it I found one old black-visaged scoundrel had seized all the whisky corn, laid two stakes across the row for a bar, and was peddling it out to the others at one whisky grain for two unsoaked!"

"Well, gentlemen, we all need rest after that, so let's to bed."

"DIDYMUS" CRITICISES WASHINGTON.

IMOUGH the Fonest and Stream is essentially a sporting publication, a slight mixture of outside stuff would do your readers good, if they only knew it, but for fear they might grunble I'll make them think it's a sporting article by inserting right here something about "choke bores," "sure death on fleas," "speekled beauties," vulgarly called trout, and a few other sporting points, and then they'll enjoy it. If I were a "literary curs" of the Ward persuasion I might tell your readers that Washington is the home of the grate American iggle, but I'm not, so I'll seriously say that Washington is, pre-emmently, a political city. The average citizen talks of nothing but political city and indulges in political dreams by night; and when anything relating to the matter of adding to the city's attractions is broached it "falls on stony ground." Its attractions are nany. The streets are very broad, and it has miles upon miles of beautiful concrete pavement, not made on the New York job principle, but laid down properly, so that driving around the city is really a delight, and horses are never seen lying 'round in promiscuous looseness, as they often are in front of the "Brunswick" and the Worth monument in New York.

Small parks are in profusion, and in front of nearly every house is a little park or terrace. (The principal game is the English sparrow, but they are not allowed to be shot, as they will some day be needed as a substitute for pigeons at shooting matches). HOUGH the Forest AND STREAM is essentially a sport-

ing maches).

There are trees in abundance all over the city, and at a surface glance they seem to clothe the city in a garb of beauty, but there is probably no city in these United States where such utter ignorance is shown in the planting of trees. If the authorities had their wits about them they would take a the authorities had their wits about them they would take a lesson from their predecessors who planted the trees around the White House and the capitol. There is scarcely an old tree left around the capitol, and scarcely one of those remaining in the White House grounds is fit to be three. No observer of trees can fail to know that the silver maple is the poorest of all our shade trees, yet they are planting them by the thousand, to be cut down about the time a sugar or rock maple would be in its full perfection. The silver maple grown rapidly, but has nothing else to recommend it. The of an our smale trees, yet they are plutting them by thousand, to be cut down about the time a sugar or rock maple would be in its full perfection. The silver maple grows rapidly, but has nothing else to recommend it. The folings is thin and pale, the limbs are long, slender and brittle, and liable to be split or broken off by every high wind, while the Norway sugar or rock maple have dense, dark-green foliage, and are strong and lasting as well as beautiful. There are doubtless other trees that would suit the soil and climate, but this is not a dendrological lecture. People frequently remark, "What a delightful city Washington would be were it not for the nuisances," In truth it is a delightful city for a permanent home, and would be more soif a consideration of its true interests could be wedged into the brains of its rulers, and the editors could be induced to admit a few sharp criticisms into their columns; but as

matters now stand it is simply a half-civilized Garden of Eden. Occasional visitors from the Eastern cities, whose refined tastes and sensitive feelings are ruffled by the vulgar annoyances they meet with, try the effect of protests through the press, but the press is as stupid as the city rulers, and can't see why people should want to find fault with anything—except the opposite side in politics—and down it goes into the waste basket.

A hare church of our netional window near teach the form

ean't see why people should want to find fault with anything except the opposite side in politics—and down it goes into the waste basket.

A huge chunk of our national wisdom once took this form: They set apart 10,000 annual dollars to feed the negroes, which in one light looks very well, for negroes must eat; but, unfortunately, as long as they are fed they will not work, and a city where it's all cat and no work, is equal, in their eyes, to the New Jerusalem. So the lazy ruscals flock in from all parts of the South to feed at the public crib, and there are now in Washington more than 50,000 of the black persuasion, and the cry is still they come.

If they would work, or if every mother's son of them did not think it his especial duty to prove his equality as a man and a brother by his impudence and general cussedness, they might be tolerated; but as it is, they are "tolerable and not be endured." The paramount luxury of the negro is whistling, and of the 50,000 aforesaid, something over 20,000 are always whistling, except when eating. Science hus demonstrated that every negro has a lung capacity equal to that of two bull elephants, and us two-thirds of the juvenile black male population are of the newsboy tribe, and are allowed to congregate on the corners of the streets like crows in a cornfield, and make as much noise, you may imagine how charming it is to the contemplative mind. It is uscless to appeal to the police, for, like the editors, they don't consider that making the city attractive is in their line of business. (I introduce the crow because the crow is a gume bird; in fact, too gamy for the common taste, and is nover caten except by professional politicians.)

I also take the liberty of growling at the street car nuisance, and will state that four-fifths of the passengers in the street cars sit with their legs crossed—like Trumbull's "signers of the declaration" in the rotunda—and still consider themselves gendence.

I would likewise state that a multitude of dogs may sit under your window, and ba

any moon to bark at), and no law will interfere with their amusement

any moon to bark at), and no law will interiere with their amusement.

Many other minor items might be added to this tirade, but they're a sensitive people, and I'll spare their feelings.

Wild turkeys are sometimes seen in the streets of Washington, but if a man wants to shoot wild ducks he must go down the broad Potromac; but the ducks are expensive. Mine cost me over \$40. He was very small at that. I wounded another, but I don't think he cost me over \$10. 1 might have killed more, but at that rate I was afraid I'd have to sell somebody's house to pay the bill, so I let them live, and they are now enjoying the fruits of my mercy by raising interesting lots of little ducks away up in the northern swamps. There! It's just as I expected—this turned out to be a sporting article after all.

Weshington, D. C., June 1, 1882.

Didymus.

WASHINGTON, D. C., June 1, 1882.

DOCTOR BUG.

BY LEW VANDERPOEL.

EPTEMBER was fast dwindling into October and the CEPTEMBER was fast dwindling into October and the early frosts were just yellowing the leaves. Old Mount Mansfield was never lovelier. Crag, cliff and foliage united into one picturesque whole. The lesser Green Mountains spread far away to the north and south, a continuation of irregular summits. The sun was just setting as I climbed part way down the east side one ever memorable day, and stopped at Jerry Corbin's for my supper. Jerry was a great good-natured giant who kept a little "wayside inn" up in the mountains for the accommodation of itinerant sportsmen.

At the time I mention three other sportsmen were sojourn

men.

At the time I mention three other sportsmen were sojourning at Corbin's with me. One of these, universally dubbed "Rattlepate" because of his proclivities to yarning, was the most unmitigated nuisance it was ever my misfortune to meet. He was deliberate and corpulent enough to prove the axiom that large bodies move slowly. His "ancient" appearance easily led one into the mistake that he was grandfather to the patriarch Abraham. According to his professed belief he was a mightier Nimrod than Nimrod himself, and there was nothing in all creation that he didn't know. Prevalent opinion was that he was only less tricky them a circus-mule, and that he had never been known to tell the truth. Anyhow, he was disliked "by acclamation." The second bearder was a Boston drygoods drummer, with no very marked characteristics, intellectually or otherwise. The third was the especial object and subject of this sketch. Who he was or whence he came none of us ever knew, but a sweeter character than his it would be impossible to conceive. He was kind, gentle and reproachless to all, seening to live entirely for his fellow men with no thought of self. Still he was thoroughly a mystery; entirely beyond ordinary penetration. Nobody ever attempted to question him; his manner prevented that. He did not repulse, however: he only repelled; that gently, too. On Jerry's old battered "register" he simply wrote in clear, handsome characters, "Doctor Bug, U. S. A."—not the loveliest name in the world, and certainly not a very definite address.

'The drummer, Joe Biglow, and I were strangers before address

leachiest name in the world, and certainly not a very definite address.

The drummer, Joe Biglow, and I were strangers before ment at Corbin's; it is needless to say as much of the Doctor. The Rattlepate was an annual infliction at Mount Mansfield, and I had already met him several times before—to my sorrow. Our party was there with one common intent, and our meeting and subsequent relations on this basis were cordial. Game abounded in plentiful variety, and we would be apparently happy but for the irrepressible Rattlepate; his terrible tongue was worse than a two-edged sword. His daily achievements were far in advance of those of the rest of his party, and his prolonged recitals of the same were obnoxious even to painfulness. The only way to silence him was to leave him, and even then ne would talk on unmoved as long as his last victim was within reach of his voice. The Doctor never seemed to find him tiresome, but would listen to his prate with perfect patience. The wholesale boring of his associates was Rattlepate's manifest mission on earth, and with one sad exception this was ifest mission on earth, and with one sad exception this was

ifest mission on earth, and with one sad exception this was all he ever accomplished.

This was the exception. He returned to Corbin's just behind me, the night which opens my tale, more than ordinarily moved. It really seemed as if something out of the general run of his adventures had happened. It was quite a cool day, yet he was dripping with perspiration. As soon as he could wash down a portion of his excitement with a

copious draught of whisky, he explained that he had discovered a bear's den, inhabited by a she bear and three cubs; a monstrous male bear, the probable father of the cubs, had followed him almost to Corbin's. We hailed the last part of his story with a hearty laugh; it was rather extravagant. The Doctor proposed that we go for a bear hunt in the morning, undoubtedly out of consideration for Rattlepate's feelings. We decided to go. Unfortunate decision.

In the morning we breakfasted early and started in pursuit of Rattlepate's bears, with no expectation on my part of finding anything larger than a chipmuck. In his stupendous fright Rattlepate had forgotten the precise direction of the bears' den, and we had to help him hunt it up; a good half day was exhausted in the search. At length the booby discovered familiar land marks, and declared the quarry just at hand. Sure enough it was, but no "b'ar." A collection of cobwebs covered the mouth of the den that seemed the accumulation of centuries, and probably nothing more colassal than a spider had occupied it for many years. The miserable boaster had merely found the hole in the rooks, that was all; his craven imagination had conjured the rest.

Disgusted and charrined we started for home, Mr. Rattle-

the rest.

Disgusted and chagrined we started for home, Mr. Rattle-

Disgusted and chagrined we started for home, Mr. Rattlepate keeping far enough in the rear to avoid our remarks,
which were certainly not at all complimentary to him. As we
were passing through a deep ravine, a wild cry from Rattlepate silenced and stopped us. In an instant he repeated it.
"Help! help! For God's sake, help!"
Wilder and louder than ever the cries rang out. With
almost superhuman bounds the Doctor hurried along the
back track to the rescue. Joe, Corbin and I followed more
leisurely; our faith in Rattlepate was considerably shaken.
We had arrived at the conclusion that he would bawl for aid
if a mosquito bit him, and very much doubted that he was
in any danger.

leisurely; our faith in Rattlepate was considerably shaken. We had arrived at the conclusion that he would bawl for aid if a mosquito bit him, and very much doubted that he was in any danger.

A shot from the Doctor's heavy rifle and a yell of rage from a panther, hurried our tardy steps. A moment later an opening in the underbrush disclosed to us an exciting scene. A monstrous panther had attacked Rattlepate and was standing astride the latter's prostrate body. The Doctor's shot had taken effect in the animal's side and it stood glaring at him with menacing mien, growling and lashing its tail spitefully. The Doctor dropped his rifle and tackled the panther with his knife; over and over they rolled among the rocks and brambles, until exhaustion in both of them terminated the bloody fight.

The Doctor had kept up an incessant stabbing, and the panther was bleeding from a hundred knife-holes; a bullet in the ear from Jerry's rifle finished its career. The brave Doctor was literally strung in pieces by the animal's terrible claws, and it had chewed his left arm to a pulp. We saw at a glance that he could not live but a few minutes, and that he was fully aware of his condition. He was too horribly mangled to be carried from the spot where he lay. We washed his wounds with water from a stream that flowed through the ravine, and did the little we could to ease his last moments.

"Boys," he said feebly, much interrupted by the flow of blood from his mouth, "I am dying, and I think I am glad. So far as I know, you are the only ones on earth who will miss me. I am dying the death I would prefer to all others, in the service of a fellow mortal. I think it is the first service I ever rendered any one in my life. Let me lie here in the forest shade, away from all noise and tumult, alone, forgotten and unknown."

Unconsciously we had lifted our caps as he spoke, and unconsciously we have a substant of the provise of the flow mortal. I think it is the first service I ever rendered any one in my life. Let me lie here in the f

Here Lies ALL THAT IS MORTAL OF DOCTOR BUG:
The Man
WHO GAVE HIS LIFE For a Liar,

The following summer a veiled lady one day alighted from a carriage at Corbin's door and asked for the Doctor. Jerry told her the circumstances I have so imperfectly narrated here, and her grief knew no bounds. He guided her to the lonely grave, and she threw herself upon it and wept for a long time, murmuring, sadly, as she did so, "Too late! too late!" On the way back she lost a rich lace handkerchief, which Corbin afterward found. In one corner was the name that was Doctor Bug's last word on earth, "Agnes."

JUNE IN THE NORTH WOODS.

I HAVE just got back from the woods. Have hardly shaken off the smell of tar oil or rubbed out the black fly bites. My annual trip is to the "Brown's Tract" portion of the Adirondacks, camping on the Fulton chain of lakes. And surely there can be found nowhere, so near home, such

wear. Stooping down I turned it over, and as I did so the name "Nessmuk," painted on its side, met my eye. Ah! I see how it is now. "Nessmuk" paddled round the waters in that miserable little cheese-box, cramped up, sitting on the damp bottom of this boat. No wonder he told us such pitful tales of his coughing continually, being sick all the time; finally going out of the woods disgusted, and determined to cry down the Adirondacks as a fraud and a humbur.

pintur tales of his coolgaing continually, being sick ain time; finally going out of the woods disgusted, and determined to cry down the Adirondacks as a fraud and a humbug.

Now, Mr. "Nessmuk," when you go into the Adirondacks again, go in a boat—take one of the new fifteen foot double enders that weigh about sixty pounds, and as you get into it sit down on a seat six or seven incaes away from the water, and with room to stretch out your feet, then lay hold of the swivel oars and row like a man—let the Indians keep to the paddle if they like—then you may be able to swell out your lungs and fill them full of the health-giving air which is so plentiful there, and thus shake off that cough which so distresses you. I hope you may not belong to that class of whom I met so many in the woods last summer—I mean the incurables—for I do like to read your spicy letters. Further up the lakes we find on Fourth Lake the "Dunagua Camp," which is kept this year by Thomas Clark, formerly an employe of the old Rainbow Hotel in Beekman street, New York, in the days when Howell ran the house. Clark is working hard to make and keep a comfortable house, and I know his wife can get up a good dinner at short notice, for I had one. Then on the other side of the same lake we find Edward Arnold's, a neat, cosy camp where many of the old sportsmen gather during the season, attracted by the remembrance of the old Arnold House, so dear to them in the days that have gone, and which was kept by "Ed's" father. A now camp kept by Mrs. Sperry on this lake, near the outlet, seems to be pleasantly situated. All these houses take boarders. I mention them simply for the benefit of travelers, having no interest whatever in advertising them.

On the evening of the 22d of June, there arrived at the Forge House fifteen large cans, which might easily be taken for milk cans. On their arrival they were taken down to

All these houses take boarders. I mention them simply for the benefit of travelers, having no interest whatever in advertising them.

On the evening of the 22d of June, there arrived at the Forge House fifteen large cans, which might easily be taken for milk cans. On their arrival they were taken down to the dock and opened, and pronounced "all right." These cans contained seventy-five thousand rainbow trout from the State hatching house. As soon as the strainers could be sunk into the cans and the siphons set to work, the water was changed, and then they were loaded upon boars and sent forward with all speed to their destinations. 25,000 of these little fellows were put into Little Moose Lake before midnight, there to found a colony of game fish for our future pleasure and profit. The remainder were distributed through the Fulton Chain and on the north branch. Many were dead and the shiners preyed on some of the living.

For the last four or five years I have noticed that in fishing for salmon trout (or lake trout) our catch showed fish of two distinct colors or shadings, but of the one species. One of these was more dark and swarthy, and this was more apparent in the larger fish; the others were lighter in color and more bright and clear in general appearance. The first were the natives; the latter the imported fish. I think fully two thirds of the salmon trout that I have taken belong to the latter class, to-wit: the imported fish. I have also noticed that there seems to be more speckled trout caught of late than we did four or five years ago, and the increase appears to be in the smaller fish. In this species we have no distinctive marks to show which are the natives and which are the imported fish; but this we know: young fish are being put into these waters every year, and were it not so, the species would soon run out. The question is often asked, "Does restocking pay?" If my humble vote counts for anything it will be a hearty and emphatic "Aye, aye, sir!"

One of the grandest sights of my late trip was Great numbers of them could be found along the lakes and through the woods.

I want to tell of some good catches of fish, but must put them on ice for another letter.

RANSAS NOTES.

New York, June 7, 1882.

And surely there can be found nowhere, so near home, such complete isolation from the outside world, where one can line in such close and sweet communion with nature in her truest and grandest forms, and so far separated from art and all that is artificial. Each year we see the same grand old nills, the same gleaning, laughing lakes, the same bubbling streams, the same rushing, headlong rapids, and searce can note a change in them, though we feel it in ourselves.

Of late there has been quite an increase in the accommodations for visitors to this region. A few years ago there was only one house where we could find lodgings other than the open shanties, which at best are a wretched apology for a shelter. Now we have the "Forge House," as of old the terminus of the road entering the woods. This house is pleasantly situated, and is well kept, and the Messrs, Barrett are doing their best to please their patrons. About four miles up the lakes, beautifully situated on the shore of the Third Lake House," a clean, cosy, cheerful place—one where the ladies and the bairnies may enjoy rest and recreation, while the fathers and the brothers may wander off after the trout or the deer. Here I have met many pleasant place to call at in passing. The other day while at Perrie's the toe of my boot came in contact with a cance which looked the worse of the

State alone, many of them have groves (generally artificial) of from one to forty acres, besides thousands of miles of hedges already large enough to afford excellent she'ter, and the birds are increasing much more rapidly than they possibly could by natural means. The impression here seems to be that the small birds have taken Horace Greeley's advice to young men, and are settling the West. A few years ago one could scarcely see any birds except prairic chickens, larks, snipe of all kinds, plover and waterfowl. Quail are rapidly increasing as the country fills up; but now bluebirds, robins, jays, yellow hammers, woodpeckers, sparrows and doves are getting quite plenty and even numerous in the more settled localities. There are a few thrushes but no catbirds. Martins are very plenty in the towns, and anyoue can secure a colony by simply providing accommodations for them. The doves and hawks nest on the ground. On some of the streams raceoons are quite plenty, and for want of trees they live in the ground like a woodchuck. We have two varieties of polecats here: one like what you have in the East, the other much smaller. Its bite is very poisonous, resulting in something like hydrophobia, and is considered deadly."

[We cannot, from the very meagre description given, identify the birds with the "rudimentary wings," but presume that they are either some small grobe or else the coot (Putica americana). These birds, however, are sufficiently well provided with wings to fly from North to South and back again.]

THE HOOP SNAKE.

Opheosaurus ventralis.

Opheosaurus ventralis.

THIS is one of those singular animals around which ignorance and credulity have woven a tissue of supersitious nonsense almost rivaling the traditions of the famous sea serpent himself. It is first credited with having two heads, one at each end of its body, and next with having the curious habit of taking its tail in its mouth and rolling along the ground like a hoop. Just how these two traits can be made to agree we don't know, but suppose we should not question such time-honored lore—our fathers believed it and why should not we? The double-headed snake first appears in history in the writings of Cotton Mather, who was assured by the Rev. Christopher Toppan that "it had really two heads, one at each end, two mouths, two stings or tongues." The poet Whittier has immortalized it in his poem "The Double headed Snake of Newbury," and draws from it a most excellent moral. He thus speaks of it:

"Far away in the twilight time
Of every people in every clime,
Dragons and griffins and monsters dire,
Borne of water and air and fire,
Or nursed like the Python in the mud
And ooze of the old Deucalion flood,
Crawi and wriggle and foam with rage,
Through dusk, tradition and hellad new Through dusk, tradition and ballad age So from the childhood of Newbury town So from the chandood of Newbury town And its time of fable, the tale comes down Of a terror which haunted bush and brake-The Amphisbæna, the Double Snake!"

Of a terror which haunted bush and brake—
The Amphisbana, the Double Snake!"

As this strange being is quite plenty in the Western States, it may be interesting to ascertain just what the truth is in regard to it. To begin with, it is not a snake at all, but merely a peculiar lizard with no limbs and a very slender body. It is found from twenty to thirty inches in length, and at first sight would pass for a snake, but a little examination shows the differences. The body is a little examination shows the differences. The body is a little examination shows the differences. The body is a little examination shows the differences. The body is a little stouter than that of most snakes, and the length is made up by the tail, which is quite long. The head is very different, having no neck constriction behind it, and the cephalic plates are quite unlike those of a serpent. On the ventral surface, too, we do not find the series of long, transverse plates (gastrosteges) of the snake, but instead it is like the upper surface covered with fine scales. In color it is a yellowish white below, with more or less of brown above, which sometimes takes the form of longitudinal stripes, and at others is a uniform tint. Like other lizards, this one has the peculiarity of having its tail broken off very easily, only a slight blow being necessary to cause the fracture. When in the normal condition, the creature has a rather long, slender, pointed tail, but so easily is it broken that more than balf the specimens captured are found to have lost more or less of this member at some time in their lives; and so well known is this fact that it has given these animals a third name, that of glasssnakes, and the story is told and vouched for, that they will tly in pieces upon the slightest provocation, and when left to themselves the parts get together and soon reunite. Now, when one of them has been broken, its tail heals over in an obtuse-point; and when it happens that the fracture occurred at a place where the body was of about the same si

Ac. College, Ames, Iowa.
[The name "glass snake" and perhaps also "joint snake" is applied to this lizard, but we have never heard it called hoop snake. What reason there is for crediting this harmless reptile with all the dreadful attributes of the supposed hoop snake, we know no more than our correspondent. And if Opheosaurus ventraits is indeed the animal upon which all the hoop snake stories are based, it is certain that a crusl

injustice has been done it. But is it certain that this is the "hoop snake?" We have plenty of stories about the mythical reptile which apparently originate in the Eastern States where Opheosaurus is not found.]

where Opheosaurus is not found.]

The Nighthawk in Ctries.—111 East 72d street, New York City, July 7, 1882.—Editor Forest and Stream: In your issue of July 6, 1882 (Vol. XVIII., No. 23), your correspondent "Homo" states that he "never knew before last week that what is known as 'the bull-bat,' or 'nighthawk,' frequently build their nests on the flat rooftops of city houses." This fact has been known for some time by working ornithologists. As early as 1874 Dr. T. M. Brewer ("North American Birds," Vol. II., p. 403,) says of these birds (Chordelles popetus, Baird): "Each summer their number in Boston has perceptibly increased, and through June and July, at almost all hours of the day, most especially in the afternoon, they may be seen or heard salling high in the air over its crowded streets. The modern style of house-building, with flat Mansard roofs, 'has also added to the inducements, affording safe and convenient shelter to the birds at night, and serving also for the deposition of their eggs. In quite a number of instances in the summers of 1870 and 1871 they were known to lay their eggs and to rear their young on the flat roofs in the southern and western sections of the city. I have also been informed by the late Mr. Turnbull, of Philadelphia, that the flat roofs of large warehouses near the river in that city are made similar use of." During the past June (1882) I have observed a pair breeding on the flat roofto pof a house on the north side of Seventy-first street. This is the first case of the kind that has come under my personal observation, but I have been informed by others of similar instances in this city. In watching this pair I have noticed one habit which is part cularly striking. On leaving their eggs, they never rise directly from them, but flutter along to the most distant the flow of the profit and then launching out with the customary flight, go swooping and screaming about.—Louis A. Zerega.

THE WREN A NEST ROBBER.—Fort Wayne, Ind., June 12, 1882.—Editor Forest and Stream: Noticing an article recently in the Forest AND STREAM regarding the proclivity of crow blackbirds and bluejays for destroying the eggs and young of other species, I have to relate a similar trait in the character of the house wren (Troglodytes domesticus). A chipping sparrow had a nest in a Scotch pine a few fectabove ground, which was just fluished and a single egg deposted. I was watching for the return of the birds, when a male house wren flew by and lit on a limb a few inches above the nest. He peered auxiously into the nest for a few seconds, and then bristling up his feathers, hopped directly down into it and fiercety drove his bill into the egg, which, after apparently testing its contents, he flirted out of the nest and down to the grass below, after which, uttering a low, angry note (similar to the one made when they discover a rival poaching on their domain), he flew away. I pi ked up the egg and found that he had absorbed about half its contents, puncturing it only once. I have taken much pleasure in egg and found that he had absorbed about half its contents, puncturing it only once. I have taken much pleasure in studying the habits of these diminutive birds, been amused at their courage in attacking cats and large birds, but to say that I was astonished at the discovery of this (to me new) phase in their character is hardly enough. I was amazed. Now, if he will destroy the egg, would he attempt to kill the young? I would like to know if others have observed these small birds as nest robbers.—Dorris.

DEATH TO SMALL PLUNDERERS.—New York, July 7, 1882.—Editor Forest and Stream: "Forest Field" complains of the destruction of his grapes by summer redbirds. The English sparrow annoys us in a similar manner. Selecting the most luscious and perfect clusters (the Delaware is their especial favorite), they pick two or three, eating the pulp, and then tear the skin of as many more; these decay, and the result is, the spoiling of all those in immediate contact, and the result is, the spoiling of all those in immediate contact, the result is, the spoiling of all those in immediate contact, and the ruin of the "tempting attractiveness" of the entire bunch. Your correspondent says "a shotgun he does not like to use among the vines, that the birds become sby, etc". We found the same difficulty; but with a "Plobert" and patience, we now have the upper hand. The report is slight, and with a little practice he can "bowl them over" very nicely at fifty or sixty feet. Let him station a boy or go himself to the vines, remain quietly on the watch and after dropping a few, try another position. They will soon grow suspicious, and if he persevere, will avoid his vines to great a extent.—Dick.

THE MOONEYE.—A specimen of the lake mooneye, Hyodon clodalis, fifteen inches in length and weighing one pound and six ounces, after over a day's exposure, was taken last week on the Niagara River with a bass fly and shown as a curiosity on account of its unusual size at the store of as a curiosity on account of its unusual size at the store of our well-known game dealer and sportsman Mr. H. Roy. Although this fish is rarely seen and only then during the short time of its migration to the waters of the Niagara River, it is yet tolerably well known among the fishermen as the mooneye on account of its unusual large eyes. It arrives in early June, scattered sparingly among the immense shoals of the lake herring, and takes to fly with the greatest avidity.—C. L. avidity.-C. L.

REARS AND BEAR STORIES

AM a little disgusted and a good deal discouraged. I thought I had at last struck on a truthful bear story with a dead man in it. But it was not to be. After more than forty years' experience I cannot say I know for a certainty that any wild bear has killed his tormentor, the hunter, within that any who bear has kined his tormentor, the indirer, whilm the range of my observation, though I have seen men badly scratched and bitten.

Yes, my "sympathy was premature," if you put it that

But the story was served up to us in the leading dailies But the story was served up to us in the leading dailies and weeklies on the same terms as the iceberg calamities and the tornado rackets, all told "with the circumstantiality belonging to fact," as my "Grandmother's Review, the British," once remarked of Lord Byron.

How was I to know, I want to know? I do sympathize with Mr. Milliken. He has missed his tip for

* * * "A name, "
To fill the future speaking trump of fame,"

and gone home to Boston, to die of some ignoble disease induced by east winds, clam chowder, or green cucumbers, after the way of the Modern Athenians. He has a right to be mad. Had the story proved true, he would have gone down to posterity more famous than if he had led the charge

after the way of the Modern Athenians. He has a right to be mad. Had the story proved true, he would have gone down to posterity more famous than if he had led the charge of the Light Brigade.

And I must needs pick up my fool pen and hasten to tell five (no less) short bear stories, only to get polished off at the end by "E. M. M.," of Boston, with the query, "Was there ever a veritable bear story truthfully told?"

Why, bless you, yes. Five of them in Forrest and Stream right over your "query." Every one of them true and veritable, so help me John Rogers in my direct need, when I am lost in the mountains, fifteen miles from any place, no compass, one broken leg done up in an old gum overcoat, and twelve miles from low whisky mark!—Yes; certainly.

Why, my dear fellow, just reflect a moment. There are more than fifty bears killed yearly on an average in the wilder counties of Pennsylvania. Suppose you were among us and killed only one of these bears, do you think you would have a "vertiable story" to tell when you got back to Boston? And the killing of each and everyone of these bears includes a truthful bear story of necessity. Of course any man may lie, but the truth, graphically told, is always interesting enough. Natheless, here be liars.

Again. My dear "E. M. M.," you are a Bostoman; presumally of Puritan, possibly of Mayflower antecedents. You do not go back on absolute statements of scripture? I trust not. I hope better things of you. Please "take your eye and throw it alongs" the second book of Kings, second chapter, twenty-third and twenty-fourth verses. Is it a veritable and truthful bear story? It is a pretty tough bear story; but, it may be true. I dunno, I dunno. Forty-two sharp village youngsters are a good many for two she bears to get away with, by "tearing," "destroying," or "devouring" as the different versions have it.

It may be I am a trifle credulous when bear stories come to the front. Of the very many such stories to which I have listened, I believe there were few that were not substan

cofundrum at the end of it.

In the autumn of 1866 I happened to be in the village of New Lisbon, on the Lemonweir River, Wisconsin. It was the cranberry season, and there was not a day on which several wagon loads of cranberries did not come into the village from points varying from ten to twenty miles to the northward. One day I was called on to go down to the hotel yard, and inspect and examine and report on a strange variety of here, which had been killed in a marsh some

ward. One day I was called on to go down to the hotel yard, and inspect and examine and report on a strange variety of bear, which had been killed in a marsh, some twelve miles distant. I went at once. Some friend had reported me as a hunter and rifteman—which I was; and also as a naturalist—which I was not. At the first glimpse of the animal I thought the boys were trying to run a roan calf on me for a bear, but I climbed into the wagon and was soon convinced I had found something very unusual, and well worth investigating. The animal was a genuine bear, about a two-year-old, I should say. Description, as I put it down at the time, roughly, as thus: "Color, mainly a light, foxy red, mixed with white hairs from ears to rump. Fur coarse, like hair, shaggy and somewhat curled. To call him a red grizzly would give a good idea of the color. Jaws, claws, teeth and legs strong and muscular. General makeup, thin, tall, and much longer-legged than any dark bear I have ever seen."

have ever seen."

That is how I noted him. During the day he was seen

That is how I noted him. During the day he was seen and examined by scores of people, some of them old, experienced hunters. With one exception, he was a new animal to them all, as he was to me.

The one exception was a grizzly, bare-headed old hunter from the region lying south of Lake Superior. He called the creature a "masb bear." He said: "You never find 'em anywhere only around big cranberry marshes, where there are low sandy pints and scrub pine. I have hunted Northern Michigan and Wisconsin for thirty year, and haven't seen more'n half a dozen. The skins ain't worth anything, and the meat is always lean and tough. How they live I don't know, but they can run and fight." Twice afterward I encountered the same animal: once in Minnesota, once in Northern Michigan. He was always the same—always a distinct type and a genuine bear. Now, he may be described and well known by naturalists, but I have not seen it noted. ** There must be many persons in New Lisbon, Wis., who saw the animal I have tried to describe. Will any one, who has positive knowledge of the above-described animal, please send notes of the same to Forrest and Stream?

And I know of more odd strange incidents pertaining to

animal, please send notes of the same to Forest and STREAM?

And I know of more odd, strange incidents pertaining to wood and wold than I shall ever tell. I do not want the reputation of a liar. I am writing on the little pine table, where, thirty years ago, I wrote for Porter's Spirit of the Times. Just in front of me hangs a fine fifty-cent portrait of the Father of his Country. Beneath the portrait hangs my little hatchet, while the fresh morning breeze is wafting

* Compare Audubon's account of Ursus americanus

the leafy and suggestive branches of a cherry tree almost to my very face. With such pure and chastening influences before and about me, is it likely I would turn bear-liar in my old age? Wellsboro, Pa., July 3, 1882. NESSMUK

HINTS ON CAMPING OUT.

IN your issue of June 29, I notice an article from the pen of "C." in relation to camping out, in which he refers to instructions given by an old hunter on the same subject in issue of May 11. The doubts of "C." in relation to building

issue of May 11. The doubts of "C." in relation to building a comfortable shanty out of boughs, as advanced by "J. G. R.," coincides with my views exactly.

The first article brought to my mind an incident of camp life that happened to two "tenderfeet," deer stalkers, in the fall of 1865, on the head waters of Kinzua Creek, McKean

ounty, Pa.

Land a boon companion, had made that section our hunt-I and a noon companion had made that section our ing ground for several falls, having good luck in secuplenty of venison, with now and then a bear as trophic the chase. These two would-be hunters, unknown to us. ling ground for several lans, having good has a search septent of venison, with now and then a bear as trophics of the chase. These two would-be hunters, unknown to us, followed in on our trail, and put up a regular Indian brush shanty almost under our noses, and got confortably settled ere we were aware of it. My companion as well as myself looked upon such an act as rather intrusive at first, but concluded to wait patiently for future developments. They had been there a few days when there came a cold drenching rain, lasting part of a day and continuing all night, soaking the dry leaves up just right for still hunting. Pard and I were out early the next morning, and on our way thought we would call and see how the wigwam withstood the rain, surmising that the boys would like to take a little exercise for their health if nothing more. Upon nearing their shanty we discovered them standing, basking in the heat of as good a fire as they knew how to build. We took in their situation at a glance, and they felt just like unfolding to us the beauties of such a camp life without being questioned. Being invited inside, we could but wonder that they occupied it till day-light. Provisions, blankets, bunks, etc., completely soaked, guns covered with rust, and everything in confusion. During the day, however, they got dried out, packed their goods and left. I doubt not but they engaged board and lodging at some hotel on all subsequent hunting expeditions. "J. G. R.," in telling us "how to prepare for a camp-out over night, when lost or following up the chase," describes the mode of preparing fuel for the night. Of course such a manner could be followed if the hunter had taken with him an ax to cut down the trees and back-logs from.

But most of hunters only carry a light hatchet and would undoubtedly travel till night before stopping to build boughlouses and cut down the rees for fire wood. For the benefit of those that find themselves lost, or that travel till dark and are compolled to camp, I will give my way, which I ha

In most of timbers only carry a right hatener and would undoubtedly travel till night before stopping to build boughlouses and cut down trees for fire wood. For the beneft of those that find themselves lost, or that travel till dark and are compelled to camp, I will give my way, which I have found to answer quite well when the snow was a foot deep on the ground and I had nothing but my gun, hatchet, matches, etc. I first find a dry hemlock tree with the bark on near water if possible, then find a large log, and if snow on the ground, rake it back, build a fire some five or six feet from the log out of the dry bark, backing it up with any chunks that may be found in the vicinity, cut or break a good armful of green hemlock or spruce boughs, placing them on the round along the side of the log next the fire. While they and the log are drying off, I gather bark, etc., for fuel for the night. If necessary I cut a pole twenty or thirty feet long to assist in loosening the bark from the tree. By this time the bunk is warm and dry, the log acting as a wind break on the one side and holding the warmth in and around me on the other. If it rains or snows, I lay a few poles on the log with the ends Since and notified the within it and around the on the other states of the bars of the bars of the bars of the bars accomple of feet over the bunk, shingle on some of the bars and have a better protection than I could hope to make from a wagon load of boughs, and all accomplished in the space of five minutes' time.

FREWSBURGH, N. Y.

A NEW MEXICO STORY.

ALBUQUERQUE, N. M., June 12, 1882.

ALBUQUERQUE, N. M., June 12, 1882.

Editor Forest and Stream:

I have no exploits of my own worth relating, but send a clipping from the Santa Fe. New Mexican, recounting the worderful story of the killing of a grizzly bear and big deer at one shot. It reminds me of the famous story of how a negro servant explained the shooting of a deer through its ear and hind foot by the same shot: "The deer was a sratching its ear wid its hind foot." The following story ought to make Maj. J. Verity hang his head.

T. S. S. On Sunday last one of the most curious adventures took place, near the upper waters of the Pecos River, that has ever been related. As the story was told by the hero of it himself, who is recently from Chicago, and withal a very modest man, it may be believed implicitly; and it is illustrative of how by combined bravery, coolness and marksmanship two birds may sometimes be killed with one stone. Mr. H. J. Sheldon, the author of the story, left his camp at Cooper City, on the Pecos, last Saturday afternoon in scarch of game, in order, as he himself expressed it, in the language of the board of trade, to cover his shorts in the line of fresh meats, and especially induced thereto by the fact that he had several times heard of an elk of enormous dimensions having been recently seen a few miles up the river.

that he had several times heard of an elk of enormous dimensions having been recently seen a few miles up the river. As Mr. Sheldon was renowned throughout the camp for his skill with the rifle, much interest was manifested by the miners and others in the expedition, some of the more sanguine even offering odds that not only did that particular elk stand no mortal show for a prolonged existence, but that Mr. Sheldon would bring back with him provisions enough to supply the camp for the coming season. They accordingly gathered around his cabin, drank his health numerous times in the vintage of the Pecos and gave him three rousing cheers, as armed with a Springfield rifle, mounted on his horse and accompanied by his constant burro, he gallantly struck out for the unknown wilds of the Upper Pecos.

Saturday night he camped at the upper forks of the river, and Sunday, bright and early, was again on the march.

Saturday night he camped at the upper forks of the river, and Sunday, bright and early, was again on the march. About four o'clock in the afternoon the burro which had wandered ahead came running back apparently in great terror, cars and tail erect, eyes glaring, making that peculiar mournful sound for which its species is noted and refusing to be caught or comforted. Not being able to make out from the report of the confused burro just what had happened, Mr. S. cocked his gun and advanced slowly and cautiously on the unknown enemy. Crawling along on his hands and knees for about a quarter of a mile he at length doubled a bend in the river, and there, standing in full view in the meadow and not more than one hundred and fifty yards away, he saw a huge grizzly bear with three cubs,

and just beyond the bear and in direct range with her, an animal that he at once recognized as the long sought for

animit that he at once recognized as the long sought for elk.

Neither of the beasts were aware of his approach, so quietly rising upon one knee and resting his rifle across the other, which is Mr. S.'s favorite position in shooting, he took deliberate aim, intending, as was his custom in attacking grizzlies, to break the bear's spinal column. This as Mr. S. afterwards explained, incapacitates them for severe and prolonged attack or resistance. Bang went the gun, away sped the bullet, and down fell two animals—in fact, three, the bear, the elk, and Mr. S. himself. The bullet had cut the backbone of the beast completely in two, and passing on through had lodged in the heart of the elk, and the extraordinary task to which the rifle had been subjected produced such a violent recoil that the hunter himself was stretched flat upon the ground. Recovering himself, speedily, Mr. S. advanced upon the prey, hunting-knife in hand, but life was extinct in both animals.

The little cubs on hearing the report of the gun fled, but being only a few weeks old were speedily captured, tied in bags, and fastened on the back of the horse. On examining the supposed clk, Mr. Sbeldon found it to be not an elk at all, but an enormous deer—species unknown—measuring eleven feet eight inches from the tip of its nose to its hind feet, and standing somewhat over six feet high across the withers.

When their story was first heard, the accuracy of Mr.

withers.

When their story was first heard, the accuracy of Mr. Sheldon's tape line was doubted, but after one of the feet of the beast was seen—about the size of the back of an ordinary rocking chair, and we had heard half a dozen fish and campaigu stores around the camp fire that same night, we came to the conclusion that W. S. had rather drawn it mild than otherwise. At all events, with the aid of several men and horses, he brought back to camp on the Monday following the deer, bear and cubs, and the entire population of Cooper City have been feeding off the hind quarters of that deer ever since. If any one doubts the accuracy of these details let him ask Mr. Sheldon himself who is expected in Santa Fe in a few days and who will gladly explain the modus operandi of killing a bear and deer with one bullet.

IDAHO NOTES.

IDAHO NOTES.

In this Territory fish are not protected by law, but the season opens, with sportsmen, about March 1, and closes in September. Salmon—mainly S. elarkii var. aurora—are brought to market between December and April. The red-fish (O. komerlyi) is caught in August, between the Payette Lakes, where it is said they are so numerous at that time that numbers are killed by horses in crossing the stream. I have not eaten them when fresh, but think they are too fat to keep well in salt or when dried.

An old law protects buffalo, which have not been found in Idaho for many years, yet I have seen one skull, unquestionably of a buffalo, washed out by high water. The close season for elk, deer, mountain sheep and mountain goat is from March 1 to August 1. Not enforced except in vicinity of towns. Miners and woodchoppers often place their main reliance for ment on this game.

from March I to August I. Not enforced except in vicinity of towns. Miners and woodchoppers often place their main reliance for meat on this game.

Our wanter was a very favorable one for birds. Quail and blue grouse (T. obseuras) promise to be abundant. I found a grouse nest last week containing two eggs. I have not seen them described. They were about the size of Guinos fowl eggs, pointed, and spotted all over with chocolate brown spots; the ground color differed in shade, one being quite dark, "oraf au lait," and the other nearly white. The sportsman triumphed over science—the nest was not robbed. I intend to visit it again in a week or two, and if it is found abandoned on account of my last visit, will secure the specimens. The nest was a very simple affair, on a side hill, not far from water, under and on the shady side of a sage brush, with a horn "chip" outside; no grass or leaves for a lining. The sharp-tailed grouse—called here prairic chicken—is nearly extinct near civilization. They winter in the gulehes, and so become an easy prey for pot-hunters. The open season for them ought to close with November. Blue grouse, ruffed grouse and Canada grouse (spruce partridge—fool hen) winter in places so inaccessible that they will outlast the others. I hope to visit the Payette Lakes and Salmon River Mountains in July and August, and shall try to obtain the Canada grouse skins I promised you.

Borse Cirry, Idaho, June 10, 1882.

THE WET SEASON AND THE BIRDS.

THE WET SEASON AND THE BIRDS.

CONTINUED reports come of the scarcity of woodcock as CONTINUED reports come of the scarcity of woodcock as the open season approaches. All the news I receive is of one tenor. The prolonged rains of the past spring destroyed many young birds. And again it comes that the woodcock has not been the only suffere, but the young birds of quail in some districts have in like manner perished. Your correspondent has just returned from a brief tour to the West, and in conversing with sportsmen of Cincinnati, Louisville, and 8t. Louis, understands the same state of affairs exists throughout the whole country west of the Allegheny Mountains. The rains have been widespread and the birds have suffered everywhere. On the Indianapolis and St. Louis Railroad, the region through which this line extends is one inunense swamp caused by the rainfall. In many places water surrounds the farm houses and outbuildings, and country roads are completely covered. This was the condition a week since, and many heavy rains have occurred since.

Prairie chickens have not suffered to the great extent the smaller game has, for the reason that the grounds where they breed are not so much exposed to flood. We are likely to have a very dry period before the return of the snipe in October, and the grounds which they frequent in ordinary fall seasons will then, if a drouth has occurred, be overgrown with dense vegetable matter, and force the birds to select more suitable grounds, nearer water courses, spring bottoms, and the borders of ponds or lakes.

Your correspondent learned that the wild pigeons used at the late Louisville shoot were on the average too young to make good shoofing, many merely "flopping up" from the trap and then down again. On the whole the tournament was a success, and the great complaint to be made is that the States were not more generally represented with teams. This was not the fault of the management. Homo. Prairie chickens have not suffered to the great extent the

SHORE BIRD SHOOTERS will do well to send now for the little pamphlet entitled "Shore Birds," is acclosed last year by the Forest and Stream Publishing Company. It treats of their Haunts and Habits, Range and Migration, Nomenclature, Localities where they may be found, and of the use of Blands and Decoys.—Adv.

RIFLE AND ROD IN NORWAY.

RIFLE AND ROD IN NORWAY.

ONE of the most charmingly written little books that we have ever come across is "Three in Norway, by Two of Them." It is the story of three Englishmen who spent the months of July, August and September catching trout, shooting reindeer and ryper (grouse) among the mountains and glaciers of Northern Norway.

In style it is most pleasing, and it abounds throughout in a certain dry humor which is very attractive. The party were evidently all capital fellows and keen sportsmen, and had, besides, an appreciation of the ludicrous side of things, which is too seldom found among book makers.

We cannot, perhaps, do better than to give one or two extracts from its pages. Their treatment of the inquisitive visitors to their camp is thus described:

Any natives who see our camp when rowing past come to shore to

tracts from its pages. Their treatment of the inquisitive visitors to their camp is thus described:

Any natives who see our camp when rowing past come to shore to inspect us and our belongings. They all adopt the same course of their boat and make it safe, and advancing close to the tent, stare, and say nothing either to each other or us. Then Essus asys confidentially, as if it was a new and brilliant idea, (he has done exactly the same thing some scores of times) "We'd better be ciril to these fellows; perhaps they could bring us some eggs, and they look pretty friendly." The natives are all the time standing and saying nothing. Then Essus says confidentially, as if it was a new and brilliant idea, (he has done exactly the same thrighty." The natives are all the time standing and saying nothing. Then Essus remurks in Norwegena, "It's fine weather be returned by the same through the same that the same control of the same through the same that the same and a saying nothing. Then Essus says and Essu not having understood a single syllable answers, "lat' dry (yss) but have you any eggs?" Then aside to the Skipper, "Wonder what the dence the fool was talking about?" Soon the natives perceive that their words are at the and a half, or two times, they depart as they came. Some wasted, and relapse into the silent staring condition again, and after a time and a half, or two times, they depart as they came. Some well and give them some list, at other times they look upon us as dangerous lumatics, and avoid us like the plague.

Essu learnt this habit of asking for eggs when we were on a fishing expedition near the South coast of Norway. On one occasion, there, we arrived at a small village, with an enormous quantity of trout that we had caught in the adjoining fjord, and found a small crowd of fourteen or lifteen scattering man sily lounging around an open of fourteen or infeces ascarring man sily lounging around an appearance of the story of the same weird question.

The new, who had been chatting busily amongst thems

The story of the killing of one of their last reindeer is thus told by "Esau:"

The story of the Killing of one of their last reinideer is thus told by "Esaus".

Now, here was where my luck came in. If that buck had not been so proud he could have run straight away from us to the glacier beyond the lake, but we were "betwist the wind and his nobility," and he wanted to get a clean breeze and run against it instead of down it. Consequently, when he was about three hundred and fifty yards away he turned to the right, apparently intending to make a circle round us and so get the wind in his face.

Directly he turned broadside to us gave a shrill whistle and the buck stopped short for a moment so that I had just time to make stumbled, but recovered himself instantly and made off a good deal faster than before, evidently perceiving that things were getting serious and that "this here warn't no child's play." Before I could fire again he got into the ravine, which runs down toward Rus Lake, and was out of our sight.

We thought there was just a chance of cutting him off in that extendly rough ground, though, of course, we could not tell whether he was much burt or not: so we ran as hard as we could for about a quarter of a mile, loading as we ran. Suddenly I caught sight of him going very slowly, but luckily he did not see us, so we olding still, and an all after another short ma wing to his wound, and about we outland a fifty yards away.

This time he saw us, and darted off as fleetly as ever, no longer

indly, and after another short run came in signification, and after another short run came in signification.

This time he saw us, and darted off as fleetly as ever, no longer with his side toward us but straight away. I was dead beat, and Jens had thrown himself down and was peating like—like—theoretina? Suggested the kipt and another yard; you know what it is on those stones, so I sat drawn another yard; you know what it is on those stones, so I sat drawn another yard; you know what it is on those stones, so I sat drawn another yard; you know what it is on those stones, so I sat drawn another yard; you know what it is on those stones, so I sat drawn another yard; you know until the stone of the s

The book is full of incident and humor, and will be thoroughly enjoyed by those who are fond of outdoor life.

PERSISTENT POACHERS.—Forge House, Fulton Chain, N. Y.—I have to inform you that the notorious "Taylor party" has again been caught killing deer out of season. I find that this party, which hails from Philadelphia, was fined \$250 last year for the same offence and that the warning was not enough. This year they came into the woods with about fifteen persons, six of whom were ladies, and brought thirteen guides from Long Lake. They built a bark shanty on Big Moose and supposed that all was serene. Game Agent Dodge was notified that they had brought in jacks for fire-lighting and descended on them over on the Twitchell trail just as they were backing in some "meat." He introduced himself and convinced them that he would require their company out of the woods as far as Booneville. Some of them went and settled up with Squire Morling. We will keep our eyes on them and hope to catch them again. They call themselves sportsmen, but are merely meat destroyers.—GUDE. PERSISTENT POACHERS.-Forge House, Fulton Chain, N

Massachusetts Methods.—The Massachusetts Fish and Game Protective Association, advertise in the papers that "sportsmen and all other friends of fish and game preservation will confer a favor, and benefit their own interests, by promptly reporting any violation of fish or game laws to the undersigned. Any person who visits the woodcock covers at this season of the year, with dog and gun, soudd be suspected, and will bear watching. A seward of fifty dollars will be paid for information that will lead to the conviction of any person who kills or has in possession any woodcock before Aug. 1, or any partridge before Sept. 1, or any quall before Oct. 15. This association will promptly prosecute all cases of violation of the laws protecting fish and game.—

John Fotler, Jr., President."

We Hope Not.—The Sun of this city says: "Vicar-General Quinn and Father O'Fairell of St. Theresa's have gone to the Adirondacks to hunt and fish. Mass will be said on Sundays in their tent on the shore of the St. Regis." Wo hope that these gentlemen have not been misled in reference to the Adirondack game senson. These is no hunting there now, except for bears and pauthers.

Esor's Fox in Minnesona.—Cedar Mills, Minn.—Esop's fox, which are so much that he could not return through the hole where he had come into the barn yard, turned up in Cedar Mills, the other sight. Reynard jumped through a window down upon a brood of chickens belonging to Mr. Rathbun, and after he had filled his maw was so heavily ballasted that he could not get out again. Mr. R. keeps a double-barreled shotgun, which he wields with effect; his blood was up, and that fox died an infumous death.—A. McE.

Texas Deer.—Willis, Texas, June 8.—The boys are bringing in some of the biggest and fattest old bucks you ever saw. Our deer law opens 1st of June here, which may seem singular to you; and our months for fine deer are June, July, August and September. Running season begins 1st October, after which the deer are worthless.—C. L. J.

MANNE. - Machias, July 3. - Game prospects about average. ALATYE.—Machias, July 8.—Game prospects about average. I thank you for the stand you have taken upon game protection. "G" of Waterville (issue June 22) is correct. We intend to look after the dogs and visiting sportsmen this fall, for unless we do, we can do nothing with our crust hunters, and game will be among the things past.—H.

Massachusetts.—Taunton, Mass., June 30, 1882.—Quail are more plentiful this season than for several years past, and the prospect for the coming fall is very promising. I have not seen many woodcock and grouse yet, but expect to see young woodcock soon. At this time last year I found young woodcock about half fledged.—J. C. C.

SOUTHERN EXCURSION GLIDE.—This excursion guide of the Virginia Midland Railway is a handsome pamphlet, containing a great deal of information about the resorts of Virginia, North Carolina and Georgia. It is supplied by A. Pope, General Passenger Agent, Richmond, Va.

A ROCKY MOUNTAIN HUNTING COMPANION is wanted by a Philadelphia correspondent, who has been over the country before. The contemplated trip may be an extended one, and it is proposed to make it economical.

GUN STOLEN .- See notice of stolen Greener gun, in our advertising columns.

BEAR, MOOSE AND CARIBOU .- See "Stanstead's" letter in our fishing columns

Camp Hire Hlickerings.

"That reminds me."

"That reminds me."

THERE had been a flight of pigcons and the boys had all been out. After the remarkable shots and wonderful experiences had been related old time stories were brought out and revamped for the occasion, making the meeting a very interesting one. By common consent Uncle Mose Sanger was awarded the palm as king of pigcon hunters, and many unecdotes of his successful campaigns were related, the last speaker unhesitatingly pronouncing him the most indefatigable hunter as well as the most ardent lover of the sport in all that region

able hunter as well as the most ardeut lover of the sport in all that region.

To this statement Cud took exception, and said that Joe Allen was entitled to the honor of first place. Now, Joe was a half-witted fellow, who lived at the town farm, and as no one knew of his ever killing anything, Cud was pressed to give his reason.

"Well," said he, "this morning I saw a flock of pigeons settle on a big tree and I went for them. Just before I got there I saw Joe under the tree pointing his gun at the birds; then he took it down and walked around a little and took aim again. He did this several times, when the birds flew off. I asked him why in thunder he didn't shoot. 'Oh? said he, 'I haint got but one charge-of powder and shot and I want to hunt all day.'"

Sea and River Hishing.

Southey, in his "Common Place Book," Vol. I., p. 142, gives the following account of "The Church of the Fishes:" "There stood here a Greek monastery, and when Mahomet laid siege to Constantinople the following miracle occurred: On the day of the decisive nople the following miracle occurred: On the day of the decisive attack a monk was frying some fish, when news came that the Turks had entered the town. 'I would as soon believe,' said he, 'that these fried fish would spring from the pan and become alive again,' To reprove the incredulous monk the fish did spring from the pan into a vessel of water which stood near and swam about in it. In commemoration of this miracle a church was built over the spot containing a reservoir of water, into which the fish, which still continued alive, were placed.' These were probably carp, which are noted for their vitality and ability to endure heat.—S. C. C.

A BATCH OF FISH STORIES.

A BATCH OF FISH STORIES.

THE following passage forms the conclusion of an elaborate article on "Tront Fishing," from the ever-pleasing pen of Charles Lannan, which will appear in his forthcoming work entitled, "Riverside Essays;"

And now before concluding this paper, the spirit moves us to mention a few special recollections connected with the capture of trout. Our first attempts with the fly were made—how many years ago!—in the county of Windham, Conn. The news had reached us at Norwich that there was an old fisherman residing in Voluntowa who could tell us all we wanted to know, and a bright, but cold, spring morning found us at his residence. He knew of a brock not far off which ran through a meadow which was very narrow and very winding, and at that time in good condition. He told us to begin far up the stream, and to throw the fly at each of the bends, where there was sure to be a little pool, and in going about half a mile we took out thirty beautiful trout, which averaged about half a pound. The good old man followed us all the way—he was in his eightieth year—and enjoyed the sport quite as much as we did. We visited him a number of times during that season, and always had fair sport, and when the next spring arrived we sought him out again, but he was asleep on a little knoll not far from his home, and not a trout could we find in all the land. In those remote days Voluntown was a barren, and lonely, and dreary place, where the people lived by burning clarroal, but those beautiful trout and that good old man can never be forgotten.

The largest lot of trout that we ever captured in a single be forgotten.

The largest lot of trout that we ever captured in a single

day numbered one hundred and sixty, and were found in the headwaters of the Scolarie, on the western slope of the Catskill Mountains. Not one of them, however, measured over six inches, and while we may possibly be mistaken, the idea haunts us that we enjoyed about forty for supper, cooked by the wife of the mountainer under whose roof it was our privilege to spend the night. Such a rest as we enjoyed was never excelled by any mortal, and the peace which was the mountains words and mountains, and in rested upon the surrounding woods and mountains, and in the starry heavens, was only made more blessed by the soughing of the breze in a neighboring hemlock and the distant song of a whip-poor-will.

soughing of the breeze in a neighboring hemlock and the distant song of a whip-poor-will.

The largest common trout that we ever saw weighed a little over four pounds, and was taken at the head of the tide in a brook at Marshfield. It was not our fortune to capture him, but it was a privilege even to "look upon this king." If was presented by his captor to Daniel Webster, and the dinner at which he was served was made intensely interesting to the writer by an exchange of fish stories between the host and his honored guest, John F. Crampton, the British Minister accredited to Washington.

The largest trout we ever captured weighed a little less than three pounds, and this is the way the feat was performed: We were on the road from the Merimichi to the Nepisiquit in New Brunswick after salmon, and our driver had stopped at the Tabusintae to water his horses. The stream at that point was only a large brook, but under the bridge was a very inviting pool, in which, as we were passing over it, we noticed a pleasant-looking disturbance in the way of ripples. The horses were very thirsty, and of course mg over it, we noticed a peasant-locating disturbance in the way of ripples. The horses were very thirsty, and of course it took some fifty minutes to water them, and as we could not afford to idle away so much time, we "whipped out" or smallest salmon rod and a nice little fly. We made five casts and took out that number of trout, one of them weighcasts and took out that number of trout, one of them weighing nearly three pounds, and the balance two and one-quarter, one and one-half and one pound, and a half-pounder. Of these fish two of them were out of season and unfit to eat, but the other three were fresh run and in good condition. For fifteen miles from the sea the Tabusintae is quite a large river, but above tide water it has the character of a large river, but above tide water it has the character of a

one produced and the business was and onequarter. One and one-half and one pound, and shalf-pounder.
Of these fish two of them were out of season and unfit to
eat, but the other three were fresh run and in good condition. For fitteen miles from the sea the Tabusintae is quite
a large river, but above tide water it has the character of a
large mountain brook; and although itformerly abounded in
striped bass, salmon, sea and common trout, the settlers
near the sea have well-nigh destroyed its fisheries by their
cupidity and ignorance of true economy.

Once when we were passing over from Lake George to the
Adirondacks on foot, we tarried for a few hours at a bridge
which crossed the upper Hudson, because the spot looked
inviting for a little sport. While standing on that bridge,
engaged in unticing a knot, the fly which we had just attached to our line happened to be daugling about one foot
above the water, when a trout weighing half a pound made
a leap for it and hooked himself, so that the fellow was
eaught without the formality of wetting a line.

But our trouting recollections have not always been without alloy, and here is an incident connected with the beautiful waterfall of Gien Ellis, among the White Mountains.
We were piloted to it by the lamented Thompson during the
summer than the first opened the Glen House. We re-visited
on many subsequent occasions, enjoying in the Mountains.

was all in vair, and which we had reached the world this glooming bit of wilderness and had reached the world of sunshine, we went upon our way rejoicing and full of thankfulness for the beautiful everywhere.

And now, in fancy, we are upon the head waters of the Catawba in North Carolina. It is the month of May, and we are a veritable "solitary horseman," but not the one alluded to by the novelist. We are alone, and crossing the moun-

tains that slope toward Tennessee, so as to strike the valley of Virginia, and there wind up our equestrian tour. We are not equipped for fishing, but happen to have a small line and a few files in our pocket book. But the Catawaba where we now look upon it, is very shallow, covered with golden and crimson pebbles, very clear and I beautiful, with a wall of lofty wood-covered hills protected on either side. That there are trout in this stream cannot for a moment be doubted. But what shall we do for a rod? A careful hunt for a twig is of no avail. We consult the mother of invention and she suggests our riding whip, and a moment after the word is said the deed is done. We then intimate to our beautiful and sure-footed little mare, as best we can, that it would do her good to perambulate the river for a little while, and so we leap into the saddle, and begin to try and throw the fly. All that we can well do, however, is to drag the fly from one side of the stream to the other. Instead of being wild the fish are willing, and in half an hour we have taken half a dozen as beautiful trout as were ever seen. We compliment and reward our intelligent companion for her important assistance, by letting herenjoy a little patch of grass, pack the fish in our saddle bags, and resume our journey. That hight we spend under the roof of a frontier farmer, partake of a fish supper with his family and then spend a couple of hours before bed time talking with our host about the people who live in the valley of the beautiful Catawba.

And now we will conclude this rigmarole with an account of a royal feast that we enjoyed on the shore of Lake Superior. We were a party of Chippewa Indians, except the deponent and the trader who had us all in charge. The wind had compelled the brigade of canoes near the Apostle Islands to land upon the main shore, and this spot was at the mouth of a small stream freeming with trout. After picking up along that shore and packing away all the agates that we wanted, with the Porcupine Mountains in full vi

WITH HACKLES AND GENTLES.

FIRST PAPER.

" Let's fish, and let's sing together. In spite of wind and weather; For here pure joy is found, So let the toast go round: Come, here's to all anglers true Fill your glasses, but ne'er get fou!"

HAIL and a hearty welcome to the honest angler whose HAIL and a hearty welcome to the honest angler whose eye may, perchance, read the above, written on a window of an inn near Dumbarton, and whose soul is in sympathy with the sentiment therein expressed and suggested. I write "suggested" advisedly, for the little word "fish," used either as a noun or as an active verb, is sure to suggest more than can be expressed to the brother of the rod and creel. Visions of the past and future come up before him, and whatever his present may have of joy or woe, these mental gleams of flowing water and of rising fish will intensify the one and mitigate the other.

A fisherman's joys, like his sorrows, are such that no alien to the craft can understand—in one sense an angler is a

one and mitigate the other.

A fisherman's joys, like his sorrows, are such that no alien to the craft can understand—in one sense an angler is a separate and strange being, having, 'tis true, the form and semblance of other men, but a "thing apart" from them, like Byron's description of a man's love as compared to that of

Dyron's description of a man's love as compared to that of woman.

By the grace of Forest and Stream I purpose, as an angler, to write a few papers on "the gentle art" for those who "be quiet and go a-angling." At the start I admit that a half selfish purpose incites me, and it is that when I cannot cast a fly or bait the hook I take pleasure in writing of so doing. In my reflections, expertences or anticipations, if I have any interested followers, and if I in anywise beguile any angler's leisure time, I shall be satisfied. I shall write as the stream flows, carelessly and freely, turning aside now and then for any pleasant shade or shallow, and striving only to run free of "snags" and aught else that peradventure mars the pleasure of the angler who—

* * "Envies no man's joys But his who gains the greatest sport: With peace he dwells far from the noise And bustling grandeur of a court,"

With peace he dwells far from the noise, And bustling grandeur of a court."

The old turnpike, my friend, hath led our feet to this pleasant riverside and we will now try what the river hath in store for us.

It is not my ideal of an angling water—it is too sluggish, its hue too dark and its banks too low and boggy for a genuine and artful bout with the rod. It is too suggestive of cat-fish and other ignoble fins unworthy of a true angler's creel, to awaken much enthusiasm. Nevertheless it is a river, and I know there are perch, pike and black bass therein, so we will beseech the rabble to let our hooks alone and pray the fates to send the same a few goodly specimens of the three above named. If you like you may try your new "spoon" for the Exac, but I am minded to tempt a voracious Perca with a well secured brandling. Bait-fishing of any kind is not the acme of the art, but when no fly-fishing is to be had the use of well prepared baits is not to be scorned. They must be well prepared, however, to make them endurable, and with such I have taken many a lusty fish, after a sharp struggle with naught but light tackle atween us.

For all kinds of ishing let the tackle be as light as may be compatible with security. I am not an advocate of using a willow-withe for a rod, however; there must be a staunchness to support the spring and a balance to the temper of every rod. It is very comfortable to be at the landward end of a light rod and tried tackle when the fish is "struck" and its resistful greeting felt at the wrist! There may be beholden the "three graces"—the grace of the darting fish, the grace of the bending rod and the unconscious grace of the rapt angler as, with eye and hand alert, he plays the fish to the net, or gaff. In years agone I have seen the lithe form of a graceful woman adding grace to grace as she "played" the rish to land, and nower did she look more fair than with the flush of victory on her animated face, the two-pound

trout lay in her hand! There is a rare pleasure in the society of a woman who loves to angle—who can throw the cares and pleasures of her sex and society aside and cast a fly with deft hand and can play and kill her fish with consummate skill. There are such—God bless them! Would there were

Not a rise to your spoon yet! Not a bite to my worm either! It is rather monotonous, I admit, but we are, at any rate, free from the daily cares and perplexities of life, and while we are comfortable, let us not make ourselves uncomrate, free from the daily cares and perplexities of fife, and while we are comfortable, let us not make ourselves uncomfortable by worry. The sun rides too high for the fish to feed, and let us be content if we only hold the rod and see the water kindly take its shadow on this, our first outing. Our beloved master in the art, Walton, wrote pleasant words on the taking of few or no fish, and cited many consolations therefor. This free air, that lovely stretch of river, and the knowledge that this is but the beginning of our lishing days together, ought to give us cheer. Look ye! your float indicates life at the hook and—I have him! A sturdy tug and a pound of good flesh at the least. That sudden rush and pause means to me a goodly perch, and recall days long gone and scenes far removed from this. He plays well, and I hardly expected to find so much "game" in such dark and slow-running water, which goes to prove that "appearances are deceitful" often. A few more runs and I will land the fish! Here he is! A lusty perch, as I said, and in excellent condition. I break his neck, thus instantly putting him out of pain, and the creel has one occupant of over a pound weight. und weight

ting him out of pain, and the creel has one occupant of over a pound weight.

We may reasonably hope to take more, as he belongs to a gregarious family, and I advise you to leave the spoon and follow my example, since I have proven it to be a good one. For years I have made a practice of killing my fish as soon as they were landed. It is humane, and it makes them in better condition for the table. A struggling fish in a creel makes me rave, so beware! Instant death to all game—whether of fur, fin or feather—should be the purpose of all sportsmen. Quick killing not only ceases misery, but puts the fl-sh in firm and toothsome condition for the palate and stomach, and—you have a bite! Be wary, and keep him from the jagged abutments of this old bridge, or your line may suffer abrasion and your expectancy the loss of the fish. In spite of my predictions we may secure a "fry" for breakfast; another brace will do this, as your fish is quite equal to, the one I have landed.

Thus, with indifferent success, we sit on the crumbling embankment and fish, and dream and talk; laying plans for

Thus, with indifferent success, we sit on the crumbling embankment and fish, and dream and talk; laying plans for the morrow, and with every breath "sucking iu" health and quiet joy, although our floats dance idly on, rather than vigorously down-sink under the mimic wave. "Tis enough to know that the town is behind us, its cares likewise! We are free, we are fishing, we are happy!

"Old Father Time has played his pranks. My hair is silver gray, Yet still along the verdant banks Of streams I fondly stray. The gentle craft I still pursue

While wandering to and fro, And angle, as I used to do, A long time ago."

O. W. B.

THE RED DRUM.

THE RED DRUM.

TROM all I can 'glean, the ''Red Drum'' of the New Jersey coast is the ''Redish' or channel bass, Sciamops occllatus, of the South. Last winter a noted Pennsylvania fisherman informed me that he had captured a number of large ones near a wreck off Atlantic City, during it e summer of 1881. In a paper received to-day I noticed that they are biting near Cape May. As I have captured numbers of this noble fish, and as successful fishing is to a great extent dependent on little things, I fancied that a few remarks might not be out of place.

On the Atlantic coast of Florida they run large, the smallest I have thus far captured with a hand line weighed nine-teen pounds. On the southwest coast they do not attain the size they do on the eastern—the largest I have thus far captured with a rod and reel on the latter coast weighed but twenty-four and a half pounds. In fishing for channel bass at the mouth of this river, I generally use a hand line, for the tide runs like a mill race. I use a strong hand line and a first quality Virginia hook one inch and a quarter from tip of point to shank. At times these fish feed at the edge of the surf and it might be well for your Northern fishermen to test this mode of fishing. They could use a bass rod and reel or a hand line.

For surf fishing I use a square lead three inches long and one inch in diameter. When casting the lead I place in the center of the mold a cylinder of writing paper about three-sixteenths of an inch in diameter. When casting the lead I place in the center of the mold a limeter. When casting the lead I place in the center of the mold a cylinder of writing paper about three-sixteenths of an inch in diameter. When the lead is cold I remove the charred paper, and have a smooth hole from end to end of the sinker. To obviate cutting and chafing of line. I dress the ends of lead with a poetck kuife. Fifteen inches from the hook I tie a half knot, the line is passed through the lead and is arrested by the knot. With a coil of line in left hand I enter

weight of the sinker it remains stationary, and the action of the tide and the undertow on the bait draws the line through the lead, and the bait moves freely. As the line is not fastened to the sinker, a bite is easily detected. For surf fishing it will be found advantageous to soak the line for twenty-four hours in shellac varnish, and after removing it stretch between two stakes or trees, and before the varnish is dry rub the line with a piece of coarse cloth. A line treated in this way will render easily, and not be so liable to kink as an ordinary line.

In fishing from a boat in this section, fishermen throw the bait from thirty to fifty feet astern. The result is, the bait remains on the bottom, the fish quietly munch it and escape the hook. For a large fish, if the bait is still, they are addicted to nibbling, and prove good bait stealers. My experience has taught me to anchor over the bank, and when tishing with a hand line in astrong tide way, to use a twelveounce lead. I use a snood three feet long, and attach it to the line six inches above the sinker. I allow my line, to ruo ut until the lead touches the bottom, when I raise it one foot. By this arrangement the bait floats with the tide, is kept in motion, and a bass will seize it with a vim. and the music will commence. By adopting this mode, I one morning, before 8 A. M., landed eleven of these tighters, averaging forty-five pounds. If fish do not bite, I sometimes use a float and allow the line to travel with the tide, and thereby capture a stray one. It is not generally known, but channel bass bite during the moonlight nights. In this State they

bite best on the last of the ebb, slack water and the young

flood.

For bait 1 sometimes use mullet, but in the North it is probable mossbunkers will make an attractive bait. Each bait should weigh not less than three or four ounces, but if sharks and skates are plentiful, cut fish bait will prove objectionable. As a rule, I have avoided the capture of these varmints by using hard back crabs for bait. I take a large-sized hard back, remove the back shell, cut off the claws at joint nearest the body, divide the crab in two pieces, and use one half for a bait. If the tile does not run too rapidly, I would advise piscators to test live bait in the way of a young mossbunker.

young mossbunker. In fishing for red drum a rocky or shell bottom should be selected, or a point near an old wreck. I can assure; readers that they will find these fish bold biters, if the is kept from the bottom and moving. They are ful fight and will be found worthy of the piscator's notice.

AL FRESCO. JACKSONVILLE, July 4.

THE FATE OF A SCEPTIC.

THE FATE OF A SCEPTIC.

JUST as winter was turning into spring, one of whom we expected better things, ventured to question in these pages the substantiality of a faith venerable as man himself, and whose devotees throng every water within the bounds of human habitation. In the face of the inscriptions upon Cleopatra's Needle and the traditions of Scandinavia which bear witness to its truth, ignoring the records of the Swiss navy in that memorable expedition of the Matterhorn, and stilling the voice which cried out of the depths of his own consciousness protesting against the wrong, he deliberately susstinated the officery of moistening with saliva the festive stilling the voice which cried out of the depths of his own consciousness profesting against the wrong, he deliberately questioned the efficacy of moistening with saliva the festive clam and frisky worm when employed by the angler in the practice of his art. The world stood horrified at his presumption; the ichthyophagoi shuddered over the apostacy of he man.

A rebuke came from the Nile, the Hoang Ho, and the

sumption; the chanty oping of shuddered over the apostacy of he man.

A rebulke came from the Nile, the Hoang Ho, and the sources of the Matterhorn. A cry of derision from gentle anglers who, in far-off Bahar and Patua, were casting the well-lubricated bait aloft into the haunts of the Anabas seandens, struck the iron to his soul. Nature ceased to smile, and put aside his attempted pryings with a stern "That'll do, sir!" The Place de Blackford, for him, became an Inferno. Then he daily read tender reproaches in the dreamy eyes of Pleuronectida; the ficree glance of the Gadus morbous. All the him with an undefined terror, while the wail of wild-eyed Scomber over his perfidy touched him with his first remorse. It was unendurable

He secluded himself beside a rural stream and watched the lusty salmon emerge from the ovum; he became a nurse to their infant wants; he planted in strange waters; he invoked the zodiac, from frisky Aries to questionable Virgo. Vain resort; the offended powers could not thus be appeased. He became desperate; he sought annibilation. He queried in his despair whether the Unlow were edible; in recklessness he threw himself among men who had invented gorillas, and sought the society of those to whom the octopus was a plaything. He reared hecatombs of horseshoe crabs and of dogfish, nor hesitated to devour them; he poured libations of punch du Chaillu, proved himself a castiron receptacle and, as such, offered himself, a human aquarium, to the fetes. Still a vain subterfuge; pursued by a Nemesis as inexorable as the gad fly which drove the wandering Io from land to land, from the dwelling place of Scythians to peaks, lightning-blasted, the prison of the godated, he forsook his olden haunts and turned to that last refuge—the wilderness—the resort of the world's heroes of hait-cloth garments, of its mortifiers of the flesh.

The climax of his punishment is attained. To-day he is

Scythians to peaks, lightning-blasted, the prison of the godhated, he forsook his olden haunts and turned to that last refuge—the wilderness—the resort of the world's heroes of hair-cloth garments, of its mortifiers of the flesh.

The climax of his punishment is attained. To-day he is a wanderer in the wilderness, far from home and friends, without a roof to shelter his devoted head, a pensioner on the appropriation of the State. In his slumbers will come dreams of once happy hours—hours when he sported with the fragrant Lophius and made melody on his light guitar, ere he had sounded the fair fame of the lovelorn virgin of Havemeyer's Island. Ever and anon his slumbers will be broken with the cry of the great white owl, "don'!—you wish—you hadn't?" bringing new remorse. On land, in hourly danger of being trodden beneath the rushing herds of Cariact; on lonely waters, in constant peril of being seized by the fierce Namapeush and dragged to depths where the Esociata are waiting to sit in judgment on the traducer of their kin, he passes his days.

Tears are unavailing; the pearly drops of the Ostrea virginiana, the gushing showers of the Unios cannot recall him. Fate is long; the end cannot be foreseen. It may be that in some far off time a tightly corked bottle—empty—a few buttons on the beach or, perchance, a shoe thrown from the crater of Mount Marcy will be found and identified as a portion of the chattels of a former editor of Forest and portion of the chattels of a former editor of Forest and portion of the estate. We bewait his sad fate, but feel assured, should he escape the perils with which he now seems almost hopelessly environed, that his penance will be rich in its fruits, and that not the least of these will be a firmer faith, a new credo, an unfaltering trust in that mysticism of the craft—spitting on the bait.

TENNESSEE NOTES.

TENNESSEE NOTES.

MESSRS. Demoville, Dunean, Hicks and Foster returned this week from their annual fishing excursion to Michigan. They did the Elk River, and though they were there rather early, the sport was clegant. Mr. Foster landed a twenty-pound Mackinaw trout with an eight-ounce rod, and Dr. Louis Demoville a five-pound bass with similar tackle. About Nashville the angling fraternity have had a fair amount of sport since the spawning season. Geo. Goodrich caught a ten-pound jack out of Crow Creek. Mill Creek has been seined until there are scarcely any fish left. From South Harpith encouraging accounts are given of the large increase in fish this summer. Mr. J. E. Warner is doing very well with his hatchery in Cheatham county. The brook trout eggs he received last spring were successfully hatched and he has now about 12,000, varying in size from the minnow with his egg sack appended to one-pounders. Mr. Warner is under the impression that when the water is as cold as that from the spring which supplies his ponds, the brook trout will not only thrive but in this climate will increase in weight more rapidly than in the North, because the ponds here never freeze over, and the fish feed and grow all winter. I hear from different sources that those persons raising carp are meeting with great success. Mr. Hamilton, living near Lebanon, has a large pond in which from a few pairs of German carp placed in it two years ago, he now has thousands. Dr. Salmon of Shelbyville tells the following

remarkable story of a new species of fish (or perhaps I had better say new to this country.)
"Several years ago a tremendous water spout passed over

better say new to this country.)

"Several years ago a tremendous water spout passed over a farm near my place, the rainfall was unprecedented, and with it, I believe, came the fish in question. After the storm was over I noticed in a small creek close by my house millions of minnows, which by their peculiar action I took to be strangers. Having on my place a pond in which there were but few fish, I determined upon capturing some oi the little fellows in the creek, and adding them to the pond supply. I did so, and since they have multiplied rapidly, filling the pond with what I consider the most delicious fish I ever ate. They grow to weigh one or two pounds, resemble the white perch, are free from bones, take the hook rapidly and are tolerably game. The strangest feature in the whole matter is, that there are no more of them in the creek from where my supply came, nor are there any to be found outside of my pond in the State."

I know Dr. Salmon personally and can vouch for the statement above made. When he returns home, he will send me a specimen of the fish in alcohol, and I will send it to the FORENT AND STREAM for identification.

Hermann Burkholz, Charley Horn, Jack Bentley, and Felix Mitchell, have gone for a week's camp fishing along the banks of Duck River. They are all first-class sportsmen, and have one of the most complete camping outfits in the State. That they will have a splendid time is a superfluous prophesy, and no doubt will creel no end of fine fish. A great many drum and bass are being caught in the river at this place.

this place.

NASHVILLE, June 24.

NEW BRUNSWICK NOTES.

NEW BRUNSWICK NOTES.

ALMON fishing so far has been very poor here in the Restigouche region this season; the salmon have been both scarce and small. At one fishing stand on the bay below here last year the salmon taken averaged 264 pounds each; this year the almon taken averaged 264 pounds. A few days ago there was a little run and the net on this stand during two tides took forty-two fish, but the average has been from five to ten salmon a tide. Reports from Miramichi say that they are now having a fine run of fish, and that the freezing houses are fast filling up. If this is true we may have a good run here later. Trout fishing has been good, if anything better than for years past. The writer and a friend have just returned from a visit to some newly discovered lakes that lay some fifteen miles from here in the wilderness, and we had the honor to cast the first fly upon their waters, and rare sport we had, for they were teeming with—I can't use the term 'speekled beauties.' for that's too common; neither speckled trout, for it has been decided by our 'wise men' that our speckled trout are not trout 'at all,' but *Salvelinussf*, so I will say that the waters of these lakes were alive with the sprightly sesthetic char with Osear Wilde like tendencies, as they showed a strong partiality toward a large, bright, yellow fly, though the first and also the largest *Salvelinussf*, was taken with a fly sent me by E. B. H., of Plymouth, N. H. Will Brother Hodges kindly give us the name of that fly and where they may be pround, as they are the pretiest fly that I ever saw. This particular one was unfortunately injured badly early in the affray by a big \$S. f. tearing off its wings, but I am satisfied that it will prove a killing lure wherever used. Bear, particular one was unfortunately injured bady early in the affray by a big S, f. tearing off its wings, but 1 am satisfied that it will prove a killing lure wherever used. Bear, beaver, moose and caribou signs were plenty around these lakes, and we saw several coveys of young ruffed grouse. Later in the season the sportsman could have good sport in that locality with the gun as well as with the rod.

Campbellton, N. B., June 30,

STANSTEAD

HERETICS ON THE WORM OR FLY.

Editor Forest and Stream:

Editor Forest and Stream:

Trout-fishing is the cream of sport. To confer a benefit on mankind is to preserve the trout streams. There is no poetry in rivulets without trout. The man that don't enjoy trout-fishing should be rooted out as weeds from a flower garden. The man that destroys a trout stream by introducing pickerel or black bass is a vampire, and no better is the man or boy that fills the creel of the "Rifualists" for pay. The trout is not so big a fool as the ritualists would have you think. Put two hooks on your line, on one a worm, the other a gaudy ty. Dandle them ever so skillfully, and the trout will take the worm every time, and that worm is always in season. This has been my experience, confirmed by observation. The "ritualist" and heretic fish together; the heretic eatches the fish, and if he is a country heretic, the ritualist has the fun of getting the fish to show. I know I am committing a sin by stating facts that don't sound well in a fish story, but I consider it excusable, taking into consideration the fact that trout streams are fast becoming depleted, owing to the existence of so many unconverted consideration the fact that trout streams are has becoming depleted, owing to the existence of so many unconverted country heretics. Is it worm or fly, let it be fly. Go on with your good work, Mr. Editor. Extinguish the heretic, and then the fly will have at least a ghost of a chance. Let ritualism prevail, and our streams will again sparkle with the golden beauties, and posterity will bless you for the in-TOHM JHONS

We have a certain valley in this State, lying high up in the Alleghanies, remarkable in many particulars. It is about twenty-five miles long by six wide, almost level, and the soil of unsurpassed fertility.

It is bounded by mountains which are not high when looked upon from the valley, but, in reality, are among the highest in the Appalachian range.

A small river—the Black Fork—so named from the chocal late color of its waters rises in the southern extremity and

A small river—the Black Fork—so named from the choco-late color of its waters, rises in the southern extremity, and

late color of its waters, rises in the southern extremity, and flowing northward, leaves the valley in a fall of seventy feet, making the only break in the mountain border.

The valley is almost wholly undeveloped, and, consequently, a grand place for the sportsman. Deer, bear, wild turkey and occasionally panther, are found, while a very beautiful, but far more dangerous creature than any of the preceding, is now frequently met with. You are as any now to see a track made by a "tiny little shoe," or "catch the glimpse of a petiticont," as see a bear.

The sportsman's days in that valley will, ere long, be churches, etc.

But the trout that live in that river—quite remarkable to me, and the cause of this article.

But the trout that live in that river—quite remarkable to me, and the cause of this article.

They much resemble our brook trout, common in our mountain streams, with, perhaps, a greater brilliancy of the spots, caused, it is said, by the somewhat lighter color of the body. They are very plentiful, but are seldom taken

over fifteen inches in length. How are they caught? over fifteen inches in length. How are they caught? With the white or red angle worm alone? Never has a trout been taken from that water by the fly, dead or alive. They never rise, but take the worm altogether like the common sucker—by a series of weak little nibbles. Although this trout loses much of his dignity by the tame manner of taking Lim, he is gamy when hooked, and equals any on the table. Although a "Ritualist" in trout fishing. I had, on this occasion, to bow quite low to the "Heretical" worm. Have any of your readers had experience with this kind of trout? If they should be sceptical on the subject. I am ready for another excursion to the same waters. Wolm.

Philippi, W. Va.

PHILIPEI, W. Va.

NEAR DETROIT.—I send catches made about the Star Island House since May 20: May 31, Chas. Mills, Detroit, 43 black bass and 3 pike; May 28, Miller and Crane, Detroit, 7 bass, and 14 pike; June 5, C. Miller and party of four, 76 bass, weighing 242 pounds—all taken in two hours; June 8, Taylor and Brown, 45 bass, Bext day took 65 more; June 10, Allen F. Holmes, 42 bass; June 11, Miller and Holmes, 46 bass; Geo. Foot, 16 bass; F. H. Smith, 13 bass, During this time over 500 black bass have been taken by members of the club, whose house is only one mule from Star Island House. Last year the largest catch at Star Island, in one day's fishing, by thirty-three boats, was 1,247 pounds; and many pike, pickerel and perch were also taken but not counted.—James Slocum.

Large Striped Bass.—On July 4, Mr. Renneck of New York, caught a striped bass weighing sixty-four pounds at Cuttyhnuk, with rod and reel. The fish was fifty-four inches long and thirty inches in girth. The next largest fish caught this season was caught by Mr. Alf. De Cordova, fifty-eight pounds, fifty-six inches long twenty-nine girth, Wm. Post caught two bass at Newport about four years ago, weighing seventy pounds. This is the largest bass on record caught with rod and reel.

Salmon Fishing.—Those of our readers who wish to try the salmon on the Cascapedia are referred to the advertisement of "James B." in this issue. The river is said to be one of the best. We have a telegram from that river dated July 11 saying that the river was high and fishing fine, some scores as hig has fourteen fish to a rod; largest salmon forty-six nounds.

Indiana.—Greencastle, Ind., June 26.—The base are about done nesting, and fishing is very good. There are now two base to where there was but one last year. If the seines were kept out of the creek our stream would abound with base every year. Mr. Coleman, of this place, has made several good catches this season.—Gardante.

Hishculture.

NEW HAMPSHIRE NOTES.

NEW HAMPSHIRE NOTES.

The salmon have made their appearance in the Merrimac River at last, about two weeks later than last year. The first one was seen at the Lawrence Fishway June 18, and estimated at about 13bs. One was also seen the same day at Lowell, which is ten miles further up the river, trying to jump the fall at the Dam, not having found the lishway. Another was seen in the fishway at Lawrence, June 20. One was taken by some boys at Amoskeag Falls, at Manchester, June 23, and Mr. Hodge took one at the hatching house at Plynaouth, on the 27th. The Fish Commissioners have been very fortunate in securing the services of Mr. Hodge, who is an occasional correspondent of Forest and Stream, as superintendent of the State Hatching House, in place of Commissioner Powers, who was obliged to give up the charge of it on account of his health, the exposure to wet and cold having threatened him with serious trouble with his lungs. Mr. Hodge is a keen sportsman and a good naturalist, and his experience and advice have been of great value to the Commissioners in times past.

Fishing about the State has been very good this season, as the streams have been full of water. I have basketed one or two nice lots of trout from brooks which I used to fish thirty or forty years ago, but which I had long since given up as "played out."

Thave not heard much of the bass fishing in the Connecticut River as yet, but two tine pike were taken at this place last week, one of 10 (2 hs. and one of 13 lbs.

Tout fishing at Sunapee Lake has also been good. Three trout were taken last week at George's Mills, at the head of the lake, weighing together 11 lbs. 14 cz., and these are the regular brook trout, not the Sahon onanguexis. The stocking of this lake with smelt, some years since, has probably had something to do with the increased size and number of the trout, as well as furnishing the excellent bass rishing to the found three. Count me in with Dr. Henshall on the "Toy-Rod" question.

Charlestown, N. H., July 1, 1882.

SHAD IN ARKANSAS.

SHAD IN ARKANAS.

O much has been said and written about shad in the many tributaries of the Mississippi River, and hearing of their abundance in the Ouachita River, Ark., I wrote to Dr. Lawrence with reference to them, and in reply he sends me the inclosed letter, which will doubtless be found of interest by all persons desiring to see the propagation of fish secured.

J. D. H.

NASHVILLE, Ter

by all persons desiring to see the propagation of ish secured.

J. D. H.

MASHYLLE, Tenn.

Hot Springs, Garland Co., Ark., {
 June 30, 1882.

To J. D. Hill, Esq., Office of "Southern Industries," Nashville, Tenn.:

My Dear Sir—In reply to your postal of 28th inst. regarding information from Judge Ferris concerning shad found in our rivers, I will state, reiterate the fact heretofore-written and published in Prof. Baird's report, that white shad of the greatest delicacy are annually, from March 25 to April 15, found in the Ouachita River, caught at Thornton Dam, eight and a half miles from Hot Springs, Ark. Shad have been caught here to my knowledge since April, 1860. Our mountain rivulets and streams, the rocky bed and margins of the Ouachita, for some thirty miles below the physical barrier of the first dam on the river, arrest the fish in the ascending as they course the rivers from the ocean at spawning season. Shad have been caught within the last three years. We are on the Ouachita, about 1,000 miles from mouth of Mississippi River. Any scientist can find at Louisville Falis, on the Onio River, about 1,400 or 1,500 miles from mouth of Mississippi River. Any scientist can find at the Academy of Science, Philadelphia, Fa., shad over twenty inches long that I contributed from the waters of the Ouachita River, near this place. Shad, I believe, at spawning or breeding season as an ocean fish in all our coast tributaries from the St. Lawrence to the Rio Grande. Shad are a game fish and will rise to the green corn-colored fly, but the mouth is so tender that a reel is required to drown and capture them.

More shad are caught annually in St. John's River, Fla., and sent abroad, than from any three rivers from Connecticut to the Potomac River. The Fish Commission may claim and be by government rewarded for stocking our rivers, but so far as the Quachita River is mentioned shad were there before the Fish Commission were born. Doubtless they have sent coals to Newcastle, but fish will swim without the commission.

GEO. W. LAWRENCE, M. D.

SOUTHERN FISHES FOR NORTHERN STREAMS

SOUTHERN FISHES FOR NORTHERN STREAMS.

In a previous communication I referred to the fact that the fish commissioners of the North and Northwest are stocking suitable streams with salmon trout and shad, and are overlooking thousands of streams and ponds, where Southern bream and wall-eyed and war-mouthed perch would probably succeed. These fish will undoubtedly thrive in mill ponds, small ponds, and lakes where nothing but eatfish and roach can. If introduced into the depopulated streams and ponds of the North, they would materially increase the food supply, and furnish sport for the angler. Our fishermen enumerate four distinct species of the bream in this State and the size they attain, I append a local from this day's Union newspaper.

The perch attain a weight of two and three pounds. They will take the fly, minnow, or cut bait. They are bold biters, and excellent fighters.

These fish are excellent for the table, increase very rapidly, and studiously protect their spawn and young. As food and for sport they will not equal the trout or salmon, but they can be reared where the salmon would die. It appears to me that they might be advantageously introduced in many localities in the Northern States.

The paper referred to says: "Yesterday morning by invitation of Mr. Smith Martin, salesman for E. Vanderpoel, wholesale and retail fish dealer, we visited his fish house, near the city market, where we beheld a thousand or more of the largest and fattest bream that it has been our good luck to see for many days, and which were beyond a doubt the best lot generally of fresh fish that have been brought to Jackson-ville this scason. Many of these bream would weigh from one to two pounds each, and were reaidly taken by consumers at the usual price—twenty-five cents per string of four. They were caught near Georgetown during Monday night, and sent down to the city, where they arrived in splendid condition. Fish have not been at all plentiful with our dealers the past few months, but the prospects are good for a large r

JACKSONVILLE, Florida, June 15.

A MEETING OF FISH COMMISSIONERS.—Huron, O., June 30, 1882.—We have read with a good deal of pleasure an article in your valuable paper from the pen of Mr. D. Y. Howell, Superintendent of the Fish Hatcheries of Ohio, in relation to the work of the hatcheries of the State during the past year, and noticed particularly his very practical ideas in reference to the demand for the passage of a law for the protection of the supply of whitefish and trout in our lakes, and we heartly second his suggestion that a convention of the Fish Commissioners of the different States be called for the purpose of framing a law to be passed by the Legislatures of all the States bordering on the great lakes, looking to the fish referred to,—Wickham & Co., Wright & Co.

STRIPED BASS FOR THE PACIFIC.—Oceanic, N. J., July 10.—Editor Forest and Stream: We have secured 200 bass (striped) for the California Fish Commission. The fish are yet in the feeding car, and are in good condition. Think we will take 100 more, and by Thursday the youngsters will be on the way to the Pacific waters. I will send Prof. Baird six of the bass fry, three and a quarter inches in length, the smallest yet caught by the commission. The lobster experiment was not a success, as they were kept until the fifth day, then died. We'll ship one car eels.—G. H. WILD.

A TENNESSEE FISHCULTURE COMPANY.—Nashville, Tenn., June 16, 1882.—A charter has been applied for establishing a fishculture company in this city. Mr. J. C. Warner who has a small hatchery in Cheatham county will be manager. The company proposes growing all varieties of fish capable of being propagated in tais climate. Game varieties will receive the greatest attention. The enterprise is one destined to pay handsome profits.—J. D. H.

SPANIEL JUDGING AT CLEVELAND.

Editor Foyest and Stream:

I have nuch pleasure in answering the letter of "Cocker," contained in your issue of 29th ult, because, in the first place, I believe his questions are succerely put for the purpose of obtaining histornation, and in my position as Secretary of the American Cocker Spaniel Club, I consider it my duty to take considerable trouble to reply to such: and, secondly, as he is apparently a disappointed exhibitor at the Cleveland Show, under my decision as judge, I au only following out the principle I all along adopted in connection with that show, viz.: to explain to each exhibitor showing under me my reasons for the various awards.

As there seems to be considerable misconception as to what the American Cocker Club standard really is, I would trespass on your indulgence to the extent of asking you to publish, along with this letter, our printed description of the points of the cocker, as adopted by the club. While the subject was under discussion by the committee appointed by the club to draw up a standard, I expressed my views in writing in somewhat greater detail than the committee thought lit to adopt, but the standard accepted by the committee conveys to my mind very much the same ideas I had expressed. The club's standard is as follows:

"A cocker spaniel must not weigh more than 28lbs. nor less than 18lbs.

"General appearance, symmetry, etc. (value 10). A cocker spaniel should be eminently a well-built, graceful, and active dog, and should show strength without heaviness or clumsiness. Any of the spaniel colors is allowable, but beauty of color and marking must be taken into consideration.

"Head (value 15) should be of fair length, muzzle cut off square, tapering gradually from the eye, but not snipey. Skull rising in a graceful curve from the stop, and with the same outline at the occiput, the curve line being flatter but still curving at the middle of the skull. The head should be narrowest at the eyes and broadest at the set-on of ears, and, viewed from the front, the outline between the ears should be a nearly perfect segment of a circle. The stop is marked and a groove runs up the skull, gradually becoming less apparent, till lost about half way to the occiput. This prevents the domed head. Jaws level, neither undershot nor pig-jawed, teeth strong, and regular.

"Byes (value 5) round and moderately full. They should correspond in color with the coat.

"Ears (value 10) lobular, set on low, leather fine, and not extending beyond the nose, well clothed with long silky hair, which must be straight or wavy—no positive curls or ring-lets.

"Neek and shoulders (value 10).—Neck should be sufficiently

which must be straight or wavy—no positive curls or ringlets.

"Neck and shoulders (value 10).—Neck should be sufficiently
long to allow the nose to reach the ground easily; muscular,
and running into well-shaped, stoping shoulders.

"Body (value 15).—Ribs should be well spring; chest of fair
width and depth; body well ribbed back, short in the coupling, flank free from any tucked up appearance, loin strong.
"Length (value 5), From tip of nose to root of tail, should be
about twice the height at shoulder, rather more than less.
"Legs and Feet (value 15).—The fore legs should be short,
strong in bone and muscle; straight, neither bent in non out at
elbo-w; pasterns straight, short, and strong; elbows well let
down; the hind legs should be strong, with well-bent stifles;
hocks straight, looked at from behind, and near the ground.
Feet should be of good size, round, turning neither in nor out,
toes not too spreading; the soles should be furnished with
hard, horny pads, and there should be plenty of hair between

hard, northy paus, and there should be painty the toes.

"Coat (value 10) should be abundant, soft and silky, straight or wavy, but without curl; chest, legs and tail well feathered. There should be no top-knot or curly hair on top of head.

"Tail (value 5) usually docked, carried nearly level with the back. At work it is carried lower, with a quick nervous action which is characteristic of the breed.

SCALE OF	POINTS.
General appearance10	Length 5
Head15	Legs and feet
Eves 5	Coat10
Ears	Tail 5
Neck and shoulders	
Body15	Total

Ears. 10 Tail. 5
Body. 15 Total. 10.77
Body. 15 Total. 10.70
Perhaps our standard is hardly full enough in description to convey to those who are not thoroughly acquainted with spaniels an exact idea of our little favorice, but to me, at least, it pictures such a dog as the following: A strong, active cobby, nimble, little spaniel, full or eager activity, brimful of intelligence and desire to please. He should have neither the long head and muzzle of the field spaniel nor the domed head and pug face of the endern King Charles, but a happy medium between the two, if anything, inclining more in the direction of the field spaniel than the chumpy snuffling King Charles or Blenheim, whose heads are simply horrible to the eye of the sportsman. His body should be thick-set and round in barrel, with immense loin power for such small dog, considerably shorter in the back proportionately than the field spaniel, and his ribs should run well back and have good depth behind. The legs should be short, strong, and straight in front, and behind he should have muscular quarters and thighs, and clean-made hocks. His ears should be set on low, lobular in shape, of good length in the leather, but not too heavy. His cout, bright, glossy and silky, flat or slightly wavy, of good length and abundant. The feather on ears, legs, feet, tail and belly should be long and wavy, not curly nor inclined to run into ringlets. His tail, usually docked to enable him to hunt, with convenience to himself in thick coverts, ought to be an exact index to his character—wanton, irrepressible and ever busy. It ought never to be carried above the level of the back at work. The limit of weight fixed by the club is from eighteen to twenty-eight pounds. For my own part, I prefer cockers between twenty and twenty-five pounds, but I must confess that of late years I have rarely seen any of this weight that were not useless weeds.

The cockers that appeared before me at Cleveland in class

weight fixed by the club is from eighteen to twenty-eight pounds. For ny own part, I prefer cockers between twenty and twenty-five pounds, but I must confess that of late years I have rarely seen any of this weight that were not useless weeds.

The cockers that appeared before me at Cleveland in class 38, although in their way nice-looking and probably useful dogs, did not nearly answer the above description; and it would have been in the highest degree misleading, had I awarded any prizes to dogs altogether different in type to what the American Cocker Spaniel Club is designed to encourage spaniel breders to try and resuscitate, viz., the true cocker spaniel, which, from neglect in England and America and the want of concerted action on the part of his disinterested admirers, has been gradually mongrelized into a hundred different shapes and styles.

"Cocker" asks why I did not judge cockers by Stonebenge's scale of points. Well, I judged field spaniels by Stonebenge's points, as also I did all the other classes submitted to me, where legives a scale; but I know of no other scale of points for the origins, as asale; but I know of no other scale of points for the origins, as asale; but I know of no other scale of points for the origins as scale; but I know of no other scale of points for the origins as scale; but I know of no other scale of points for the origins, as also I did all the other classes submitted to me, where he gives a scale; but I know of no other scale of points for the origins, as also I did all the other classes submitted to me, where he gives a scale; but I know of no other scale of points for the origins, as laborated by the American C. S. Club, and which is, I think, a very good one, notwithstanding all the objections raised against it.

My understanding of that standard is given above, and I cannot well see how some intelligent gentlemen, for whose opinions generally I have the greatest respect, seem to think that it was specially designed to five real many of the presencent of the cocker

The greatest fault I have to find is that the length of the body is not considered enough by breeders. Stonehenge says it should be rather more than twice the height at the shoulder; the Cocker standard is just the same. If "Cocker" would think of this and get the length with a good flat coat on the otherwise perfect cocker, which I dare say he owns, he need not take a back seat at any show. These are the two points which I think deserve attention at present, and if I may add another—give a slightly longer muzzle with less stop at the upper end, cocker breeders in this country need not be ashamed to show their dogs at any show in the world. This is a big enough dose for the present.

Al. B.

is a big enough dose for the present.

Billion Forest and Stream: "Cocker," in your issue of June 29, says: "I supposed that all of the judging was by Stonehenge's points." Further on, he says, "I must confess my irnorance of what the standard of the American Cocker Spaniel Club is." "Cocker" is just the man a lot of us have been looking for, and he must have succeeded in finding what we have all missed. We have seen in print the standard of the A. C. S. C., but we have failed as yet to find any points given by Stonehenge. Will "Cocker" kindly favor a number of breeders interested in the small spaniel with Stonehenge's points, which he refers to and lends us to believe he knows all about.—SPANIEL.

ENGLISH SHOWS AND CLUBS.

The article under this heading in our issue of June 8 should Live Slock Journal. "Sprint" continues his "growls" in the former journal as follows:

It has just entered my head, that there will certainly be some readers of these criticisms of mine, who look upon them as the theory of the sound of the sou

DOGS CHEAP.—Mr. E. A. Herzberg offers some good by gains in our advertising columns. He wishes to dispose of I dogs before the 1st of August, and has reduced their prices figures that will without doubt accomplish his purpose.

MR. ALLEN S. APGAR'S SCOTCH COLLIE "MARCUS."

MARCUS.

WARCUS.

WE give this week a capital half-length portrait of the champion Scotch collie dog Marcus (E. K. C. S. B. 7,329) owned by Mr. Allen S. Apgar of New York. Marcus is a black and white dog of good size, very well formed, and has the best collie coat that we ever saw. He was imported January 7, 1882. His winnings in Great Britain include champion at Dublin, firsts at Chesterfield. Thornton, Filey, Shipnia, Shropshire, Fulford and Margate. Seconds at Doncaster, Durham. Whitby, Keigley, Filey, Pickering, Cheltingham and London, Thirds, London twice and Belfast. Since his arrival in this country he has won first and special at Pittsburg, and the champion prize at New York and Boston. He is also the sire of several prize winners in Great Britain, and is uncloubtedly one of the best stock dogs that we have in the country.

THE EASTERN FIELD TRIALS.

THE EASTERN FIELD TRIALS.

[Del/) W will be found a list of the entries for the Eastern del Trials Derby. There are fifty-nine in all, and a grand so they are if we may judge them by their breeding, we heardly congratulate the association upon the excellent character and goodly number of the entries for their fourth annual Derby, and can safely promise those who are so fortunate as to witness the running, that they will see one of the most interesting and important events of the kind that has yet taken place in this country. We have received from several corespondents very favorable reports from High Point, N. C. stating that the grounds selected for the holding of the trials are all that could be desired, and that quall bid fair to be very plenty. The farmers are greatly interested, and will strictly proserve the grounds and do all in their power to promote the success of the meeting, and to make the visit of the attending sportsmen a pleasant one. Arrangements are in progress for reduced rates of fare, of which due notice will be given. The following are the entries:

DIED OF GRIEF.—Many Northern sportsmen who have visited Florida have in past years formed the acquaintance of Mr. de Laureal, a veteran sportsmen of St. Augustine, and will learn with regret of his recent death. Mr. de Laureal was in his seventy-seventh year, and up to the time of his death was enthusiastic in his pursuit of field sports. A favorite dog belonging to Mr. de Laureal, after his master's death, moance piteously, and, with every manifestation of grief, refused food and water, and pining away, in three days died.

THE PARIS DOG SHOW.—Paris, France, June 26, 1882.—
Editor Forest and Siream: Many of the readers of your very
valuable paper will probably be pleased to know that the
highest prize at the last dog show in Paris, the Pric Ahonneur
(for setters without distinction of breed) was given to an
American dog, a Laverack setter from the Strathroy, Ontario, kennels of L. H. Smith, Esq. The dog in question is by
Paris out of Pearl. He is as good in the field as on the bench.
—IVAN P. PRANISHNIKOPF.

E. A. Herz-old set DEATH OF MR. HERZBERG'S JESSIE.-Mr. E. DEATH OF MR. HEROBERG'S JESSIE.—Mr. E. A. Herz-berg, of Brooklyn, has lost by death his famous old setter bitch Jessie. She died last Friday full of years and honor. Although a grand field performer, she was perhaps better known as the dam of St. Elmo. She was also the dam of St. Patti, St. Mars and several other good ones. Jessie was ten years old at the time of her death, and was in whelp to Emperor Fred.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ALBANY, July 4.—Renseslocewyck was not an inviting place, this afternoon, on account of the weather. When the first squad of riftenen arrived the rain was falling, and it continued during the whole of the afternoon. Promptly at two o'clock the matches were conmenced, and for four hours there was no intermission in the shooting. The riflemen are so accustomed to all sorts and conditions of weather, that a little rain does not dampen their ardor or interfere with the programme as usually laid down. So long as the markers can locate the stots the men are ready to step to the front and fire their scores. The first match called was the short-range match at 200/ds, [of y a military match at the regular military distances 200 and 500/ds, closs ing with a mid-range match at 500/ds. The attendance of speciators was good, but not anything like it would have been had the weather conditions been more agreeable. The scores made in the matches were as follows:

MINNEAPOLIS, June 6Unlike other cities	
is comported baland the times as rurards field	and countie sports. In

MINNEAPOLIS. June 6.—Unlike other cities of its size. Minneapolis is somewhat behind the times as regards field and aquatic sports. In almost every city or town in the country two or three erganizations having go an object social, division of the country two or three erganizations having go an object social, division the fact that the citizens in a constitution of the sufficient interest to make them so. In this city, however, clubs are formed and arrangements made which promise to make ceverything boom portaining to the organization, but from one cause or another sufficient enthusiasm or interest is not awalrened, and beyond holding annual meetings the clubs formed are seldom heard of. As an exception to this rule, however, is the interest taken by the members of the Minneapolis Hille Club, which stands among the organizations of its kind throughout the country in the front rank, both as to skill and membership.

Tank, both as to skill and membership to exceed and met monthly and semi-monthly for seven or eight years for rile practice, was requalitied on April 7. 18-90, under the name of the Minneapolis kille Club. The charter members were: C. M. Skinner, Frank J. Horau, J. H. Gallison, I. N. Hoblit, Ilo Quan, Joseph R. Hofflin, A. F. Elliot, E. Bachner, J. W. Hankinson, Cale Maudlin, Andrew Slatten.

The understanding was that the club should be formed for one year as a preliminary organization, and as the end of that time the question of a permanent organization could be better settled. At the incenting held at that time, A. F. Elliot, was decreed. At the incenting held at that time, A. F. Elliot, and the end of that time the constitution and by-laws were adopted and on July 7 a club house was erected and a range secured on the river bank, near the University.

From that time up to the present day the club has met with unpre-

sity.
From that time up to the present day the club has met with unprecedented success, which is due to the active part taken by the members.
At the annual meeting held April 6, 1881, the success of the preceding year caused the forming of a permanent organization, with A. F. Elilot President, C. M. Skinner Secretary and Treasurer, and C. M. Skinner Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Treasurer, and Secretary and Secretary and Treasurer, and Secretary

The tournament will be the event of the year among ridemen in he Western States, and beside the teams from prominent ride clubs here will be a number of teams from the State military organizations, and one or two from companies stationed at the fort.

GARDNER, Mass., July 6.—There was not as large an attendance t Hackmatack Range on the Fourth as expected. The inch ring and reedmont rarget combined was in use, 200 yards of hand. The following the companies was the statement of

New Yorkers, to 19th by the nome team, or by Creedinor count, 4ft; of 3d out of the possible 525. The return match will be shot at Brinton Range on July 13.

FOOLS PLAY.—One of the usual flock of summer players who shout through the warm weather to the empty seats of New York theaters, has been holding a private exhibition of his specialty, and it is thus described:

"A square-t-was placed immediately in front of the footlights," as the secrebs of the playing card—tive of spades. At this the scribes present were permitted to practice, at about ten yards distance, and until the corner spots were hit. The actor then placed the target at the extreme rear of the stage, and himself standing at the rear of the orrobestrastalls, despite the very boil light, easily sent a bullet into the center spot of the card. The shooting of apples from off the head and pipes from out the mouth of his son were feats which the rilleman scarcely counted as anything; he as sight with his ling from an eloyer, sent a bullet through an apple resting on the head of a young lady, at full twenty paces. He then explained and performed the "double shot." A fripod, in which a rille is fixed, stands on one side of the stage; this rille is sighted at an apple resting on the head of a young lady, at full twenty paces. He then explained and performed the "double shot." A fripod, in which a rille is fixed, stands on the add of a young lady on the opposite side of the singe, A young man sits in front of the triped also holding an apple, while the ringer of the fixed gun, his build for the young lady. He aims at the trigger of the fixed gun, his build for the young lady. He aims at the trigger of the fixed gun, his build gun the imposite side of the stage. It will be readily imagined that this is a most startling feat."

THE TRAP.

THE BOMBARDMENT AT WEEHAWKEN.

THE BOMBARDMENT AT WEEHAWKEN.

The challenge issued by the Algonquin Gun Glub to shoot any club in the United States (i) men earch, 20 Ludies each) having been to came of from the Sith inst., at the grounds of the Algonquins, Weelawten, at 2 P. M. the battle field was in order, with a commodious table running nearly the entire length of the wigwam, weighted down with good things in the eatable inne, while divers pleasant liquids of a temperance nature and otherwise were handy and in abundance. It was a triendly challenge in order to start up the glass hall shooting, the interest in which had been for easier to high now and hard to get, the interest in which had been for easier to high now and hard to get, the first of the control of the start in the scores at the fleeting ball, had not practised for two years, and they rather expected to get a warming this time; but they were determined to enjoy temselves and at the same time do their best, and from the result it will be seen that their right hand "South Paw" was shis left mostly) had not forgot its cunning.

It was soon decribed to the control of the south and the southern the control of the

and at this same time do their best, and from the result it will be seen that their right hand "South Paw" uses his left mostly) had not forgot its cunning.

It was soon demonstrated beyond a doubt that shooting at weekly shoots, or at practice with one's own club members, and shooting in match with a crowd of critical speciators standing by, were two different things, and the Algonquins suffered the most from this, as some of their men, Hill, Hannah and Sauer, for instance, always good for an average of 18, dropped come tending to the various little gruess, arranging his men, and attending to the various little details incident to a match was not compatible with a big score. Another thing worked against a large score, but which was perhaps as fair for one as the other—the unevenness of the balls; some of the balls incident to a match was not compatible with a big score. Another thing worked against a large score, but which was perhaps as fair for one as the other—the unevenness of the balls; some of the balls incident to a match was not compatible with a big score. Another thing worked against a large score, but which was perhaps as fair for one as the other—the unevenness of the balls; some of the balls in the air, or be pushed out of its course by the shot, and not broken. MAGGIE'S BRILLIANT PERFORMANCE.

Oct. 3—Jersey City Y. C., Losing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

MAGGIE'S BRILLIANT PERFORMANCE.

THERE has all along been some hope in the minds of many that the string of defeats we had to take at the hands of Madge last year were exceptional. That we had been "taken unawares," and that lack of preparation was the key to our losses. To the closer observer this seemed a very lame excuse, since no one discovered astonishing rapidity after the battle. But five minutes of the first of those memorable races the cutter rig with its double files and loose-foot mainsail was "pooh-poohed." A single jib, you know, was a much better driving sail, and a laced mainsail could lie much closer; and, besides, who ever knew a square-headed topsail to sat on a wind? Then again, lead ballast was all nonemense; from was the the foreigner curried lead or find botte, and nobody cared whether the foreigner curried lead or find botte, and nobody cared whether the foreigner curried lead or find botte, and nobody cared whether did. It was a foregone conclusion that the cutter would be beaten "as though she were at anchor"—the very expression put into cold type by more than one of our esteemed but very poorly informed contemporaries.

Whew! Sum our eyes were suidenly wenched open when the was a sum of the proposed monotonous and over for our own adored light draft, the "nesty, quontonous sail over for our own adored light draft, the "nesty, and those pet theories about "sliding over the water." When the first beating was, to use a vulgar but expressive phrase, thoroughly "rubbed in" by five more similar disasters, until no fresh victims could be found to chemical the proposed of the country of the

allogather, the performance of the Maggie bids fair to eclipse that of the Madge, and by the time the season is ended, the superfor speed and the season is ended, the superfor speed means and the old season is ended, the superfor speed and the season is ended, the superfor speed and the season is ended, the superfor speed and the old season is ended, the superfor speed and the old season is ended, the superfor speed and season is ended to the season of the sea

Sociate searching tests in the case of our smatter yachts, will be also now that all doubts on the question have been about removed.

Our warning is this: If ever a fair battle between our big craft and an acknowledged crack cutter from abroad is brought about, our national fame as yacht builders will stake out of sight in a day, unless radical departure is made in new vessels from the properties should or beamy type. We gave that warning before Madge arrives should or beamy type. We gave that warning before Madge arrives and we lost half our prestige as a yacht-racing nation. Mageir follows up in Boston waters, and even our own national invention, the catboat, is knocked out of time by a brand-new, untried British production a few days after her launch, before sails were stretched or her trim was got, or the crew could learn how to take her!

The practical bearing of Maggie's fine doings upon the question of type we will return to upon another occasion. In the meantime builders and yachtsmen have food for thought enough to provide, in the light of experience gained, for the day fast approaching when we will have to face a big outter for better or for worse.

AN UNFORTUNATE CRUISE.

AN UNFORTUNATE CRUISE.

Editor Forest and Stream;
The cruise of the Pacific Yacht Club, a San Francisco organization, to Mare Island, on Juno IT, was an unfortunate one. About ten yachts to Mare Island in Juno IT, was an unfortunate one. About ten yachts a company of the pacific yachts are proposed in the pacific yachts and the pacific yachts are proposed in contact with a quarter bitt. This threw a damper over the whole is seen and was killed by the force with which his head was been such as the pacific yachts had to square away for the straight in contact with a quarter bitt. This threw a damper over the whole cruise, of course. Instead of the arranged race on the next day the yachts started back as they pleased, singly instead of as a fleet. The yachts started back as they pleased, singly instead of as a fleet. The yacht started back as they pleased, singly instead of as a fleet. The yacht started back as they pleased, singly instead of an entry a gain to the yachts started back as they pleased, singly instead of an entry heavy hea

RACING IN A BLOW.

boat is a good sailor, but thoughi his boat would do as much in a sea way as in smoother water.

RACING IN A BLOW.

THREE or four years ago our San Francisco correspondent, Lee missing the property where an account of a race on that bay, in which he missing the wind an account of a race on that bay, in which he missing the property of t

happened-before in a San Francisco yachtrace, and universal indignation is felt among the yachting fraternity that a "back out" should be laid to them. The weather state bout lost anchor and chain, and the bout at Hunters Point dragged some three miles to leeward. If the Fileur de Lis had keyt on see could have got another race on the technicality of the dragging stake boat. Some \$30,000 changed hands on this race. The Nellie people were disgusted after winning a hard fight to windward to have their adversary back out ingioriously. The Nellie is Capt. Turner's deepest boat and is a fine yacht. She belongs to Hyde R. Bowie, an enthusiastic yachtsman.

Sanceliro.

THE CUTTER'S GREAT VICTORY.

THE CUTTER'S GREAT VICTORY.

MAGGIE WINS FROM A FLEET OF CRACES.

A GAIN the cutter has won! As though last year's victories of the Madge were but a premonition of want was in store, the fine fifteen-tonner Maggie takes hold of the account and adds her second to the record in favor of the cutter. The municipal regata of Boston ally, sailed on take nation's birthday, July 4, in Boston Harbor, will since the days of the America. Governments, back in 1831. That schooner was fairly and handsomely from a fleet, and since her days a like exhibition, international in character, back in 1831. That schooner was fairly and handsomely from a fleet, and since her days a like exhibition, international in character, bad not been voucrasfed until Maggie unfolded another page in the volume of nautical doings, and in proving her superiority over cherished ideas, once more tareatens to turn customs and faith topsy-tury and instigate a second new era. What the America did for fine bows and flat sails, Maggie has done for depth, low ballast and slip-shape rig. In bearing a vory smart fleet—as smart as can be mustered in Boston, and, we believe, quite up to the best lot to be gathered in New York—the Maggie brought to a climax the work already got under way by her preacessor. Her victory was complete, her laurels gathered in fair, square flegar without fluxes, the odds heavily in favor of her adverving victor and the production which will live as long as yacht racing is known, and tell-heavily in the modifications of our home-built craft to be launched in the future.

Her victory was a great one, most notable in every respect, and

ifny, asked for nothing, received nothing, and dome out with a reputation which will live as long as yacht racing is known, and tell heavily in the modifications of our home-built craft to be launched in the future.

Her victory was a great one, most notable in every respect, and unequaled in international annals. She met a fleet of more than ordinary flyers, not a lot of old-fashioned tubs such as the America tackled in 1851. She met a fleet of more than ordinary flyers, not a lot of old-fashioned tubs such as the America tackled in 1851. She met the very latest ticles, boats in the best of condition, with nearly a year to profit by the lessons taught by the fladge for aliation to bulkst, rig and line handling. She met not a single vessel, like the Sappho abroad or the Madge or Mischelf san otherwise the state of the same than the san of the san

Undine	17.6 5.4	5.6

the Hardings bell boat were rounded and sheets eased for the run up. The wind steadily rose, until near the finish a mild gale was piping. How Maggie held a lead under these conditions against smart sloops larger and longer than herself it something of a marvel, and speaks volumes for her running capacities, especially as Hesper is a good one at that business.

The followers not only brought the freshening gale along with them, but sought to "cover" the leader, and Undine's big spread told to effect, for both Hesper and herself were running up on the cutter. The latter had too much to spare, however, and bowled over the line victorious, landing the city purse, winning a hundred fold in reputation, and compelling profound respect for her type in quarters where cutters had most been ridiculed and their speed laughed to scorn as wide, and is likely to learn from the lesson. The estimable patriots who take blind zeal as a virtue and depreciate impartial investigation with judgment according to fact and merit, went home dejected, sadder and a trific wiser men. The band hired to celebrate the discomiture of the cutter, toddied off without as much as tuning up for the grand final which did notcome to pass, and FORBER AND STREAM stock rose to its highest quotation.

In second class isnadow had the coven way, being, however, closely beets, killer added and the rother to be roug string of winnings, and the small fry finished, as shown in the tables below, the Adrienne, the only schooner entered in first class, taking prize on sail over.

SALEM BAY Y. C .- JULY 4.

SALEM BAY Y. C.-JULY 4.

Editor Forest and Stream:
The merits of the yaw five tried in the Salem Bay race yester.
The merits of the yaw fact. White Cap 21 minutes, yer it arose from only and days when by flaws and breezes in one part of the bay and calms in another she gained an accidental advantage. Last year she could beat White Cap as a schooner fairly under equal conditions. This time she beat her by a fluke, and there was no chance to get a correct gauge of the White Cap's speed rigged as a yaw! The breeze up to 1230 o'clock was a stiff one, but at tuat hour suddenly fell to one of moderate strength, what might be termed a light sail day. The ones were as followed by the termed a light sail day. The consequence of the breeze were a fall to the day of the control of the days were as followed by the control of the cap in the starburgh lack buoy No. 13 on Haste shoal, on starboard, Bowditen ledge on the starboard, then to the terd buoy on Eastern Point ledge, leaving it on starboard; then to Half-Way Rock, leaving it on starboard; then to the starburgh of the club house, through the starboard, and black buoys on Haste ledge and Haste shoal on port. Distance, 25 miles.

Third class—and, leaving Bowditch ledge on the starboard; then to Lowell Island, Leaving black buoy on Cut Throat ledge and buoy on the Brimbles, on the port; then to starting point, leaving Lowell Island on starboard. Distance, 7 miles.

Fourth class—From the starting point of the club house, out the main ship channel, leaving Bowditch ledge on the starboard; then to have been should be a strength of the club house, on the main ship channel, leaving Bowditch ledge on the starboard; the house of the house of the starboard to starting point. Bistance 5 miles. M., and the Allice or she starting point and the starting point is on the starboard, to starting point. Bistance 5 miles. M., and the Allice crossed the line first under a cloud of canvas, presenting a fine appearance, her sais fitting beautifully. The White Cap ci away three and one-half m

tor was occupying an entire hour in getting over the two miles and a half to the stake, and the schooner rounded it over twenty minutes

for was occupying an entire hour in getting over the two miles and a bail to the stake, and the schooner rounded it over twenty minutes aband on the stake to Half Way Rock was a run dead before the wind, and the seven miles was made by both yachts in almost exactly the same time, occupying an hour and seventeen minutes in the light breeze. By the time the yawl reached the rock the Alice was well up to the Haste, having run very fast with all sails drawing, and got within a mile and a quarter for the finish. The bad luck of the yawl still followed her, for the wind again fell so light that when she rounded Half Way Rock and brought her head sails to fill she did not sail so fast as in running before it. This continued until Lowell Island was turned, when a slight improvement in the breeze brought her home at 6:20 P. M. It was demonstrated and admitted on all stables so of the yawl of the proposed of the proposed of the yawl sail to the sail of the proposed of the yawl and the proposed of the yawl of the proposed of the yawl and the proposed of the yawl of the proposed of the yawl and the proposed of the yawl and the proposed of the yawl and the proposed of the yawl and the proposed of the yawl and the proposed of the yawle proposed of the yawle was awarded in fourth cass, as neither the keel nor the board had a competitor.

In third class Comus and Hop Bitters take prizes.

Judges, Clarence Murphy and Geo. W. Manfield.

LARCHMONT Y. C .- JULY 4.

THERE are so many attractions on a national holiday that the tentries for a match are liable to suffer decimation. The Larchmont Corinthian races filled fairly well under the circumstances. Gracie had a sail over, which was to be regretted, as Sagitta, her competitor, is one of Alonzo E. Smith's fast ones, and if in racing hands ought to make her mark like her sisver Hildegarde. It was quite possible that Sagitta could have saved her time off the big one had she answered the signal to go. The sub-division of class A promised to 'offer good sport, with Eclipse and Rover to lead and Volante and Curlew to fight it out among themselves. An unfortunate accident aboard the cutter Volante put the lutter around for home. One of her amateur crew, Mr. Jesse Young, had his leg broken by being caught by the mainsheet while lighting. He was put in doctor's hands and was reported subsequently as getting along nicely.

in doctor's hands and was reported subsequently as getting along nicely.

In the fourth class Dr. Barron's Wave won a hollow victory, beating Genia by nearly half an hour. The other classes were for open boats, and many local boats were found at the line. The races were open to the New York, Atlantic, Eastern, Seawanhaka, Corinthian and New Bedford yacht clubs. The course for the first three classos was from off Larchmont to the red houy at the west end of Execution Reef, to the black buoy off Center Island, to a mark south of Captain's Island, passing all on the port hand, thence to the Reef buoy again, leaving it on the starboard hand, and return to Larchmont, 28 nautical miles. The fourth class rounded the Matinnicock Foint buoy, after the reef buoy; the rest of the course the same; distance The fifth, fixth, seventh, and eighth classes, after turning the reef buoy, and that off Matinnicock Point, rounded Constable's Point buoy, and returned; distance, seventeen miles. The ninth class, after

Eclipse... Volante..

turning the reef buoy, went to Constable's; thence to Baylis Rock buoy, to reef buoy and returned; distance, twelve rules. Regatta committee—George A. Froeman, Jr., Thomas L. Fisher, and Augustus Wind Ires to the Constable of t

KEEP CLEAR OF THE MAIN SHEET.

3 36 00

KEEP CLEAR OF THE MAIN SHEET.

Editor Forest and Mream:

An unfortunately fatal accident occurred in San Francisco Bay recently which illustrates the danger of people standing in the way of the main sheet with a yacht dead before the wind. The yacht the main sheet with a yacht dead before the wind. The yacht should have recing with two other large schooners, and runoing dead before a very strong breeze. The helmsman several times warned before a very strong breeze. The helmsman several times warned those in the cockpit that there was danger or jibing, and finally the la lies were sent below out of the way. The boom lifted several times, and those on the deck came into the cockpit. Finally there were unmistatable signs of a jibe, and as the sheet slackened, one of the guests, a young lawyer named Plaisance, attempted to lift the slack of the sheet, stepping out of the cockpit to the lee side of the deck of the sheet, stepping out of the cockpit to the lee side of the deck of the sheet, stepping out of the cockpit to the lee side of the deck of the sheet, stepping out of the sheet shadown the sheet of the sheet, stepping out of the sheet shadown the sheet of the sheet sheet sheet with the sheet sheet of the sheet, stepping ont of the sheet, stepping ont of the base of his body, hurling him headlong across the deck. Holding out his hands to protect him side, but not sheet the same time. The yacht was some three times from Mare island, and on reaching there, saying the same from the Navy Yard, but pronounced the case hope in through the bittore a hole in his throat at the same time. The yacht was some three inlies from Mare island, and on reaching there, suggests came from the Navy Yard, but pronounced the case hope in the Larchmont Y. C. matches, July 4, by which but your correspondent, we may add, as a warning, the unfortunate affair aboard the Volante in the Larchmont Y. C. matches, July 4, by which Mr. Jesse Young had his leg broken "like a pipo stem" by fouling the mainsheet during a jibe. Mean at the wheel sh

YACHTING ON THE LAKES.

WACHTING ON THE LAKES.

Willor Furest and Stream;
The beom which Fonest and stream;
Include a spread to the lakes, and not only have keel yachts come into favor again, but oven our centerboarders on the Bay of Quinte, which our shool water renders necessary, have taken to the pevaling fashion. The Gracie, one of our twelve-tonners, has added a lead shoe of 1,500 pounds, and the Emma, another of our fast ones, has add affixed to her bottom an iron shoe of 2,000 pounds. At Kngstom, and this control of the product of a local strict of the product of the product of a local varieties, and the product of a local varieties, the product of the pr

the B. Q. Y. C., has been visiting Oswero with his fine sloop Novah, and received that hospitable welcome for which the Osweronians are celebrated. The Norah and Elicen, by the way, ought to make an interesting contest in moderate weather. Air, Bell saw the new keel sloop Cricket, one of the Boston style of deep draft craft, built in Boston for cruising and racing on length measurement. She is 26tt. on the water line, 11t. beam, draws fit. Sin. of water, and has ample head room under a flush deck. The Cricket is fast, having on her first trip, in a very light wind, walked away from the rest of the fiset, which includes one good one, the Ella, in a beat to windward.

DORCHESTER YACHT CLUB, JULY 3.—The Dorchester Y. C. sailed its sixty-fifth match off Nafiant, July 3. Open to all. Course for first and second class, twenty miles; for third class, ten miles, giving up, only sixteen being timed out of twenty-four starters. First class, over 40ft.; second class, 28 to 40ft.; third class, under 28ft. Two cash prizes in each class. Down to the Half Rock, Hesper led with a free sheet. Maggie then spun by her and worked out ahead of the whole lot with great ease, turning the Whistler mark with a long lead, after tedious work making the most of cat-paws. Constant of the whole of the whole of the constant of the whole of the constant o

OCONOMOWOC, YACHT CLUB.—July 4.—Editor Forest and Stream: The first regatta of the season, and the sixth race for the Shufeld cup (by sloop rigs) was sailed over the course of the Oconomowoe Yacht Club on July 4, Mr. Jno. S. Cooper acting as judge and John J. Knickerbocker as time keeper. The result was as follows

OSWEGO REGATTA.—In the races July 4, Col. J. T. Mott's new Boston built keel sloop Cricket won from Lawra, Ella and Fascination, over a fitteen-mile course. Cricket held the best wind, and Ella bungled with her topsail. The outer mark was rounded by Cricket in the lead, but on the run home Laura gained rapidly. Cricket in the lead, but on the run home Laura gained rapidly. Cricket actual time was 3:26:30, Laura's the same, and 3:27 with time allow-ance applied. Ella's time was 4:0:15, and corrected, 4:3:25. Fascination failed to finish.

YACHT AND BOAT SAILING.—We have received the third edition, revised and enlarged of this popular standard work, by Dixon Kemp, M. I. N. A., which we will review at length as soon as space permits. It is enough here to say that the volume more than fills the expectations formed, and that the additional plates are excellent in execution, while a great deal of detail has also been added to the text.

PERI.—Mr. J. G. Cassatt sold his sloop Peri, through Manning's gency, to F. P. Sands, of Newport. She was built in 1880 by Alonzo. Smith, of Isilp, and is an excellent and sightly sloop. Length ver all, 42ft.; water line, 37ft.; beam, 14ft.; depth, 6ft. 3in. She has light tons of lead for ballast. Her new owner will fly New Bedford

NEW CUTTER.—The cutter Valkyr has been sold through Manning's Agency to Mr. J. G. Cassatt. Dr. Dawson at once gave A. Cary Smith an order to design a 60ft. cutter, to be built in time for next season.

Answer's to Correspondent's.

J. R., New York.-Law on woodcock in New York is up August 1 J. D. P., Patterson, Ont.—Dinks, Maghew and Hutchinson, price \$3.00. We can furnish it.

C. E. C., Trinidad, Col.—For the preparation, if it is now manufactured, apply to a druggist.

G. W., Blair, Pa.-1. We cannot vouch for the firm you name; have repeatedly refused to insert their advertisement in this paper. Dea with tried firms; see their names in our advertising columns. 2. You

will find a gun with one barrel cylinder-bore and the other modificu-choke about the thing.

E. R. B.—We find the man's name in the city directory as a gun dealer. Know nothing of his standing.

H. B., Glasco, N. Y.—Your query has been overlooked. Scarcely birds of the kind you ask about in Florida in winter.

A. H. Cure, Tex.—By today's mail send you the skin of an animal that I shot some time ago. Please inform mo to what species this animal belongs and by what mene it grams. The skin is that of the so-called civet cat (Rassaris artico), an any Texas, Artzona, New Mackico and Southern California. It belongs to the family Viverride, a group which includes the genets civet cats, mongooses, ichneumons and suricates of the Old World and is the only American representative of this family.

Thour Fix, Baltimore. -Will you please advise me what trout fites are best suited for waters of Northern Now Hampshire? Ans. Take red libts as a good if for all waters and have an extra one. Brown and black palmers (hackles), professor (blue and silver), alder, light-ning bug grizzly king, queen of the water, abbey (a golden pleasant), coachman, and add. if please green drake, blue dun, May fly, and a white miller, the latter for twilight fishing.

G. Ithaca, N. Y.—In shooting at single balls from a rotary trap is there any rule which prohibits loading both barrels on going to the score, and thus being able to get the advantage of the choked barrel in case the ball goes straight-away? Ans. No, there is no general rule prohibiting this. In the absence of any specific regulation in your club rules, the shooter may claim the privilege of making such a choice of barrels,

J. L., Iowa.—I send you by this post the skull of some animal or other and should feel obliged if you could inform me what animal has teeth all over its top jaw as this one has. I have shown it to a good many people, but no one seems to know what it is. I found it on the prairie near a house. Ans. It is the pavement of teeth from the upper jaw of Haploidoudus grunniens, a fish variously known in fresh waters as grunting perch, take sheepshead, white perch, etc.

Powarso. — Will you enlighten us as to the true species of pompano? Whether the Gulf of Mexico and South Atlantic fish is the same, as the same name in the Penfic waters? Which the Sign Species, and how many are there? Ans. They are not the same. The Species, and how many are there? Ans. They are not the same. The species of the same of the

He states under oath, that he fired five shots, no more, from each rifle, every one of the 75 shots striking a 6-10 mph bulseye, about the size of a striking and that everything that leaves the or it cannot pass as shoot nearly or quite as well

Stevens factory must snoot nearly or quite as wen or it cannot pass.

Every arm is as carefully made as a Waltham watch. The only difficulty I have with them, is to get enough to fill my orders. When one goes to a neighborhood a dozen or a hundred more are sure to follow, and the makers find it impossible to keep up with the demand. Like the Waltham people, the more they make, the greater the new demands become. SOLD BY DEALERS EVERYWHERE. Send stamp for illustrated price list to

CHAS. FOLSOM, 106 Chambers St., N.Y.

GALLERY PISTOLS: Light, \$20; heavy, \$22.

I avail of this occasion to inform you that the little pocket rifle that I bought from you six months ago is a perfect gem. On my last trip I had occasion to use it in the woods, and out of 100 shots I killed 87 birds, the largest being a wild pigeon at distances ranging from 100 to 300 feet. For accuracy and perfection I consider the Stevens rifle pleasure, I remain, dear sir.

Yours, very respectfully, J. A. P. BONALDE.

SHIELDS'

American Improved Gut Leader

CASTING LINE. Fig. L

My invention consists in adding to a leader a reconforce at the several points where the upper files are to be attached, by which the size of the line at such point is doubled, the result being that the wear upon it by chafing from the loop of the fly-suell is greatly prolonged, and the doubling of the leader in the size of the line at the control of the line at the land of the loop of the fly-suell is greatly prolonged, and the doubling of the leader in the act of looping the upper files of a cast about a leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

In addition to this it is difficult to hold the loop of the leader in the act of looping the snell to it sufficiently firm to easily accomplish the attachment of the fly, as a single piece of gut is not the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a leader ande in accordance with my invention, while Fig. 3 shows the manner of looping the leader in the act of attaching the fly. In these drawings, A, Fig. 1, denotes a leader of silkworn gut adapted to the purposes of the shifting for trout or owns, and at b. and the snell attached to the fly being looped about the leader, as shown at c. In carrying my invention into practice, I add to the leader A at one or more points (according to the number of flies to be used in the cast in addition to the stretcher) an additional piece of gut A, which I term a "reconcilent of the cast in addition to the stretcher) and additional piece of gut A, which I term a "reconcilent of the cast in addition to the stretcher) and additional piece of gut A, which I term a "reconcilent of the cast in addition of the stretcher) and additional piece of gut A, which I term a "reconcilent of the cast in addition of the stretcher) and additional piece of gut A, which I term a "reconcilent of the cast in addition of the stretcher) and addition of the cast in addition of the stretcher) and additional pie

is in using them.

The easiest way to apply a "fly" or to remove it without impairing the strength or durability of the leaders. Length 3, 6, 9 ft., made of superior silk worm gut in all varieties.

THE OPEN SEASONS.

N another page will be found a carefully collated schedule of the open seasons for game and fish. The data there given are very comprehensive, and the two schedules give all the essential points of the several laws as they now stand on the statute books.

Much time has been devoted to the preparation of these lists and great care has been exercised to insure their correctness. While it would be hazardous to assert that no one of the thousand dates may be erroneously given, it is believed that the schedule is as perfect in respect to its freedom from error as it is in its comprehensiveness.

The data relating to New Brunswick, Ontario, Tennessee and Virginia are given provisionally.

Few persons, who may not themselves have had occasion to look up the game laws of different States, can understand the difficult nature of such a task as is the compilation of a complete game law schedule. There are, to begin with, fifty-one different States, etc., which have, or have had, game laws; and then in each State several different seasons are designated, with exceptions and exceptions to the exceptions, in indefinite number. In the absence of any reliable compendium of the laws, we have been obliged to apply to reliable authorities in the several States; and we take this occasion to express our acknowledgments to the gentlemen who have so courteously rendered us their invaluable assist-

The game laws as a rule are cumbersome, and very often they are exceedingly ambiguous. If more concise they would be better understood. There is in the wording of many of them a wooful disregard of the ordinarily accepted rules of English grammar. In construction and punctuation some of them are models of inaccuracy and shiftlessness. It is to be hoped that in the annual revisions of the statutes more attention may be given to precision and simplicity of statement.

The provisions of the game law should be so plainly worded that the dullest comprehension may grasp their meaning. The class which offends most against these statutes is an illiterate one, and their plea of ignorance of what the law

means may in many instances be well sustained.

In reading the table of open seasons it will be observed that the terms pheasant and partridge are nowhere employed, the names ruffed grouse and quail being substituted lounce oil of wormwood, with one pint olive oil.

for them. In New England and New York the word partridge is almost invariably used to denote the ruffed grouse (Bonasa umbellus), but in Pennsylvania and Southern States, as well as in some parts of the West, especially Minnesota and Iowa, a ruffed grouse is always a pheasant. Throughout the northern sections of the country the word quail is everywhere applied to Ortyx virginianus, but in Maryland, Delaware and to the southward, the bird changes its name, and becomes a partridge. These local designations are now so firmly established that it is scarcely worth while to attempt the impossible task of bringing into use a uniform style of nomenclature for the whole country. As a matter of course the laws of the various sections are couched in such terms as may be supposed to be most intelligible to the residents of these sections, and therefore local terms are always employed, in order that there may be no misunderstanding of the statutes. Thus in the laws of some of the States and Territories the same species is called by several different names. Often, too, a general term is employed which will cover several species; as for example when a law protects "sage cocks, hens or chickens, and grouse," we may understand that in certain sections of the Rocky Mountains this simple clause protects the sage, dusky, ruffed and sharptail grouse and the whitetail ptarmigan.

The substitution of the term prairie chicken for pinnated grouse is so common throughout the whole country, that it need scarcely be alluded to, but it is perhaps not so well known that in different sections the sharptail grouse (Pediæcates phasianellas, columbianus) bears the names grouse, (to distinguish it from Cupidonia cupido) white belly, white breast, sprigtail, sharptail, pintail and willow grouse. term curlew is usually employed to designate the long-billed curlew, the most important species of the group, but it is a generic term which covers our three well-known species.

There are a numbe, of other localisms which might be alluded to, but they have for the most part a very limited

In the schedule of fish seasons, the term "California trout" is the designation adopted in the text of the law for the rainbow trout, the latter being the more correct name of the two. The terms "Jack (or white) salmon" in West Virginia, and "wall-eyed" pike in Illinois, Iowa and Vermont are localisms for pike-perch. "Longe" or "lunge" in Vermont, "togue" in Maine, and "salmon trout" in several States, are local names for the lake trout.

The Forest and Stream is prepared to furnish readers at all times with further information upon any specific point

THE WIMBLEDON MEETING.—The meeting of riflemen from all parts of the Kingdom at the great London range has been shorn somewhat of its prominence by the doings of the English men of arms in Egypt; yet it is well attended and promises to be a success. The composition of the team which is to visit America will be pretty well determined at this meeting. While our English friends are gathering men and money for this battle, there appears to be a very great lukewarmness on the part of our managers here. There is a great deal of reporting "progress," but whatever progress there may be is of a sort invisible to the common eye. the marksmen who made victory out of nothing in 1874 are not likely to disappoint us in 1882. What the feeling is may be seen in an interview had with Gen. Wingate, and which is published in another column.

Association of the Carolinas. - A number of gentlemen met at Asheville, N. C., Fourth of July week, and formed "The Sportsmen's Association of the Carolinas." It is their purpose to have an annual summer reunion at some point in the mountain region where they may enjoy the magnificent scenery, renew their youth in the invigorating moun tain air, and contend in "generous rivalry" in marksman-ship. Our correspondent, "Wells," was present at the Asheville meeting, and was chosen President of the association, a fitting appointment, upon which we felicitate the recipient of the compliment and those who conferred it upon him. The description of the "Land of the Sky," given by "Wells," is an enticing one. With such surroundings we cannot see how the reunions of the Carolina sportsmen can be other than most delightful gatherings.

MOSQUITOES AND BLACK FLIES .- The following preparations are recommended as lotions for the face and hands to ward off the insects: 1. Equal portions of purified tar and salt butter. The tar may be obtained at a drug store. 2. One

DEATH OF LEWIS H. REDFIELD,-Lewis H. Redfield died at Syracuse July 13, at the age of eighty-eight years. The son of a Revolutionary soldier, Mr. Redfield was born in the last year of Washington's first Presidential term, and consequently had lived under the administrations of all the Presidents, and was, as he once said, "almost as old as the constitutional government of our country." He began his newspaper work in 1812, and he had for a long time previous to his death been recognized as the veteran editor of this State, if not of America. The last years of his life were spent in honored retirement at his home in Syracuse. Mr. Redfield's taste for field sports were well known; our columns have in years past been enriched by contributions from his pen; and it was only last summer, if we mistake not, that we chronicled his going on an angling excursion to the Adirondacks.

WEBSTER IN THE FIELD.—As field and camp customs went in those days, we should hardly look for a tribute to Webster's temperate habits to come from one of the great statesman's hunting comrades; yet such evidence has been recently adduced as given by the late Mr. Chester Harding, the well-known artist of Boston. Mr. Harding was one of Webster's camp cronies. Some years after the latter's death, having been asked as to the truth of the stories circulated about Webster's habits, "False, sir! false!" rejoined Harding. "I knew Webster for over twenty years. I have fished with him, I have shot with him; we have camped together; I was intimate with him at Washington; my daughters have visited his daughter Julia; and, sir, I never at any time saw Webster the worse for liquor."

Lump Fish.—There is a salt water fish (Cyclopterus lumpus) known as the lump fish, lump sucker, sea owl, cock paddle, etc., which is not eaten on our coast. It is a singular looking fish, and is jelly-like in the consistence of its flesh. suggested its possibilities to the head caterer of the Ichthyophagous Club, but even he dared not test it, and laughed us to scorn for thinking that it could be made into a marine calves-foot jelly. We would now call attention to the fact that at the International Fisheries Exhibition, at Edinburgh, a diploma "for dried fish and smoked lump sucker" was given to A. Hendrickson, Borstahusen, Skania, Now if this fish has consistence sufficient to stand smoking, it is firm enough to eat in other ways. Anyway, it is interesting to know that it is a recognized article of food in Sweden.

West Virginia Brush Fishers .- Our correspondent "Jack" complains of the mysterious disappearance of trout from West Virginia streams, where only a season before there had been abundance of them. Perhaps the letter which follows his own in another column may throw some light on the subject. The brush-fisher is a specimen of animated nature of which we should like to have a fuller

ANENT ALEXANDRIA. -The editors of about nine thousand of our respected and esteemed contemporaries, from Park Row to Podunk, sat down after the hombardment, the other day, and wrete leading editorials telling Queen Victoria and Admiral Seymour how they would have done if they had only been there. It's a great pity some of them were not there-on the Egyptian side.

ADIRONDACK DOE KILLING .- A correspondent writing from the Adirondacks signifies his readiness to give to the officers of the State Association for the Protection of Fish and Game evidence which will convict the perpetrators of the outrages mentioned in his letter. It is to be hoped that this offer will lead to the prosecution of the parties.

PRESIDENT ARTHUR has not forgotten how to cast the fly. His success with the Potomac bass is told by our cor-respondent "Ivanhoe." Senator Wade Hampton is credited with a big score, all caught with the fly, while Senator Vest used a minnow, and Senators Jones and Cameron dangled

QUAIL IN VERMONT .- Our Ferrisburg, Vt., correspondent, "Awahsoose," writes, under date of July 14: "One of my neighbors is sure that he heard a common quail near his house one morning. If so, it is the first that has been heard here in forty years."

GORDON SETTERS .- We have in type for our next issue some very interesting correspondence on this subject.

ADIRONDACK SURVEY NOTES.

п. -- самря.

THE colored waiter at the Prospect House, in answer to a question, said: "Bears, sah? Yes, indeedy, dar's a heap o' bears a-walkin' 'bout dese yer woods. Leastwise I hears de people say so, an' I takes dere word for it, for you bet I don't go up yonder on dem mountains a-lookin' for no bears. Yah, yah! No, sir; I'se got enough to 'tend to my own business 'thout goin' a-foolin' wid bears. Dey comes down ebry night an' eats outen de swill pail behind de back do', but you can bet your sweet life I ain't 'bout dar when de night comes." Mr. Baker looked at Mr. Mosserop as much Mr. Baker looked at Mr. Mosserop as much as to say, "Do you hear that?" and the latter returned his gaze in a manner which led him to infer that if any baldheaded gentlemen were about they might produce their bears at once. The unimpressible Mr. Blake quietly looked round the table to observe the effect of the waiter's assertion as to the frequency of bears, but no further allusion was made to the subject then.

Some of our guides met us here, among them the famous "Jack" Sheppard, Will Ballard, and Josiah Helmer, and as the story of a man having been killed by bears off down by Piseco was then an absorbing subject, we naturally asked the guides about it. None of them took stock in the story for the reason that the male bear was said to have been in company with the female and three cubs, a thing that they declared was "agin natur," and I have learned since that the whole thing was a hoax. A she bear and three cubs were killed here about that time, but no man has been killed by bears hereabout in a long time. It must have been a sorry joke to telegraph a man's family that a bear had killed him. Some men would not relish such funny business.

Leaving Blue Mountain Lake in four boats, and a barge with 1,800 pounds of baggage, we went down through the chain in single file. Through Marion River into Eagle Lake and past "Eagle's Nest," and down the river again into Uttawana Lake to the first carry, around the rapids above Racquette Lake. These two lakes of the Eagle or Blue Mountain chain are yet in a fair state of preservation from the attacks of man, and are undisfigured by hotels, having only an occasional "camp," which, by the way, in the Adirondacks has come to mean a commodious log house used either as an occasional resort by a private party or a backwoods hotel. A "shanty" usually means an open-fronted bark camp, habitable only in summer. To my eye these permanent camps disfigure the lakes, for they are always in plain sight from the water, detracting from the idea which you love to cherish that you are here in the character of Robinson Crusoe, and that you are removed from all contact with humanity, except the small reserve which accompanies you. Even tents would not be so unsightly, having an air of temporary occupation, and you could hope that they would be folded in the true Arabian manner on the morrow and you would be left monarch of all. A tent is the best and most enjoyable of all camps. It is airy, free from insects, and can be moved to other parts at pleasure, but if a man or a party build a "camp" they are anchored, no matter how many neighbors come or what attractions other lakes may offer.

The log camps which I have seen between Blue Mountain Lake and the Forge House, down the Fulton chain, Racqu tte, Big and Little Moose Lake, etc., have cost from \$500 to \$1,500 dollars each. All have ice houses attached, and many have outside kitchens, verandas, and are of considerable architectural pretensions. A contract is made with a guide to build a camp of specified dimensions, and the work is done in the winter, when horses can be brought in to haul the logs and to fill the ice house. The guide usually has charge of the house when the owner is absent, and cooks for him when he is in camp. It is true that we are a luxurious people and the fact is not only visible in our city hotels and on our railways, but also in the woods, where we go under the impression that we are roughing it and friends at home are wondering how we stand the hardships.

It will be seen that these things strike me as singular. True, for this is my first trip through the Adirondack wilderness, as it is the fashion to call it, and I brought heavy boots, blankets of wool and rubber, all of which had been left be hind, and were only used two nights and then abandoned. I have slept on spring beds, under mosquito netting, and with all the evidences of civilization about me, and I am not pleased with it. In youth I have trapped in the Bad Axe country (Wisconsin), and hunted and fished through Minnesota above Crow Wing, to supply a government survey with meat. Not for pleasure, but for the necessities of life-in fact as a business. This and three years of army life have taught me to depend upon my own exertions, and to have a guide in the woods to get wood and cook, while I sat in a chair was a new sensation, not calculated to relieve one from his sense of dependence. I did, however, in my forays with a single guide, insist upon the privilege of at least cleaning the fish and frogs and preparing them for the frying-pan, even if debarred from further participation in the cuisine.

Passing through the lakes mentioned above, one can see the signal stations on the mountains which the survey has erected with so much labor. These are erect poles on a tripod built over the spot where the instrument stood, in a clearing which enables a sight to be obtained of the surrounding mountains and lakes, and a triangulation to be made. The clearing and establishing of a signal station often takes a party of four or five men from one to three weeks, according

to the nature of the work. If the mountain has a flat top it requires great labor to clear it of timber so as to see the signal from all sides. It begins to be evident from the talk of those of the party who have been at it for some years, that what with night signaling from ponds by rockets and flashing gleams from mirrors by lonely operators on the mountains, that labor with the Adirondack Survey is not wholly a picnic. Little mountain climbing will fall to my lot, however, except over small ridges on some of the worst carries, as I am only to observe the fishes of this region and take note of their species and such habits as they may be willing to ex-pose to view of what they may consider an impertinent in-

Over the carry and down into Racquette Lake we went, and stopped for dinner at Edward Bennett's, whom we found busily at work putting up a new house in place of the one burned last spring, from which himself and wife escaped with barely their lives; cleaned out of all their worldly goods except an axe, which stuck in a stump nearby, and With true grit, he is pitching in and making another start with the axe which remained. After dinner we left our surplus plunder with the old woodsman, Alva Dunning, who is taking cure of a private camp near Bennett's. Here my diary says: "Flies worst I ever saw," but as I find the same expression on most every page through June, I cannot conscientiously ask you to believe it; in fact, now that that month is passed, I have grave doubts of there having been any flies. I was rather anxious to troll on Racquette, but the boats moved too fast. I have managed to take a few small cyprinoids on the way, but no trout yet. Leaving the lake, we entered Brown's Tract Inlet, and wound our way up its long, crooked, weedy length, beset by flies which could not brave the breeze of the lake, but here came in swarms, so that each man in the boats, fifty feet off, had his head hidden in a cloud resembling a haycock. last the inlet was passed, and we came to a swampy landing and a carry of a mile and a half over a poor, rocky trail to the eighth lake, Fulton chain. Down this we went until a little camp owned by Alva Dunning was reached, and we halted for the night.

FREDERICK DARWIN SHERWOOD.

Editor Forest and Stream:

Permit me, while the earth is yet fresh above him, to pay a tribute to the memory of one dear to many of the readers of Forest AND STREAM, and who spent a portion of the last two years in the Adiron-lacks—Frederick Darwin Sherwood.

Suffering from an attack of hemorrhage of the lungs he sought the

air of the Adirondacks and the healing balm of their ever green air of the Adironalogs and the neuring path of their ever green forests. He received substantial benefit, and his improvement elicited much congratulation. Impatient, however, of coveted results he exchanged the Adironalogs for the Rocky Mountains, and in October last took up his residence in Colorado. The change was not for the better. During his stay there in the winter and spring, he was not substantially benefited. Sudden changes of temperature affected substantially beneficid. Sudden changes of temperature affected him disastrously, and finally fatally, and he died in Pueblo of hemor-rhage and pneumonia.

The forest had impressed him finely, grandly. Writing from

Colorado he says: "This is like jumping out of one world into another and I assure you, that such treatment to one accustomed as I hav and I assure you, may sten use attended or one accessionar as I mive been to the grand old forests of my own native State of New York, this is exchanging the balm for the bisister." Again writing from his sick hed he says: "How one misses what he is deprived of. I can't help thinking of the glorious old woods, and O, how much better I would be with you at the foot, the little cascade in the grand old no New York."

This death, somehow, sets the head and heart in revolt at the mys teries of human life and destiny. Mr. Sherwood had just entered upon manhood. Of fine presence and winning manners, high suscep upon manhood. Of fine presence and winning manners, high susceptibilities, a manly frankness that at once conciliated favor, and the very soul of honor, he was ambitious of the prizes of successful business life, and was in a position in the metropolis where conspicuous merit was sure to win him distinction. To high expectations and the flattery of successful beginnings, succeed disappointment, disaster,

death.

To know Mr. Sherwood was to love him. Those so fortunate as to have met him in his forest home will remember the fascination of his manners, and how with the attention of his loyal brother Frank, he ispensed the hospitalities of his little camp. He slaeps per dispensed the hospitantes of measured analysis reaches to early speaking in liver Side Cometery, near the village hamlet of Copenhagen, Lawis county, New York. It is a beautiful knoll that meets the sun in his coming, and the spot he chose for his final resting place. Around it, away to the dim distance, lies the loveliest landscape of Around R, tway of the thin ridge and valley, varigated with the verdure of forest and field, and at the far horizon, girt with hill and rampart capped with blue. The pretty little river, typical of his slumbers, dows smoothly at his feet, and the roar of its romantic falls, subdued, softened for him into of love and peace, sings his everlasting requiem.

"HAMAK" OR "HAMMOCK."

Captain Bernard Roman, an early English writer on lorida, designates hard wood land by the word "ham-

Florida, designates hard wood land by the word "hammock."

Wm. Bartram, as quoted by Webster, gives it as 'hommock," which word Webster defines as "a small hillock or eminence, sometimes covered with trees."

Dr. D. G. Brinton, of Philadelphia, author of "Notes on the Floridian Peninsula," a valuable and original work, writes "Pine lands and hammocks, not hummocks, the latter is a New England word with a different signification."

Captain Dougles Dummitt, who lived many years on the southeast coast of Florida, who was a man of intelligence and education, and who was familiar with the Seminoles and their language, before the Indian war of 1835, told the writer in 1870, that the word was "hammock," that it was of Seminole origin, and signified land where hard wood timber and cabbage palms naturally grew. He spelled and pronounced the word "hammock." Ferbaps, however, to distinguish it from the other word signifying "a hamging bed of network," it would be well to adopt the authority of W. W. Harney, and spell it "hamak," alhough that is too much like the Spanish word "hamaca," a hammock, or bed.

The Sportsman Tourist.

TO THE JORDAN.

NOT the historic river of Palestine, but a smaller and less famous stream in northern Michigan, which flows into Pine Lake, and through it into Lake Michigan. This stream is well known to anglers as being the one which a dozen years ago introduced the grayling, Thymallus tricolor, Cope, though Mr. Le Moyne, of Chicago, to the fraternity of anglers. At that time the existence of this fine fish in the United States was unknown to science; since that, however, another grayling has been found in Montana, T. montanus, Milner, making with Back's grayling, T. signifer, Cuv. and Val., of British America, three species of grayling on this continent. continent.

Wishing to make the acquaintance of this fish, in August, 1874, I went from Chicago, in a lake steamer, in company with two young friends, to the village of Charlevoix, on the northeast shore of Lake Michigan. As I can say nothing more in praise of Charlevoix than that its climate is good in more in praise of Charlevoix than that its climate is good in summer, I will pass over the troubles and inconveniences of the transit through that town, and begin with the steamer which plied up and down Pine Lake, a small and uncomportable craft which took us and our three boats and boatmen fifteen miles to the head of the south arm of the lake. This lake is a handsome sheet of water, clear and deep, with high and well wooded shores, with a few scattered farms and houses. Where the Jordan comes in the shores are low and marshy. Here we left the steamer, and with our baggage stowed in the boats, entered the river, which is about twenty yards wide, with a depth of five or six feet, very clear and cold, with a strong current and a gravelly bottom. Nature must have intended it for a trout stream of the most excellent kind, and such it was, before it was devastated by the trout.

kind, and such it was, before it was devastated by the trout hog, and the man who fishes for count.

The depth of water diminishes as you ascend, but the current is stronger, and navigation is impeded by logs and fallen trees, shores low and marshy, affording no camping grounds.

Three miles of hard work took us to a log bridge, and a Three miles of hard work took us to a log bridge, and a clearing with a log cabin, and three miles further we come to a high bank on the north shore, where is the only camping place for miles. We landed and pitched our tent in a grove of pines, but the ground had been much occupied by fishing parties who had littered the place with dead fish, the odor of which we not beleave a fixed for miles we not beleave a fixed for miles we not beleave in the ground of insects. of which was not balsamic. A fine assortment of insects, mosquitoes, gnats, and deer flies, greeted us with their various hums of welcome, and commenced business at once upon the cartiely

After dimer I took a boat and went down stream, the other two boats went up. I used a cast of three files, seeing that the trout were small—a red ibis and a red and a gray hackle. The trout were searce as well as small, and I got only that the front were same—a red fors and a red and a gray heakle. The trout were searce as well as small, and I got only ten, from four to six ounces in weight, returning to the river all under the former size. Having heard of immense catches in the Jordan, I concluded that either I had come at the wrong time, or that the fish were nearly exhausted from this stream. The two boys used bait and got a dozen trout of small size. small size

stream. The two boys used pair and got a dozen trout of small size. August 8.—We all went up the river this morning about three miles; found the river much obstructed with fallen cedars and pines, like most of the streams in the Michigan wilderness. Came to a reach of still and deep water which I fished very carefully for grayling, using light-colored flies and imitation grasshoppers, the latter not taking anything while on the river. From a deep hole under the bank I raised a good trout, and as I played him, another of rather smaller size took the other fly, and I saved both, the brace weighing one and a quarter pounds. At the next cast I hooked a grayling of half a pound, which I killed, being my first of that species that I had ever seen, except in a bottle of alcohol. I admired its graceful form and beautiful colors alcohol. I admired its graceful form and beautiful colors for a few minutes while I rested the pool, and then cast for its mate, which responded—the size about the same. By careful fishing I got live more trout from this pool, and then descended the river, easting from the bows. I found ish scarce, and brought in only lifteen in all; but this wild woodland river was charming, and, as Shakespeare says:

"The pleasant'st angling is to see the fish Cut with their golden oars the silver stream. And greedily devour the treacherous bait,"

Cut with their golden oars the silver stream, And greedly devour the treacherous bait,"

Which passage is evidence to me that in addition to his otner gitts the great dramatist was a fly-fisher.

August 9.—To-day we moved our camp down to the mouth of the river on the lake shore, where, in a fine grove of pines, we pitched our tent near a cool spring. Went out this evening and trolled with a spoon for an hour for black bass. They were on the feed, and I got ten of the small-mouthed species from one to three pounds, and four North-rn pickerel from three to five pounds in weight, and was then driven in by a heavy shower. The boys shot two dueks and half a dozen wild pigeous, so that our larder was well supplied. The trout of this cold river are of good quality. The grayling we did not eat, having promised to take home specimens for a museum.

August 10—I got some live bait this morning and tried still fishing near the camp, and took four bass f. m two to four pounds; I also hooked a very heavy one, which, after a severe struggle, broke my hook. Perhaps I tore too heavily upon it. Certain writers, who are fond of exercising their small wits at the expense of anglers, remark that the largest fish always escape, insimating that the weight of these being an unknown quantity can be safely exaggerated by the angler. In the nature of things the are est and strongest should break loose and escape, ohl scoffer. Does not the dector sometimes represent his patient in a worse condition than the strictest regard to truth would justify? And the angler, being human, may some mes overestimate the size of his trout by an ounce or two without a scruple.

The boys brought in three good pickerel and two bas of

overestimate the size of his trout by an ounce or two without a scruple. The boys brought in three good pickerel and two bas of three and four pounds this evening.

August 11.—Went up the Jordan this morning as far as Deer Creek, two miles. The trout were disinclined to rise, so I addled a piece of bait cut from a pigeon to my fire, and sunk them to midwater. This was successful, and I took from the first pool below the creek a couple of trout which together weighed 'wo and three-quatter pounds; also four of half a pound, cach. In the next pool I killed a grayling of half a pound.

Tennyson's brock, which 'ran by little towns and half a

or nair a pound. Tennyson's brock, which "ran by little towns and half a hundred bridges," was not much like this lonely and tangled

forest stream, but they resembled each other in this; they both contained-

"Here and there a lusty trout, And here and there a grayling.

And here and there a grayling."

How different those English streams, so protected, that though fished for a thousand years, they still are fruitful, whereas ours, in half a dozen years from the time they are open to the public, are stripped of their fish. The forest, too, which grows on their banks, is fast being destroyed by steel and five. The wood cut off, the streams dry up, and all becomes a barren waste. We ancient anglers have seen this process going on everywhere.

The grayling region is not extensive, and the rivers even within that district which contain the fish are not numerous, so that with the reckless fishing which prevails, the time is not distant when the last of them will have been captured. The question has been discussed, which is the strongest

not distant when the last of them will have been captured. The question has been discussed, which is the strongest and most active fish, the trout or the grayling? I have not taken enough of the latter species to give an opinion, but my impression is that there is little difference in this respect.

I think that the trout will survive the grayling in these waters; and when the trout are gone there will always remain the black bass and the pickerel, and for my own part I consider the black bass equal to the brook trout in game qualities, and as a table fish superior in this, that it bears keeping better than the trout, and is less easily spoiled by the bad cooks in country tayerns.

keeping better than the trout, and is less easily spoiled by the bad cooks in country taverus.

That surly and disagreeable sage, Dr. Samuel Johnson, was wont to speak disrespectfully of anglers, but the following passage from his tale of "Rasselas" seems to me to be a good motto for him that goes a-fishing:
"Ye who listen with credulity to the whispers of fancy, and pursue with eagerness the phantoms of hope; who expect that the deficiencies of the present day will be supplied by the morrow; listen to the history of Rasselas, Prince of Abyssinia."

S. C. C.

CAMPS OF THE KINGFISHERS.

HPPER AND LOWER WATERS OF INTERMEDIATE LAKE.

IN SEVERAL PARTS-PART VI.

IN SEVERAL PARTS—PART VI.

I'M and the Scribe went below to the scenes of their triumphs of '80, below Pickerel Point and opposite the Upper Island, while Brother R. mustered courage to risk himself in a boat alone and do a little fishing on his own hook. The veteran and I went up lake, past 'lover's landing" (after Frank), and on up to deep water point, where we stopped awhile to shore fish at the mouth of a little spring prook, where Dan said the water looked very 'fishy.' Going up we had felt of the water very carefully with poor results, the fish, as it seemed, having changed their feeding grounds as all along this part of the shore the previous year I had found the very best of the bass fishing. We took a pair of small-mouthed bass here of fair size (a fair-sized bass for this lake should not weigh under three pounds), and crossed over to Long Point to try for a pickerel along the bultrushes. This point is a long, narrow strip of bard sand and pebbles, pointing directly up the lake, is from one to six feet under water, and is covered with a dense growth of bultrushes that reach out on either side until lost in the depths of the lake. To the west the shore sweeps around in a sharp curve to the toot of the hills, forming a deep bay, in which neighbor Johnson, of the Nursery, said is usually to be found good bass and pickerel fishing, but we did not stop to try it that day, having a notion to fe'l around the west shore below. We idled along the rushes, taking a bass or two and a longface from here down to Buzaroo (corrupted into Buzard's roost) Point, which is a sharp finger of land, a few feet wide, covered with scrubby, storm-beaten bushes, that reaches a short distance straight out into the lake, nearly opposite to where our camp was located. (In my last year's letter to Forest and Stream this was erroneously called Long Pont.) Here, twenty yards off the Point, the water is 80 to 100 feet deep, and if soundings were taken it would probably be found much deeper between this and the mouth of the little strea TIM and the Scribe went below to the scenes of their tri-

From where we stood the shore takes nearly a west course, bending gradually around to the south and the outlet below the islands. Looking south we were nearly in line with the east shore, so crooked is the lake at this part; and just across, less than half a mile, was Pickerel Point, off which a year before I had many a tough tu-sle with some of the most noted warriors of the tribe after which we named it. Here also Jim and the Seribe had often lain in wait for the sneaking ras-als, and many of the craftiest of them had they knocked on the head and scalped (so to speak), and yet the cannibals multiply and wax fit by swallowing their better neighbors and poor kin without the ceremony of roasting. It is no rare occurrence for an able-bodied pickerel to make a meal of a few nephews, a plump niece or two, a better neighbors and poor kin without the ceremony or roasting. It is no rare occurrence for an able-bodied pickered to make a meal of a few nephews, a plump niece or two, a dozen of his grandchildren, and a half score of silly sunfish, just to fill up as many odd cavities in his ever-craving bowels; and sometimes a heedless young bass will be caught off its guard and take his way down his insatiable gullet.

Back in the boat, we followed the trend of the shore around to the west and south, fishing along down to a clearing opposite the upper island, where we went ashore and drank from two of the purest and coldest springs we had found in all our meanderings. I knew one of them the year before, and Johanny (the camp boy) and I had often slaked our thirst at it when hunting frogs in the marshy meadow just back. The clear-

thusting frogs in the marshy meadow just back. The clearing contains quite a little settlement of four or five families, and one of the chief secrets of the thrift, enlightenment and good sense of the people of Michigan—a school house. Pitch

and one of the chief secrets of the thrift, enlightenment and good sense of the people of Michigan—a school house. Pitch your camp where there is a school house or two in the vicinity, and you may sleep in security; for school houses are tolerably certain to bring you good neighbors.

The noise of a fish breaking water along the rushes down shore started us again, and pulling out we took a course across the lake and between the two upper islands. From the springs across to these two islands, and between them the water is shallow and the bottom scooped out into pockets or holes from a hundred feet to a hundred yards across, and grown around with streaks of bultrushes in water of

camp an hour before sundown well satisfied with the day's camp an hour before sundown, well satisfied with the day's fishing. A half hour after, Jim and the Scribe came in what a string of bass that "laid us clean out," and each of them was as happy as a schoolboy with a pocket full of fish hooks and a new line. Brother R. had done nothing to speak of,

was as happy as a school by with a possess to speak of, and therefore had few lies to swap.

The next day at noon we came in with more fish than we could use in four or five days, but they were not wasted, as we divided with our neighbors who came around in the

evening for a friendly chat.

While at dinner Jim and I discovered that we each had a evening for a friendly chat.

While at dinner Jim and I discovered that we each had a tooth that was bothering us for trout, and after a brief consultation we agreed that when a fisherman has a "trout tooth" that worries him occasionally, the only thing to give it relief is a trip to the first trout stream he can reach, and do it fortlawith. Cedar River was only a matter of three miles away, and in twenty-five minutes we were in a boat and on our way to the outlet of the lake, the head of Intermediate River. At the head of the rapids we stopped a few minutes to select a few clams from the bottom of the river, cut them up into proper sized baits, and then on down through a lot of saw logs, grounded here and there in the shallow water, until we shot into the back water from the dam at Bellaire. This cam had seen built after we left the year before, and had backed the water up for some distance above the mouth of the Cedar, the dead water extending up the Cedar for at least eighty rods, but it still retains its distinctive features of clearness its extreme coldness, and swore a plain-featured oath that he'd be d—ucked if he fell in this time, for hintended to steer clear of all slippery logs, and logs of any shape or size that spanned the stream.

We could fire our boat through the trees and brush and logs but a few rods above the mouth, where we left it and longe our way around through the woods and tangle to the

We could force our boat through the trees and brush and logs but a few rods above the mouth, where we left it and made our way around through the woods and tangle to the head of the backwater where we took a short rest and a cool drink and rigged our tackle for a spotted-side.

We had come to the stream so late that we could not fish much of it and get out of the woods before dark, and a quarter of a mile or less ended the afternoon's sport with ten as lovely trout as ever flirted frisky-tail in crystal stream. Truth complis the statement that Jim took only one little suckling of five inches, which he tied in triumph to his suspender and felt that his ambition was satisfied; he had caught a spotted brook trout (none of your "speckled beauties" for Jim; Jim's a man of sense) and he had taken it from about the worst stream to fish that can be found out of doors.

When we got back to the boat he found he had scraped his trout off getting through some easy place in the brush, but he consoled himself with saying, "It was not much of a trout anyhow, bout big enough for a bait for a good healthy bass." As he hunted for his bass rod that he had hid under a log near the boat, he went on, "I've got trout fishing enough to last me a year; no more in mine; Cedar River is too much for Jim. Do you know, Hickory, that the fools are not all dead yet?"—snaking his rod out from under the log—"and we are two shining hights of the survivors. Let's get out of this infernal river and go to camp."

At the head of the backwater in Internediate I unshipped an oar and using it as a pole pushed the boat by hard work up the shallow, swift rushing stream to the saw-logs near the head of the rapids, where we were forced to get out and s. Then we got back to the boat he found he had scraped

up the shallow, swift rushing stream to the saw-logs near the head of the rapids, where we were forced to get out and walk the logs and pull the boat through the tortuous channel into deeper water above. A few yards out from the head of the river to the west I "smelt a spring" and pulling in we cooled ourselves with copious draughts from it, and changing places Jim laid himself out for a long pull to camp. At the head of Lewis' Island he dropped the oars with, "Will that camp never come in sight? I'm 'clean bushed,' how would you like to handle her awhile?" Changing places again we were soon around Pickerel Point, and as twilight yielded place to the sombre shadows of night we walked into the radiance of the camp-fire, hungry, and as Jim had said, "clean bushed,"

The boys were waiting for a trout supper, and fortunately

said, "clean bushed."

The boys were waiting for a trout supper, and fortunately the nine we brought in were enough for a fair mess all around, and it took Frank but a short time to dress them and place them upon the table smoking hot—a feast that

and place them upon the table smoking hot—a feast that makes one's mouth water to think about.

In clearing off the table Frank said he did not find bones enough left to "tickle a kingfisher's throat." Jim and 1 had appeased the wrath of our trout tooth, besides giving the boys a pleasant treat, and we felt we had done good that day to ourselves and our fellows. Our sleep that night was sound and dreamless, and it took broad daylight and the chatter and scolding of a little red squirrel, nearly over the tent in which Frank and I slept, to arouse us to a sense that it was time for the camp to be astir.

Breakfast over, the four elders took their ways to the waters of their choice, Brother R. preferring to stay near camp and spread himself on a school of sunfish that he had got acquainted with the evening before. At one o'clock we

waters of their choice, potentially, preferring to stay head agot acquainted with the evening before. At one o'clock we went to camp for funch, and to leave two good strings o' bass for any neighbors that might drop in for a fresh tish o two. Jim showed one that pulled the scale at exactly five and three-quarter pounds—the largest one of his career—and we knew by the satisfied grin that wandered back toward his ears that he was tickled clear down as far as the tickle could get for his boot toes. And then he told us about one that he struck coming around Pickerel Point: "Why, I thought at first I had hooked a sturgeon or a young mule, and that ironwood rod o' mine just bent up like a bulrush in a puff o' wind, trying to hold him out of the grass. It cracked and snapped till I thought every minute it would split, but I guess it was only the varnish at the ferules. Talk about your heavy fish, that was the heaviest one I ever felt at the end of a line. But he got away; guess he wasn't hooked very well," and with this morsel of consolation and a crumb of comfort in the shape of half a pound of buttered bread crammed into his mouth, he lapsed into silence. In the afternoon old Dan and I worked our way along

around of comfort in the snape of nair a pound of outlered good sense of the people of Michigam—a school house. Pitch your camp where there is a school house or two in the vicinity, and you may sleep in security; for school houses are tolerably certain to bring you good neighbors.

The noise of a fish breaking water along the rushes down shore started us again, and pulling out we took a course across the lake and between the two upper islands. From the springs across to these two islands, and between them the water is shallow and the bottom scooped out into pockets or holes from a hundred feet to a hundred yards across, and grown around with streaks of bulrushes in water of from two two six and eight feet deep. These pockets are clear of rushes, and are perhaps ten to thirty feet in depth. In some of these we took some very fine bass, and any day after when we felt inclined we could go down there and find excellent sport. We fished back west of the little "loon" island, crossed over to Pickerel Point, and were back to

brave little boot head to wind, and in five minutes she was pitching her hows into waves two and three feet high, with thumps that threatened to knock a hole in her bottom; but she proved herself a splendid boat in a sea, and I felt that, thumps that threatened to knock a hole in her bottom; but she proved herself a splendid boat in a sea, and I felt that, should the gale not increase in violence, we would weather it without serious trouble. I could see that old Dan was lightly uneasy—the first time in a long acquaintance—and reading in my face that I knew it, he jerked his chin over his shoulder toward the shore, and asked, "Do you think, Hickory, we will have to pass the night in that infernal swamp, with the mosquitoes?" I had confidence crough in the little boat to say. "Keep a good grip on the saft, Dan; sit firm and keep cool, and we will go to camp if the oars don't break." Edging into the rushes, where the water was only five or six feet deep, that in ease we should go over I knew I could get my old comrade ashore, we fought our way in the teeth of the gale, foot by foot, under the hardest pull of my life.

way in the teeth of the gale, foot by 100t, under the pull of my life.

We forged slowly ahead, sometimes losing a little when un extra vicious blast would strike us, then ahead again, the gallant little boat beating the waves with resounding strokes as she threw the spray over us at nearly every plunge.

I felt the need of "a leetle more nucled," but after what seemed to us a whole day, we rounded Pickerel Point, and got the wind nearly abeam. This eased the dead strain at the oars wonderfully, but it led us such a merry dance over the foam capped waves that old Dan took a firmer grasp on he seat and shut his teeth so tight that he forgot he was "chawin terbacker."

the foam capped waves that our Dan cook a firmer grasp onhe seat and shut his teeth so tight that he forgot he was
"chawin terbacker."

Around another little point we got sight of the camp and
all the boys standing on the beach looking for us. We could
see them swinging their hats and making frantic grations, but the gale roared so loud we could not heat the shout
that we knew they seat up on catching sight of us. Ten
minutes more and we struck the beach a few yards be low the
stream, going in on a big roller, and the old fish-hawk got a
slight dampening before I could get him out of the way of
the next one. A general shake took place all round, for the
boys had really been unersy about us, and Bro. R. vented
his thankfulness at his Uncle Dan's safe return with, "Bless
your old soults; here you are again, and sound as a dollar."

"Where were you two old loons when the zephye struck
yon?" asked Jim: and Old Knots said "be knew Old Hickory would have just sense enough left to hunt the shore, or
come to camp—just as the notion struck him." But we
knew that't under this shaft the twinkle in his eye covered
a thankful heart that the two old loon-aties were within
reach of his brotherly grasp.

Jim's expression, "clean bushed," covered my case exactly.

I was so worn out, and hot, and dry, that it was a question

reach of his brotherly grasp.

Jin's expression, "clean bushed," covered my case exactly.

Jin's expression, "clean bushed," covered my case exactly.

I was so worn out, and hot, and dry, that it was a question

if the little stream would furnish water to slake my thirst.

I dipped up and drank sundry and divers cups of it, and

never tasted water sweeter than did th.t.

The blow was at its height now, and the tents, although

closed tight, were puffed up like inflated balloons and only

for the thorough manner in which they had been staked

down, they certainly would lave taken flight and gone sail
ing over the tree tops. The flagstaff, a slender ash sapling

twenty feet high, bent low in the wind like a stricken reed,

while the flag shivered and snapped until we looked every

moment for it to split into ribbons. Up the lake as far as we

could see, the waves were rolling five or six feet high while

the whole face of the waters was covered white with foam

and driving spray.

and driving spray.

We had almost to shout to make each other hear, so loud We had almost to short to make each other lead, so four was the roaring of the gale and the noise of the rollers as they beat on the beach in front of us and rolled over each other up to within five yards of the tents. It was a grand sight, and I'll venture not a "Kingdisher" but will keep it in

other up to within are yair at the signification of the significant of the significant of the significant of the significant significant of the

By the time they untied the boat and got into the shallow water in front of camp it was on them; and Fra-k, running in, caught the painter of the boat and dragged them high and dry on the sand, laboring under a big scare. Knots said, "Bro. R.'s eyes stuck out so far you might have snared them off with a grape vine." But the blow was over, and the swells went down as darkness came on.

The best advice, perhaps, to give a brother who may be fishing up there is, to hunt a haven if you see it getting suddenly black in the northwest, and if you near a roar pull quick for shore, unless you have perfect confidence in the seaworthiness of your boat and your ability to handle it in the roughest kind of water.

That night Knots and Jim talked their affairs over and concluded that as their vacation was about at an end, and 'usiness

That night Knots and Jim tarked their about so yet and con-cluded that as their vacaction was about at an end, and "usiness required their attention at home, they would start the next afternoon. In the morning Frank and I fished down to Bellaire and engaged a wagon to take them to Mancelona in time for the night train down, and after dinner went with them and their baggage to the head of the rapids to meet the warm.

them and their paggage to the head of the rapped the wagon.

It is always unpleasant to lose old comrades and congenial spirits from a party, and the attempt at a little hilarity when it came to the final shake was rather a failure.

As Frank swung the boat into the stream, headed for camp, we could hear the boys floundering through the "bresh" and Jim "a-cussin" vigorously at the mosquitoes, as was his wont.

Jim "a-cussin" vigorously at the mosquitoes, as was us wont.

Back at camp we found old Dan sitting on a camp stool, his legs crossed, puffing solemnly at his pipe, and his face longer 'na tish pole. While we were zone, he had got a "mossback" to row for him, and while tishing across the lake below Buzzard's Roost, he had struck a bass that started him to wondering how hig a bass would grow provided he had abundant room to spread himself in. He had fought him over two or three acres of water for nearly half an hoar, and when he was finally led alongside, "clean bushed," as and when he was finally led alongside, "clean bushed," as Jim would have said, they found they had neither landing net or gaff in the boat

Dan instructed the neighbor to "fift him in gently and c-a-r-efully, and not lose him," Reaching out, he took hold

of the gimp, the fish making never a flop, but when two-thirds of his length out of water, and they thought he was just as good as in the boat, the treacherous gimp snell parted (it was one of the same worthless lot that had lost Dan's big fish at the head of White's Lake), and he sunk out of sight

hash at the head of White's Lakey, and he sunk out of signi-under the boat.

To say that Dan was mad would but feebly express it, and if the maker of that gimp could have been within earshot, he would have gone home and closed up his business in the firm belief that it was high time for him to mend his ways. They pulled over to camp, and Dan had been sitting there on the stool ever since, drawing consolation from his pipe and studying it all over.

and studying it all over.

Here, while the old fish-hawk is refilling his briar-root, it may be in place to give the accepted origin of the term "mossback," as applied to the inhabitants of the North Peninsula. I quote from a letter received from our friend, J. M. Wadsworth, of Central Lake, after we returned home. J. M. Wadsworth, of Central Lake, after we returned home.

"Many years ago, a party going from here over the old Indian trail, to Saginaw, passed by quite a large settlement who were just finishing up their shanties, and all were busily engaged gathering moss and earrying it on their backs to the shanties to moss or fill up the cracks between the logs. From this the term mossback was derived, and it has stuck to them ever since as tight as the moss to the north side of a beech tree."

tree."

Our mossbacked frieud—a Mr. Simmons if I remember rightly—felt that it was mainly through his bungling that the fish had been lost, and his usual serenity was somewhat disturbed thereby. But as it was not exactly his funeral, he recovered from it sooner than old Dan, who is, I believe, still nursing his disappointment and cussin' that gimp.

From his description of the bass—a small mouth, he must have weighed fully nine pounds, and S. said it was the biggest bass he had ever seen in the lakes.

KINGFISHER.

ITO BE CONTINUED.]

CAMP FIRE IN THE GREAT SWAMP.

BY A. MULE. -PART II.

M AC, you must have come here before the bottom was cut to pieces by the Leves, didn't you?" said I one evening, as the talk flagged.

"No," said the old hunter, "I got here arterwards. But I ve heerd so much about it from the Injins who was here that I sometimes believe I saw it myself.

"This swamp for the Injin them days was like the place you read about in the good Book—a real Paradise. The coverflow was regular twice a year, and kept off most of the cane without being deep enough to affect the game, while the burning of the grass every fall killed the underbrush and left the noblest, biggest, fairest open woods that ever a moccasin made a track in.

"The woods were full of honey, and wherever there was a chance high ground there were dense thickets of paw-paws, plums, cherries, grapes, and all sorts of wild fruits. Black-berries and dewberries loaded the vines in every little opening, and the wild strawberries were far sweeter and better than the same things we raise here now.

ing, and the wild strawberries were far sweeter and better than the same things we raise here now.

"As for nuts and sich like, they were in places so thick that in season a man might walk on them for hundreds of yards and not touch the ground. I've seen myself groves of walnuts and pecans deadened by the acre to clear away for the cotton field. As for fish, well, they are here yit, thank God, but the game is gone.

"The deer then used about in regular droves, sometimes ffecen or more in a bunch, and it was almost impossible to miss killing one anywhere if a man sat still on a log for an hour.

"The b'ar and turkeys, to say nothing of the wild hors."

The b'ar and turkeys, to say nothing of the wild hogs "The Dar and Turkeys, to say nothing of the wild hogs and cattle, were just running about in every direction and were half afeered of a man. In fact they must have been gentle to let the Injins kill them with such bows as they had and such shootin' as they did."

"Why," said Jack, "I always heard the Indians were fine letter."

shots." Great mistake," said Shelb. I've lived with 'em, hunted with 'em, fit with 'em and never saw a nigger of 'em could hit a barrel head everytime at thirty yards.

"The Injin then would kill more game than a white man on an average, but he did it with his patience and not with his shootin." Anyhow they got a better living here than anywhere else. Old Tush-ma-soggee told me that he saw thirteen b'ar once around one hee tree had blowed down!" "Shelb., I'm told you are particularly fond of turkeys," remarked the Doctor with a twinkle in his eye that boded something.

thirteen b'ar once around one hee Tree had blowed down!"

"Shelb., I'm told you are particularly fond of turkeys," remarked the Doctor with a twinkle in his eye that boded something.

The old man started slightly and then gave a very dry sort of laugh between a chuckle and a groan.

"Tom must have been telling you that yarn, and it didn't lose anything in traveling through his tongue I know,"

"Well," said Tom, "as the boys want it I'll try to do it again. Some years ago, a big party from the hills came down one fall for a grand hunt. They all knew me and Shelb., and in fact camped near his house and made it a sort of headquarters. It was the most restless devilish team that ever was got together. Every man as full of fun as he could hold and lots oozing out all over the camp. There was literally no rest in them. Like a kaleidoscope every turn brought new combinations and often most unexpected ones. Everybody joked everybody else, and nobody was safe from some curious prank or other. Fighting was not allowed under penalty of lynching in the bayou, and getting sulky was not by any means a remedy to be used rashly.

"Among the lot was a doctor who was notoriously the worst shot in North Mississippi, but, nevertheless, most passionately fond of shooting and sport.

"Now, Shelb. never played but one practical joke in his life, but after seeing a few of the Doctor's first-class misses, he despised him in his heart, and resolved to 'fix him.' And as his bad luck would have it he took into his confidence a couple of the very worst rascals in the gang.

"Everything being arranged between Shelb. and his fellow conspirators occasion was taken one off afternoon, to banter the Doctor about his shooting. He reared up at once and swore that he could beat anybody in the crowd. Shelb. offered to bet his saddle horse against the Doctor's mule and swore that he could beat anybody in the crowd. Shelb. offered to bet his saddle horse against the Doctor's mule and story. The pood lady came out like a hive of bees. 'Now, Mr. McP—',

use to say one word. I'm done. J am, sure. I've sucked my last aig. I have sure, by gad, I have. You can put my name down on your church books, by gad, you can, sure!" "Did you ever join the church in fact. Shelb. ?" asked P—"Why of course," struck in the Doctor, "didn't you know that Shelb. was raised for a preacher?" "Yes, and would have been preaching till now, but for a wasp," said Jack. "On the day of his trial sermon he put on a pair of buckskin breeches that had been hanging up for a year in the garret, and by the time he got fairly warmed up the wasps got enthused too. They say he ripped, and cussed, and tore off his breeches, and whaled both the other preachers with him in the pulpit before the audience could choke him down." Old Shelb. stood it patiently, for he had been baited before. "All right, boys," said he, shaking his head, "go'in. You are like my old woman's ash-hopper—the lie is all coming out of you. Preachin' is a good business, and I put it next to b'ar-hunting. But the only man I ever heard of coming near uniting the two was a fellow who shot an old suck lim' she in the nose, and when she charged him he got his foot fast in a bamboo. Finding he couldn't git loose, he began to pray the Lord to stop the b'ar. When she got close to him, however, he quit that prayer, and said, "Good Lord, look down upon me and assist me. But if you can't help me, don't help the b'ar, but just lie low and you'll see the durndest b'ar fight in Mississippi."
"You ask the Doctor, Shelb., who was his last patient with 'ague cake!' said P.
"That ain't as bad on him as the way he set Henry Thomp son's dislocated hip, 'said S. Henry got thrown off his mule while dead drunk, and the Doctor was sent for. The patient was insensible, but the learned physician saw at once that the man had dislocated his hip—a bad case, as one leg was six inches shorter than the other!
"As soon as the patient became sober enough to speak, the Doctor asked him tegerly if one of his legs was shorter than the other!"

Doctor asked him eagerly if one of his legs was shorter than the other?"

Harry rolled over and hiccupped, "N-o, siree! one of 'em's longer than t'other!"

"Well," said old Pills, "go ahead, boys. My time will come when calomel and jalap stock will go up!"

"Yes, just as we go down!"

"Anyhow, I ride civilized fashion on a horse, and don't straddle everything that comes along!"

"What does that mean?"

"It means I was out hunting one day with Mr. Tom, there. He took along a big, clumsy dog he said was a regular staghound. We knocked down a big buck, and Tom sat down on him to cut his neck. But the buck was just waiting for some such foolishness, and rising up with a bounce, off he tore, kicking and bucking. Tom holding on, for deer life and squalling for me to shoot. I was laughing too much to try that; but I sicked on his big dog, who had not seemed to understand the scene. But he soon caught up and went in for meat seriously. Whether it was a miss-take or what, I never saw and never got a chance to ask the dog; but anyhow, he grabbed Tom's leg instead of the deer's, and a pretty mess they made of it. When I stopped laughing long enough to run up, there was Tom a straddle of the dog, which was dead as a nail—perfectly crazy—cursing till he was blue in the face, and sticking his knife viciously in the poor beast at every word—the deer, of course, gone forever."

Matural History.

MIMICRY AS A PROTECTION.

MIMICRY AS A PROTECTION.

THE intelligence of the lower animals is, perhaps, in no case so well shown as in their attempts at protection. The struggle for existence seems to have developed a marvellous ada; tation to their surroundings, strongly marked in some, slightly in others, yet recognizable among all living creatures. In the North we find many animals that offer, in their color, little contrast to the ever present snow, the resulting inconspicuity being the greatest protection afforded by nature. The ptarmigan, indeed, so closely follows the change in its surroundings, that while in the winter it is pure white, when the gray mosses, lichens and scanty vegetation crops out in the spring, the birds shed their white coat and assume a correspondingly dark garb. The animals that live upon the great deserts in Africa and America, in almost every case, have assumed nearly the exact shade of the ground upon which they rest. The horned toad of the West is almost invisible, as it lies upon the burnt, sandy soil; the toads of our gardens resemble the dusty roads which they frequent, while the frogs assume a brilliant green that affords them sufficient protection among the rushes by the river side.

Color in animals is a protection not only because of its simiriver side.

Color in animals is a protection not only because of its simi-

river side.

Color in animals is a protection not only because of its similarity to surrounding objects, but it serves its possessor in another way, to warn their enemies. Numbers of the unseatable caterpillars are extremely beautiful; equally so are the Danaida, Heliconida and Papilionida, all richly marked butterflies, noxious to birds, and so strangely characterized that they are never attacked by the latter by mistake.

That certain insects are aware of their mimitic power, and take advantage of this, is shown in the case of the butterfly Paralitha. It is in much favor by certain birds, and often chased by them. When driven to the wall, however, by a feathered enemy, it suddenly assumes a slow and labored light that is peculiar to a poisonous butterfly much dreaded by birds. The pursuer, on noticing the change, thinks it has made a mistake, and gives up the chase in disgust, while the cunning mimic resumes its natural mode of flight.

Among the insects that find protection in both color and form, the Mantida and Phasmida are pre-eminent; the tormer are called praying insects, from their curious habit of holding up their long fore feet as if in prayer. Many of them are colored in exact imitation of the trees or twigs upon which they are found, and in their general adaptation to their environments are wonderful examples of the positive existence

they are found, and in their general adaptation to their en-vironments are wonderful examples of the positive existence

vironments are wonderful examples of the positive existence of design in Nature.

The leaf insects (*Phasmida*) are still more exact in their mimicry, especially those of the genus *Phyllium*. They are about the size of an ordinary leaf; their wings and the dilated margins of their head, thorax and legs, being almost exact in their resemblance to the leaves of the plant the walking leaf most affects; the veining, even to the most delicate markings, is there, and the color is exact. In the

East they are often kept alive as curiosities, and visitors from abroad jestingly asked to point them out, when they are clinging to a limb, entirely indistinguishable from the leaves, though only a few inches away. Some of the stitch insects in the collection of the Museum of Natural History, Central Park, are seven or eight inches long, and are perfect in their resemblance to green twigs; the rugosities of the bark, the knots and defects in the wood are all closely copied by the leg joints and various parts of these curious creatures. Some resemble dead twigs, and have singular excrescences upon them that mimic moss. We are all familiar with the difficulty of capturing grass-hoppers from their similarity in color to the grass. Locusts on sunburnt plains are brown or gray, while those that live in the green woods are arrayed in like colors. In some the actual imitation of the oval decayed spots of the leaf are seen, so that the insect resembles an old leaf punctured with holes, and is safe in this protection from the various birds that seek it. Mr. Belt, the naturalist, was fortunate in observing the action of one of these locusts in time of danger. It was moving slowly along when a host of insectivorous ants came by, eager for such game. The locust stopped, drev closely to the ground, while the enemy rushed by, little suspecting that the dried and weather-worn leaf that barred their passage, was the choice morsel they would gladly have expured. When the ants had passed, the clever mimic resumed its way unmolested.

Certain flies mimic bees, even to the noise they make. Wasps find their double in the syrphus fly, and the Priornamis, a wasp of Central America, is so closely initiated by a hemipterous insect (Spiniger luteoncomis), even to its erratic movements, transparent wings, etc., that few would take up the cunning though perfectly harmless mimic.

The stinging ants, ferocious creatures, are closely copied by certain spiders, and numerous species of hemiptera and coleoptera. I have often found a small spid

its color corresponds with that of the leaves it feeds upon, being of a darker green when it feeds on the orange. The chrysalis is usually found suspended among the leaty twigs of its food plant, or of some neighboring tree, but it is probably often attached to larger branches; and Mr. Barber has discovered that it has the property of acquiring the color, more or less accurately, of any natural object it may be in contact with. A number of the caterpillars were placed in a case with a glass cover, one side of the case being formed by a red brick wall, the other sides being of yellowish wood. They were fed on orange leaves, and a branch of the bottle-brush tree (Banksia sp.) was also placed in the case. When fully fed, some attached themselves to the orange twigs, of thers to the bottle-brush branch, and these all changed to green pups; but each corresponded exactly in that to the leaves around it, the one being dark, the other a pale, faded green. Another attached itself to the wood, and the pupa became of the same yellowish color; while one fixed itself just where the wood and brick joined, and became one side red, the other side yellow! These remarkable changes would perhaps not have been credited had it not been for the previous observations of Mr. Wood; but the two support each other, and oblige us to accept them as actual phenomena.

This faculty has been observed among fishes, and a very pretty experiment can be tried by any of our readers who are the fortunate possessors of a salt water aquarium. The common flounder, the one that has such beautiful movable eyes, is perhaps the best to experiment upon. To commence, your fish or fishes must be in perfect condition; having made sure of this, place them in the aquarium, having previously arranged the bottom so that it is pure white bleached sand answering the purpose. Watch the color, a light brown probably, of your flounder, when you put it in, and leave it for a day or less. You will then see that the fish has grown lighter or has assumed a tint very simil

will be seen that it will preserve the same tint on all bottoms. with the seen that it will preserve the same thit on all bottoms. The tint, color, or light strikes the fish's eye and is conveyed by the sympathetic nerve to the myriads of pigment or color cells that surround the bedy in layers in what is called the cutis, or second skin, causing them to contract or expand as the case may be, and to these expansions and contractions the wonderful changes and fluctuations of color in all animals are due. animals are due

animals are que.

The chameleon shrimp Mysis, found in Southern waters, is a most beautiful green when in its natural state, and is found most frequently among rich green seaweeds, and darting through them it becomes at once invisible. This simiing through them it becomes at once invisible. This similarity of color might be thought an accidental occurrence, as really many cases of seeming or false mimicry are; but let us place the little green fellow in a glass of pure water, or in an aquarium, where we can observe it from all sides. It darts around as if investigating its prison, and if we follow its movements a change is noticed; the green tint is growing darker, now lighter, then passing through different shades of blue, from dark to light, the color spots seemingly separating and assuming in form disconnected patches, which finally disappear, leaving the little creature almost devoid of color. A land crab, called Gelasimus, also loses its color when treated in a similar manner, becoming pure white or a very delicate shade of green.

devoid of color. A land crab, called Gelusinus, also loses its color when treated in a similar manner, becoming pure white or a very delicate shade of green.

In the Gulf Stream a number of crustaceans are found that are perfect mimics of the sargassum to which they cling; their backs appear painted with fantastic markings of yellow and different shades of olive-green, and even the little white polyzoons that encrust the weed are faithfully portrayed upon the shells of these little mimics. The little fish, Antenvarias, that here also finds a home, is bedecked with the same colors, and decorated with a fringe of barbels that even in shape resemble the bobs and points of the weed. A fish discovered by the Challenger expedition was absolutely covered with these protective points, so that it resembled a mass of seaweed. The fantastic fishes called Sculpins, with their bright red., yellow and golden garbs, are afforded protection by the curious barbels of flesh that swing pendent from their various parts, and when settled among the weed they can hardly be distinguished. This is especially so with the Lonhius or American angler, all around the mouth of which, and upon the fins, are bits of flesh in exact imitation of vegetable forms, and as they lift and move with the tide, as the sluggish fish lies in wait for prey, many a finny victim swims near, thinking it a moss-covered rock, and pays dearly for the mistake.

swims near, thinking it a moss-covered rock, and pays dearly for the mistake.

Some of the spider-crabs afford remarkable instances of an instinctive desire for protection. We have taken one, carefully cleansed his rough back of the weed with which it was covered, and placed it among a mass of algae in an aquarium. Almost its first move would be to seize a bit of weed, sever it from the bunch, and apply the broken end to its mouth, evidently for the purpose of attaching some gelatinous fluid; then lifting the claw over its back the shoot would be planted there. Another piece, perhaps of another color, was soon added, and in an astonishingly short time the crab was thoroughly protected from observation by its resemblance to a moss-covered rock, so that the sharpest-eyed

color, was soon added, and in an asconsingly short time the crab was thoroughly protected from observation by its resemblance to a moss-covered rock, so that the sharpest-eyed fish would pass it by without notice.

Many of the Holothurians are afforded a curious protection by their singular mouth organs. The Pentacta, a black cucumber-shaped creature, when placed upon the white sandy bottom of an aquarium, almost immediately buries itself in the sand, some completely disappearing from view. If we leave the tauk for awhile, on returning we shall flud that to all purposes and intents a graceful branched shrub has grown in our absence; it waves to and fro as if in the tide, coiling and moving the mouth of our Holothurian, who it would seem, aware of the danger of the contrast its body offers, sinks beneath the surface, sending up its curious mouth that is an almost exact mimic of the algae among which the creature lives.

In all animals we find in a more or less degree, these strange provisions, evidences more powerful than words, of mind in nature.

mind in nature.

Habits of Woodpeckers.—Northampton, Mass., July 10.—I have just settled a point on the woodpecker question, to my own satisfaction at least. A pair of yellow hammers, or golden-winged woodpecker, are carrying on their family matters near the house, and the male bird passes much of his time on a dead limb, alternately hammering and singing. I took a position near the tree and watched him for some time, and found he was only "making merry" with his bill. He would get off a song or notes to that effect, then he would tirn and rattle off a few loud taps, then plume himself, etc., while a few hundred yards away another was going through the same performance. I am now satisfied that their bills are used for pleasure as well as for business; though whether they ever hunt up old tin kittles when dead limbs are scarce I can't say. "Homo" is doubtless right as to nighthawks laying their eggs on city roofs, but he never saw their nests there or anywhere else. When a boy I often found their eggs, but always on a hard gravelly place where there was no grass. Except for the crop of fun it yields, that hoop snake business smacks too much of superstition to waste paper with. Let the N. Y. Sun take the cake!—Dedicated.—Nest of Dendreca Pennsylvanica.—Waterbury. Conn.,

DIDYMUS.

NEST OF DENDRGCA PENNSYLVANICA.—Waterbury. Conn., July 13.—Editor Forest and Stream: About the latter part of last May, while walking in the woods, I discovered a bird gathering material for her nest, and, following her with my eye, found the site she had fixed upon. I visited the place frequently until the "set" was laid and then, being a new bird to me, shot her (inclosed please find skin, and please excuse the condition it is in), and took full possession of nest and eggs. The nest (which measured, outside 3 in. wide by 2 in. deep, inside 1½ in. wide by 1½ in. deep) was situated in a hazel bush about 3 ft. from the ground, made of sticks and fine straws, and contained four eggs, all measuring 1.—16 in. long by 8-16 in. wide. The eggs have a white background, ring of iliac spots, black and brown blotches, but vary somewhat.—Subscriber. [The skin is that of a female chestnut-sided warbler (D. pennsylvanica), a species which you will find extremely abundant in your locality during the spring migration, May 5 to 20.]

WHITE BEAVER.—Upper Marias River, Montana.—The other day an Indian killed a female beaver near here, and on opening her found four young ones in the womb, two of which are white and two black. The two white ones are much smaller than the dark ones. young ones for me, and as soon as the pelts are dry I shall send them to the museum of Dr. Hart, Merriam, Locust Grove, where they may be seen by any one interested.—J. W. Shultz.

SUMMER NOTES FROM NOVA SCOTIA

JUNE 26.—It is perhaps worthy of remark that at the present date, when all our indigenous trees and plants have attained their full leaf, there is an unusual abundance Present date, when all our indigenous trees and plants have attained their full leaf, there is an unusual abundance of insect life, so much so that vegetation suffers to a great extent. Even the white birch (B. pappraeca) is infested with an aphis which strips the leaves off the topmost branches of the trees. Our kitchen garden is alive with insects, and potatoes, squashes, tomatoes and nearly every vegetable has its leaves riddled by the ravages of small beetles belonging to the Chryssomelide, one or two species attacking different vegetables promiscuously. A small Melontha also ruins the foliage of the raspberries. As a set off, however, to the hosts of insects, our neighborhood can boast of a greater variety of birds and more nests than I have known before. It is probable that unusually severe winters, especially those remarkable for excessive snowfalls, have no destructive effect upon hibernating insects or their larvae; indeed, founding our opinion upon several years' observations, we are fuellined to think that when the land is covered almost perpetually with snow, as it was in this province nearly the whole of last winter and long into our late spring, all animal life lying dormant beneath is benefitted by the warm covering, and awakes, late though it be, in more vigorous condition than it would have done if submitted to alternate thaw and frost which usually characterize the winters of our clime.

July 4.—For the last week or ten days our house has been

clime.
July 4.—For the last week or ten days our house has been invaded by an army of gad flies (*Tabanus*), which are devoured cagerly by two tame ground squirrels belonging to the little boys.
July 7.—Fire flies (*Photinus*) abundant at night for the

first time this

his season. -Silk worm moth (*Telea polyphemus*) about

July 8.—Silk worm moth (Telea polyphemus) about. Two curious positions for the nest of the robin (T. migratorius) have occurred here; one on the top of a post in an angle of our garden fence, without shelter of any kind; the other on the bare ground in an angle formed by two logs covering each other. A robin's nest was also found built on that of last year. Another fact regarding the nesting of birds we may mention. In three young spruce trees about eight feet high, transplanted in the hope of their living about the last of May, three birds' nests were commenced, but after a fortnight of hot weather, about the beginning of June, the spruces began to die off, shedding their nests at the very first appearance of decay in the trees.

Fern Lodge, Waterville.

Notes from Central New York.—Onondaga Valley, N. Y., June 22.—The seventeen-year locusts, so called, (C. septendecim) are with us on time. Millions of them on the oak and hickory trees, and the noise is dearlening. The females are engaged in laying their eggs in the small twigs. If you want any specimens I can send them. Does the scarlet langer (P. rubbra) sing? Tenny states that its notes are not musical, and are represented by the syllables "chip churr." I claim that it does sing, and that its song is clear, mellow and sweet, resembling, in many respects, the song of the rose-breasted grosbeak (G. ludovici-ane). My friend, L. Sherwood, has seen and heard it, as also have I. The notes "chip churr" are the alarm, and I think also the call notes. I want to call attention to the sagacity, or something else, of a fox, and at the same time to state that the person mentioned is in all respects reliable. While Mr. Leiter, of Onondaga reservation, was crossing a field he heard what he supposed to be a small dog, barking at the foot of a tree, some thirty rods from him. On going to see what the dog had treed he was surprised to see a fox running around the tree, jumping and barking. As Mr. Leiter came near, the fox ran six or eight rods and sat down. Mr. Leiter went to the tree and saw among the branches a large 'coon. The fox still sat within gunshot, and, thinking to get both of them, Leiter went to his house, got a gun, and on returning saw the fox at the same anties, but before he could get within range it ran away. He killed the 'coon. Now then, what had Mr. 'Coon done that the fox should treat him thusly? I leave it for others to answer. Did the fox act in the manner aforesaid in order to call attention to the 'coon?—W. M. [The searlet tanager has undoubtedly a song—a rather sweet, mellow whistle, which somewhat resembles that of the robin. Its vocal efforts, while to be sure not very remarkable, are certainly worthy of the title of song] Notes from Central New York.—Onondaga Valley, of song]

Camp Hire Hlickerings.

'That reminds me.

THERE was a full meeting at the old store, and as usual when this was the case the exercises were very interesting. There was a drover present who had a herd of cattle for when this was the case the exercises were very interesting. There was a drover present who had a herd of eathle for sale, and many of the farmers had gathered in to talk over prices and enjoy a social hour with the boys. The conversation was mostly about cattle, and after the crowd had got warmed to their work the rattling cross-fire of anecdote, fact and fiction that incessantly poured forth was vastly entertaining, amusing and instructive.

Some one incidentally mentioned a fat ox once owned by him and with convincing confidence stated the exact num-

amusing and instructive.

Some one incidentally mentioned a fat ox once owned by him, and with convincing confidence stated the exact number of pounds of t flow that the animal had yielded. This was, to say the least, very ill advised, for in less than five minutes there was more tallow piled on top of his poor story than would have fairly lined the ribs of all the oxen he ever owned. Crestfallen and disgusted he slunk into a corner and was mentally kicking himself for not waiting for the last story when Uud, inspired by the woebegone expression of his countenance, cleared his throat and remarked, "Speaking of fat critters reminds me of a sheep we had when I was a boy. He was an old ram that father bought at an auction, and he was so blamed poor that nobody would bid on him and he was knocked down to the old man for seventy-five cents. It was in the fall, and none of us thought that he would winter, but we turned him into the barn yard and let him take his chance. We didn't take any special pains with him, and the fodder wan't first rate, and it didn't seem to us that he was taking on fat so dreadful fast, but when we killed him in the spring how much tallow do you guess he had?"

After many guesses and much discussion, during which the drover was heard to remark that if the old ram panned out more than a ton he would quit the business, Cud was asked to state the quantity.

Drawing down the corners of his mouth he said. "He lacked

asked to state the quantity.

Drawing down the corners of his mouth he said, "He lacked just a pound and a quarter of having any."

Game Bag and Gun.

THE LAND OF THE SKY.

THE LAND OF THE SKY.

MY pen has been rusting for the past few weeks, and I fear the long rest has made me forget even the little I knew of matters which are interesting to the readers of your sporting journal. I left my home in the valley of the Pedee about ten days ago, when the thermometrical range was from eighty-eight to ninety-four degrees Fahrenheit, and came into what some one has called "the Land of the Sky," to see if I could not find the cool air and pure water which are so necessary to the restoration of physical powers, which have been weakened by an exhausting climate; and, at the same time, indulge in a little sport at glass balls and "clay pigeons" with some of the most expert gunners in the two Carolinas. Asheville, in that celebrated county called Buncombe—after which, it is said, a peculiar kind of oratory is named, often indulged in by persons who occupy official position, and are more anxious for a re-election than the statesman-like discharge of their duties—contains quite a number of sportsmen, who are all skillful in the use of the gun, and can select a "team" who are hard to overcome in a contest. With a liberality rarely equaled and never surpassed, this club issued an invitation to the brotherhood in several of the Southern States to visit the beautiful and invigorating region lying west of the Blue Ridge, and engage in a friendly struggle for the mastery, without charge for the sport, those gentlemen paying all the expenses of the tournament. Fourth of July week was the time selected for the meeting, and cards of invitation were duly sent to sporting clubs, not only in the two Carolinas, but in Virginia, Georgia, Alabama and Tennessee.

My route to this land of cool air and water whose scenery is among the grandest, to say the very least, east of our "Father of Waters," passed Charlotte and Salisbury, at which latter point I took the Western North Carolina Railroad, at eleven P. M. I awwoke the following morning, about surrise, ener Old Fort, the castern entrance of Swannanoa Gap, th

Mt. Washington, the pride of the descendants of the May-flower.

Each turn of the road discloses new charms to the eye of the lover of nature's grandeur, and thus, inhaling the pure morning air, cool and bracing, we sped our way and soon crossing the Swannanoa, we reached the immediate valley of the French Broad, just below the confluence of the two streams, and the depot of Asheville was reached. Delivering the checks for my baggage to the porter, I entered the 'bus' of the Eagle Hotel, and after traveling a few minutes along a well-graded, but circuitous road, was set down at the hotel, assigned to a comfortable room and indulged in the luxury of a bath of mountain water. After this I was ready for whatever kind attentions the courtesy of my Asheville friends might bestow. They soon found me, and invited me to a preliminary shoot at their grounds during the coming afternoon. afternoon.

me to a preiminary snoot at their grounds during the coming afternoon.

For some reason, but few sportsmen had made their appearance, and indeed only a small number attended the contest at any time during the week. Only three full teams were present, and two others were made up of supernutaries, so that only five ever engaged in the trial of skill. Your correspondent did some excellent shooting, for him, before the tournament began, breaking ten "clay pigeons" and ten glass balls consecutively. But when the "tug of war" came, his good fortune deserted him, and he stood in great danger at one time, of being his own successor in winning the "pop gun"—the badge of poorest marksmanship—the badge which, they said, he won on a former occasion, and which he received with becoming thanks, in a speech of suitable eloquence. Nevertheless, that glory, he failed to achieve, and thus lost the laurels, which he did not covet.

We had a pleasant time in our contest and during our stay. The Asheville Club were assiduous in their attentions and showed their guests all possible courtiesy. Among other en-

achieve, and thus lost the laurels, which he did not covet. We had a pleasant time in our contest and during our stay. The Asheville Club were assiduous in their attentions and showed their guests all possible courtesy. Among other encounters was one for a championship badge, offerod, by our hosts. For this Spartanburg, Orangeburg, and the Independents, of South Carolina, with Holmes, Smoak and Gibbes respectively at their head, and Asheville and Eureka, of North Carolina, led by Carter and "Wells," met in "battle array." At the conclusion of the strife it was found that the Independents were the victors. "Wells" was deputed to "deliver the goods," which he did in "his best style"—how good was it?—and Gibbes responded in a similar way, pledging himself to have it present at the next annual meeting, to be banded over to his successor. Some of the shooting was excellent, much was fair, and a little far from creditable. Candor compels me to say that the "clay pigeons" did not give universal satisfaction, because in quite a number of cases they did not break when hit by shot. In one case, while I was "at the bat," and one of these pigeons flew to the right, I discharged my gun and a "miss" was scored against me. Feeling sure I held the gun properly, I requested agentleman to pick up the clay, and it was found that five shot had struck it, two going through, and yet it was not broken. Several other similar cases occurred. I used No. 8 shot, one ounce and three drams of gunpowder.

During the week of festivities an association was formed, called "The Sportsmen's Association of the Carolinas." Your correspondent was chosen President, Maj. II. H. Thomson, of Spartanburg, S. C., Vice-President, and Mr. T. H. Gibbes, of Columbia, S. C., Secretary and Treasurer. The executive committee consists of the officers named and Messrs. D. C. Waddell and S. Van Gilder, of Asheville, N. C., and Messrs. Owen Holmes, of Spartanburg, and D. J. Smoak, of Orangeburg, S. C. It is designed to have at least one annual "shooting match," for

locality selected for it will be in the mountainous region of one or the other of the two States.

Among the features of our late tournament were matches where all shooters were placed upon terms of absolute equality. These were of "sel" traps, so that each contestant had the same chance—one off, one 185 deg, to the right and left, and one focusing. In such an arrangement there is no room for compilint against either luck or design, and the order of flight can be so directed that no shooter will know which way the ball is ground the last one is reached. In the absence of such rule it is easy to see how cheating can be done. That it is done occasionally, anybody outside of an asylum knows.

There was a pig-on much also, and some good shooting was done, notably by Misses. Waddell, of Asheville, and Gibbs, of Columbia, neither of whom used the second barrel but one. The prize, however, was won by Mr. White, of South Carolina. The man so the contestants were placed in a box, and after the pig on was put in the trap, the drawing was done, notably by Misses, which was not precaution is often necessary, for not elimbia who was not the trap, the drawing was done, the reby making all jockeysian out of the question. I am soure to say that such precaution is often necessary, for not elimbia who have fond of the gun are gentlanin. I once saw a pig-on mitch where three shooters had combined. One furnished the pigeons, traps and trapper. Whenever either one of them came to the stand, a young pigeon was burned loose, but when I and others shot, an old fellow was put in, who datted down the wind with almost leetric velocity, and got forty to fifty yadis off before we could bring the gun to bear. Was this hones!? An interrogation mark is entirely needles.

After we had shot antil we were surfeited with the sport, we disbanded, hopping to meet again for a renewoil of the expectation was the very surfected with the subtrious of the meeting of the St. and south the subtrious of the meeting of the places for any colder was presente

hardy man can have all the sport in its pursuit which any one can want.

But the chief attractions which these mountains and valleys afford is the delightful climate, so pure and bracing that the cnervating influences of the summer are kept away, and the physical powers are kept at that standard which makes life in its realities as joyous and bright as the fantasies of "a spleadid dream." All these joys can be had at a moderate charge—far less than is usually paid at the North for similar entertainment. When the railroad is finished to Ducktown a large summer region of surpassing salubrity will become easily accessible to all parts of the country, and hill and vale, and stream and mountain will become resonant with the music of beatified humanity.

Michigan Notes.—The sportsmen of this State, with whom I have conversed, are divided on the subject of the present Michigan game law. Woodcock shooting as this law allows it begins Aug. I, and they tell me there are as many woodcock being killed now as in any past season. One informant, whose name I am permitted to use if I choose to, told me he had seen several birds after they were shot. For my part, so long as the open season for woodcock shooting is made so late as August, I cannot see why it would not be just as well to postpone its opening until Oct. I. It is a great temptation to a man with a gun in the woods in the middle or last of August, while woodcock shooting, "to keep his gun oft" of young ruffed grouse if they should jump up before him. Many will kill them and do kill them during the late summer. The safest and easiest way out of all such dilibenities is to aboth all shooting until autumn, and I think we are fast coming to it. I am sorry to write you that lattery shooting for ducks is becoming more and more common every season on the Michigan waters. These machines me anchosed of course right in the feeding grounds. Meny leading sportsmen I have talked with are bitterly opposed to their use. I tell them it will not be many years before they will notice the damaging effect of such methods in shooting.—How.

Lower Drive Agency, Dakota,—I think from general appearances that we shall have quite a large number of grouse this fall and some prairie chickens, as I know of three or four flocks about here. The country on the opposite side of the river is fast sattling up, and the grain fields will bring them up the river.—D.

Forest and Stream Schedule "A."

OPEN SEASONS—GAME AND FISH.

Showing the season in which it is permitted to kill each kind of Game and Fish, in every State. Territory and Province, where such a season is prescribed by law. Compiled from original authorities and published by the Forest and Stream, 39 Park Row, New York, July 20, 1882.

General Provisions.

It is unlawful: To kill, have in possession, transport or sell game birds, animals and fish, save only in the open season for each given below; to net or snare game birds or animals; to take or kill game fishes by any other means than angling; to shoot waterfowl at night, or with any other than shoulder-guns; to hunt rabbits with ferrets; to enter inclosed land for shooting without consent of owner; to kill except for scientific purpose insectivorous or song birds at any time, or to rob nests of wild birds (except birds of prey).

Laws forbidding export of game obtain in Colorado, Connecticut, Dakota, Indiana, Michigan, Minnesota, Missouri, Nebraska, New York, North Carolina, Wisconsin, Ontario, Wyoming. Discriminations against non-vesidents obtain in Delaware, Iowa, Missouri, New Brunswick, New Jersey, North Carolina, Nova Scotia, Quebec, Tennessee. See Schedule "B."

FLORIDA SUMMER SHOOTING.—Pensacola, Florida, July 11.—Editor Forest and Stream: I think that you must have some "grudge" against Florida. In your issue of June 29 you state that deer, quail and other game are just now in season in Florida. Now, I do not think that you would deliberately state something of this kind unless you had some authority for so doing, but on this occasion your informant was wrong. Deer and other game are only shot here by sportsmen from October until February. Of course there are "pot-hunters" who shoot game all of the year in this State, just as much as in any others. It is true that the Legislature in this State abolished the game law, but while it was in force it was very strictly enforced in this (Eseambia) county.—H. T. [We do not quite catch the drift of our correspondent's remarks. We said that Florida had no game all right. The fault we have to find with Florida is that the State is 500 years behindhand in the matter of proper game protection. We speak from our own personal observation, extending over a period of eighteen years. We are glad to know that the law was enforced in Escambia county; and we hope that H. T. will exert all his influence to restrict in his neighborhood the shooting of game in its breeding season.]

The Golden Gun Club.—Golden Col., July 4, 1882.— Editor Forest and Stream: The Golden Gun Club was re-cently organized with the following officers: President, Frank E. Everett; First Vice-President, John MacLachlan-Second Vice-President, E. J. Thompson; Secretary, E. J. Ullrich; Treasurer, James A. McGee; Field Captain, W. R. Livingston; Executive Committee, W. R. Livingston, J. W. Barnes, Geo. Ball, Torrence White.—E. T. U.

THE MAN WHO BEGAN THE WAR.

THE MAN WHO BEGAN THE WAR.

I BELIEVE I had something to do with stirring up the grouse controversy that has been going on in your paper for several months, though it has assumed many phases, and indeed all phases since it began. I therefore desire to be heard in rejoinder on some of the points. I claim to be a sportsman in the fullest and broadest sense of the term, and can kill as many birds on the wing as most men, but I always take grouse whenever I find them—rather prefer them on a tree, next on the ground, and after that on the wing as the last resort.

can kill as many birds on the wing as most men, but I always take grouse wh-never I find them—rather prefer them on a tree, next on the ground, and after that on the wing as the last resort.

As to the extinction or diminution of grouse, I don't see that there is any less abundance of them now than there was twenty-five years ago, so far as our section of country is concerned, except where the forest has been cleared away. There are more some years in some localities than in others, just as domestic fowls are found. They are liable to be depleted by disease produced from a variety of causes, like the whole animal kingdom. I don't see that breech-loaders, railroads, and all the modern appliances of civilization have affected them in any way in the mountains of Virginia and West Virginia. Any day from October to April a good bag of them can be made by driving or riding along the turnpikes and public roads through this country.

I suppose it is well known to every grouse hunter that on a good steady saddle horse, or in a vehicle, are the best modes of hunting grouse. The birds will run, and nor fly from a horse until pressed very closely. They are very fond of dusting themselves in the road, and, in fact, when not disturbed, my observation is that they rather prefer an open, grassy, somewhat damp place, surrounded by woods or a dusty road, to stay in to the thick brush or any other place. My experience is that pointers or setters are of little use in hunting them, except to retrieve them. Owing to my perverted (2) taste, I suppose, I prefer the "yaller dorg" that has learned to tree them, if not hanting on horseback; if mounted, then I want no dog—except a retriever. As I said in a previous letter, the "treeing dog" is like a poet—born not made; and there are the fewest of them—real good ones. I have never seen more than three in my life, the best one, a pure foxhound.

In our section of country, the greatest coemies these splendid birds have are the lawks, large owls, foxes, and

not made; and there are the terms of the property of the prope

FRESH-WATER CLAMS.

FRESH-WATER CLAMS.

In your issue of June 1 I was both amused and interested on reading the suggestions of a professor of a Western college, touching the edible qualities for the human family of our common fresh-water clams. Hitherto my attention has often been directed to the masses of denuded shells of these clams, which are so frequently met on the shores of our invers as well as the borders of our lakes. The muskrats, it must be inferred, are high livers on these mollusks, as witnessed by these piles of shells on the shores of our waters, as above stated. as above stated.

as above stated.

I observe that the professor is deeply interested in the solution of the problem of the possible edible as well as nutritious and deheate possibilities of the aforesaid clams as a new and cheap regimen for the era in which we live, when beef and pork have taken such an upward "hist" as to put the man of humble means beyond their enjoyment. So the professor, with that gravity and profundity of research which often distinguish our educators, wants the lethtyophagous Club, at their next session, to employ the best experts in the culinary art to settle this (to him) deeply interesting question.

phagous Chito, at their next session, to employ the best experts in the culinary art to settle this (to him) deeply interesting question.

Away back in the years, when I was just learning my A B C's in the art of duck shooting over wooden decoys in the bays and indentations of that famous old river, St. Lawrence, this claim question bored into the head of my companion Bernard and myself in this wise: As we were rowning to our camp among the far-famed and now appreciated "Thousand Isles" of the St. Lawrence, after a morning's tear among the whistlers or winter ducks as we then called them, when nearing the shore whereon our encampment and tent were spread, we noticed in the shallow water myriads of clams partially imbedded in the shallow water myriads of clams partially imbedded in the sand and mud, with open, audacious mouths. Resting on Lisoars, Bernard exciamed, "Oh, what a sight! Why may we not get up a new and toothsome dessert with which to crown our everyday repast of ducks, brown and golden-legged plover, partialges, fish and the like?" I embraced the idea without hesitation.

new and toothsome dessert wan man a control day repast of ducks, brown and golden-legged plover, partridges, fish and the like?" I embraced the idea without hesitation.

The next question that puzzled Bernard, was, how to gather the claims, although the water was quite shallow and transparent but nevertheless chilled by the advent of October. "Clear as mud," said I. Drawing my ramped and removing the wormer, I leaned over the gamwale, and at every jab at the open mouth of the bivalve with the small end of my rod, the claim would close with a sharp grip and was litted from his bed and with sudden jerk landed in the beat. In a few minutes I had nearly a peek, and ashore we pushed to cook our matituitial meal. Bernard looked after the coffee, potatoes, pork and duck fixings, while I applied myself to the washing, opening and cooking the claims. For the information of the professor and expert, to be employed by the Ichthyophagoi, I will explain my process, that they may be saved the time and loss of "goodies" with which I invested our new dish; First, a careful par-boiling, emptying the liquid, then adding a quantity of milk, a liberal slice of butter, a pinch of pepper and salt each, and lastly a supply of oyster crackers.

Our first course ended. I brought forth my maiden attempt

of other, a pinen of pepper and sait each, and assay a sup-ply of oyster crackers.

Our first course ended, I brought forth my maiden attempt in this, to me, new department of the culinary art. F.lling Bernard's plate with a liberal supply of the hol, smoking and really delicious mass to smell or gaze upon, I helped myself in the same way, and after a little stirring and cooling and

aggravating of the olfactories with the delicious aroma, in

aggravating of the olfactories with the delicious aroma, in we went, without ceremony. The clams thus prepared so nearly resembled cysters or salt water clams, that not a doubt disturbed us as to the entirely satisfactory outcome. The with the first spoonful I fished up a clam, and so did Bernard, and while the soup would have conferred credit upon Professor Blot and advanced the reputation of Delmonico in their palmiest days, not so the aforesaid clams. As often as I closed my teeth on the mussel my jaws would go back with an involuntary spring as if encountering a piece of indiarubber. Blossed with the best of teeth at that time, and dauntless courage, I repeated the "open and shut process" without success, when casting a sly glance at Bernard, I saw him vigorously essaying to make minco-ment of his first encounter with a fresh-water clam. With the utmost caution and assumed sincerity and gravity at my command, I ventured the inquiry how he relished fresh-water clams? The look he gave me was one of mixed disgust, disappointment and despair, which I shall never forget, as he replied, "The soup is delicious, but, by heavens! I can't make an impression with my teeth on these clams." So deep was my amusement at his looks and reply, that whatever remained in my mouth went out in a spray, succeeded by a choking guffaw that nearly dismantled my upper story.

The apparently sober and carnest inquiry of your Western professor recalled with so much freshness this trifling incident of long ago, that I ventured to cast the feeble light of my experience toward the solution of this fresh-water clam problem.

dent of long ago, that I ventured to this fresh-water claim my experience toward the solution of this fresh-water claim problem.

Into one of those pockets, which time, the grinding of sand and pebbles had worn into the otherwise smooth rock near by, we emptied our new and delicate dishes, to which "Tronp," our foxhound, only needed to be invited to do ample justice to this, to him, toothsome award.

As the Forest and Stream is a regular visitor at my old home, Ogdensburg, St. Lawrence county, N. Y., it is now, and long has been a wonder to me, that with the native talent and sportive bent of so many of its citizens, and more especially of the St. Lawrence Game Society, they do not adorn the pages of you popular journal with frequent contributions from a place "chock full" of really sporting lore of by-gone days of the now living devotees of the rod and gun. There is one "Jos ph," "L. D. V. H.," "A. C.," "N. H. L.," and numbers of others I can now tally on my finger ends, who could tell "ofer true tales" full of truth and pregnant with dilemmas and contre-tem s well worthy of being chronicled in the Forest and Stream. I trust they will, without exception, excuse the freedom of this gentle ray on the old hive.

F. B. Hitchcock.

MANKATO, Minn., June 26, 1882.

"GAME PROTECTION FOR THE PEOPLE."

Elitor Forest and Stream.

I reproduce the above caption from Forest and Stream. You used it to broaden the principles that should underlie organization for the protection of game and fish. To advise you of the results of effort in that direction, however partial, to inform you that within never so limited a sphere it has become an accomplished fact, is to make acknowl-directly for your fearless and president effort in the you of the results of effort in that direction, however partial, to inform you that within never so limited a sphere it has become an accomplished fact, is to make acknowledgments for your fearless and persistent efforts in that behalf. What power there is in words spoken right to the mark. To point at iniquity and outrage, and say their right names is to brand them for public reprobation, and to set the good against the bad. There is a power, too, in the sympathetic cheer they excite, and I have heard men whose hands were yet grasped, emphasize in the very first syllables of salutation, the sterling truthfuness and counage of Forest and Straeam in all the varied departments of its labors, and notably fish and game protection.

But, to the subject matter: You published, in March last, the proceedings of the first annual meeting of the St. Lawrence Game Club. It is a corporation organized under a general statute, and "means business." Its constitution is printed on a quarter sheet, and its by-laws do not occupy a larger space. Its officers are a president, vice-president, five trustees, a secretary and treasurer, and a vigilance committee. Membership is created by signing the constitution and paying to the treasurer fifty cents. Annual dues are a half dollar. Another source of revenue is voluntary subscription, and it supplies the sinews of war.

In April the trustees held a business meeting at Canton, he county seat, and arranged the plan and details of action for the following year. Pains were taken to have the purposes of the club widely disseminated, and to invite membership and co-operation. The whole northern section of the State, the Adirondack territory, its forests and waters, left out of account in the selection of game protectors, was the matter of p.incipal concern, and it was determined that within the sphere of its immediate efforts, St. Lawrence county, preventive and punitory measures should be undertaken. You will be gratified to know that the club is doing efficient service. Public attention ha

mnation. Detectives in the employ of the club, and paid from its treasury, are doing service in the county, and this it is proposed to continue until the interest of the people shall be properly represented here in the persons of State game protectors. The Legislature and the Executive of the State will have their extension properly dispected the State.

properly represented here in the persons of State game protectors. The Legislature and the Executive of the State will have their attention properly directed to the matter, and we believe proper consideration will be given to it. Results thus far are encouraging—surprising. In a section where before all was lawlessness, less than a dozen prosecutions, civil and criminal, have been commenced for violations of the game law.

Encouraging as all this is, it is to be remembered that partial, local effort cannot attain satifactory and general results. There is need of local organization throughout the Adiron-dack regions—organizations in counties. To awaken the attention of the public, organization is necessary. Sentiment is sound, and when expressed is always on the right side. Let me repeat, organization is wanted, for organization is public opinion taking life, and having a tongue, mandates, ministers. Then the law-abiding are strengthened, and the rest coerced. If the good citizens persist, the bad ones will go under.

When one gets a comprehension of the value and uses of well stocked game preserve, the benefits hygienic, economic, to result from its proper and legitimate pursuit and capture, and above and beyond all the essential aid to moral and intellectual culture afforded by the gratification of a love for field sports, natural or acquired, it would seem that the average citizen, with a modicum of civic virtues, should not

fail in his duty to the laws. And he will not. Properly appealed to, he will be an effective worker in the cause, and will cry stop thief at the poachers with the spoils of their wretched vocation. And this is about all that is required. It is an expression, and so strengthens and directs public senti-

Shall there not be local organizations representing counties, in the Adirondack territory, and each represented in an Adirondack game club that will have in charge the vigorous enforcement of the laws in the whole section.

St. Lawrence county to its neighbors sends—
Greeting: Join us in a common effort to protect the game and fish, or harbor the poachers we shall drive from our borders, and leave us a monopoly of benefits.

Mr. Editor, please say—in qualification of a statement in a late issue—that hounding deer in St. Lawrence county is unlawful at all times.

Mac. Shall there not be local organizations representing counties.

THE PHILADELPHIA POACHERS.

Nour last issue we gave an account, from a guide, of some of the "Taylor party" who were found with unlawful venison by Game Agent Dodge, and taken in to Booneville and fined. We are now permitted to print the following letters on the subject, written to a gentleman in New York city: law ful

Booneville and fined. We are now permitted to print the following letters on the subject, written to a gentlenan in New York city:

DEAR SIR—As you appeared to feel some anxiety in regard to what the Philadelphia party might do over on Big Moose Lake. I thought I would drop you a line in reference to my visit to them. I succeeded in getting into Big Moose, and was there three days and nights watching their movements before they knew I was pres. nt. Seeing that one of their boats did not return Friday night, I concluded it would be best to hunt it up, and on the following day I overhauled two of the party, with a guide, on the trail from Big Moose to Twitchell. I interviewed them a few minutes, and then went through their baskets, finding in the bottom of one, under about forty pounds of trout, a nice little lot of venison, just the hams skinned out and done up nicely in a little canvas bag. I took one of the young men out with me to Booneville, where, after an introduction to Justice Morling, he squared up for penalty and costs. The whole thing, with expense of coming out and going back, amounted to about one hundred dollars, and when I get through with them, the 'meat' they had will cost about ten dollars per pound. The names of the young men I captured were Joe S. Clark and Ernest Wright, of Philadelphia, and their guide was Jerome Wood, from Long Lake. As the Fulton Chain people were much pleased with the turn of affairs, and anxious to give it publicity, they desired me to write you and have it noticed in Forest AND STREAM, as a warning to others who have a disposition to evade the law, or violate it, rather. Fred Hess and Chris Goodsell, Fulton Chain guides, were with me, and did me good service. The Fulton Chain guides, to a mun, are in earnest in this matter, and are determined that the game laws shall be respected in that country. What makes the boys feel pretty well over this affair is: This party had nine guides with them from the other side, and they rather intimated that they were cute enough to kil

State Game Consiable Dodge came out of the wood last night with Joseph Claik, of Philadelphia, in tow for violating the game law by killing deer out of season. Dodge went in and camped in the club camp on Big Moose and watched their boats for three days when he missed one boat, and caught the young man on his return from Twitchell Lake, on the trail, with the ham of a deer in his pack. This morning Mr. Taylor was up before Justice Morling and fined \$50 and costs, nearly \$50 more, and returned to the woods very quick. It was a big thing to catch one of that party when they knew that the game constable was at Big Moose and on the lookout for them. It also pits the Brown's Tract against the Long Lake guides, and saves the deer until the season opens.

deer until the season opens.

Should any of your friends sour on you this warm weather,
I will be glad to sweeten them, as I have 4,000 pounds of
maple sugar on hand.

CALVIN V. GRAVES.

BOONVILLE, N. Y., July 10.

THE ADIRONDACK DOE SLAUGHTER,

Editor Forest and Stream:

Easter Forest and Stream:
Your "practical suggestion" to the New York Association for the Protection of Fish and Game, in your issue of the 6th inst., is indeed a good one, but I fear it will, like all other means looking boward the protection of game in this section, fail to hit the mark. The account given by "Adrion Ondack." in the same issue of the showful elements of Ondack," in the same issue, of the shameful slaughter of deer in the Blue Mountain region holds good for the entire

deer in the Blue Mountain region hous good to wilderness.

At one summer resort coming under my notice, seven deer were brought in early in June, four of which were does who were giving suck to their fawns. These deer were shot by the guides of the house, and were bought by the proprietor for his table! And the same guides are now nightly carrying would-be sportsmen to the spots where they can best slaughter deer in front of the headlight. And I am informed that what is true of this one resort is equally true of all the resorts in the woods. The externination of deer in the Adisondacks when it comes—and it is surely coming—will not

deer in front of the heudlight. And I am informed that what is true of this one resoit is equally true of all the resorts in the woods. The extermination of deer in the Adirondacks, when it comes—and it is surely coming—will not be chargeable to true sportsmen inside or out of the wilderness, but to the natives or guides, and the hotel proprietors, who will not discountenance the detestable business.

Without desiring to be impertinent, I would like to offer a "practical suggestion," No. 2, to the aforementioned association. It is this: Let them place a good, reliable man at each one of the summer resorts in the wilderness early in the season, say about the time the ice goes out of the lakes, and I will guarantee that he will be kept busy until the end of the close season in reporting, first, the guides shooting on their own account, and later, the sham sportsmen under the care of the guides. He can ist on the verands of the resort I have referred to and hear the arrangements being made for a deer hunt (?) to take place that or the following night, and he can hear of like plans being made every day. Now, I claim that the known presence of such officers at the different resorts would break up such arrangements and render the business a risky one, and it is a wall-known fact that neither sham sportsmen nor guides are fond of taking risks where the law has a chance of becoming operative.

Such a plan as I have suggested, if honestly worked, would, I believe, considerably decrease the usual slaughter of deer in May and June. Another means of arresting this slaughter rests, I think, with the gentlemen sportsmen temporarily residing at these resorts. They, while con-

demning the evil, quietly wink at it, because, to become an informer under the circumstances, would render their sojourn at such place very unpleasant; but I think they should face the music and denounce the business whenever detected. How many guides do you suppose would go out, or take parties out from a hotel, to shoot deer out of season if they knew that the sentiment of the guests was against such action, and that among the guests were gentlemen who would promptly report them to the proper officers of the law? But a few indeed, I trow.

If the association wants points or spots in this locality, I can and will furnish them in quantities to suit and to convict!

THE INDIANA OUTLOOK.

THINK it too early yet to form a correct judgment as to the prospects for autumn shooting in this the central part of Indiana. Woodcock, at least the first broods hatched, have done well, notwithstanding the numerous storms and freshets. I had the pleasure of observing a nest as early as the 9th of April. The female was sitting on four eggs. On the 28d she hatched, and so far as I could observe, successfully raised her little brood. By the 1st of June very little difference could be noticed, on tlushing between the old and young birds. But I think the second efforts to nest have been a failure—as the grounds have been frequently flooded, so much so that I doubt if any second efforts to nest have been a failure—as the grounds have been frequently flooded, so much so that I doubt if any second

frequently flooded, so much so that I doubt if any second broods have been raised.

"Homo's" observations in Pennsylvania, will, doubtless apply in this State, as the high waters have been so frequent and so general, that the birds may find good feeding grounds everywhere, and so be dispersed over too much ground to make their pursuit interesting at this season of the year. I have not tried them yet, although this is the fourth day of the open season, but I may do so, if only to verify my impressions.

We had a remarkably warm, open winter—the bluebird

We had a remarkably warm, open winter—the bluebird and goldfinch I observed every month during the winter—and quail were comparatively unmolested, and a fair number paired off early in May; but I fear the long-continued rains and cold during June has interfered with the growth of the young chicks.

We hope for the best, and certainly the prospect is better for later broods. A good mast crop—one of the very heaviest I ever saw—will no doubt cause a better supply of game to tarry with us, if it does not induce emigration.

Hares and squirrels were pleutiful this spring, and promise good shooting for such as enjoy it.

Upon the whole, there may be enough game this fall to try a new breech-loader on, or to secure a dainty for a sick friend, or enough to satisfy a lover of nature, who only makes gunning an excuse or pretext for a day's stroll in wonderland, but I doubt if there will be enough to satisfy the sportsman who hunts for game alone. Him, indeed, no amount of slaughter will satisfy.

C. W. W. Farkland, Ind., July 4. FAIRLAND, Ind., July 4.

FARRLAND, Ind., July 4.

Ohno Game Prospects.—Cleveland, July 10, 1882.—
Prospects for quail are very good; all along the country from Cleveland, Ohio, to Monroe, Mich., they seem plenty; but very few woodcock there or here. I think more scarce than last year hey were scarce, and mostly old birds. Know of no reason for this, unless, as with some other game, they are playing out. And no wonder it is so, when they are shot at continually in the South from December to April, and almost six months in the North. They will soon be a bird of the past unless summer shooting is abolished. Places where I could formerly bag three dozen and upward in a day, I have now to hunt harder to secure one dozen generally, without a very unusual streak of good luck. I am sorry it is thus, because I am getting old and not so swift of foot as I formerly was.—J. C.

Minnesota Game Prospects.—Pillsbury, Minn., July 7. MINNESOTA GAME PROSPECTS.—Pillsbury, Minn., July 7.—From present indications the open season will bring unusually fine sport hereabouts. In every little slough and pond hole large flocks of young ducks, mostly mallards and now nearly half grown, may be seen. Farmers report that every field has its large family of "chickens," while for the first time in years pigeons have nested in this locality. I think I saw fully 5,000 during a short ride a few mornings ago. Grouse wintered extra well, and have been steadily increasing in numbers in this town for the past three years. I think there are ten now where there was a pair three years ago, and this despite the fact that pot-hunters receive a higher price for them now than then. Deer and bear "sign" are not wanting.—J. Frank Locke.

Night Shooting Woodcock.—Del Rio, Texas, July 5, 1882.—In your issue of June 15 I note inquiry in reference to fire hunting woodcock in the South. I have known this to be done by the negroes in Mississippi, and the excoles in Louisiana. Large numbers are staughtered annually, and find a ready sale in the New Orleans market, which I have seen fairly glutted with this noble game bird. This worse than pot-hunter provides himself with an assistant, a pine torch, and shotgun loaded with a squib of powder and thimble of shot, and proceeds to the cotton fields, where the birds feed at night. They are easily approached, being bewildered by the glare of light, and are virtually killed at the muzzle of the gun.—G. W. P.

Leather-Stocking Club.—Oswego, N.Y., July 15.—The Leather-Stocking Club of Oswego county held their annual meeting at the secretary's office on July 13, when the following officers were elected. President, O. S. Osterhout; Vice-President, George G. Warren; Secretary, G. P. Matteson; Treasurer, Hon. N. W. Nutting; Attorney, H. C. Tanner; Toard of Managers, C. A. Tanner, George W. Lyman, A. Emerick, J. B. McMurrich, and W. A. Failing. A committee of three consisting of O. S. Osterhout, George G. Warren, and H. C. Tanner, were appointed to secure birds and make arrangements for a grand old fashioned club tournament.—Veteran.

TENNESSEE GAME Notes.—The prospects for an abundance of quail were never better. Many young birds are already reported hatched out, and as the grain crops are so fine this year and the weather favorable, they will have plenty of food and grow rapidly. Doves are also very numerous. They are much esteemed here by epicures, and numerous. They are much esteemed here by epicures, and our local sportsmen say they enjoy shooting them more than any birds we have. Large game is reported as more plentiful than usual. If our game laws were only respected, with the vast forests in this State there should be any quantity of it.—J. D. H.

Sea and River Hishing.

Out of the legends connecting fishes with heathen divinities, there have been evolved and handed down to us, revised and improved, the signs of the zodiac, indicated in almanacs by the figure of a man. which signs are still reverently consulted by both sailor and angler; and the latter is never confident or hopeful of great success unless the sign be above the loins. Whether or no this be a superstition bequeathed by the ancients I have not bestowed much time in examining, but plead guilty to the weakness of individual faith, and feel confident of good sport only when the sign is in the head, stomach or bowels, but never when it is in the legs or feet.—Genio C. Scott.

BASS FISHING ON THE POTOMAC.

THE heavy rains of the past week having rendered the water of the upper Potomac unfit for fishing, I have thought a line from here might be of some interest to your readers, and while others are busily engaged in overhauling tackle, I have concluded to send you a brief report of the doings of the "Woodmont Club." The bass have been takdoings of the "Woodmont Club." The bass have been taking the fly most vigorously and a large number of fine fish have been captured. Lost week the President of the United States indulged himself in throwing a fly here and hauled in sixteen large bass. Senator Wade Hampton who fishes altogether with the fly, captured one hundred and four—several of them reaching four and five pounds. Senator Vest, who used minnows, made a big score, while Senators Jones and Don Cameron contented themselves in the shade of a large elm opposite the club house and fished for perch with red worms. The President was loud in his praise of the fine fishing, beautiful mountain seenery and the location and appointments of the Woodmont Club House. The whole party expressed themselves as highly delighted with their visit and

ing, beautiful mountain scenery and the location and appointments of the Woodmont Club House. The whole party expressed themselves as highly delighted with their visit and promised soon to return.

This week the fishing has been fine, and some splendid fish have been taken with the fly. One member of the club brought in twenty-eight, some weighing as high as three and a half p unds. Another member brought in four fish weighing fifteen pounds six ounces. Of the thirteen anglers present all did well.

Opposite the club-house, on the West Virginia side of the river, we have fine woodcock grounds, and the birds are pleatiful; so that when one tires of the rod and line, he has but to cross the river and fill his "bag" with that most delightful and delicious of all game birds. While I write the sweet notes of the Bob White are heard in all directions, and prospects for fall shooting are good. The large woodcd estate, some 3,000 acres, of this club, is well stocked with deer, turkeys and pheasants, and right royal sport, in season, is anticipated.

"Woodmont." Washington Co., Md., July 8.

"Woodmont," Washington Co., Md., July 8.

WEST VIRGINIA TROUT STREAMS.

WEST VIRGINIA TROUT STREAMS.

Is there a sportsman living that at some time or other has not pictured to himself, or had painted for him by some other artist sportsman, "the happy hunting ground," the place where game abounded so plentifully, that the very thought of it made his heart beat quick? Is there an angler who has not been told of some favored stream where the trout "swarmed," and where one would tire of the sport of catching them? And how many have ever had those visions realized? I confess that I have been the victim of both delusions more than once. I am just now aching with the pangs of disappointment at not finding the trout stream lately visited by me, "alive with 'em," as I was told I would do.

the pangs of disappointment at not moung the treat and lately visited by me, "alive with 'em," as I was told I would do.

My companion and myself started from here the latter part of June for Deer Creek, one of the headwaters of the Greenbrier River in Pocohontas county, West Virginia. We rode two days overmountains, thirty-tive miles per day, and reached the head of the stream, which flows from the top of Alleghany Mountain, at sunset of the second day. Here we procured a guide, who still further raised our expectations by his narratives of the glories of that stream.

Early next morning we started down the stream, armed with flies, worms, and every sort of bait. We waded and cast to right and left, and in every imaginable place that a fish could possibly have been lying, but for three hours not a rise, not a bite, nor did I see a fish. As we neared the mouth of the creek, about noon, the sky became overeast, and for a while the little fish came up pretty lively, and we took about seventy-five or eighty fingerlings before sundown. But what was that to men who had ridden seventy miles to catch trout? We found our wagon near the mouth of the stream waiting for us, rode to a neighboring house, and after a good night's rest returned by another route home. It is impossible to account for these things. I know that many of my friends, who visited this place as late as last summer, told the truth about the fish they caught. My friend and myself are as good fishermen as any of them, but the fish were not there this time. We came to the conclusion that one or the other of us had been doing something mean, but of course couldn't find out which one it was.

but the fish were not there this time. We came to the con-clusion that one or the other of us had been doing something mean, but of course couldn't find out which one it was. I see by "Chasseur's" letter of June 13, from the Green-brier White Sulphur Springs, that he has got it into his head

that the trout are vastly abundant in the waters of the Green-brier and throughout West Virginia. Well, I have no doubt

that there are "more trout in those streams than in any waters this side of the Rocky Mountains," but I am satisfied that the drought of last summer has greatly diminished their numbers, and it will require several prosperous years to restore them to their old-time condition. We heard of many other streams in the section visited by us, that were said to be "full of 'em," but we had the romance of Deer Creek too recent in our recollection to be diverted from our homeward course. At some more convenient season we may explore some of them, but not just now.

JACK.

STAUNTON, Va., July 10.

I notice the article by "Chasseur" in issue of July 6, on trout fishing in West Virginia, and while I do not doubt his ability to do as he says, viz., give information as to how to reach trout streams where the pot-fisherman is not, my experience in the aforesaid State leads me to think it will be a fearfully rough route, and one that few will care to travel. In fact, nowhere else in my experience have I found illegal fishing reduced to so fine a point as on the trout streams of West Virginia. But, you see, I probably went to the wrong place

place.

Last season while casting in the South Branch arch, above Franklin, a native came over to take a look at me, and said, "If you want trout why don't you go to Greenbrier?" ("Many there?" I saked. "I reckon." said he: "I was up there last week and took seven hundred trout." "Take them with the fly?" "Not much," said the native. "How then?" "Not, of course;" and he walked away, apparently disgusted that anyone should think him foolish enough to fish for trout with a fly.

On one trip I had for company the prosecuting attorney of the county, and the same officer of another county. As we

disgusted that anyone should think him foolish enough to fish for trout with a fly.

On one trip I had for company the prosecuting attorney of the county, and the same officer of another county. As we were on our way up stream they told me of a famous pool where we sure to fill our creels. Just before we reached it I stopped to try a cast in an inviting pool, and when I came up, there sat the two officers of the law on the bank, with lines recled up, and from the associated expression of their countenances I gathered that something waswrong. In fact I heard words uttered that left no doubt on the subject. And now, what do you suppose the trouble was? Here we were, eighty miles from the B. & O. Ry. on one side, and forty miles from the C. & O. Ry. on the other. There ought not to have been any pot-fishermen there. But there was, just the same, and the cause of the disturbance of mind of the two disciples of Blackstone was that when they came up three natives were engaged in the unlawful occupation of whipping the pool.

Each took a large bush, then went into the pool and thrashed around, up and down until they judged the trout were tired out, then in the shallow water one man felt under the stones and threw out what trout he could find, and in the deep water the other two got the balance with the same. Was this lawful? Not much. Did those two prosecutors do anything? Yes, they did. They swore.

And then they went on to the next pool only to find the same lot of natives at work there. Some one may ask the question why they took the trouble to whip and snare when they could not the reason was that there were too many rocks in the pool to use the net.

Now my idea in writing this epistle is this. I had a good time, intend to go again. (In fact it was not my first visit to the State.) But those pot-fishermen were everywhere, and if "Chasseur" can tell us of a country this side of the Rockies where they don't exist, he will have a place in my remembrance forever.

Bedford, O., June 10, 1882.

BEDFORD, O., June 10, 1882.

THE RICHARDSON LAKES REGION.

THE RICHARDSON LAKES REGION.

SINCE my last letter many fishermen have packed their kit, and left for their several homes, not on account of poor fishing, but because they could not spare any more time to indulge in their favorite sport. The fishing still continues good, and the trout are just beginning to rise to a fly, several fine ones, weighing from two to flive pounds, having been taken at the Middle and Upper Dams. A number of land locked salmon were also taken at the Upper Dam within the past week. These fish will gradually work their way all through these waters, as they have already been captured at the Middle Dam, and on Rapid River, between Welokennebacook and Umbagog Lakes. By the way, speaking of Rapid River, there will be some of the best fishing on that stream during the next two weeks that we have had this season, as the logs have all passed through the poud in the river, and will be in Umbagog Lake by to-morrow night. Let those who want good fly fishing through July put in an appearance at the Middle Dam at once.

The fishing in Mooseluernagumtle Lake has been very good this spring, and they are still getting fair fishing in the vicinity of Haines's Landing. At this place, Mr. C. T. Richardson, the popular caterer to hungry fishermen, and formerly superintendent of the Oquossoc Angling Association, has a nice botel, well fitted and furnished, and visitors to this region cannot do better than bide a while with him. His house is well furnished and he sets an excellent table. Excursion tickets from Boston to Richardson's and returnmay be procured from the Boston & Maine Railroad via Portland, Bryant's Pond, Andover, and Upper Dam, for \$14.00, this being the easiest and most pleasant route. Travel to Parmachence Lake, has been light thus far, but parties are now beginning to head in that direction. One party went up last Friday, another Saturday, and a third comes to-morrow, all going over the Magalloway River route. This river is now free from logs its entire distance, and there will probably be a

route another year.
I learn that the Richardson-Rangeley Lakes Transporta tion Company have just purchased a beautiful farm containing sixty-five acres of land, situated in Cambridge, N. H., at the foot of Umbagog Lake, and propose to creet before another year a hotel for the accommodation of sportsmen

and tourists. The farm borders on the shore of the lake for some distance, and the main road from Bethel to Dixville Notch and Colebrook passes directly through it. It is the prettiest and most sightly piece of land around Lake Umbagog, and will make a beautiful summer resort.

Another year the steamers on Umbagog Lake will probably

Another year the steamers on Umbacog Lake will probabily land here, instead of running two miles un the Cambridge River to Upton, as they are now doing. There is some telk of building a telegraph line from Bethel to Lake Umbacog, and if the company with a long name build the hotel, I have no doubt that this will be done before another year. Lake Umbagog is the most beautiful lake in the Rangeley chain, and a good hotel at the foot of it is very much needed. Although there are plenty of pickerel in the lake, the trout have not been all driven out, and each year trout weighing from five to eight pounds are taken at the head of the lake near the entrance to Sunday Cove.

BALD EAGLE.

LAKE UMBAGOG, Maine, July 2.

FRANKLIN COUNTY, MAINE.—S. J. Chadbourne, Esa., Dep S. cretary of State, Augusta, Me., has been off to Franklin county on an angling excursion. He says, 'n the Konne of Journal, of Weld, the village where he stopped: Well village is pleasantly situated in a broad valley, near a large, clear sheet of water, five miles long, called Webb Pond. The ride from Wilton to Weld was exhilarating; the scenery wild end grand before more than the property of the property village is pleasantly situated in a broad valley, near a large, clear sheet of water, five miles long, culled Webb Pond. The ride from Wilton to Weld was exhilarating; the scenery wild and grand; lofty mountains tower high, peak on peak, and deep valleys stretch away between, along which are scores of brooks of the sweetest water, all bremine with speekked trout. After tea we repaired to one of flees brooks, and were rewarded with a handsome string of trout. The next day we visited the pond of Mr. David Vnaterman in the north part of Weld, who has commenced the cultivation of trout. At the foot of one of the mountains above referred to, Mr. Masterman has built a dam across a limid stream and made a pond of about four acres, into which he has put nearly 1,000 trout, most of which will weich a nound aniece. We had the pleasure of dropping them a line, in re-rone to which we brought away a string that was the envy of all who saw it. Mr. Masterman intends to make other pords, build a hatching-house, increase his stock, and for a consideration allow sportsmen the privilege of fishing there, and we have no doubt it will prove a paving investment to him and a source of pleasure and profit to those who love to angle. If any wish good trout-fishing, let them visit Mr. Masterman, and they will be sure of a kind recention and some good fishing. Franklin county is the sportsmon's paradise. Not only are the brooks and ponds filled with trout and pickerel, the gamiest that ever swam, but the forests that crown her everlasting bills contain game of menny kinds, including the black bear. Several were seen in Weld last spring, in the clearings that go up high on the siles of the mountains. One was slain last April in plain sight of the mountains. One was slain last April in plain sight of the mountains. One was slain last April in plain sight of the mountains. One was slain last April in plain sight of the mountains. One was slain last April in plain sight of the mountains. One was slain has April in plain sight of the mountain

Brook Trout.—In a conversation with a reporter of the New York Post, Mr. E. G. Blackford is reported as sayine: "It is still a mooted question whether the flesh of the wild trout, bred in his native streams, or that of the cultivated trout, bred or stall-fed in the preserves, is the better. Fach side has its supporters, but there is no doubt that trout raised in ponds by artificial propagation are as good if not better than the wild trout. A great many thines go to determine the character of the flesh of both wild and cultivated trout than the wild trout. A great many finnes go to determine the character of the flesh of both wild and cultivated trout—the bottom, the nature and temperature of the water, the quality of the food supplied, and various other considerations. Probably the finest trout both for size and quality of meat, are found in the Rangeley and Moosehead lakes in Møine. Trout have been taken from these lakes weigh ng more than ten pounds. I have one in my museum which weighed ten pounds, and the Smithsonian Institute has one which weighed eleven and three-quarter pounds. It is a very common thing to hook a trout weighing three or four pounds. Then again these fish are prized not so much because of their size, but because they are the most symmetrical in shape. The flesh is a deep pink color and the skin is beautifully marked with large pink spots. The brook trout is found throughout Canada, and as far north as the northern point of Newfoundland. The line marking the boundaries within which the have been found runs along the coast to about the central part of New Jersey, and then strikes out to the Allechnny range of mountains. It follows close alone the eastern edge of this range to the northwest portion of Georgia, which in range of mountains. It follows close along the eastern edge of this range to the northwest portion of Georgia, which in furthest point south at which they have been found, and then runs close along the western edge of the mountain ch in to the great lakes. The brook trout has often been caught in salt water near the mouths of rivers or bars. One, which had probably escaped from some preserve along the coast, was caught in Gravesend Bay not long ago. They seem to relish the salt water, and though the color of their skin and flesh is darker, they are considered by epicures much better for food than those caught in fresh water."

EXTRORDINARY CATCH OF FISH.—On Friday and Saturday, July 14 and 15, Messrs. A. Eddy, Chas. W. Wingert, F. C. Chamberlain and Abel Crook, of the Fountain Gan Club, of Brooklyn, caught in Barnegat Bay 1,325 weekfish, of which 608 were captured the first day and 722 on the second day. They used the ordinary rod and reel and a variety of bait—shrimp proving the most successful. Their yacht, the Harriet, of Forked River, Captain Horatio Wilbert, Mate John W. Bunnel, thus scores the largest record. The record kept by Capt. Joe Parker, of Forked River, shows that the largest number previously caught in one day was 528, by a party of four with the same boat. In July, 1881, the Scalper, of Forked River, received a record of 1,411 in seven days fishing, distributed as follows: July 24, 202 weakfish; 25th, 100; 26th, 165; 27th, 149; 28th, 177; 29th, 221; 31st, 397. The Brooklyn party were provided with small swivel squids, which proved very attractive, and to render assurance doubly sure they resorted to chumming with crabs and other natural fish food. The fish ran from three-quarters of a pound to two pounds in weight.

NEW BRUNSWICK.—Milltown, St. Stephen, N. B., July 10.
—Salmon are very plentiful in our riper, more so than for many years. The fly fisherman I think would have fine sport when so many are taken in the nets.—G. A. BARD-

Philadelphia Fishermen in a Scrape.—A sudden stop was brought to the sport of the Second Presbytorian Club of Philadelphia while at Fortress Monroe a few days ago, whither they had gone on the schooner Applegate. The interruption to the usual round of amusements was brought about by a wag who caused to be printed a seeminely legal document, purporting to be signed by the sheriff of Kensington, and countersigned by the chief of police of that place and Gov. Hoyt, to the effect that a crowd of men had stolen from a wharf in Kensington the schooner Applegate, and offering a reward for the arrest of the thieves and the return of the vessel. This proclamation was secretly posted through the streets at Fortress Monroe and Hampton, and, when the club least expected it, they were confronted by the sheriff of the county and a large posse, who out all hands under arrest. They would have been taken to juil had not a Baltimore to bacconist named Marburg gone their bail. The authorities could not be convinced until the next day that the club had been victimized by a practical joker.

Maine Trout and Land Locked Salmon.—Lincoln, July 18.—This is a very pleasant country for persons who wish for a quiet summer resort; good hotels and attendance: charming drives; unexcelled perch and pickerel fishing within sight of the village, and fair trout streams within a few miles. Trout-fishing has been unusually good this year, and land-locked salmon have been taken in larger quantities from the Schoodic Lakes than for any year since 1871. My score for trout this year, nine trips, occupying about one day each, is 301; largest, two and a quarter pounds; smallest, ten ounces.—F. C. P. MAINE TROUT AND LAND LOCKED SALMON.-Lincoln, July

Salmon Fishung.—Prince Edwards Island, July 11.—The wet backward season here has kept the water in the streams high and cold, which has had the effect of making the trout fishing the best known for years. So far as I can learn but one salmon has been taken here this season above tide water, and this one was jigged by a P. E. I. garçon of twelve years. Most of the salmon that enter the streams here are fall-run fish which accounts for so few being taken by fly-fishers. It rains here six days in the week, and the odd day is usually delightfully cool and pleasant.—Stanstead.

FLORIDA RED SNAPPER.—Maj. John C. Reynolds, chief engineer of the Savannah, Florida and Western Railway, recently visited the red snapper banks near Carrabelle, where his Jarty caught ninety-eight of these fish in one hour, their aggregate weight exceeding 1,000 pounds. A railroad will soon be completed to Corrobelle, which is on the west coast, cast of Appalachicola.

COLORADO TROUT.—An old-time Arkansas correspondent, Colorado i roce.—An out-time Arramsas corresponde who is on a summer visit to Co'orado, writes from Norte, Col., June 5: "Trout-fishing is good at present in Rio Grande. The speckled beauties are plenty, and take fly ravenously." We hope to hear from "T." at greatenath.

Minnesota.—Pillsbury, Minn., July 7.—As usual fishing is magnificent. Some very large bass, pike and pickerel have been taken.—J. Frank Locke.

Hishenlture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORD-FISH. BY G. BROWN GOODE.

[CONTINUED.]
DISTRIBUTION ON THE COAST OF THE UNITED STATES,

A LLUSION has been made to the early accounts of the work of Cartes both in the coast of the United States both in the work of Cartes by and the letters of Garden to Ellis and Linnals, to Mitchill's account of it in 1818. Though it is strong that the work of Cartes by Cartes and So, to Mitchill's account of it in 1818. Though it is strong that the work of Cartes and Carte work of Cates've and the letters of Garden to Ellis and Linneus; also, to Mitchill's account of it in 1818. Though it is strange that this very conspicuous species was not recorded more frequently by early American authors, it is still more remarkable that its right to a place in the fauna of the Wostern Atlantic was either denied or questioned, as late as 1856, by such well-informed authors as sir John Richardson and MM. Cuvier and Valenciennes. (10)

Storer's "Report on the Ichthyology and Herpetology of Massachusetts," published in 1839, was the first American faunal list, since Cateshy's, in which the sword-fish was mentioned among the American fish.

The range of the species on the castern coast of America can now be defined with some accuracy. Northward and castward these fish have been seen as far as Cape Breton and Sable Island Banks.

Captain Rowe states that during a trip to George's Banks he has seen them off Chebucto Head, near Halifax, where he fishermen claim occasionally to have taken them with a seine.

seine.
Capt. Daniel O'Brien, of the schooner Ossipee, took five sword-tish on his halibut trawl, in 300 fathoms of water, between La Have and Brown's Banks, in August, 1877.
Capt. Jeroma B. Smith, of the schooner Hattie Lewis, of Gloucester, killed a swordfish off Cape Snoke, pear Sidney, Cape Bretan (11)

Capt. Jeroma B. Sincera. Gloucester, killed a swordfish off Cape Smoke, occ. Cape Breton.(11)
Mr. J. Matthew Jones, of Halifax, N. S., writes, in 1877:
"The sword-fish is by no means common on our coast, and only makes its appearance at intervals along our harbors and bays. One was taken in 1864 in Bedford Basin, at the head

omy markes its appearance at intervais along our narrors and pays. One was taken in 1864 in Bedford Basin, at the head of the second pays of the s p. 78). 11 Oapt, R. H. Hulbert.

of Halifax Harbor. September 6, 1866, an individual weighing 200 pounds was taken in a net at Devil's Island. November 12, 1860, the Rev. J. Ambrose sent me a sword, 3 feet and 6 inches long, from a fish taken at Dover, N. S., a few days

ber 12, 1800, the Rev. J. Ambrose sent me a sword, 3 feet and 6 inches long, from a fish taken at Dover, N. S., a few days previously.

The sword-fish has, once at least, penetrated into the Gulf of St. Lawrence. In September, 1857, Capt. J. W. Collins was one of the crew of the schooner Mary Ellen, of Truro, Mass., and harpooned a sword-fish four miles southwest of the eastern part of Prince Edwards Land.

On the coasts of Maine, Massachusetts, and Rhode Island they abound in the sunumer months. Southward they are less frequently seen, though their occurrence off New York is not unusual. I have never known one to be taken off New Jersey, and in our Southern waters they do not appear to remain. Unler and Lugger vaguely state that they sometimes enter the Chesapeake Bay. (12)

This is apparently traditionary evidence.

Dr. Yarrow obtained reliable information of their occasional appearance near Cape Lookout, N. C. (13)

Alt. A. W. Simpson states, in a letter to Professor Baird, that sword-fish are sometimes seen at sea off Cape Hatteras, in November and December, in large quantities. They sometimes find their way into the sounds.

An item went the rounds of the newspapers in 1876 to the effect that a sword-fish four feet long had been captured in the St. John's River, near Jacksonville. After personal inches the Jacksonville, I am satisfied that this was simply a scabbard-fish or slivery hair-tail (Trickiurus lepturus).

Professor Peey states that the fishermen of Cuba sometimes capture the Pez de espada when in pursuit of Agujas or spear-fishes. (14)

They have also been seen in Jamaica.

Issnes.(14)
They have also been seen in Jamaica.
Lütken gives instances of the capture of young sword-fish at various points in the open Atlantic.
OCCURRENCE IN THE PACIFIC AND INDIAN OCEANS.

OCCURRENCE IN THE PACIFIC AND INDIAN OCEANS.

We have no record of their occurrence on the eastern coast of South America, but the species is found on the Pacific coast of the same continent, and north to California.

Professor Jordan writes: "Occasionally seen about Santa Catalina and the Coronados, but never taken, the fishermen having no suitable tackle. One seen by us off Santa Monica, in 1836, about eight feet in length."

Mr. Willard Nye, of New Bedford, Mass., kindly communicates the following notes: Captain Dyer, of this port, says that sword-fish are plentiful off the Peruvian coast, a number being often in sight at one time. The largest he ever saw was one caught by himself about 150 miles from the shore, and which he estimates to have weighed 900 to 1,000 lbs; the ship's crew subsisted on it for several days, and then salted 400 lbs.

which he estimates to have weighted and so, 1,000 105, 1,000 105, 105 ship's crew subsisted on it for several days, and then salted 400 lbs.

Captain Allen also states that while cruising in the Pacific for whales he has found the sword-fish very abundant on the coasts of Peru and Chui, from the immediate coast 500 miles out, though outside of that limit they are seldom seen. They are most plenty during the month of January, when they are teeding on the common mackerel, with which those waters at that time abound. The largest he ever caught weighed about 600 bis.

about 600 lbs.

Both Captain Allen and Captain Dyer have made several voyages as masters of whaling ships, and are perfectly familiar with swood-fish on our coast; both speak of seeing penty of bill-fish in the Pacine, but they never had taken the trouble to catch them. Chather mentions them in his book on the Fishes of the South Sea.

In 194 Dr. Hector discovered a sword-fish snout in the museum at Auckland, New Zealand, and his announcement of the discovery was followed by the publication of two other instances of its occurrence in this region. (19)

SWORD-FISH ENTERING RIVERS.

Sword-fish have been known to enter the rivers of Europe

Sword-fish have been known to enter the rivers of Europe. We have no record of such a habit in those frequenting our waters.(16)

Actian's improbable story that they were taken in the Danube in winter has been mentioned. Southey and others relate that a man was killed while bathing in the Severn, near Worcester, by one of these tishes, which was afterwards camelic.

Worester, by one of these tishes, when was account caught.
Couch states that a sword-fish, supposed to weigh nearly 300 pounds, was caught in the river Parrett, near Bridgewater, in July, 18³⁴, 1970 De la Blanchère, one of them was taken, in the minth year of the Prench Republic, in the river of Vannes, on the coast of Rhuys, (8)
In the great hall of the Rathhaus in the city of Bremen hangs a large painting of a sword-lish which was taken in the river Weser by some Gremen fishermen some time in the seventeenth century.

Underneath it is painted the following inscription:

"ANNO, 1696, DEN 18. JULI, 1ST. DIESER.
FISCH. EIN. SCHWERTFISCH. GENANNT. VON DIESER.
STADT. FISCHERN, IN. DER. WESER. GEFANGEN.
UND. DEM. 39. EJUSDEM. ANHERO, NAEHER.
BREMEN. GERRACHT. WORDEN. SEINE. GANZE.
LENGTE. WAR. 10, FUSS. DAS. SCHWEIT, WAR.
7½, VIRTEL. LANG. UND. 3 ZOLL. BREIT." GEOGRAPHICAL RANGE OF THE SWORD-FISH FAMILY.

Although it may not seem desirable at present to accept in full the views of Dr. Lütken regarding the specific unity of the spear-lishes and the sail-lishes of the Atlantic and Indian oceans, it is convenient to group the different species in the way he has suggested in discussing their geographical distribution.

way he has suggested in discussing their geographical distribution.

The sword-fish, Xiphias gladius, ranges along the Atlantic coast of America from Jamaica, lat. Isdeg. N., Cuba, and the Bermudas to Cape Brenton, lat. 4 fdeg. Not seen at Greenland, Iceland, or Spitzbergen, but occurring, according to Collett, at the North Cape, lat. 1deg. Abundant along the coasts of Western Europe, entering the Baltic and the Acditerranean. I can find no record of the species on the west coast of Africa south of the Cape Verdes, though Litthen, who may have access to facts unknown to me, states that they occur clear down to the Cape of Good Hope, South Atlantic

19 They sometimes approach very near the shore, however, as is shown by the following extract from a Cape Cod paper:

A Sword-Hois in close quarters.—Monday afternoon, white Mr. A. McKenzie, tae boatbuilder on J. S. Atwood's wharf, was busily at work, his attention was attracted by a splashing of water under his workshop, as if a score of boys were swinning and making all the workshop, as if a score of boys were swinning and making all the workshop, as if a score of boys were swinning and making all the activity of the constant of the control of the constant of the cons

ember 29, 1015. 17 History of British Fishes, ii, p. 148. 18 Dictionnaire Général des Pêches.

in mid-ocean, west coast of South America and north to Southern California, lat. Hdeg., New Zealand, and in the Indian Ocean off Mauritius. Good authorities state that sperm-whales, though constantly passing Cape Horn, never round the Cape of Good Hope. Can this be true in the case of the sword-fish?

The sal-fish, Histiophorus gladius (with H. americanus and H. orientalis, questionable species, and H. mulchellus an I. H. immaeudatus, young), occurs in the Red Sea, Indian Ocean, Malay Archipelago, and south at least as far as the Cape of Good Hope, lat. & deg. S.; in the Atlantic on coast of brazil, lat. 30 deg. S. to 0, and north to Southern New England, lat. 22 deg. N.; in the Pacific to Northwestern Japan, lat. 30 deg. to 10 deg. N. In a general way the range may be said to be in tropical and temperate seas, between lat 50 deg. S. and 40 deg. N., and in the western parts of those seas.

The bill-fish or spear-dish, Tetraphurus indicus (with the various doubtful species mentione.), occurs in the Western Atlantic from the West Indies, lat. 10 deg. to 20 deg. N., to Southern New England, lat. 42 deg. N.; in the Cape of Good Hope, lat. 30 deg. S.; in the Indian Ocean, the Malay Archipelago, New Zealaud, lat. 40 deg. N., at the Cape of Good Hope, lat. 30 deg. S.; in the Indian Ocean, the Malay Archipelago, New Zealaud, lat. 40 deg. S., and on the west coast of Chili and Peru. In a general way, the range is between lat. 40 deg. N. and lat. 40 deg. S. not very unusual on the coast of Southern New England. Several are taken every year by the sword-fish lishernen. I have not known of their capture along the Southern Atlantic coast of the United States. All I have known about were talken between Sandy Hook and the eastern part of George's Bauk.

The Mediterranean spear-lish, Tetraphurus belone, appears to be a land-locked form, never passing west of the Straits of Gibraltar.

STRIPED BASS FOR CALIFORNIA.—Red Bank, July 12.—Caught, this A. M., 150 small bass, striped, for California Fish Commission. Have on hand 450, three and a half to five inches in length, all well and hearty. May thish this week. Will report.—G. H. WILD.

A ROANOKE 'COON HUNT.

FOR the special benefit of Mr. Shaw, who advertises in Forest and Streem for a 'coon dog, and to whom I had offered my Logan as a perfect one, I will relate a hunt I had to-day (June 2) with Logan and my pack in substantiation of that character.

If Forest And Stream for a 'coon dog,' and to whom I had offered my Logan as a perfect one, I will relate a hunt I had to-day (June 2)) with Logan and my pack in substantiation of that character.

The Roanoke, from Hyde's Island, just above the site of the former Gaston Bridge (which, alas, fell a sacrifice to nuries in our late sectional strife), to Pingh's Island, a distance of some five miles, is studded with small slands varying in size from a quarter to an acre. At the head of these islands are large rate, serving as a most excellent home for 'coons. These islands I have kept as a 'coon preserve for over forty years. In March I begin to hunt then, selecting warm and open days. I ride to the Roanoke with my pack as if lox-hunting, leaven purpose hollow occasionally on the way. 'Coon about.' This administion is quickly understood, and off the pack will dash to the river, and into it occasionally before I get to it. Thave a cance in readiness, and use pole or paddle as the varying character of the water renders necessary in visiting each island.

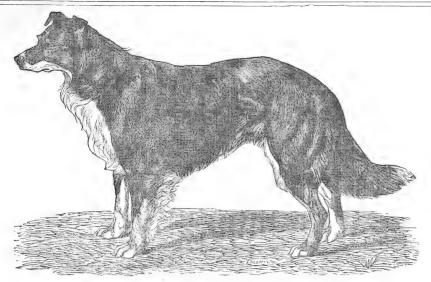

The hounds swim from island to island, and if a 'coon has even touched one they will notify you. I then stop my cance and await results. Every island will be visited by the most practiced of the pack until the 'coon's quarters are found; then the entire pack and lundsman hurry to that point, the ratt is quickly scarched and the 'coon soon disturbed. In most cases he slips out at some inguarded point of the raft, takes water and unoves with considerable speed down stream, but not equal to that of a hound. He is soon overtaken and a terrible water engagement follows. I keep in close proximity to prevent the coon's drowning any of the hounds, for he will seat himself upon their heads, sinking them under water, and will keep them there until they are drowned. But this is not easily accomplished when you have a pack, as the is immediately dislodged by some one of it and the promised victim relieved. This scene will be repeated many times before the 'coon is killed or secu

promised victim relieved. This seems will be repeated many times before the 'coon is killed or secured, and some half dozen of the pack thus head-ridden will have experienced its effects.

In March you will find a male and female together. The female after this time leaves the river for the upland woods, where she breeds and raises her young. In August she makes nightly visits to the Roamoke with her entire lister, generally four, and feeds upon the tender corn. After repeated visits she remains in the raits as a permanent home. The male rarely removes from the river for any length of time, and at all seasons of the year may be found on the river.

The distemper so demoralized me the past winter that this spring I did not 'coon bunt. The present hunt was my first. After ordinary breakfast, as herefolore, I rode to the banks of the ktoanoke, and gave notice to the pack of the game was in pursuit of, by repeated and loud admonitions of "coon about." It was astonishing to see how readily I was understood, old lessons recollected, and how eagerly the pack took to the water, and that too before I could right my cance. It happened a 'coon had been on the nearest island, which it is probable they winded from the bank. At all events every practiced hound went carnestly to work, and swam from Island to island, searching each diligently. The 'coon went up its southern bank for half a nile. At this point I supposed the hunt a fruitless one, and called in the pack by a gentle "Hoope, hoope, hoope," and recrossed the river and went emore, and the northern shore several islands not hunted over.

The Roanoke here is four hundred or more yards wide, and he first island from the southern bank to halt of his distance. I could move in the cance much faster than the dogs could swim, and did so, reaching an island just above the one alluded to some time in advance of the pack. Theredogs made for the nearest sisland, Fannie, Mischief, Fanny and Redbird all went into it and got on the raft and gave no evidence that

MR. THOS. H. TERRY'S SCOTCH COLLIE "TWEED IL"

the 'coon had been there, and finally swam up to the island I was on. But they had scarcely arrived before Logan gave notice that they had passed a 'coon. He was behind the entire pack, and struck the trail behind it. In a moment he was joined by the pack, and before I arrived, Logan had attacked the 'coon under the raft, who, extricating himself from Logan, moved out and off down the stream, relying upon his dexterity in the thick underwood to elude and escape. I never w. tnessed a better and more furious class. The 'coon would double and twist like a hare, occasionally showing himself at the water's ed.e, and maintaining his run for at least ten minutes, and until Fannie, in my presonce caught sight of him and overtook him at the water's ed.e. A desperate light followed, which lasted some minutes, end ing, however, in his death and without any serious injurbeing inflicted on his assailants. He proved to be a very old male, judging from the worn condition of his teeth. He weighed fourteen pounds. This huntertainly proved Logan's superiority—at least to the rest of the pack—and if it does not of itself establish his claim to that of a first-class 'coon of, in the connection with his past exploits in his line it surely does.

There is one evil in connection with the sale and purchase

nes. There is one evil in connection with the sale and purchase

not of itself establish his claim to that of a first-class 'coom dog, in connection with his past exploits in his line it surely does.

There is one evil in connection with the sale and purchase of dogs which cannot be too severely reprobated not only by the Forest AND STREAM but by every huntsman in the Union. I allude to the practice of negotiation and the manner of it. I am not a regular dealer in hounds and only a few years back ever sold one. I luckily attained many years ago the Byron strain of hounds, which I liberally distributed to friends before the war, but that lamentable calamity swept off al. hounds as well as every other species of personal property, and at its close I alone owned a full pack of pure bred Byrons. Corresponding with a New York journal and furnishing that paper with occasional descriptive fox chases, incited a large demand for Byron hounds, which resulted in so heavy a tax upon my time and so great a draught upon my stock that I determined to sell all puppes I could conveniently spare.

All applicants were registered and each was served in routine of order. Many ordered who never afterward applied, and to-day I have three pair of splendid choice full-bred Byrons on hand. Two pair were ordered by a gentlemen of Clayton, Adams county, Illinois, who wrote on March 13, 1883. "Now, sir, to please choose for me from the pups two dogs and two bitches that you think will make the best dogs. I would like to hear from you immediately. When the pups are old enough to ship, write me and tell me how you would have me send the money, by P. O. order or express." I replied to each inquiry, and notified the gentleman that on the ist of May the pups would be ready and to forward instructions how to ship. Though repeatedly written to on the subject since, not one word has been received from that gentleman in reply.

Again, a gentleman from Princeton, Indiana, ordered a pair, stating, "I want you to choose a pair of your linest pups and save them for me; when old enough to ship I will send the money.

V. H. C.

I WANT to ask a few questions, and possibly suggest my views on points inquired about. Has there been any change in the standard of color for bull-terriers? I noticed at the last New York Bench Show that one gray doc, in class 83, and one brindled bitch, in class 84, each received Vnc. Stonenge says a bull-terrier must be pure white, and that it is useless to show one of any other color.

Now, partly in this connection, I would ask what is the significance of Vhc., and whether, if it has no definition, it is not desirable that it is should be defined. I would suggest that it he taken to mean that the dogs receiving it are good-enough to have prizes, when not in too "bot company," that is, it would distinguish the really fine dogs among non-prize winners from the trash. Under this definition it would not be possible to give seven white ribbons and withhold a third prize, which I believe was done in one class at a recent bench show. Why should a judge commend very highly, or, for that matter, why should he commend at all, a dog to whom he would not give a prize if he was alone in his class? I think my definition of Vhc., together with the abolition of He. and C., would simplify the duty of judges at bench shows very considerably. And what is the sense of this claborate system of honors for the defeated dogs? After all, a plain C. is only "damning with faint praise," and Hc. is very little better.

TWEED II.

TWEED II.

(HAMPION Tweed II., is a medium-sized black and tan Yectch collie, owned by Mr. Thos. H. Terry, of New York. He is seven years old, by Price's Tweed out of Maddie, and was imported in August, 1880. Before leaving he won the following Field Trial prizes in Great Britain: Frst prize, puppy stake, Alexandria Palace, 1876; divided Championship Stake with his mother, 1876; first prize, Harnflotos, 1876; first prize, Harnflotos, 1876; first prize, Garthgoeh Bala, 1876; championship silver cup, 1876; first prize, Harnflotos, 1877; first prize, Garthgoeh Bala, 1877; championship, Garthgoeh Bala, 1877; second prize, Machynleth, 1878; second prize, Hangollen, 1878.

Since his arrival in this country his Field Trial winnings ne: Second prize, Hangollen, 1878. Since his arrival in this country his Field Trial winnings ne: Second prize, Philadelphia, Pa., 1881; first prize and special silver medal. Pittsburgh, Pa., 1881; first prize in braces, with kennel companion, Pittsburgh, 1881; first prize in braces, with kennel companion, Pittsburgh, 1881; first prize, Hangers-own, Md., 1881; thist prize, Washington, D. C., 1881; first prize, champion class. New York, 1881; silver cup for best collie in show, New York, 1881.

Tweed II. has also proved himself a capital sire. Several of his get are first-class animals both in loots and as workers, quite a number of them having won prizes on the bench, and as will be seen by referring to our report of the Alexandra Park Trial, in this issue. Joe Mills, a son of Tweed II, has proved limself a worthy representative of his illustrious sire. The cut is from a sketch by Harry Tallman.

THE ALEXANDRA PARK COLLIE TRIALS.

The cut is from a sketch by Harry Tallman.

THE ALEXANDRA PARK COLLIE TRIALS.

THE Collie Trials, which were brought to so successful a termination on Friday last, are interesting, as showing to what state of perfection the instinct of the collie can be brained. Few people, more particularly those who live in the metropolis, or the more thickly-inhabited agricultural districts, were prepared to see the amount of intelligence that was displayed by the prize-winners at this the first fixture that has been held at Muswell Hill under the auspices of the Collie Club. This club has been formed but one year; but from the commencement, the management was placed in the hands of a committee composed of gentlemen well known in the canine world, and who had made the collie their study, all which is calculated to instil contidence into the members, and gain the support which enabled them so soon to organize this meeting. It is noticeable how well the members worked together; and that cliqueisan which has caused the downfall of so many clubs that have been started with prospects quite as bright, is unknown.

The trials we advertised to commence on Thursday, the 15th inst., at 10:30; and as we strolled in the direction of the cricket ground, we observed what appeared to be a hurdle set up, but on close inspection we found there were three, which formed a very small pen, and this was the place where the collies were required to cage the wild sheep. Which had been brought from the mountains of Wales.

Near to this erection stood a man gesticulating and emitting sounds, which reminded us that we were in the neighborhood of Coiney Hatch; a few vards from him was a small batch of gentlemen, decorated with fancy rosettes; and, at a much greater distance, a crowd, who all appeared intently gazing upon the place. Scarcely had we joined this group, and made the inquiry as to when the performance was to begin, when the enjoye were to be found; the small batch of gentlemen, decorated with fancy rosettes; and, at a much greater distance,

that neither the shepherd or the dog are allowed to touch the sheep, and also that the sheep had been selected from two flocks, two from one flock, and one from the other, so as to make the probability of their separating greater, and, therefore, more difficult for the dogs to manage. In the final round, Jenny, who had previously hurdled cleverly some very unruly sheep, again worked beautifully, and to her was awarded the first prize of £12. Speed, an urgly little wretch, with prick cars, also did good work, and was wonderfully clever, and secured the second prize. Bob, who was lucky in meeting kindly-disposed animals, won the third position, and the extra for the quickest penner; and Handy, who had the worst sheep, but worked them cleverly, the fourth prize, and the extra given by His Grace the Duke of Sutherland for the dog that did the best work. The well-known Ca lo had some brutes of sheep, that ran into the grand stand, and so lost his chance.

the state of the position of the control of the con

peted in any of the stakes, and any of the best looking birch. Air. Shirley awarded the last two cups.—Live Stock Journal.

"WHAT IS A COCKER?"

To cocker breeders of the United States and Canadas:
I have taken some pains to inform you of the true state of matters touching the position and status of the useful and beautiful little cocker spaniel; and I had hoped that before this sufficient attention and interest would have been aroused upon this subject to Induce all true lovers of the cocker to be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe might be rescued from the uncertain and lamenthis little doe in the last so far as public effort is concerned. How to effect this is the question of the bour; and here let me suggest that all breeders and friends of the cocker mide in a common cause to bring about a convention of such breeders and friends, and then and there, by counsel and comparison of views, see if we cannot eseet a true and loyal standard for the judging of the cocker in our late bench shows proves that the standard and scale of points adopted by the A. C. S. Club of New York is a sorry method indeed of defining the true cocker. This was practically demonstrated the benchming is not soon done to bring about some legislation by which the cocker shall be preserved in his true type; the lay is not far distant whien the genuine cocker will be known no longer forever. This was practically demonstrated

WHERE TO ADVERTISE DOGS.—Ann Arbor, Mich., July 8, 1882.—Editor Forest and Stream: Here let me compliment the circulation of your valued paper, not only as a medium of news and matters of interest to the sportsmen of the country generally, but as a business vehicle in all things pertaining to the wants of the lovers of the gun and rod. With the single advertisement in your paper I sold all the dogs that I wished to dispose of, and could have sold many more had I the inclination.—E. C. Franklin.

PILGRIM'S "BET."—In answer to an inquiry in your issue of the 6th, I would say that Pilgrim's "Bet," (the bitch possibly referred to) was a liver-sclored birth by Paul Mend's Dash (sire of Rodman's Dash,) out of Robert Robinson's Bess. I know nothing of her "performances," except that she whelped some uncommonly fine dogs. Perhaps you will receive better information of her from some one who knew her.—S. H.

A CANINE MISER.—Instances of canine economy are by no means rare; but the account of a dog-miser is, so far as our records extend, unique. Dandie, the animal referred to, was a Newfoundland dog, belonging to a gentleman in Edinburch. It frequently had money given to it, because, besides other interesting signs of sazacity, it would go to the baker's and buy its own bread. But Dandie received more money than his needs called for, and so he took to hoarding it. This his master discovered in consequence of the dog appearing one day with a breakfast roll when it was known that no one had given it any money. Suspicion aroused, search was made in the room where the dog slept. Dandie appeared quite unconcerned until his bed was approached, when he scized the servant by the gown and tried to drarg her away, and became so violent that his master had to hold him. Sevonpence-halipenny was found hidden in the bed. Dandie did not forego his saving propensities even after this; but he exhibited a creat disilke afterward for the servant by ho had discovered his hoard, and in future was careful to select a different place of concealment.—Chambers's Journal.

MR. MALCOLM'S DOGS.—Last week we had the pleasure of visiting Mr. Harry Malcolm's kennel at Mount Washington, Baltimore county, Md., where we saw his celebrated lightweight Gordons, Malcolm and Dream IV, two fine specimens of the breed. Mal. is now six years old, and justin his prince, He is exceptionally speedy in the field, and although much lighter than the Gordons which now find favor on the bench, has proved his superior staying powers, having been hunted day in and day out steadily for three weeks by Mr. Malcolm, without any signs of fatigue. Dream IV. is also very fast, and when a little older, will no doubt equal her uncle, for she is a nicee of Malcolm's. Mr. Malcolm has also a puppy by Mal. out of Dream, who is wonderfully apt. Although only three months old, Mr. Malcolm has already commenced his training. He charges at the word, follows at heel, and retrieved a heal thrown into the tall timothy grass almost as will as the old dogs. He is a well-built little fellow, with plenty of muscle fore and aft, and will make a rattler. Although sold serviceable companions in the field.

FISHER'S BORDER LILY.—Some weeks since I think you asked for the pedigree of Fisher's Border Lily. She was by Howe's Duke out of Fisher's Flirt; she by Munn's Duke out of Fowler's Duchess.—S. H.

Bifle and Trap Shooting.

THE MINNESOTA STATE TOURNAMENT.

THE opining of the Minnesota State Sportsmen's Association, at West St. Paul on the 12th, was not very auspicious. The weather was very threatening and but few attended, but those who were present went throughly into the sport and enjoyed themselves nugely. The birds were good, bad and indifferent. First shoot: 10 birds, 2tyds, rise; \$5 entrance, 40, 30, 20 and 10 per cent: W. D. Garfield 9, I. Woodring 10, F. H. Warner 9, J. W. Hanson 8, A. N. Pet it 10, R. P. Bovd 10, M. F. Kennedy 10, J. I. McLaughlin 9, L. D. Fressenden 8, J. G. Browne 9, C. Hathaway 8, J. H. Hitchcock 10, C. B. Smith 6, H. Durant 8, P. Francke 8, H. Poeher 8, G. T. Serratch 4, R. Kennedy 8, F. McKinley 8, G. Becker 2.

Ties on 10 at 28vds.: Woodring 5, Pettit 4, M. Kennedy 3, Hitchcock 2, Boyd 3. J. Woodring, Waverly, Io., won first money. Ties on 9: Thomas 5, McLaughlin 4, Tabor 5, Browne 0, divided.

Ties on eight won by Durant after shooting at fifteen the birds, beating Hanson and Fessenden at 3tyds, second the The sweep-stakes shoot. 7 birds, 26yds. The first money on ties of 7 was won by Thomas and Kennedy, who divided. Woodring and Hanson divided the second money on a 3 tie on the shoot off on 6 birds. Matthews shot out Garfield, Tabor, Boyd, Browne, Francke, Petit and Durant for hird money. Hathaway won fourth money on 4 birds.

for third money. Hathway won fourth money on 4 birds.

On the final sweepstakes Becker won first money on 6 straight, at 26 and 31yds. Second money divided.

The 13th was the second day of the tournament, and a more pleasant and delightful day for easy out-of-door exercise could not have been made to order. A slim gathering was on time at 9 A. M., but the birds did not arrive on the ground till a full half hour after they did. When the birds did come, however, they were rare goers that cooled of the expert haste of some, while it sharpened the appetites of the cape haste of some, while it sharpened the appetites of the rare than the first shoot.

Tha first shoot was at 6 tame pigeons, 25 day, riser Thomas, of Sird Island, T. Dunne, Jr., of Minneapolis, Pennfield, of Minneapolis, True and Becker tied on 5, and Dunne shooting 6 straight, won the tie shoot and first money. Woodring and Durant divided second on 4, and Tabor and Hitchcook shot Skinner, of Philadelphia, out and divided third money.

There were 16 entries for the next shoot at 21yds., and Woodring made 10 straight on the hard birds, which gave out and let in fair squabs, with Thomas, Durant, Hitshcock, Stinner and Pennfield added to the tentie. Hitchcock and Skinner divided after the first shooting at 14 birds on the tie shoot, Thomas weakening on the thirteenth bird. True outlived Kennedy, Tabor and Poehler on the ties on nine. Dunno won the eight ite, Baker and Hanson with four straight. McLaughlin shot out "Garfield" for fourth money.

of the skirmishers.

Ten birds, 21yds, rise, \$8 entrance: "Garfield" 6, Woodring 10, McLaughlin 10, Hanson 7, Tabor 8, Becker 8, "Smith" 10, Poeliler 6, Benham 5, Essery 8, "Locke" 9, Thomas 9, Durant 10, Hitchcock 10, Dunno 5, Pettit 10, "Browne" 4, Lynch 5, Pfister 8, "Drew" 8, Foucke 7, "Peck" 7, True 7, Garfield 4, Richeson 7, Johnson 6, Kennedy 10, Ekimer 9. Ties on 10 were won by Pettit, of Verndale, with 5 traight, having killed 15 straight for very hard birds. The nines divided. Pfister and Becker divided third money, Tabor having the worst kind of luck. The ties on 7 were won by "Peck" on 3 vocksts, which ended in the aforesaid disappointment. Only two squads shot out, the last squad, after waiting, were refunded their money, and the others divided or won, according to score:

	Pfister10 11 00—3
Hanson	"Locke"
Becker	Benham
"Palmer"00 10 10-2	Francke
"Garrield"	Taber 11 00 11-4
Richeson01 11 10-4	Essery 10 00 10-2
	"Browne"
Poehler 10 01 11-4	McLaughlin00 00 10-1

Instead of the promised 1,000 birds for the third day of the tournament, there were only 3.00 provided; and what were these among so many? Nevertheless, an admirable day's sport was had with clay pigeons, which, as a novelty, were both puzzling and very interesting. At times the firing was very rapid, and resembled file firing; and at times also the saucer birds suffered; then again a long string of misses would become monotonous. Taken altogether, the sport was excellent, and provided endless fun right to 7°0 clock, when it was most furious, the few remaining shooters having become thoroughly warmed up. The scores are not published, as they would be no criterioal of the actual standing of the shooters. Some of the best known marksmen made quite a nice nest of goose eggs in the early part of the shoot. But when they got the hang of the skimmers, they made fine scores upon them.

RANGE AND GALLERY.

NEW YORF vs. BRIDGEPORT.—The return match between the New York R.Je Club and the Bridgeport Rifle Club was shot at Brinton Range, N. J., on Thursday, July 13. A nasty fish-tail wind was blowing, and there was an unreliable light. The New York Club won the match by seventy-eight points, with the following scores:

New York Rifle Club, F J Donaldson, Captain.

	T P White10	9	11	11	12	8	- 8	10	10	11	11	11	12	10	12 - 156

Harry Nichols11	4	0	9	7	в	11	5	7	5	9	7	12	9	6108-	-9:

After the conclusion of the match, the party returned to Jersey City, where the Sea Beach steamer was in readiness, and they were transferred to the Sea Beach Palace at Coney Island, where a dinner was provided by the New York Club. After partaking of the dinner, which was very well served and enjoyed by all, the party returned to the key by the 90 cluck train, and the Bridgeport Club caught the 90.50 train for home, as proposed, all voting the affair a success.

BOSTON, July 15.—The weather conditions at Walnut Hill were fairly good for rifle shooting to-day, and the usual number of marksmen visited the range to contest the honors in the various matches. A new matern at 200 yds, was started, and some fair scores were made. The conditions of scores made in this match, as well as the records made in the balance of the competitions, were:

300yds-Creedmoor Target,

Rounds, 15; only one entry allowed on each day. No sighting shots. Three scores to count. 70 per cent of the fees to be divided into six prizes. Match to be shot each Saturday at 2:30. Classifica-tion of the first class same as for matches A and C, and all others classed with the lowest score in first class.

A match will be shot at Walnut Hill next Saturday, between tearepresenting the Wakefield Rifle Club and the Massachusetts Asciation.

representing the wakened kine Chib and the Massachusetts Asso-ciation.

CREEDMOOR, July 12.—Three matches on the programme at Creedmoor to-day brought down a large attendance of marksmen. Though the open lawn over which the shooting was done was ex-posed to the full glare of the sun's rays, the intense heat was tem-pered by a cool breeze not unsteady enough to interfere with good alming. The shooting opened at 10 clock A. M. with the initial competition for the Champion Marksman is badge of 1889. This draw made. The conditions of the match make it open to all members of the N. G. S. N. Y. and N. R. A.; the latter, however, not being eligible to win the principal prize. Distances, 200 and 500yds, five shots at each distance. Weapon, the Remington rife, New York State model. Position, standing at 200yds, and yith head to the target, at 500yds. First prize, a gold champion marksman's badge of 1882, offered by Brigadier-deneral Alfred C. Barnes, General Inspector of Rife Prac-tice, State of New York. The badge to become the personal property wan it the greatest number of times.

Under the conditions of the match. Captain J. L. Price, a former winner, was handeapped fire points. This would make his count-ing score but 55. The first ten scores was awarded a silver medal each. The leading scores in this match stoot.

	rrega-	200	900	
Name	ment.	Yards.	Yards.	Total.

F Van Lennep	7	18	20	38
C C Gillet	7	19	18	37
H C Brown	23	16	20	36

He Brown. 23 16 29 38 the above named match. It was intended to encourage the poorer marksmen to come forward. There were thirty-nine entries. It was open to members of the National Guard of the State of New York and the National Ride Association, the former, being in uniform, may count scores made as qualifying them to shoot for the New York State Marksman's badge, provided that they use the State Remington ride; 100 and 200 yds.; standing at 100, kneeling at 300 yds. Flye shots at each distance with any military rifle. Out of the possible fifty points the leading scores were:

J James46	H C Brown
J L Price	A H Donegan
W J Underwood45	GS Schmerhorn36
C H Eagle	J Williams
J S Shepherd41	G H Whitthaus31

During the afternoon there was a severe test opened to the off-hand marksmen in the Carton match. This was open to all comers, 2Myds; any position. Any ritle; millitary to fire five shots, any, four shots. Four inch Cartons only to count. J. W. Todd, G. L. Morse and J. H. Brown struck the target four times each. F. H. Holton hit it three times, and the veteran Ransom Rathbone twice. Under such a cloudless sky and with the great heat caking the powder dust in the rifles, such shooting was considered very fine.

The Skirmishers' Match, at 500 to 200yds, and return had but seven

entries, the scores being: J. S. Shepherd, 76; H. C. Brown, 50; J. H. Sanders, 36; W. A. Robinson, 35; J. McNevin, 24.

ALBANY, July 13.—A fair attendance of marksmen was at Reusslaerwyck, this afternoon, to shoot the two short-range methoes that had been provided. The wind and weather were all that could have been desired, and formed a favorable contrast to the past two or three days in town. The men were in good shape, holding well and getting a white one quite often. As a consequence the scores were very good. The record of the day was as follows:

INTERNATIONAL CORRESPONDENCE.—The captain of the British team for September next—Sir Henry Holford—under date of June 23, writes to Gen. Wingate a long letter, in which he says: I am glad that you agree about the targets; as to coloring, it is a matter of no importance. We can only use black and #hife at Wimbledon, formed to; but at Greed theory are the rule would have to be conformed to; but at Greed theory are the rule would have to be consumed to; but at Greed theory are the rule would have to be consumed to; but at Greed theory are the rule would have to be consumed to; but at Greed theory are probabilities of other colors. With regard to orthoptics, our National Rifle Association has given way, and we may now use them. I don't think any of my leann are likely to use them, but we had better not prohibit them. As to detached verniers for elevation and wind allowance, they are permitted; and as they are obtainable by you as well as by us, it seems to me that it would be out of places to prohibit them. We have arranged to sail in the Alaska on August 26. I think now that we have come to accord on all subjects. I am looking forward to a pleasant meeting.

THE WESTERN RIFLE ASSOCIATION is now holding its grand annual tournament at Fort Snelling, Minn.

THE AMATEURS, of New York, will not shoot against the Massa-busetts team in $\Delta ugust$, as announced.

THE TRAP.

WASHINGTON July 14, 1882.—The Alexandria Gnn Club, of Alexandria, Va., visited the Capital City Club last Wednesday for the purpose of engaging in a scries of friendly contests. A match at ten glass balls sach, 18yds, rise was begun, and immediately after one round five clay pigeons at 10yds, rise was sprung for each shooter, in the midst of the shooting a shower came up which drove the club to shelter in a neighboring house, where luncheon was provided by the Capital City Club. The rain continued until it was too dark to shoot out the matches. The Capital City Club will shoot on the Alexandria Club's ground Thursday, the 20th inst. The following scores were made:

with a short allowance of weight on the keel. A good cruising yacht should leave no doubt upon this vital question "Your cutter in total and "says the theorist once more. We beg to deny this in total and "says the theorist once more. We beg to deny this in total and "says the theorist once more. We beg to deny this in total and "says the theorist once more in the says wet can be during her matches we witnessed. But so were to the solo were can be during her matches we witnessed. But so were to the sain, and so they were on the sloops. All small boats when driven under a heavy press are wet, especially in a sea. Cruisers are less exposed to the charge, for they take sail off in time, and when canvas is reduced abourd the cutter, she is, according to our own experience, nearly sister. Sheet testimony of others, a "dryer" boat than her been supported to the charge, for they take sail off in time, and when canvas is reduced abourd the cutter, she is, according to our own experience, hearing sister. Sheet testimony of others, a "dryer" boat than her been were water should pour in to beward, it does not eight he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side. The sloop might at the same time he crew on the weather side in the sloop. The sloop might at the same time he crew is the boat's deek may be those as an one cares a particle how wet the boat's deek may be those as an one cares a particle how wet the boat's deek may be the cutter a much drier vessel than generally supposed, and on the whole far more to the cutter's likes less than the sloop.

The casy motions of the cutter a much drier vessel than generally

in a meet more senseactery manner than anything in the way or a sloop.

Stop, and the distinct of moderate beam pre-eminently adapted to cruising about our coasts, and believe that she will be received with great aron who come in the prejudice and pardonable national pride are brought into fair competition with the truth concerning such vessels. As to rig, that is another question into which we need not enter further in this article.

CHICAGO Y. C.

CHICAGO Y. C.

The new life infused into this organization, which has suddenly sprung from provincial to metropolitan inportance, was shown by the large list of entries for the annual matches sailed July 4, and the numerous spectators attracted, as well as the prominence given the racing by the Chicago press. The wind was light and pality all day, and for several hours a heavy for should not be got ready in time. She failed to finish within the stipulated seven hours, and the cup returns to the club rist and second class sloops sailed for St2s and St0, besides the First and second class sloops sailed for St2s and St0, besides the First and second class sloops sailed for St2s and St0, besides the first and second class sloops sailed for St2s and St0, besides the first and second class sloops sailed for St2s and St0, besides the first and second class sloops sailed for St2s and St0, besides the first and second class sloops sailed states and less of first three classes, for the rest eleven miles. The steam liles of first three classes, for the rest eleven miles. The steam liles of first three guests of the club over the course, and the following gentlemen as judges: L. T. Stanley, Soear Krause, Samuel Baker, George H. Lally and F. W. S. Brawley. Regatta Committee: Martin Engert, A. A. number of excursion steamers had to be brought into requisition to accommodate the attending crowds. Protests on account of fog were properly ruled out, likewise the Sea Gull for spilling ballass. If the day was not what might have been wished, the Ohlogoy Y. C. sesses, and in encouraging its site of carties the solid material it possesses, and in encouraging its many thousands seeking recreation and health in manly sport. Summary as under:

SEAWANHAKA Y. C.

SEAWANHAKA Y. C.

The club cruise has brought together the following thet at the Larchmont rendezvous, under orders of Com. Lee abourd the flarship Oriva: Schooners, Albatross, ninety-divetons, Vice-Com. Humphreys, and Nokomis, 18 tons, W. A. W. Stewart. Cutters, Orivia, thirty tons, Commodore C. S. Lee; Volante, fifteen tons, A. G. Hodges; Muriel, twelve tons, Paul Tuckerman; Petrel, six tons, John Hystop; Yolande, five tons, Bal. R. Schuyler. Sicops, Wave, thirteen tons, Rear Com. J. C. Larron; Peri, thirteen tons, F. P. Sands, and Vivien, five tons, Stanley Greacus.

For Morris Cover to a good south-westerly breeze, the shaller yachts being sent off an hour and a half ahead. It was a run all day, at which the Albatross, recently altered and overhauled, proved herself a good one, likewise the sloop Wave, who was lucky enough to get away from big and little, cutters, sloops and schooners alike, and was only overhauled late in the day by the flear Commodore's schooner. She beat her class competitor, the enter alianed by menty fifty minutes. On the other hand the two cutter alianed by menty fifty minutes. On the other hand the two living by some in and Xolonde, turned the tables on the sloop with the property of the stone of the shoot private by some in good on the same and the stone of the shoot private by some in the leader is sure to have a different wind from the boat bringing up the rear some eight or ten miles astern. Next bings leisurely, and the leader is sure to have a different wind from the boat bringing up the rear some eight or ten miles astern. Next because the standard or such informal salling. Where one makes it a race, the other takes thus proved the such as the sound of the wind from the boat bringing up the rear some eight or ten miles astern. Next stangs leisurely, and the leader is sure to have a different wind from the boat bringing up the rear some eight or ten miles astern. Next settings leisurely, and the leader is sure to have a different wind from the boat bringing up the rear some eig

tross schooner, while larger sloops and cutters were nearly an hour in coming too. No one pretends that the Petiel is a match for the twelve-ton fluriel or the thirty-ton Oriva, nor yet that she can beat sloops several times her size in a good working wind. It was a matter of luck and possibly good management, though Petirel is one of the fastest boats of her length or size in America. The same applies to the calling of the Wave, and though we do not consider either Oriva conclusions for or against any type to not good in drawing positive conclusions for or against any type to tons, then five tons all bring 19 within a few minutes of each other after a long day's passage. Since sind a few minutes of each other after a long day's passage. Since sind a few minutes of each other after a long day's passage. Since sind come over with the fleet from Morris Cove, and at Greenport, schooner Clytie, 123 tons, Anson P. Stokes, joined the squadron. Saturday a short run across was made to New London, where the Sunday was spent at anchor. The fleet then continued the cruise to block Island and Newport.

ROYAL NOVA SCOTIA YACHT SQUADRON.

ROYAL NOVA SCOTIA YACHT SQUADRON.

SATURDAY, 2th June, was fixed for the opening races of the Season, but as few of the yachts on the station were ready towing to the backwardness of the season) the first class did not fill. The season the first class did not fill. The season control of the properties of those entered—the appearance of the weather not being favorable at the hour of starting—and in the third class Mariquita had a sail over. The race on papearance of the wather not being favorable at the hour of starting—and in the third class Mariquita had a sail over. The race on what was polity, brought no less than seven curries, and though the wind was polity, brought no less than seven the course of the afternoon, there was a very close contest between Psyche and Oi-Kaze, and between Mariquita and Marile. Psyche, with her racing mainsail and jib, as beautiful a suit as even Lapithorn could turn out, performed superbly, and her owner, who always sails her himself, took it out of her to the last inch, working her up to windward on the first tack from the start in a way that boded lift for owner, did cutter's work, cut. Psyche ou had Dartin also sailed by her owner, did cutter's work, cut. Psyche ou had Dartin also sailed by her owner, did cutter's work, cut. Psyche ou had Dartin dos sailed by her owner, did cutter's work, cut. Psyche ou had Dartin dos sailed by her owner, did cutter's work, cut. White I wanted what no two other persons seemed to while he before upon, and this I have fairly accomplished and now will lay before upon, and this I have fairly accomplished and now will lay before upon, and this I have fairly accomplished and now will lay before the action of which the earlins would not be at perpetual thing with a cabin of which the earlins would not be at perpetual thing with a cabin of which the earlins would not be at perpetual thing with a cabin of which the earlins would not be at perpetual thing with a cabin of which the perpetual thing with a perpetual thing with a cabin of the perpetual thing war with my skull, a private both with said unlimited lockers for stores, a good forecastle and a coal stove, and all this adapted for the Great south may of Long Island, where the bottom for the most is only two or three feet below the top of the water. In other words, I wanted a yeaching cannibout with a sail in it. I did not ask for speed, intending to take Mr. Seth Green along with me and devote the entire summer to studying the piscatorial capacities of our satisfactive links and togs. Studying the piscatorial capacities of our satisfactive links and togs, studying the piscatorial capacities of our satisfactive links and togs, studying that the study of the produce a very clear comprehension of have explained, failed to produce a very clear comprehension of such vessels, i worried the builder somewhat with numerous suggestions, but in the end we produced the boat which I am about to up the start was get tor your noney.

rious, but in the end we produced the boat which I am about to a soribe.

The first item to consider was, naturally, the cost, for I take it that a great dead depends upon how much boat you get nor your noney. Twenty-five hundred dollars covered that, including auchters, early patent blocks, and everything of the best, the cabin and staterooms being tastefully finished inside with hard woods. On the south rido of Long feland we have a beautiful insect, or small bird, as it might almost be called from the delicacy of its song note. This conces to us in great abundance at times, and makes the art lairly rigorie bith its time. It is called, popularly, the mosquito, and to pickent its form. It is called, popularly, the mosquito, and to pickent its first the constant of the constant of the constant while facts were a pair of swinging mosquito net mosquito methods while facts were a pair of swinging mosquito net mosquito not pring slats and all under the deck, so that they cannot be sat upon carring the day and reduced to the consistency of thin. Sheeping on trema a luxury, and instead of turning out at 5 A. M. as we have always done here tolore, we sleep till 10. Curtains on rods in front of them shut them out of sight auring the day. All these are luxuries what will be thought of those in the wat at a punch almost accommodate two. In one of these staterooms, where they are still wider and elegan and softer and will at a punch almost accommodate two. In one of these staterooms.

of ladles. There are then seven berths beside two in the forecastic for the men, and the centerboard table will seat twelve on chairs having backs and arms to them, not on bunks which are subsequently to belie be is. There is no door between the cabin and forecaste, only a sliding panel large enough to pass dishes, and mode the bertis are shelves and boxes for clothes, and no forth. The forecaste is are shelves and boxes for clothes, and an forth. The forecaste is are shelves and boxes for clothes, and an forth. The forecaste is are shelves and boxes for clothes, and an forth. The forecaste is are shelves, and the cabin so that ice water cases, one of which connects with the of the pipe the are two with a faucet in the cabin so that ice water can always be had without he waste of a cooler. Further aft there is much room for boxes, spare rigging, and the thousand and one things which make up a years is fortuned. In fact as one vistor remarked, "she is all boat," every inch of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. The she way the control of space is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space being utilized. In the way of comfort she is perfectly the control of space and the space of the forest which were she in the control of space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and the space and th

senomers, stoops and carboats, but then the sharple was not built for speed.

We have beaten every working vessel (and some of these are often quite fast) we have yet met. Since then I have had her in the South Bay. Mr. Seth Green has tun her into one pound net and on to three sand flats, but when site grounds she grounds after, so that we have only to push her head around, and she goes off as she came on. We have carried all said through all the heavy wearther off this summer, and there is no soa that over gets and the gouwell of the grounds of the standard of the standard of the southern the sent when the particular when lying at anchor, for when other vessels around her were scooping up the seas with their noses, she was so quiet the carpenters could it up the inside joiner work.

As to single-lainded crusting, I was left alone on her by the sickness.

BEVERLY Y. C .- JULY 8.

BEVERLY Y. C.-JULY 8.

Estitor Forest and Stream:

"The 6th regatts of the Boverly Y. C., the first championship of the season too a place off Nahanit, July 8. Course for first class, from judges 'yacut, leaving Graves' Bell Buoy and buoy off Winthrop Head on shruoard and return, ten miles.

Course for second and Indic classes, round Graves' Buoy, Judges' Yacht Breeze, E. Y. C. Judges, W. Lloyd Jeffries, 'deo. E. Inches.

The number of entries was small, but this was fully made up by the quality of the boats, as It was a very close fight in each class, the quality of the boats, as It was a very close fight in each class, the preparatory gun was fired at 18-05, the wind then being light south-ast. Cutter Beetle was the first to cross on port tack, looking beautifully and showing the best litting suit of safts seen here for a long time; cutter sfavis followed fifty seconds later, appearing at first o holds a trile better wind than Beetle, but the latter seemed to go a little faster. So long as the wind held, the race between the two was exceedingly close, this one than another showing already will followed in the wind shifted to the southward, allowing the boats to lay their course, and carry giblopasis. Here Beetle ran away from her competitor, and held her fead back to Winthrop Folint, under same sails, trom wintrop in it was a case of spinakers, and Mavis holding rather the best wind picked up a good deal of lost ground. An entire boat has been measured, the corrected time cannot be given, but the longers are so near as same that Beetle is sure of first prize was five the winter, and the longers are so near as same that Beetle is sure of first prize. Winter, 2016, though a prize, Beetle, Aug. Hemonya, 23-120 havis, and 21:1805, followed by Perl, Vice-Gorn Parkman, at 12:1935. The race was very close, but Hoiden turned the tables on her old antagonist, rounded Grave's body just ahead of Beetle, and crossed home line with agood lead over the onne cars. She appeared with a new sail and was better handied than lea

MAGGIE AND HESPER.

MAGGIE AND HESPER.

Miltor Forest and Stream:

I do not wish to detract in any way from the performance of the Maggie in the late races in Boston waters; but I take that to form a proper judgment in the matter the following facts should be known:

The large is a racing coat, built expressly for that purpose, and fitted and rigged in every way to attain the best results; not to speak of all-lead bullast, placed where it would do the most good.

The Itesper was built and sparred for a sing cruiser, with nearly all the bothest from and instance it has Since arriving at Boston a result of the state of the bullast, placed where it would do the most good.

The Itesper was built and sparred for a sing cruiser, with heart and sailed by her owner in all of being matches. Besides I have a note of sail or in the bediest to by knowledge. And shide not allow me to ballast and rig her for real racing, as he did not care to go into it to find the term of the sailed by her owner in that the Hesper with proper ballast, all lead, and seven tons or so outside, with canvas in proper rim, would be a many of a designer who has to make bouts to sail this clients' wishes. The Madde pand Mischief and to show what obstacles are put in the way of a designer who has to make bouts to sail this clients' wishes. The Madde pand Mischief are the only boats that I have designed for racing, and tach record shows that they were not made in vain. Si Viser learner stream extract are to sail boats and the for client in the way of a designer who has to make bouts to find our vains. I were the sailed to the contract of the challenge of the read of the read and discinification and the proper than along with pleasure. Hesper Jan Canv Sairin.

We publicate above with pleasure. Hesper has been considered to the contract of the read and along the publication of the read-and significance of the read-and along the publication of the read-and along the publication of the read-and significance of the read-and significance of the read-and significance of the re

assertions of a short year ago that it cannot be allowed to pass. Our yachts, on the contrary, are all estensibly built for speed, and everywhere, the contrary are all estensibly built for speed, and everywhere the contrary are all estensibly built for speed the because of the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and the contrary and contrary and contrary and contrary and the contrary and contrary and the contrary and contrary and contrary and contrary and the contrary and contrary a

THE REFORM MOVEMENT ON THE LAKES.

THE REFORM MOVEMENT ON THE LAKES.

THE following from the Opengo Pulludium testifies that the revival of the "honest" yeart instigated by Fonser Ash Synkas is bearing good fruit on the lakes as well as on the Atlantic seaboard. The Pulludium's counsel is timely an i wise:

"The performance of J. T. Mott's keel yeach Cricket in the Fourth of July regata would seem to demonstrate the desirability of that style of boat for the great lakes in a satisfactory way. We understand that she has already snown horself a superior heavy weather boat, and on this occasion she showed her superiority as a tight of the standard of the standard she will be she had already snown horself a superior heavy weather boat, and on this occasion she showed her superiority as a likely boat overtake him with speed in the gentle breeze which is also likely to be his portion. These requisites seem to be combined in the keel hood to an extent not seem in anything else.

It is claimed for the Cricket that the stormy wind and heavy seas as the form that the season which we work in her of the contrary sort, and yet she showed superior sailing qualities on every point of wind. True, in the latter part of the race she lost the lead white she works in her own day. But the weather was of the contrary sort, and yet she showed superior sailing qualities on every point of wind. True, in the latter part of the race she lost the lead white she won from the Laura in the race to leeward, but risk was by an error in seamanship, in standing in too close to the pier, which but they the weather saile. We think that it will be to the pleasure, sacty and profit of late yachtsmen to examine carefully the general merits of the keel yacht for these waters."

MONA.—Mr. Paddleford'; fine tenton ention is lying at the screw docks, South street, reed in meny joiner work. She is to have a latice' cabin aft and other afterations. The Mona is a very fair attempt at cutter building, and Lawley & Son, of South Boston, have shown a good dead of lagentity in getting her out in such good style, in some matters of death, such as the square butts in terral in place of a spilee, and an archboard lucking the graceful sweep of the foreign production, the Mona asint's ofimprovement, but sha whole we rather like her. It is noteworthy that the Lawleys have not servilier opided an existing British cutter, but that drey have hapareners and the lawleys have not servilier opided an existing British cutter, but that drey have hapareners and the lawleys have not showing more round and shap. Lata finige or alagges. The rig of Mona is specially commendately, with an after business throughout. An inspection of her spars, mastnead fromwork and gear would be a good lesson for the builders about New York, for they might discover what a good job, and above all what a strong and hear job, really it. The oak crost-rees are made of two pleess, one forward, the other about the lower cup, and sprung with an arcu till the ends meet in meat casings, the two pleess being furners stayed by checked arrangement which can never double up, hardly carry away, and offers the topman an excellent footing to far it the topsail or to keep a lookout. Mona seems a bit full in the bows, and with a little more short than the more cutters. Her skipper reports her as an excellent soa boat, coming over Manuacket shoals in a gale and stiff as a currech. In dimensions and appearance she bears a general like hers ness to the Madge.

CUTTERS IN TORONTO,—They are a live set of yachtsmen across the border. Torento now possesses three crack cutters, which are probably equal to beating anything we have in our own fleet. The abtention of the control o

matters little whether the prize be for the republiated handle, or tor the fun merely of showing us what a close-winded dyer looks like. HALIFAX NOTES—Fitting out: Minnehaha, sloop, of Capt. Playfair, R. A. She has had her balla it diminished and better stoved, spars reduced and a general overland; of the skimming dish order, fit for smooth water only. Mayflower, sloop, 3, General it? L. McDougali, K. C. M. G. Mentor, sloop, 3, Mr. Stone, has bron keel and is very fast, stiff and safe. English model, Velenar, cutter, 3, F. C. Sumichrust, is to have new topmast and larger No. 1 jib; a genuine single-handled cruiser. Mint, sloop, 3, E. Kempy and F. F. G. Sumichrust, is to have new topmast and larger No. 1 jib; a genuine single-handled cruiser. Mint, sloop, 3, E. Kempy and F. G. Stayner is fitting out a flyton schooper for the Shaw, if E. Marting and the Gut of Canso to Charletteown, P. E. Island, Arrivals: Una, schooner, 80 tons, F. I. Eckstein, from Boston on a cruise to the castward. She is tne yacht built by George Steers in 1817, flagged originally as a sloop, and well known in the races of the N. Y. Y. C. Steat, steam yacht, Stons, H. H. Warner, from Eastport for the Gulf and the Friene corvette Chasseur are also in Hailatz Harbor. NaMOUNA.—Mr. James Gordon Bennett and his steam yacht Namouna arrived at Constantinople on July 12. The Namouna, with the exception of two or three days when it blew a heavy gale, had a and displayed line weatherly qualifies. She left New York, P. Manding 15 miles that day. The next day's runs and displayed line weatherly qualifies. She left New York, 1900, 2006, 276, and 189 miles more brought to Namouna to the Canaries. Here is or emailed for three days, and then paid a flying visit to the Madeirus.

Oswego.

HULL YACHT CLUB.—In the matches safled July 8 the regular and Corinthian prize in third class should be credited to the Sea Sird, not to the Allie, as erroneously printed. It is noteworthy that Sea Bird won with fixed ballist in a match, which permitted weights to be shifted. San Sird has won three lines and the Corinthian prize this year, always sailing in cruising trim and meeting some of the best yachts in here class.

best yachts in her class.

NEW SLOOP.—A new sloop was recently lanached by David Carll, Of City Island, for Mr. F. Barrett, of Staniford, Conn. She is 40ft. over dll, 3ff. water line, 18ft. beam and senar-aft. hold, with 3ft. 6m. draft. Now deleas concerning depfa have evidently not yet percolated such far off provinces as City Island. Do they see the papers that way?

The Parker Gun.

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

SHIELDS'

American Improved Gut Leader

CASTING LINE.

My invention consists in adding to a leader a reenforce at the several points where the upper flies are to be attached, by which the size of the line at such point is doubled, the result being that the wear upon it by chafing from the loop of the fly-such is such point is doubled, the result being that the wear upon it by chafing from the loop of the fly-such is finished at the loop of the fly-such is finished at the loop of the fly-such is finished at the loop of the fly-such is finished at leader of single gut, the latter soon becomes badly chafed and its enameled surface worn off.

In addition to this its alificult to hold the loop of the fly-such is the latter of the fly-sufficient in the act of looping the such in the sufficiently firm to easily accomplished the sufficiently rigid. By doubling the thickness of the leader at the point of attachment of the fly avoid these objections. The drawing Fig. 1 represents a leader as heretofore in use. Fig. 2 is a leader made in accordance with my invention, in the act of attaching the fly. In these drawings A, Fig. 1, denotes a leader of silkworm gut adapted to the purposes of fly-fishing for trout or bass, and as heretofore made, such leader being composed of several lengths of gut knotted together, as shown at b b, and the send attached to the fly being looped of several lengths of gut knotted together, as shown in Fig. 2, in which we and casey one is that such points. This re-enforce may be added in shown in Fig. 2, in which we are according to the number of flies to be used in the east in addition to the stretcher) an additional piece of gut A, which I term a "re-enforce," thus doubling the body of the leader at such points. This re-enforce and casey one is that shown in Fig. 2, in which we and casey one is that shown in Fig. 2, in which we have a such points. This re-enforce may be added in shown in Fig. 3, and then apply the fly by in the fly is attached, and after passing the fly through the lo

consequence.
All fy fishers will readily see the advantage there in using them.
The easiest way to apply a 16.

All fly fishers win reconstructions in using them.

The easiest way to apply a "fly" or to remove it without impairing the strength or durability of the leaders. Length, 3, 6, 9 ft., made of superior silk worm gut in all varieties.

KENEBAGO LAKE HOUSE.

KENEBAGO LAKE HOUSE.

This justly-famed sportsmen's resort is situated in the heart of the best fish and game region accessible in the State. Trout always plenty and take the fly, and deer, moose and caribou have here their tavorite haunts. The Seven Ponds are easily reached from the house, most of the route by boat, where are established fine camps and boats by the undersigned, who were pioneers in opening up the country for sportsmen. The scenery around the lake is lovely beyond description. Distance from Rangeley City ten miles, by carriage and horseback. Mail service tri-weekly. Rates reasonable. Address GRANT & RICHARDEON, Proprieters, Kenebago Lake, Franklin Co., Me. July 12, 82.

ENLARGEMENT.

BEGINNING with the issue of August 3, that being the first number of the Nineteenth Volume, the FOREST AND STREAM will be permanently enlarged to twenty-eight pages.

This increase in size is rendered necessary by the constant growth of the several departments of the paper and the consequent demand of each for more space.

The field filled by the Forest and Stream is a broad one. The paper has taken a firm hold upon the sympathies of an ever-widening constituency. The hearty support with which they have been favored by the public warrants the publishers in assuming the added expenses involved in the change from twenty-four to twenty-eight pages. As the same principles that have guided the paper in the past and won for it its present position will be adhered to, it is not unreasonable to trust that they may receive a commensurate support in the future. The favor in which the Forest and STREAM is held by its many thousands of intelligent readers is the most satisfactory indorsement of its course and the best possible guarantee of its continued prosperity.

With added facilities the editors hope to make not only a larger, but also a better paper.

Dog Larceny in Ohio.-An important decision was rendered by Judge Tilden in the Probate Court, Cleveland, Ohio, July 17, who held that stealing a dog is larceny under the laws of that State. The written decision is a lucid statement of the law and,-we may add, the common sense of the case, and its importance to owners of valuable dogs in Ohio cannot be overestimated. The full text of the court's decision will be given in our next issue.

GAME Notes.—We shall be glad to have game notes from various parts of the country, telling of the prospects for sport in the coming season. Details as to localities, routes, accommodations, etc., are valued by those who are seeking for such information to guide them in their brief vacation.

AMATEUR PHOTOGRAPHY.

MOST valuable addition recently made to the outfit of A MOST valuable addition recease, and the sportsman tourist is the portable amateur photograph There are several styles of this instrument by different makers. We have seen excellent work done with each, having inspected a large number of photographs made by amateurs. Mr. Steele's books, "Canoe and Camera" and "Paddle and Portage," were illustrated with drawings from photographs which the author took in the Maine wilderness with one of these instruments. Mr. Ober brought back from the Tropics a number of pictures made with the same instrument. "Yo" returned from British Columbia with a box full of negatives of snow-capped peaks and glaciers, from which very fair photographs have since been developed. In addition to these we have inspected a number of views taken by other parties, among them an Adirondack camp scene by Dr. Stetson, and a New Jersey hunting scene by our well-known contributor, "Fairchild, Jr."

With one of these outfits the amateur may secure a great variety of views, picturesque landscapes, the camp and its surroundings, groups of field companions, dogs on point, the bag of game or string of fish, the canoe and its crew, yacht-and, in short, a thousand and one subjects, which will ever after call up pleasant recollections of bygone days.

The manipulation of the photographic camera requires some care, and experience is necessary before really satisfactory results can be obtained. The operation of picturetaking is very simple. By the "dry process" the plates are prepared ready for immediate use, and stored in the dark box. All that the operator need do is to adjust the focus of the camera, and by touching a button drop the plate into position. The part of the process requiring the most judgment and care is to determine the length of time of the exposure of the plate. This depends upon the intensity of the light, and upon the sensitiveness of the plate itself. After a short experience the knack is acquired, and to take a picture comes as easy as to cast a fly or bring down a bird

The developing of the pictures after they have been taken is very simple, but the comprehension of the method and of the processes to be gone through with is rendered much easier if one can obtain the assistance of a professional photographer in developing the first few plates. The eye apprehends at once what is to be done, but it is not always easy to convey the necessary instructions through the ear. Therefore if you can see a few plates developed by some one who is familiar with such work, by all means do so, and spare yourself some annoyance, perhaps some irritating fail-

The cost of the apparatus is very moderate, insignifi-cant when compared with the pleasure afforded. We hear of an increasing number of the outfits now in use, and a general expression of satisfaction by those using

Work with the camera affords a novel and pleasant variation in the usual round of camp occupations, and aside from the actual "trophies of the chase," there can be no more valued souvenirs of a recreation trip than the photographs made with one's own hands.

Dogs to be Deadheaded.—We are much pleased to note that the officials of the railroads are so courteously agreeing to remit charges on the dogs which go to the North Caro-lina field trials. This is quite in keeping with the intelligently liberal policy pursued by many of the railroads toward sportsmen. We can remember the time when the annoyances attending the conveyance of a large number of dogs to a given point by rail would have proved almost insuperable obstacles to such an enterprise as our modern field trial has grown to be. The new order of things is much better, and if there is still fault to be found with some roads the cause of the trouble will, in most cases, be found to lie not with the rules of the road, but with the abuse or neglect of these rules by subordinates. Patience and an appeal to the proper officials will, in most cases, provide a remedy for the wrong sustained or prevent its repetition.

USEFUL SUGGESTION .- A correspondent thinks that it would be a good plan to increase the panther supply to scare donkeys out of the woods. Perhaps a few stuffed house cats, conspicuously set up in the trees, would do as well. Or a steam whistle might be rigged up to scream like a panther; that would protect the woods for five miles around. If the steam panther fails, a small New York newsboy might be substituted. He would scare a "true sportsman,"

THE WARWICK WOODLANDS .- The famous "Warwick Woodlands," as they appear to-day, are pleasantly described in a paper by Mr. Harrison W. Nanny, which is now in type and will be printed in our next issue. Many changes have been wrought in the country described by "Frank Forester," but the famous landscapes of Orange county still remain, and the "Woodlands" are well worth a visit. They are easily accessible by the Eric Railway. The game has not disappeared from Orange county. Of late years, spurred to action by the gunners from the city, who overran the country at all seasons and shot everything from "chippies" up to barnyard fowl, the citizens set about enforcing the game law, and the result is that in some places the game supply has largely increased. We visited a favorite locality last week, not quite within the borders of the "Woodlands," and found the prospects for November very promising.

MAINE ROUTES.-Taking it all together, first and last, there has been a good deal of disputing in these columns about the preferable routes to certain resorts in Maine. It may be that the interest in this matter is sufficiently wide to justify the extended discourses indulged in by the champions of the various lines, but we beg to suggest that there may be too much, even of a very good thing, and it might be well to wind this up before the letters exceed in length the routes themselves. We hope that an army of tourists may visit Maine this year large enough to keep the grass from growing on any of the routes, and to fill all the camps and the pockets of their proprietors. Those who go one way this year can go another way next; then they will be sure to have gone the right way once-perhaps twice-or, it may be, not at all. And then everybody will be contented and

JUDICIOUS ADVERTISING IS BOUND TO PAY.-The firms who have occupied positions in our pages for the past eight years continuously say that advertising in the Forest and STREAM pays. The circulation of this paper, always large, is this year greater than ever before. Advertisers who employ it as a medium bring their goods to the notice of a liberal class of purchasers of necessities and luxuries. There is no paper of any class that yields better returns to its advertisers than does the Forest and Stream.

THE BASS FOR THE PACIFIC.—Our correspondent, Mr. G. H. Wild, writes that the bass now on their way to the Pacific Slope are being transported with success. Much credit is due those in charge, Messrs. J. G. Woodbury and W. L. Marks, as they have lost but fourteen of the small bass between Red Bank, N. J., and the Mississippi River. Later-Just as we go to press we have received a telegram from Mr_{\star} Wild, dated July 26, which says: "Woodbury arrived at San Francisco with 300 live bass in good condition."

Deferred.-We are obliged to defer until our next issue several communications which properly should have appeared this week. Correspondents favoring us with news notes, reports of club meetings, etc., will greatly oblige by sending such matters in as promptly as may be practicable. Owing to the large editions which we are printing each week it is necessary to go to press early, in order that subscribers may receive their papers on time.

FOREST AND STREAM FABLES.

VIII.—THE SOCIETY OF PERCH FOR THE PROTECTION OF MINNOWS. W HEN the Perch saw, as they did after a little, that their Society for the Protection of Minnows was not protecting the minnow, they petitioned the King of Fishes to make a law which should do so. So the King, after advising with his privy council, decreed that there should be no minnows taken privy council, decreed that there should be no minnows taken except on Mondays, Wednesdays and Fridays. This at first seemed very satisfactory to all the fishes but the Minnows, who would rather not be taken on any day, but their wishes were not considered. After a time, however, the Perch began to complain that from Friday till Monday was too long to be deprived of the pleasure of taking Minnows; the Bass that they would rather have them on Sundays, Tuesdays, Thursdays and Saturdays, and the Pike maintained that they being such hungry fellows, should be permitted to take a few on every day of the week. Then presently each class of fishes began to be a law unto itself, setting at naught the King's law, and the poor Minnows were harried by Perch, Bass and Pike from one end of the week to the other, and were no better off than when nothing had been done to save them.

The honest sportsman abides by the laws, though they

be not exactly as he would have them,

The Sportsman Tourist.

CAMPS OF THE KINGFISHERS.

IN EIGHT PARTS-PART VII.

CAMPS OF THE KINGFISHERS.

IN EIGHT PARTS—PART VII.

UP to this time Brother R. had done little fishing except for sunfish near camp, and being the odd man, he had been, truth to say, rather meglected. A party of three or five, where there is no bank fishing to be had, is an unsatisfactory quantity, if all are not able to handle a boat. If you go up in that region to fish, make your party even numbers, unless you dispense with a cook and detail one of the party each day or two to cook and keep camp.

Bright and early next morning Brother R. and I pulled over to Buzaroo Point, and took our way down the lake for a full day's bass fishing, leaving Dan and the neighbor to swap lies, 'talk hoss' and lose another monster bass, if the chance were offered them again. Down at the twin springs at the clearing I had taken our or five bass that ran large, and as it happened Brother R. had felt "narry symptom," which moved tim to say that "he didn't believe he was cut for a bass fisher, and he was a little off, too, on pickerel, sunish was his meat, his best h Id, as far as ha'd got."

As we moved away from the rushes at the spring a violent pull that made the fine sing through the guides started the blood in him with "Good gracious! look at that—no sunfish this time." If evanted me to take the rod and fasten the fish and then hand it back to him; but as I believed it was a big bass that had struck his frog, I suggested that he handle the lish hims. If and take the full measure of the glory. After giving the tish plenky of time to swallow the frog, nodded to him to strike; and, after a furious surge or two, a magniticent base shot into the air with a leap that showed the stuff he was made of, his mailed sides glistening in the sun, his dorsal bristling defiance, and even at the distance he was away, we funcied his eyes were starting from their sockets in bewilderment, and his mind all torn up as the conviction settled on him that he had got hold of the wrong frog. With a spiteful shake he beleiched the frog out and threw it

I believe I had nearly as much pleasure out of that bass as did Brother R. I felt as good to see the satisfact on and prile-in-his-own-prowess look, beaming all over his face, as though I had struck and gaffed a twenty-five-pound maska-

prile-in-in-low-prowess look, beaming all over his tace, as though I had struck and gaffed a twenty-five-pound maskalongs.

We started in to cool off. As we entered the rushes fringing the shore, a sudden whirl of his reed brought Brother R. to his feet with, "Great Governor! there's another one; there must be a nest of them around here;" and I had to back the beat out from the rushes a few yards to give him room to handle his fish. After a brief but tough tussle, in which the Brother acquitted himself like a veteran, a very black-backed fellow of about three and a half pounds was put on his stringer with the other one, and we pulled in this time and cooled off.

We tished around in the pockets before mentioned until the trees on the hills back of us began to east their long shadows around the boat, when we headed up past Loom Island and to camp. In the pockets we had taken ten or twelve large-mouthed bass that would vary little from three pounds each, Brother R. getting decidedly the best of the "old mam" in the bout, and when we beached our boat in front of camp I think he was the proudest and happiest man in the whole Wolverine State.

Near the landing and just across the little stream from our tents we found a couple of wandering brethren, who had come down the lakes in a small yawl, putting up a little canter-pole lent for the night, the larger one greeting us with. "Hello, fatty! Have a drink!" and he drew from his shirt pocket a small vial of wrath and held it out with a smile on his honest-looking face. On being informed that the bibulous end of the party had left for home: "You're a hoppeful fisherman. Can't take a drink with old Bill Hessi Well, I'll take one myself;" and he did. We learned that they were fron Grand Rapids, Mich. W. T. Hess, a prominent hide and tallow dealer, and Charley F. Pike, of the First National Bank, and broth-rs-in-law, going through the lakes for a few days' sport and recreation. Hess was a great big, bluff, hearty man of perhaps 220 pounds, while busy little Pike was just h

were both ardent lovers of the gentle art. A look at "Old Bill Hess," as he called himself, was good for the eyes, and he found his way to our hearts at once. We helped them fix up, and had them fill the vacant places of Jim and old Knots at the supper table, and before bed time we were all on as brotherly terms as though we had camped and fished together for years, so soon does your honest angler reach the hearts of his brethren of the rod and reel.

The next day Brother R. and I fished over about the same water as the day before, taking more fish, but none so large as his first big one. Dan and the neighbor fished together again and Hess and Pike concluded to stop over a day and try their luck with us.

again and Hess and Pike concluded to stop over a day and try their luck with us.

The day developed nothing but more fish; plenty for ourselves and all the neighbors, and when matters were discussed after supper, our two new-made friends concluded that good fishing and good company were two things that would bear nursing, and they would stay another day.

In the morning neighbor Johnson, of the nursery above, came down for the trout fish he had been promising for several days past. Brother J. is the: boss trout fisher of that neck o' woods, claiming to take about ten trout while the ordinary tenderfoot who drops his claim into the cedar is scoring one, and I have no doubt he was itching to lay "Old Hickory" out, if he went along. Hickory was willin' to be laid out

Hickory" out, if he went along. Hickory was willin' to be laid out

I am not an advocate of Sunday fishing, speaking generally, but I believe the good Lord looks with more favor on the gentle angler who with rod and creel follows the meandering stream on His day, listening to sermons from stones and rippling water and hearing His praises sung by the mysterious voices of the woods, than He does on him who fleeces and lies about his neighbor six days in the week and on the seventh bellows soorous hymns that never reach higher than the roof, and claims thereby a place among the anointed. When in the woods on limited time, I go a-fishin' on Sunday if the spirit move me, and the spirit is generally up before daylight looking after the tackle and beckoning me forth long before I am ready in the flesh.

Brother J. and I went a troutin'. Taking his place at the oars in his little white cedar boat, that looked scarcely larger than a duck on the water. I followed, sitting flat down in the bottom, and dove-tailing our legs as the only means of getting all of us into the short little craft. As we cleared the rushes and got into open water I noticed I brought the boat down until there was barely two inches between me and a good ducking, and Brother J. cautioned me to "not shift my tobacco from one side to the other with nuch saddenness, lest a catastrophe overtake us." Down he lake and Intermediate River, stoopping a few minutes on

much suddenness, lest a catastrophe overtake us.

me to "not shift my tobacco from one side to the other with much suddenness, lest a catastrophe overtake us." Down the lake and Intermediate River, stopping a few minutes on the rapids to pick out a couple of dozen clams (mussels) and out up the feet for bait, we passed the mouth of Cedar, and leaving our boat at the dam at Bellaire, we "went through" the town and took our way up the Manceloan road as the casiest way to reach the "burnt clearing" on the banks of the Cedar, a mile or such a matter above, and where we proposed to begin fishing.

From the upper end of the clearing Johnson had at odd times cut a path or trail along the bank of the stream for half a mile, which made it possible to get along at a little better speed than a mile a day, and into this we piunged and were soon where we could get our rods over the clear, limpid water. This is not going to be much of a trout story, as trout stories run; in fact, if any carper is getting himself in shape to enjoy the average number of lies that usually fall to the lot of a well-proportioned trout story, he will be disappointed and may as well not wind himself up stream wherever we could find room between the logs and brush to drop our clam into the water, to the end of Johnson's trail, always in speaking distance of each other, but not often in sight.

At the cond of the trail the tangle was of the same deuse

brush to drop our clam into the water, to the end of Johnson's trail, always in speaking distance of each other, but not often in sight.

At the end of the trail the tangle was of the same deuse nature that Jim and I had found it a mile or two above the year before, but we struggled, and crawled, and fished our way along for a quarter of a mile further, when we concluded we had enough, if not of trout, at least of tangle. We fished back to the lower end of the clearing, taking a trout here and there, and losing among the net work of limbs, brush and logs that matted the stream, at least four fish where we got one, and when Bro. J. said it was time to be moving if we wanted to be in camp before dark, we struck into the road for town hungry and tired, as a foxhound after a hard day's run.

Back to the camp, we spred our fish on the table, and on counting them we found that Bro. J. had not taken quite ten to my one, as my creel turned out twenty-four white his count stopped at twenty-two, and by some unaccountable freak of good luck my trout averaged considerably mentant where the weight of his.

This "tale of the trout" is not recorded for the purpose of exulting over Brother J., but simply to find a moral for it, which is "a tenderfoot may sometimes take more and bigger trout, with more spots on 'em, than an old residenter who has hardened and tanned his soles by frequent and weary tramps to the haunts of this wary and ficklening to stop for supper, and soon after we were discussing

weary tramps to the haunts of this wary and hearminded fish."

Our neighbor headed his cockle-shell for home after declining to stop for supper, and soon after we were discussing at the table the fruits of my day's tramp, seasoned by a choice selection of able-bodied trout lies by Brother Hess, culled from an abundant store gathered together in his various wanderings in the Michigan North Woods. When the last bone was picked and the last delicious morsel had disappeared, it was voted that before breaking camp another day be devoted to trout, and Brother R., being fired with an ambition to beat Jim's record—of one—concluded to brave the tangles of Cedar and go with the writer the following Tuesday. We went to bed that night full of happiness—and trout.

[TO UR CONCLUDED.]

TO BE CONCLUDED.

Hamac or Hamak.—Denver, Colo., July.—A recent correspondent of Forest and Stream designates the moist, hardwood lands of Florida by the word hamak. In a later issue you tacitly approve, editorially, the new spelling of the word. Some years ago while in that State, and writing considerably for newspapers, I used the word hamac. Not because I knew of either authority or precedent for so doing, but for the reason that hammock, hommock, etc., as indiscriminately used, were inappropriate and unisleading in their significance. Hamac and hamak give the same sound, and if an Indian word the latter may be the better way of spelling it. If an Anglo-American invention, the other is just as good, and has precedent in tamarac, sumac and similar words.—W. N. B.

TIM POND AND THE SEVEN PONDS

TIM POND AND THE SEVEN PONDS.

Editor Vorest and Stream:

We noticed in your issue of June 29, an article headed "Maine Waters and Routes," in which the ground is taken that the nearest, most correct, and easiest way to reach Seven Ponds, the paradise of sportsmen, is by the way of Rangeley, Kennabago Lake, etc. We desire to say a few words in reply to this.

We claim that the superior route to Seven Ponds is by the way of Smith's Farm and Tim Pond, and we will state as briefly as possible why we make this claim. We notice that Mr. Farmer, in speaking of his familiarity with the wilderness, says that his real knowledge extends only from New Hampshire to Moore River, but we should say in looking at the order in which he has named these several ponds that this no doubt estimable gentleman is more adapted to running a hotel than to guiding parties through the wilderness. He says: "This narrative is intended mainly for the Seven Ponds. Massachusetts Bog, and vicinity, embracing facts gleaned from three famous hunters and trappers." Let us look at some of these "facts!" Warefield says that "No sportsman's rod had ever cast a shadow upon either of the four of the most northerly and westerly of these mirrors among the mountains." In reply to this we would say that it is a well known fact that sportsmen who are yet alive, with guides who have gone with them by way of Tim Pond, have fished in all four of the most northerly of these ponds, and there are guides here who say there are nine of these ponds instend of seven, as these other gentlemen state. We are given to understand by Mr. Farmer's letter that the camp, fourteen feet square, built by three hunters at Norwest Pond, and the camps of Messrs. Grant and Richardson at the more casily approached of the ponds, constitute the chief accommodations for guests. He says: "Kennedy Smith also has a camp and boats at one of them."

The facts are these: Mr. Smith has a fine set of buildings erected this season with a capacity for accommodating in a comfortable manner thirty g

commortable inflation that y guess. It also has also according to several of these ponds Mr. Smith also has a lease of Township No. 3, Range 6 for a term of years, on which the four most northerly a d westerly ponds are situated, with the privilege of building a buckboard road to either or all of them. In the meantime, he has several nice light birch cunces which can be easily carried from one pond to another. Mr. F. says he that would not advise any but hardy sportsmen to attempt to visit Seven Ponds. Now, we presume this advice is good so far as it refers to the route by way of Rangeley and Kennebago Lake, but when he applies it to the Tim Pond route we would say that not only bardy sportsman but gentlemen in delicate health have visited these ponds, and furthermore, they have profited by the trip physically, and have engaged apartments at Seven Ponds this season for themselves and families, including the ladies. We claim that the Tim Pond route is the superior route. Mr. F. says that sportsmen doubting his statements would do well to investigate. Most certainly, if all who desire to visit Seven Ponds had investigated the matter, there would be no need of our replying to Mr. Farmer.

Now let us notice the distances as he speaks of them. He says the distance from railroad to Seven Ponds by way of Tim Pond, etc., is seventy miles at least, while by way of Kennebago and Rangeley route it is less than forty-five miles. Now the facts are these: From railroad to Smith's Farm, over a good stage road, the distance is thirty-cipit miles; from Snith's Farm to Tim Pond six miles; from Tim Pond to Seven Ponds twelve miles thirty-four rods by netual measure, making from railroad to Seven Ponds fifty-six miles instead of "seventy at least," Now let us look at the Rangeley route for a moment. Mr. F. says the distance that way from railroad to Seven Ponds is less than forty-five miles. All sportsmen who have visited this country know very well that the distance from Rangeley to Seven Ponds, by well would be much the parties

WILLIAM TELL.—William Tell is another fraud who has been unearthed of late years. He is a fraud because he never existed, just as Gessler never existed, so say the records. A few years ago, some fellow who was a good shot traveled all over Switzerland giving exhibitions of his aulity to shoot apples off his son's head, a kind of a Swiss Dr. Carver. Whenever he made a very good shot, the people would call out: "Do tell." That's how he came to be called Tell. All the rest has been added by lying historians—

Texa Siftings.

That Catskill Panther,—Bangor, Me., July 20.—I no tice a paragraph going the rounds of the journals to the effect that a Cambridge student hunting birds in the Catskill Mountains, N. Y., was frightened home by a panther. That panther deserves the thanks of the public. If you have no game wardens, cultivate panthers. They will at least free you from that class of donkeys who shoot birds in the breeding season.—S. THAT CATSKILL PANTHER, -Bangor, Me., July 20.-I no

Antural History.

THE MONSTERS OF WHITE RIVER, ARK.

THE MONSTERS OF WHITE RIVER, ARK. As an amateur naturalist I am very much interested in the various forms of life found in this beautiful stream, a river that is navigable for steamboats for seven hundred miles every day in the year. But he who would write understandingly of natural history should have the best of text books, without he be an expert, simply for the reason that a great many thing; on this continent have no common or English names at all, and what mixes matters up still further, many different species, and animals, and plants of entirely different orders, resembling each other in no particular wantever, are known by the same common names in different regions and neighborhoods.

That life I shall write of in these notes is so uncommon that I think none will mistake what is meant. So much by way of preface, and this must be my excuse for not giving the technical names of these animals, for I have not the necessary text books with me, and even a good dictionary is not within reach in this thinly settled country. The first that I shall write of is known everywhere South as the ALLIGATOR GAR, and has, so far as I can learn, this one vulgar name only. A large tish of this kind is undoubtedly the largest of all feral life in the State of Ark mass, for we have a well authenticated instance of one being captured in Indian Bay, a few miles below here, measuring fourteen feet in total length, and specimens are quite common ten feet in length, and, as this animal has very near the proportions of the muscalogue.

and specimens are quite common ten feet in length, and, as this animal has very near the proportions of the muscalonger or pike, such individuals must be heavier than a full grown black bear. This gar is truly a monster. Those who have seen the short-billed gar, so common in Northwestern waters, cau have an exact idea how this one appears, when I say the two look almost exactly alike, except as to size. Our alligator gar is, I think, a little heavier according to his length, his jaws are not quite as long in proportion, and more rounded at the tip, and the head is higger behind the eyes, giving him a more ferocious expression, and with teeth larger in proportion.

Let us then conceive of one of our short-billed gars ten feet long, proportioned as above, with two rows of glittering and specimens are quite common ten feet in length, and, as

Let us then conceive on one of one in Shift-onical gains ten feet long, proportioned as above, with two rows of gittlering white needle-pointed teeth an inch and a half long in each jaw, so hard as to scratch hardened steel, with all the muscu-lar force that a tish can have, inclosed in a shell that it takes

Jaw, so hard as to scratch hardened steel, with all the muscular force that a fish can have, inclosed in a shell that it takes an ax of the best of steel to split through on the betly, with heavy blows without spoiling its edge, and he will have a very good idea of this terror of fish life of Southern waters. It seems to attack, like the alligator, all life in the waters promiseuously, except perhaps the turtle. That it is possibly dangerous to human life in the water may be true to a very limited extent. For there is no doubt whatever, that at St. Charles, seven miles below here, one of a party of young men, who were enjoying themselves bathing in the river channel, made a very narrow escape with his life from an attack of one of these monsters.

He was sitting on the stern of a small boat, daugling his feet in the water, when he was seized by one foot by an alligator gar, dragged from the boat, and if he had not seized the boat with both hands and hung on or dear life, he would have been dragged under and undoubtedly drowned. The gar persisted in his hold for quite a time, and the foot was fearfully lacerated, so as to lay the man up for several months. This great creature lives for the most part on other fish, but greedily devours any meat or carrion that may be in the water. He is the terror of the "trot-line" fishermen, often cleaning their lines of all their "baits," as well as hooks, for his "iron-clad" mouth mashes the hardened steel up like pipe stems. Sometimes, however, he gots himself into serious trouble, for if a hook gets fast into the roof of his mouth in a certain position he is powerless, or if the hook gets fast around his lower jaw with the shaft between his teeth, he is "Retched" if the tackle is strong enough. In this, and the next, the Ichthyophagous Society of New York can bring to their cuisine something worthy of New York can bring to their cuisine something worthy of New York as hing to teal attention to, I believe of their steel and champagne. Will some of our ichthyolo-gists give us the full natural history of them? The next animal I wish to call attention to, I believe inhabits all the rivers and swamps of this State, and is

known as the

LOGGER-HEAD TURTLE

generally, and by some, I think, as the "inossback turtle." It evidently belongs to the same fami'y as the animal common North and known as the "snapping turtle," or "tortle." It is also truly a monster, and au unrouth one; in fact, I think of no two living things that would make a more attractive "side show" to one of our numerous modern "largest shows on earth" than a few of the very largest specimens of these two animals, with a veritable "gator" or two thrown in. I will try and see if I can describe this monster so as to give your readers an idea of his appearance.

I must say that I have been reniss in my duty as a scientist, for last week my genial friend, Capt. Frank, the scientific, or rather expert, fisherman, trapper, raftsman and backwoods expert generally, of this port, luckily caught on his "trot line" a specimen each, a snall alligator ga measning four feet two and one half inches from tip to tip, and weighing about seventy-five pounds, and a logger-head of

his "trot line" a specimen cuch, a small alligator gar measuring four feet two and one half inches from tip to tip, and weighing about seventy-five pounds, and a logger-head of fair size on his "trot line," of which I intended to have made very careful measurements, but a party of appreciative specimens of our colored brethren came along, and the charitable heart of the good captain could not refuse them so large an amount of fresh meat.

I hope before the summer is past to get measurements and weights of several of each. The logger-head turtle of this lower White River country reaches a probable weight of 150 pounds, and many assert that it sometimes attains to 200 pounds. The one captured here last week was about two feet in length of upper shell by eighteen inches broad, tail fourteen inches long, very thick next the body, tapering to a blunt point; the head and neck could protrude beyond the anterior edge of the upper shell about twenty inches; total length of animal nearly five feet; weight estimated at eighty pounds; legs, with feet, fifteen to sixteen inches long and as thick as a mnn's forearm; feet armed with strong, sharp claws nearly an inch in length; upper shell corrugated lengthwise, massive, strong and hard. Very large specimens have besides the corrugations large knots or humps as large as a man's tist, and are generally covered with more or less living moss-like vegetable matter, hence, the name "moss-backs." The head is the strangest and most uncouth part of this great chelonian. It cannot be drawn with n the shell like other fresh water turtles of my acquaintance.

The head of this eighty-pound specim:n was the size of that of the average man, eyes small but bright, and situated

about one and a half inches back from the anterior angle of the snout, nostrils small, round, open, in the extremity of the snout. From the nostrils the upper jaw or beak curved downward in a very strong borny beak, like that of a hawk about one and of the snout, nostrils small, round, open, in the snout. From the nostrils the upper jaw or beak curves downward in a very strong horay beak, like that of a hawk or eagle, the tip of the under jaw is also massive and horay, curving upward inside the upper, exactly like that of a parrort, and both are so hard and strong that their owner can appreciably indent the hardest wood, and could crush the largest bones of a man as easily as he could a pipe stem. The gape of the mouth is great enough to grasp a man's thigh. Back of the eyes the head swells out into a great muscular mass, (in this specimen as large as a man's, and of course proportionately larger in larger specimens). This animal has immense strength, either on land or in the water, and is quite agile in his movements, and, so far as I can learn, is an inoffensive creature, timid, attending strictly to its own business, except that he is the terror of the "trot line" fisherman.

water, and is quite again to the carlot per can learn, is an inoffensive creature, timid, attending to its own business, except that he is the terror of the "trot line" fisherman.

The "trot-line" of the Western and Southern rivers and lakes is a stout line stretched along the bottom from 100 to 1,000 feet or more in length, with hooks tied to it every yard or so, by a short line properly baited. A logger-head finding one of these lines will often clean it from one end to the other of the bait and most of the hooks, but sometimes he "catches a Tartar" in the shape of a strong hook imbedded in the inner soft parts of his mouth where he cannot break it, and the tackle being of great strength he is made captive. The fisherman, finding him fast on the line, generally proceeds to draw his head up over the gunwale of his "skiif" and chop off with many d—ns his ponderous head, with a hatchet. It is generally mere pastime for a large "logger-head" to "chaw up" the strong steel catfish hooks of the "tot-line" and swallow them, hait and all, whether his internal economy can digest these hooks or not I have been unable to determine. The logger-head like the snapping turtle of the North, can travel briskly on land and makes quite long journeys. When he comes to the surface of the water to breathe he emerges only the tips of his nossnapping-turtle of the North, can travel briskly on land and makes quite long journeys. When he comes to the surface of the water to breathe he emerges only the tips of his nostrils, and one of 200 pounds weight does not show any more of his person than does the common turtle of the size of one's fist when breathing. If they projected the entire head above water when breathing, they would give the placid W ite River a horrible appearance to the stranger, they are so plenty. Their food is c.rtainly, in a great part, animal matter, but they may be like the "caffish," conniverous. Another fish probably peculiar to these Southwestern waters is known to the people as GASPERGOU

GASPERGOD

or drum, and is considered by nearly all a most excellent table fish, and takes first rank as the fresh-water chowder fish of the South. Hallock, in his Gazetteer, is very wrong in giving the "Buffalo-fish" of the West as the gaspergou; fish of the South. Hallock, in his Gazetteer, is very wrong in giving the "Buffalo-iish" of the West as the gaspergou; in fict, if we take the common names the people have given many fish, we get all mixed up. The fish that we know everywhere West and South as buffalo are several species of the cyprinidae (Bubalicthys bubalus), etc., all looking very much alike, and with very nearly the same habits and qualities. But the fish known as the gaspergou or drum of these Southern waters is a clupcid, but I should not say the grunter or drum (Huploianotus grunniens, Rof.) (Corvina oscula, De Kay) of the upper Mississippi waters and the lakes, but a closely allied species. Our tish here runs from five pounds to thirty pounds or more in weight, is always fat, generally very fat, and, like others of this family, feeds mostly on crayfish, which bait it takes readily, and perhaps other shellish.

lat, generally very fat, and, like others of this family, feeds mostly on crayfish, which bait it takes readily, and perhaps other shellish.

The sheepshead, grunter, drum or "whiteperch" of the upper waters, is a dry, bony, tasteless fish, generally poor, with soft mushy flesh. Ours has very firm itesh with few bones. The peculiar three grinding plates, or so-called teeth in the throat of our gaspergou, are not near so large, I think, as those of the Northern grunter or sheepshead of the same size. The two fishes look very much alke, but ours here is much the darker and heavier as to length.

The White River is a peculiar stream and has peculiar life, it being one of the five clear streams of any size flowing into the great "Father of Waters," and a scientific study of its fauna would be very interesting.

We have besides great quantities of the fresh-water soft-shelled turtle, considered by many the equal, if not the superioras an edible animal, of the famed Chesspeake terrapin. If they could be readily captured, they would soon become a great article of commerce.

BYRKE.

Caccker's Blover, Arkansas, July 3.

[The alligator gar is the Litholepis spatula, and differs from the other fresh water gars, which are sometimes miscalled "alligator gar is the Commerce.

'alligator," in having two rows of teeth on the maxillaries, in having a broad alligator-like snoot, and in growing to an enormous size. The "logger-head" turtle we recognize as a beast called "alligator shapper," "alligator furtle," and "big snapper," the Macrochelys lecertina, but have not heard it called "logger-head" before. That name is also applied to a marine turtle. The turtle to which our correspondent refers is very similar in appearance to the Northern snapping turtle, Chelydra serpendina, but is larger and more fierce. It can bite the largest Northern one in two without trouble, and we have had them in confinement and seen them crunch resh water terrapins and eat them as easily as if they had we have had them in confinement and seen them crunch fresh water terrapins and eat them as easily as if they had been peanuts. Concerning the gaspergoo we have been in doubt as to the fish which bore this name. We have thought it Amia eaths or Halpoidonotus grunniens, neither of which are Clupeoids, although the former is so classed by De Kay. We hope for more light on this fish and more notes from our correspondent, who, we can assure Northern readers, does not exaggerate the ferocity of the alligator gar and the big snapping turtle. On the contrary, he has "drawn it mild," for the latter animal is recorded as "perhaps the most feroclous, and, for their size, the strongest of reptiles,"] we have had them in confinement and seen them crunch reptiles,"]

VIVIPAROUS FISHES.—Smithsonian Institution, Washington, D. C., June 27.—Biltor Forest and Stream: The viviparous fish to which you refer in Forest and Stream. The viviparous fish to which you refer in Forest and Stream, June 8, 1882, page 369, is Gambusia patruelis (Baird and Girard) Girard. The species was made known by Baird and Girard in Proc. Acad. Nat. Sci., Phila, 1833, p. 390, under the name Heterandria patruelis. In "Fishes of Mexican Boundary Survey," 1859, p. 72, Girard refers the species to Poey's genus Gambusia and figures the two sexes, pl. 39, figs. 1—4. The genus Gambusia was established in 1851 by Poey in the first volume of "Memorias," p. 382, and the viviparity of the species was pointed out. The Gambusia forwarded to the museum through your office does not differ, so far as 1 can see, from the species found all along the Southern States from Virginia southward. The extent of viviparity among Cyprinodonts is not known.—Tarleton H. Bean. VIVIPAROUS FISHES.—Smithsonian Institution, Washing

FOOD OF THE HUMMING BIRD .- Cleveland, O., July 17. —Editor Forest and Stream: A number of humming birds (Trochilus colubris), attracted by the flowers on my porch, have been in the daily habit of visiting me this summer. Archives of the design at the carry of the visiting me this summer. Not being disturbed, they have nested in the vicinity and become quite as domestic as the house-fly. This afternoon one of them commenced his usual search for food among a one of them commenced his usual search for food among a cluster of geraniums within three feet of my shoulder. From one of the blossoms he startled, with his long beak, a number of minute flies, and almost instantly snapped up four of them, while darting on the wing, in a manuer that would do credit to the most expert "dy-catcher." This is the first time f have witnessed the humming bird taking his insect food in this manner; neither have I seen the fact mentioned by others.—Dr. E. Steilling. [That the food of humming birds consists in part of insects has long been known to ornithologists.]

A LONG-LIVED SEA ANEMONE.—At the Edinburgh Fisheries Exhibition a live sea anemone, Actiniu mesenbryanthenum, was exhibited, which was taken from the east coast of Scotland in 1828, and has ever since been kept in the jar in which land in 1828, and has ever since been kept in the jar in which it was shown. It was at that time thought to be at least seven years old During a period of twenty years it produced 334 young. In 1851, after being unproductive for many years, it gave birth, in a single night, to 240 young, and last February it gave birth to seven more, of which three were exhibited with it. It is kept in sea water, and is feed once a month with half of a live mussel, and on the following day the water is changed.

Game Bag and Gun.

OPEN SEASONS.—See table of open seasons for game and fish in issue of July 20.

NEW YORK DEER SEASON.

There appears to be some misconception about the New York deer season as given in our issue of July 20. We repeat: The season for killing deer extends from August 1 to December 1. Hunting deer with dogs is lawful only from August 15 to November 1; and the use of dogs is forbidden at all times in St. Lawrence county. Killing fawn in spotted coat, unlawful. Killing deer with trap or spring gun, or by crusting, unlawful. Deer in Suffolk and Queens counties protected to 1884.

For Columbia county, in exception to New York woodcock season 488, issue of July 20, read Dutchess county.

A SUMMER'S RAMBLING IN COLORADO.

IN the latter part of May, 188—, I left Chicago for Colorado, via the C. R. I. & P. to Kansas City, thence via the K. P. R. R. to Denver. Great changes had been made at that place since my visit in 1876, and the city was "booming," hotels and boarding-houses full to overflow. Denver is a wonderful city and well worth a visit. It is the best, and really the only point to outlit in for the mountains, in Colorad. ready the only point to other in the moditating in Corado. Here a person has the best opportunities for joining parties, if alone, or gaining information. You are bound to meet some one you have known before in Denver, and it was not many days before I had run across a number of acquaintineet some one you nave known before in Echter, and not many days before I had run across a number of acquaintances; finding two, who like myself, were only waiting for the snow to get out of the mountains before starting in. We were only three of thousands who were "only waiting," for it really seemed as if every man we met was going to the Gunnison, Roaring Fork country, or some other alecte. The town was "full of 'em." At mail time it was amusing to watch the row of humanity waiting for a letter from the East. The post-office clerks were catching it, and no doubt wished the "silver boom" was past. After remaining in Denver nearly three weeks, our party of three started for the Roaring Fork country via Buena Vista and Cottonwood Pass. We left Denver one beautiful morning in June via the Denver and Rio Grande Railroad. The trip from Denver to Pueblo is very pleasant, but there is not wash worth of notice until the train nears Colorado Springs. Cottonwood rass. We left Derver one beauturn morning in June via the Denver and Rio Grande Railhoad. The trip from Denver to Pueblo is very pleasant, but there is not much worthy of notice until the train nears Colorado Springs. Here you have a fine view of the mountains and glimpses of Monument Park; also a good view of old Pike's Peak. From Colorado Springs to Pueblo there is not much of interest, After leaving Pueblo, where connection is made for the East and South, we follow the Arkansas to Cañon City. From this place the ride begins to become interesting. The scency is magnificent, and prising through the Grand Cañon of the Arkansas, it is beyond description. Here the river rushes through a narrow gorge whose walls raise their rugged sides three thousand feet toward the blue sky. The pent up waters, swollen with the melting snow from the great range, dashing, hissing, roaring, struggling through the narrow channel, while just above the foam-crested water passes the train on a slight tressel work of iron, fastened to the solid rocky walls of the cañon. It is well named the Royal Gorge of the Arkansas. The secnery after passing the Gorge is still fine, but seems tame in comparison.

channel, while just above the nonreceived water passes that on a slight tressel work of iron, fastened to the solid rocky walls of the cañon. It is well named the Royal Gorge of the Arkansas. The scenery after passing the Gorge is still fine, but seems tame in comparison.

We were nearing South Arkansas when my attention was called to the setting sun by one of my friends. I have seen many beautiful sunsets, in the mountains, on the plains, on the deep blue waters of our great lakes, but never such a one as this. The train was passing through a valley, and right before us were the white-capped heads of several high peaks—Mount Yale, Mount Harvard and Mount Princeton being among them. On the sides of these mountains fires were raging in the thick timber, the smoke of which partly concealed them from view. The sun in all his glory was just descending behind the mountains, his fiery rays partly obscured by t.e. smoke. The combination of colors was magnificent. Great rays of light would seem to shoot across the sky, only to be caught and reflected with redoubled brilliancy upon the dark mountain sides. Shadows would suddenly light up only to grow still darker. Here would be a caught with a beauty with the set of the selection of colors was the start of the selection ormancy upon the dark mountain sides. Snadows would suddenly light up only to grow still darker. Here would appear a peak crowned with a halo of glory—all the colors of the rainbow forming its crown. There would be another with a reprofession of the same of

with a crown of fire.

As the sun disappeared behind the mountains the little narrow gauge engine putted into South Arkaussis, a place that was to be a great city, but was not. Here we had arranged to stay over night.

As the train pulled out, we shouldered our blankets and

As the train pulled out, we shouldered our blankets and guns and started for a ten which displayed the sign of "Restaurant; meals at all hours." Here we made arrangements for supper, and the privilege of stretching ourselves on the ground at night. One of the party had never slept in a tent, nor on the ground before, and he passed a very unpleasant night, as the tent was pitched where the ground was very uneven, and very much on the sl-pe. After an early breakfast, we were very glad to leave South Arkansas. The

fishing near there is good, especially near Poncho Springs, but we did not try it. W—— had been there the year before, and said he caucht a fine lot of trout. It was not a long ride to Buena Vista. Arriving at the end of a railroad in the West is an event in a person's life to be remembered, for there are not many such places in the world. When we arrived at Buena Vista things were not at their height, as the railroad was rapidly pushing on to Leadville, and the town was beginning to "drop" a little. Still, there was considererable excitement. Every train brought its load of people bound for Leadville, the Gunnison, etc. At night the saloons and dan e-houses were in full blast, and it was a "cold day" that one or more shooting scrapes did not take place. Our freight did not arrive as soon as we expected, and we had several days at our disposal to look around. We tried the trout in the Cottonwood, but the water was too high, the stream too well fished, or we were out of luck, and W— was the only one who managed to catch anything, and he only caught a little one. I voted trout fishing a bore, always thought so, would prefer any day to sit in a boat and catch perch and bass, etc. But how liable we all are to change our minds. I did mine before I left Colorado, as the sequel will show. will show.

Not hearing very encouraging reports from the Gunnison Not nearing very encouraging reports from the Gunnison country, and the snow in the pass being reported very deep, we changed our intentions and hired a freighter to take us to Kokomo via Leadville. Loading all our traps on two wagons, one a trailer as it is called, being tied on to the rear of the other, so that in case of bad hills or places on the road it can be left and hauled up alone. We started one warm afterother, so that in case of bad hills or places on the road it can be left and hauled up alone. We started one warm aftermoon through the dust for Leadville. For mouths all the trailie between Leadville and Deaver and Pueblo, had been done by freighters, and the road was cut up until it was four and five inches deep with dust. When a stage drove past you could hardly see it through the clouds of dust it stirred up. This, added to bad bridges, mud holes, rocky roads and steep bills, made the trip very interesting. And yet over the same roads had been transported millions of dollars' worth of all kinds of merchandise, machinery, and in fact everything that can be conceived of. A person visiting some of the saloons, etc., of Leadville, after passing over the road, and there seeing the mirrors, turniture, glassware, etc., would wonder how any of it ever got through safely. The road, and there seeing the mirrors, turniture, glassware, etc., would wonder how any of it ever got through safely. The freighter is a queer subject—take this one sitting astride of his wheel made, with his "black snake" coiled round his neck—whistling to this mule, swearing at that one, driving his four, six, eight, ten, sometimes fourteen and sixteen mules with one rein and lots of swearing, but still driving them as easily as a person at the East handles one horse. He is dirty and ragged. Freighters never wash while on the road (that is with few exceptions), and a "harder" lot of citizens it is hard to find. The railroad has done away with the freighters on the road to Leadville, and where one could see long trains of heavily loaded wagons moving slowly along, climbing wearily the steep mountains, they now see the little puffling, hissing, steaming narrow gauge engines.

citizens it is hard to find. The railroad has done away with the freighters on the road to Lendville, and where one could see long trains of heavily loaded wagons moving slowly along, climbing wearily the steep mountains, they now see the little puffing, hissing, steaming narrow gauge engines. Still a person can find plenty of freighters in Colorado to-day, if they desire to try the experience of a trup with them. We were about two days in reaching Leadville, thirty-eight miles; that was fair time. We found Leadville undermartial law, it being the time of the labor troubles. While passing on one of the streets I saw a man attempt to escape from the jail yard, which was nothing but a large corral or yard inclosed with a high board fence. The first intimation I had of the occurrence was bearing the sound of two shots in quick succession, and then seeing a man running round the corner, followed by another with his pistol covering him and shouting "Stop him!" As I was in direct range, I thought it would be safer behind something; so I retreated behind an iron pillar in a doorway and awaited further developments. The street was full of armed men in a moment, and revolvers, guns, swords, etc., were fourished in all directions. Nothing came of the affair, however, and the poor devil was thrust back into the corral and people went about their business. Leadville is a wonderful city among the many wonderful cities of the West, and a person can spend a week there very pleasantly, visiting the various smelters and other objects of interest. Only a short distance from Leadville by wagon is Twin Lakes, where go.d trout fishing, and formerly hunting, could be had, but it is becoming too much of a resort for the population of the city for game to abound. The summer before W— had killed, two deer while camping there.

We did not make a long stay in Leadville, as we concluded it was not healthy enough for us. Pneumonia was taking off a good muny, and Wis lungs were weak. We had to leave him as it was, to follow us by stage. Fro antitude too much for us, and as it showed about every day (June and July), we thought there might be pleasanter spots. From Kokomo there is a good road into the Mid le Park, and we planned to go over on the Grand River, where there is fine fishing ad plenty of game. A party went down from Kokomo while we were there and brought back glowing

Middle Park is a fine place for the tourist and sportsman, Middle Park is a fine place for the tourist and sportsman, and though there are more direct ways of reaching it from Denver than via Leadville, etc., a person who has time and wishes to see the country can go that way and out the other, or vice versa, thus seeing a large section of the country and many interesting points. By following this narrative one can understand the former route, that is via Colorado Springs, South Park, Cottonwood Lakes, Twin Lakes, Leadville, Kokomo, and thence to the Park. The latter route not being part of my journeyings, I will mention here, viz.: Denver via Colorado Central R. R. (if by rail) to George-

town, thence to Hot Springs in the Pork, then where fancy leads. We had planned visiting Middle Park, but W—received a telegram calling him to Denver, so we had to clange our intentions. Before leaving Kokomo, we had the good or bad fortune, as one pleases, to see a specimen of frontier law. A man was shot by a desperado, and a mob lynched the shooter. It was done quickly and with very little noise, but it was well done; and though I am a law and order man, I think it was a good piece of work for Kokomo. for it had a very quieting effect on the ruilian element of the place.

order man, I think it was a good piece of work for Kokomo, for it had a very quieting effect on the ruilian element of the place.

On our return to Leadville my two companions left me and returned, one to Denver, the other to Colorado Springs, leaving me once more adrift and open for engagement. It was not long before I found an old friend, for while passing up the street I saw an individual sitting on a keg in front of a feed store whom I thought looked familiar as far as face went, but otherwise not. An old pair of canvaspants, slouch hat, high boots and blue shirt made up an ensemble that did not resemble my nobby friend Al. B., whom I had met in Denver in 1876, just from a funcy academy in the East; but it was Al and right glad he seemed to see me. He had been looking for some "Claims" up on the Arkansas, and was going to Cottonwood, thence to Denver, had a mule team, etc. Here was my chance, so it was soon arranged that I was to go with him. Al. had a friend, Charley P., who had just returned from Ruby City, who was also going with him. We started one lovely Sunday morning from Leadville and made good time considering the roads, but Al. wanted to be easy on the mules, so we camped outside of Buena Vista that night, and drove into fown the next morning. How changed since I had passed through the place and over the road only a few weeks before. Where train after train of heavily londed wagons had moved slowly along, there was silence and solitude. The town was quiet and had an air of deeay. The salons, that chief indicator of the prosperity of a Western town, were quiet and deserted. Restaurants and hotels had closed doors and curtained windows; truly the glory of Buena Vista had departed. Only stopping long enough to buy some hay and grain for the mules, we started for Cottonwood Lake.

After getting fairly into the mountains it commenced to

buy some hay and grain for the mules, we started for Cotton-wood Lake.

After getting fairly into the mountains it commenced to rain, as it does about every day at that season of the year, and when we arrived at the lake we found things decidedly wet. However, we managed to cook our supper and to fix a pretty comfortable bed under an old roof, which would keep the rain off partly. The next day was unpleasant, but Charley and I concluded we would try the trout in the lake, so we borrowed a boat and float respectively, and sailed out on the deep. Cottonwood Lake is a beautiful sheet of water, situated in the heart of the mountains, whose high peaks surround it on all sides. It is a very romantic spot, and many parties visit it and camp near its shores for weeks. It is probably half a mile long, by a quarter or more broad. The water is very cold and clear, like most mountain lakes, and in some places no bottom has been found. It is filled with trout, and at certain times excellent sport can be had. Besides the fishing, there are any quantity of "mountain raspberries" near, and the ladies make that quite a point. On the high peaks near by, there are deer and sheep, but it is a good hunter that gets a shot, except by chance, in the summer season.

Charley and I pulled our heat better the content of the came in and tried our heat better the content of the came in and tried our heat better the content of the man and tried our heat better the content of the man and tried our heat better the content of the man and tried our heat better the man and the stream came in and tried our heat better the content of the man and tried our heat better the man and tried our heat better the man and the stream came in and tried our heat better the man and tried our heat better the man and the content of the man and tried our heat better the man and tried our heat better the man and tried our heat better the man and tried our heat better the man and tried our heat better the man and the content of the man and the content of the man and

but it is a good hunter that gets a shot, except by chance, in the summer season.

Charley and I pulled across the lake to where a little stream came in and tried our luck, both with fly and with the festive "hopper," but only succeeded in getting one poor trout. We could see them in the clear water beneath our craft, but they would not rise. It was evidently an off time, for though we stayed three days we did not succeed in getting a good mess. We tried them at all times—when it was clear, when it poured rain, early in the morning and in the evening. One evening in particular, it had rained in the afternoon, and just before sunset it cleared off nicely. The surface of the lake was like glass, and reflected on its mirror-like bosom were the high peaks that surround it. Just as the sum was casting its last rays over the mountain tops, we sailed forth, on mischief bent. But no luck was ours. We did manage to hook two or three fine trout, but that only made the affair more aggravating, as the waters seemed to be alive with them. They would jump up from the water all round us and take in the grasshoppers which hay floating on the surface, but disdained to take in ours. There may have been several causes for the trout not bitting, but as I am not authority on the subject, I will not venture to state more than one cause, and I imagined that was sufficient. The lake was corrected with grasshoppers which had been blown onto the water by the wind, and the trout were completely glutted with food. We gave the fishing up and the next days started down

ered with grasshoppers which had been blown onto the water by the wind, and the trout were completely glutted with food. We gave the fishing up and the next day started down for below, It is not always thus, for at times a person can catch all the trout he wishes for at Cottonwood Lake.

On our way to Buena Vista we visited Cottonwood Springs, which have quite a reputation for their curative qualities. It is a pleasant spot, and there is a good hotel in connection with the springs. We tried a bath at the springs, but I must confess I did not see anything remarkable about quanties. It is a pleasant spot, and there is a good noted in connection with the springs. We tried a bath at the springs, but I must confess I did not see anything remarkable about the water. It was cleansing, and that seemed to be the extent of its properties.

On our arrival at Buena Vista, Al. received a letter from

On our arrival at Buena Vista, Al. received a letter from his mother, saying that she would meet him there and take a trip across South Park with us. So that night we camped in town, and I slept in one wagon, while the boys climbed into a large freight wagon which stood near us, and, though it rained, managed to survive. Mrs. B—— came in on the evening train, and was all ready to start in the morning. Here was an example of what can be done by a lady in camping out, and a delicate one, too. Mrs. B—— was from the far East, and had come to Colorado first on account of her lusband's health. They had waited too long, however, and he did not recover. It was his wish that Al. should have a chance to grow strong and healthy; so he impressed it upon Mrs. B—— that she would not delay in his case, but go to Colorado and stay until satisfied that her son's health was thoroughly established. They were persons of means, and could well afford to spend a few years in the West. When Mrs. B—— joined us she did not look as if she was tit for a week's journey through the mountains in a rough box wagon, as she had not been well and was suffering from neuraligm; however, she had made up her mind it would do neuralgia; however, she had made up her mind it would do her good, and it did.

her good, and it did.

Leaving Buena Vista we passed over the divide into South Park, from South Park into Summit and. Hayden's Park. The ride through the parks was charming; and though we were troubled some with the rain, it being the rainy season, we did not suffer. The nights were very cold, as we were at a high altitude, and our blankets would be white with frost when we would awake in the mornings. Mrs. B. slept in the wagon, while we boys lay on the ground. We had a tent, but did not pitch it. Away from the beaten track

through the parks a person can find game, but it is not as plenty as in the Middle and North parks, and I would not advise any one to go there for hunting purposes alone, especially in the summer; but for a beautiful trip I commend a ride through the parks mentioned.

Our route took us through Ute Pass and down through the caflon, past the falls, into Manifou. Here we stopped for a short time and visited the points of interest, and they are many here. Manifou is a lovely spot for those who wish to live more as they do at home, and do not care to rough it. The altitude is not great, the air is fine, and for the invalid it is a point much superior to any other I know of in Colorado. I of course include Colorado Springs with Manitou, as they are only a short distance apart. The natural springs of iron, soda, etc., at Manitou are real; no imagination needed there.

From Colorado Springs we returned to Denver to prepare for our trip to Estes Park.

Prairie Doo.

DETROIT, Mich, 1882.

PRAIRIE CHICKEN PROSPECTS.

In your last issue you ask your Western readers to report the prairie chicken prospects. They never were better in this part of the West, viz., in the South Platte country, Nebraska. It was generally remarked by all our local sportsmen that there were more old chickens last spring than they had seen in many years. The season has been favorable, and the young ones seem to be coming on first rate. The game laws have been well observed in this vicinity. Fairmont, Nebraska.

In your last issue you request "Western readers" to in-In your last issue you request "Western readers" to inform you concerning the "chicken crop," which, I am pleased to say, are doing well. Yesterday in a ride of seven miles, I flushed at least fifteen coveys, and this I consider a large number upon taking into consideration the fact that I was not hunting, and my horse "flushed" them all. Yes, I can candidly say chickens are over-abundant this season in this section. The law, however, is very bad. Hunters here will not wait until Sept. I. They willingly submitted to Aug. 15, but when they pushed Sept. 1, 'twas too much. Will guarantee more chickens will be brought to bag by local sportsmen within the next month, than between Sept. 1 and Jan. 1. Have at this early day well-authenticated accounts of hunters who have been out after half-fledged birds, and returned with from twenty to sixty per gun. Alaccounts of hunters who have been out after half-fledged birds, and returned with from twenty to sixty per gun. Although I would he state to assure good shooting here after Sept. I, for the simple reason that the havoe among them (the chickens) will commence a month early, am positive I could bring to bag within five miles of town one hundred birds—at this writing—a day. Complimenting you upon your success in making the FOREST AND STREAM grow more interesting week after week, I remain,

Austrix, Minn., July 19. interesting week after Austin, Minn., July 19.

OLD EAGLE-HEAD'S SEPULCHRE.

OLD EAGLE-HEAD'S SEPULCHRE.

A T last after an absence of many months I am back here on the upper Marias. Here I am in the same old room; my guns are again resting on the familiar hooks of dried deer-legs, and my blankets are spread on the same shaky bedstead as of yore. Still I am not happy. My heart is now set on speuding the summer in the Rockies, and as I take my field-glass every day and see the great banks of snow covering them nearly to the base, I grow impatient and won-der if the sun isn't losing its power, for although more than a month has elapsed since I first looked at those awful snow banks, I cannot see that they have diminished at all in size. But the river flowing so swiftly by the door says I am mistaken. Its waters are steadily rising, telling of many an ilquified snowdritt gliding down to the sea. "Have patience," it calls out as with a gurgle it sweeps around the sharp cut bank and dashes over the ford, and with a sigh half of impatience and half of relief I turn away and busy myself as best I can.

Yesterday I saddled a steady old Indian horse and rode up

the cash out as with a gaiget is weep; another he sharp at bank and dashes over the ford, and with a sigh half of impatience and helf of relief I turn away and busy myself as best I can.

Yesterday I saddled a steady old Indian horse and rode up the "Dry Fork," which by the way hasn't been dry for the last six years. Took both my guns, strapping the Winchester to my saddle and carrying the fowling-piece in my hands. After going about a mile I heard the unmistakable sound of a rattlesnake and looked around just in time to see a monster one disappear in its hole. Having nothing better to do I picketed the horse at a distance and then lay down near the hole and waited for the snake to appear. Ere long he poked his head out and not seeing me, for I was hid behind a bunch of rye grass, he slowly crawled forth and coiled himself up for a comfortable doze in the warm sunshine. I rudely disturbed him with a charge of No. 6 which made him writhe and rattle furiously, blew his head to atoms with the other barrel and started on my way rejoicing.

This Dry Fork is a great resting place for ducks, and I rode along its banks in hope of bagging a few mallards or teal. I am about to make a confession. I fear I cannot class myself as one of the sporting fraternity, as a "true sportsman," for I am a pot-hunter. Back at the fort our meat larder was empty, and had been so for several days. It was with the mercenary object of filling the empty pot that I started out on this day's hunt. I am worse than a pot-hunter. I am a very fiend of destruction! for at this time of year the ducks are nesting, and in every female duck I killed I of course destroyed a prospective brood of ducklings, and a "true sportsman" wouldu't do such a thing as that. A hungry stomach is not conducive to philanthropy, I thought, as I bagged a fine drake mallard, and, a little later, its mate, which was nesting under a bunch of wilhows. Following up the creek a mile or two further, I killed six mormallards and two teal.

Up here, near the bank of the river, sta

In the still, calm night, the lawn, with its mother, would gambol on the green sward below. Over there, on the point of the hill, the wolves would sit and howl as in days of yore. Ah! how pleasant to be buried in the midst of familiar scenes. No cold weight of earth and metal imprisons old Eagle-head. Here he sleeps in sight of the scenes of his youth, and here he shall sleep until, with the coming years, the tree decays and falls to the ground and his dust is lost in the earth.

Although it is ten or twelve years since the old man died,

the scaffold and wrappings are in a good state of preservation. I climbed the tree to get a better view. Between two large branches a scaffold had been built of stout large poles, and on it the body had been securely fastened with broad thongs of buffalo hide. The head was pillowed on several medicine bags, the wrappings of robes, blankets and dressed skins had been partially torn open by the eagles or hawks and exposed to view the bow and arrows, shield and other im elements which the old man is now supposed to be using in the spirit land. I had some thought of taking these weapons, but just then a passing breeze caused the torn skins to flap and flutter, and hastily descending the tree I mounted the horse and rode away.

I am about to give you conclusive evidence that I am a pot-hunter of the despest dye. A little further up the creek I saw an antelope, picketed the horse and managed to crawl up within easy range. Saw it was a doe, and knew that if I killed it the poor little fawn cached somewhere on the prairie would die; shot her, however, and tied the carcass on the saddle with great satisfaction, and as I thought of the savory stews and roasts the meat would make, returned home with sulspeed. Verily I am a true not hunter for Leeck to fill

saddle with great satisfaction, and as I thought of the savory stews and roasts the meat would make, returned home with all speed. Verily I am a true pot-hunter, for I seek to fill the pot with meat, and some of you who, on a favorite stand bag a hundred or so of water fowl in a duy, or on the seashore mow down long swaths of poor little snipe, or on a hot summer day catch basket after basketful of trout are "true sportsmen," because you hunt and fish in season and only for sport. And then you wonder why the grouse are decreasing, and why the ducks are not so plenty as they used to be, and lay it all to the pot-hunter. Next fall when you go out on your annual hunts don't try to kill all the grouse in the woods in one day. Dou't kill a wagon load of water fowl just because you can. Be satisfied with moderate bags, and in a few years you will see the wisdom thereof. And now, having said enough to be "cussed" by all hands I will close. AP-PE-KUN-NY

Close. Upper Marias River, M. T., June 3, 1882.

OUTFITTING FOR THE DUCKS.

OUTFITTING FOR THE DUCKS.

"O duck shooting with me? Well, yes, I don't know that I will ever have a better time than the present. I am sorry we have not two heavy guns, but you will find that the sixteen-gauge will do nearly the execution of the ten, and for quick shots at the teal you will find it even better. Therefore, load about 300 shells for each gun; put 4½ drams of moderately coarse powder in the No. 10 shells, and 3 drams of one grade finer in the sixteen-gauge; 2 pink-edged wads and 1½ and ½ oz., respectively, of No. 5 shot, and a Baldwin or cardboard wad over these. As the weather bids fair to be clear, use paper shells, but take the metallic ones along, for should it rain hard the paper shells are a nuisance; the paper will stick in the chamber of the barrels, than which I know of nothing more vexatious.
"We will take each a boat so as to be able to carry a big flock of decoys, say fifty to one hundred. You had better look them over to-day and see that all have anchors, and line that is not rotted nor frayed; on such put new lines of the best cord. See that we have a small cup and bailing sponge in

look them over to-day and see that in many anomous, that is not rotted nor frayed; on such put new lines of the best cord. See that we have a small cup and bailing sponge in the boats, and you may put in my sailing umbrella; if this wind continues I can sail all the way back up the river, which is a great relief to a tired man.

"Oh! you want an umbrella? I thought you considered them a little old fogyish?"

"Well, get a good strong thirty-six-inch umbrella, such as your grandfather used to carry Attach a guy or stay of heavy cord from the tip of each rib to the sliding thimble on the handle; this will prevent it from ever turning wrong side out. Get one with a 'crook' handle, as you will find it handy to hook on to the thwart when sailing. If the wind be directly aft, the umbrella will almost take care of itself, while you steer the skiff with quartering winds. You must be fastenings of cord as your ingenuity will suggest. My side out. Get one with a 'crook' handle, as you will find it handy to hook on to the thwart when sailing. If the wind be directly aft, the umbrells will almost take care of itself, while you steer the skiff with quartering winds. You must use fastenings of eord as your ingenuity will suggest. My usual way, however, is to hook the umbrella handle on the seat or a cord stretched across the boat, take my seat in the stern, and with my setting pole stuck in among the braces, guide the boat by rolling the umbrella from side to side. You must rig some wire loops close under the gunwale, in which to carry it when not in use. There are other and obvious uses that you will learn when you have been caught in a sudden rain squall and have forgotten to take your rubber coat; or under a boiling sun in midday, when no ducks are flying. You will be surprised at the amount of 'sail area' and speed to be got out of one of these large umbrellas, and one has the grim satisfaction of getting some return from the 'pesky' wind that he must pull against.

"Again, if we are going together we must provide ourselves with another ammunition pail. Get a good medium-sized cedar or pine pail, with three brass hoops, put a hinged cover on it which you may upholster with curled hair, covered with drab-colored glazzd cloth, water-proof. Thoroughly pint the pail, same color, or you may have a green-coored one for September shooting. Inside the pail you may put partitions of thin wood set perpendicularly, or you may put partitions of thin wood set perpendicularly, or you may put of the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail where they will be kept dry and free from the pail wher

but true) as there is no process of swelling and shrinking as in a water pail as ordinarily used.

"Also get a small-sized sickle with which to cut canes and flags to make the blinds, and, let me tell you right here, when you go on a point to shoot, be careful about tramping down the cane. Go well back in the high cane and with your sickle, cut a large armful, take plenty of time to blind your boat as perfectly as possible, sticking a little handful of canes into the mud every six or eight inches apart on all exposed sides of your boat, bending the tops down at a point nearly breast high. If you rely on your pocket knife for cutting canes you will be likely to cut the job short and try to satisfy yourself with a half-built blind which is sometimes worse than none, as it attracts the ducks' attention by its unnatural and straggling appearance.

times worse than none, as it attracts the ducks' attention by its unnatural and straggling appearance.

"Previous to this, of course, you have set out your decoys, and let me caution you about setting them too far out, which is a common fault with beginners.

"When we get to the marsh I will give you some points about the placing of your decoys, relative to the sun and the direction of the wind, etc.; but, lest I forget it, let me say right here, that as a general rule, ducks prefer to fly against

the wind, and are therefore most likely to congregate at that

side of the marsh from whence the wind is blowing."

I hope these remarks may be of use to other amateurs as they were to me.

CLEYPLAND, O.

ONTARIO GAME INTERESTS.

THERE has been a growing dissatisfaction in this country with the way in which we are being imposed upon by the market shooters and others from "the States." Perhaps I cannot give you a better insight into just how we look at these things, than by quoting for your benefit an editorial article in yesterday's Free Press of this city, which is as follower.

I cannot give you a better insight into just how we look at these things, than by quoting for your benefit an editorial article in yesterday's Free Press of this city, which is as follows:

"Sporting men in the West feel hard over what they consider the unfair tactics of a set of strangers who come here to shoot over our best grounds for the pot rather than for sport. Just as in the Ottawa district deer are slaughtered each year for exportation to the States, in the west great numbers of quall are expressed to American cities on pretence of providing the railway dining cars. This sort of thing is strongly complained of by the gunning fraternity, who see the fruits of their efforts for the protection of the best game by observing the breeding season, borne off by American potmen who make a business of shooting at so much a brace. One party of sixteen Americans not long ago shot over the line of the Canada Southern Railway, and another party of eight soon followed. The result was a general cleaning out of the birds. These parties are said to pay no attention to the game laws, always treating Canadian ground as free common. In the guise of genutine sportsmen they make havoe with the farmer's fence and crops, in their haste to kill off every bevy; and oftimes the farmer directs his fury against the members of the legitimate sporting clubs of this country, whereas these gentlemen give him but little trouble, as they go in more for exercise and to see the dogs work than for the money value of the bag. When American slayers clean out the country to their entire satisfaction, they pack the quali in barrels, with a layer of squirrel on the top and bottom. The frisky squirrel being only reckoned as vermin, passes out without attracting any attention. This is one way of evading official scrutiny. A check to this kind of thing would be found in making squirrels non-exportable the same as quail, grouse, and wood-rock.

"Owing to the way in which the farmers have been co-operating with the Game Protective Society, the game r

city in these matters. In some of the States the laws concerning game are very stringent, so much so, that more than one or two braces of birds are not allowed to be sent from one State to another. Why then should Canadian fields and woods be periodically raided upon and stripped in the way and for the purpose complained of? Our friends over the lines not only get our birds, but slaughter the fish in our streams wantonly, as many think. The old Saugeen River has been stripped of trout by the Waltons of New York State—all first-rate fellows, no doubt, but who are well enough satisfied with the one-sided arrangement. The Nipiegon on Lake Superior has been fished out also by tourists mainly from Buffalo and Cleveland. Barrels upon barrels of the best fish are caught Oleveland. Barrels upon barrels of the best fish are caught and thrown aside to rot. Why should this country continue to allow itself to be regarded in this way, as a splendid field for free sport, often wanton or mercenary? Is it not time to let these parties know that 'Canucks' are not thus to be imposed upon? For all they do or care to prevent, both our fields and rivers would soon be despoiled of everything worth having "

our fields and rivers would aware, we have a live game so-worth having."

As your readers are well aware, we have a live game so-ciety here; and it is probable that through their efforts some action may be taken looking to a stringent non-export law that will effectually break up the trouble complained of.

Toppon. Ontario, July 14, 1882.

Anser Canadensis.

The Philadelphia Poachers.—Fourth Lake, Fulton Chain, N. Y.—By the time the wheels of justice roll this case out, it will make venison look like rather an expensive luxury to the denizens of the Quaker City. The members of this party are ladies and gentlemen, and it seems harsh to apply the law so vigorously to such persons, and yet, if people of their intelligence and culture will knowingly go into another State and viola'e the game laws, they must expect, when caught, to be dealt with the same as people of tower standing in society. And a few such cases will serve to convince all parties that these same laws must be observed and respected in this part of the State. Fred Hess and Chris Goodsell, guides from here, accompanied Mr. Dodge on this raid, and did excellent service. In fact, he told the writer that he felt under many obligations to all the guides on this side for their willingness to assist him, and generous on this side for their willingness to assist him, and generous offers of camps, boat supplies, etc. Our guides here are determined to suppress all "crooked" work this season, which is wise on their part, as it tends to perpetuate their business, and make this beautiful country a desirable place for sportsmen to visit. We hope that the propagation and protection of fish and game may continue and prove the means of our grandchildren enjoying fishing and hunting equal to what we are having now.—Fish Hawk.

STOOL PIGEONS.—Baltimore, Md., July, 1882.—I have been keeping my hand in during the off-season by practice at the wild pigeons, not sprung from a trap, but decoyed within range by effigies set up on the fence rails.—M.

THE BEARS AGAIN.

THE BEARS 'AGAIN.

HOW can the Forest and Stream ever atone for bringing me across the path of 'Nessmuk''! I am a peaceloving Puritan, fond of the chase but not of war; anxious to live a retired life and die a natural death, unscratched by bears or bear-killers. My every-day business and associations are such that I am daily or hourly entertained with fish stories and shooting adventures, and however thrilling (that's a safe word) they may be set forth, I never allow myself to betray signs of incredulity, for I have not the physical courage to face a disputed trout-catcher, much less a torn and bloody bear-killer; and I realized how utterly 'premature' was my own modest and thoughtless "query" when I saw its horrible proximity to that array of five bear stories by 'Nessmuk.' I was speechless. I wish to apologize, or something, and I hasten to say: My dear 'Nessmuk,' since being made aware of the powerful influences that surround you, I am not prepared to dispute the entire truthfulness and accuracy of any of the five stories.

But the story to which he refers in King II., chapter two, verses twenty-three and twenty-four, was not fresh in my mind when I 'queried.' I presume I heard of it at the time it happened, and if all the attending circumstances were noted, a la Milliken, perhaps I believed it when first told, but that was some time ago, if my memory serves me, and until I am faced by a man who was three, swears to the truth of it, and shows his hatchet, I shall allow myself to be a little skeptical. The fact is, for two young hunters to kill forty-two bears in one day is a good many bears. I know something about bear killing myself; they are hard to kill. "That reminds me," I once had an adventure with a bear myself. Not no! I beg pardon, I can't tell it ever again; the circumstances of the past few weeks have made me form new resolutions.

Beerox, July 15, 1882.

lutions. Beston, July 15, 1882.

The dimensions given in the following report are somewhat indefinite, but doubtless the bear was a big one: "Mr. Corliss, of Wade plantation, Me., an old gentleman seventy-five years of age, hunted down and shot a bear recently in Cories, of Wade pinnadon, Me., an old gentleman seventy-riev years of age, hunted down and shot a bear recently in Perham, whose skin measured seven and a half feet from snout to tail, six and a half feet across the shoulders and hips, and five and a half feet across the narrowest part, and whose careass was larger than a good-sized two-year-old heifer. Mr. Corliss has hunted bears ever since he was sev-enteen years of age, and has killed over a hundred."

And is this a true bear story? We find it in the Rutland, Vt., Herald, July 14: "The village of Pownal was thrown into a state of excitement on Wednesday by the app arance Vt., Hevald, July 14: "The village of Pownal was thrown into a state of excitement on Wednesday by the app arance of a huge black bear on the streets. At first it was sought to drive the animal away with dogs, but for a considerable time the bear was monarch of all he surveyed. Finally, after smelling about the village to his heart's content, he moved on up the railroad track in the direction of North Pownal. At this juncture one Brown appeared upon the scene, armed and equipped to do battle. The first intimation that the bear had of the appearance of this new enemy was a bullet whistling about his ears. The bear turned upon Brown but the latter sought cover. When the bear reached the railroad bridge, midway between Pownal and North Pownal, he faced about and stood upon his haunches. But Brown had no inclination to tackle the bear at close quarters. Bracing himself alongside a telegraph pole he took aim and pulled the trigger. The ball took effect in a vital portion of the bear's anatomy. Brown had killed the bear, and the news of his victory soon spread to both villages. The body of the dead bear was carried in triumph through the streets of the village, but in the midst of the general rejoicing two Italians arrived upon the scene and, after discovering the cause of the commotion, broke out in the most terrible tirade of blasphemy ever heard in the valley of the Hoosac. Explanations followed, when it was learned that the bear was their property, and that they were traveling about the country exhibiting him."

ARRANSAN NEEDS A LAW.—Little Rock, Ark., July 15.

—Editor Forest and Stream: As a constant reader of your valuable journal I am very much interested in your efforts to preserve the game of the country. I am one of the many who possess a dog and gun, and like to hunt a little for recration. We have no game law. We have tried faithfully to pass one, but have never been able to accomplish anything. The result of this is, that pot-hunters are destroying all the fish and game. I will give you a few instances. Last June a friend and myself visited a lake above here and had magnificent sport with the bass and pike. The weather was warm and dry all summer, and the lake ell to an unusual level. Some parties placed nets in there and caught all the fish in the lake. They scarcely left silversides there. In Saline River the shallows are all filled with traps and the river is depopulated. It is the same way with game. A few years ago, prairic chickens were very abundant on Grand Prairic. But they are killed all the year round, in season and out. Last season a friend and I went out with good dogs, and after going twenty miles from the nearest season and out. Last season a friend and I went out with good dogs, and after going twenty miles from the nearest railway station, hunted two days and killed nine chickens. I am told that they even gather the eggs for sale. I know they kill the hens in the spring. I wish you success in your efforts. We will try the Legislature again this winter, and if we are fortunate enough to get a law, we will try and have it enforced in this county at least.—AMATEUR SPORTS-MAN

MAN.

Whitestone Gun Club.—The first annual meeting of this club was held at Whitestone, L. I., Friday evening, the 7th. The officers and members have good cause to be congratulated, as the club has lived and thrived—and more than that, proved a success—a success, perhaps, far above the fondest hopes of its originators. One of the chief objects has been to enforce the State game laws, but thanks to this law-abiding community no infractions of the law have come under their notice. The club will, however, continue to exercise due vigilance in this respect. The following officers were elected for the ensuing year: A. C. Montgomery, President; T. A. Wilmerding, Vice-President; A. C. Wilmerding, Secretary, H. De Witt Smith, Treasurer. Executive Committe—Eugene Rubino H. De Witt Smith, A. C. Wilmerding, Chas. Tatham, C. H. Smonds

Massachusetts.-Taunton, Mass., July 15, 1882.-Your correspondent passed over several woodcock grounds yesterday. The first two places I visited the brooks were all dried up, and the woodcock had gone. There had been some at these grounds a short time before, for I found brings in the dampest spots. At the next place, there was a little water, and I found quite a number of woodcock, the young fully fledged. If we do not have rain before long, woodcock shooting in August at this place will be poor. I flushed in a short time quite a number of grouse, so I think we may expect some excellent sport with this noble bird the coming fall. My brother found a quail's nest to-day with eighteen eggs in it. Is not this rather late for quail?—J. C. C. [The first nest may have been broken up.]

Camp Hire Hlickerings.

"That reminds me."

"That reminds me."

Editor Forest and Stream:

For the comfort of your New Mexican correspondent, I will say that the story which he sends you, and is published by you in your issue of the 18th inst., does "make Major J. Verity hang his head" for very shame that man will tell such unreasonable tales.

It is generally considered the hunter's and angler's privilege to somewhat chilarge their exploits in the narration, though it has always seemed to me that they should hold quite as strictly to the absolute facts, as should any writer of natural history, and every accurate account of experiences in the field is in some sort a contribution to that science. Yet, allowing them all reasonable latitude, their stories should be consistent. If I were going to tell a lie, which the Lord forbid, it should have the semblance and the possibility of truth. I would not insult my audence with such an absurdity as putting a ferocious beast and his natural prey in such comfortable proximity that my one bullet should kill them both. I do not consider the elk, deer, or whatever he was, a remarkably large one, but he had no business there. The story in question reminds me of that told by a boaster of his having killed a deer with his scythe while he was going out to mow, and when asked how it happened that he could get near enough to so wary and flect an animal to so kill it, replied that the deer was stuck fast in a snowbank! In a forthcoming chapter of my unremarkable adventures I shall tell how I once got more than two large animals of different species by one timely delivered shot, and I will vouch for its being as true as any story I have ever told, which, I think, is sufficient guaranty of veracity. Yours, ever for the truth.

JOSEPH VERITY, U. S. H. M.

OPEN SEASONS.—See table of open seasons for game and fish in issue of July 20.

I would you were a brother of the angle; for a companion that is cheerful, and free from swearing and scurrilous discourse, is worth gold. I love such mirth as does not make friends ashamed to look good. Tove such mirth as does not make friends ashamed to look upon one another next morning, nor men that cannot well bear it to repent the money they spend when they be warmed with drink, and take this for a rule, you may pick out such times and such companies that you may make yourselves merrier for a l'tile than a great deal of money, for "it is the company, and not the charge, that makes he feast," and such a companion you prove I thank you for it,—Izaak Walton.

TROUT FLIES DICTATED BY RELIGION AND MUSIC.

TROUT FLIES DICTATED BY RELIGION

AND MUSIC.

THE construction of tro't flies has long been a subject of argument and discussion between fly-fishermen, one side reasoning, with a good show of being right, that an exact imitation of nature was the most likely to take trout (of cou. se with the same amount of skill in using them), the other side claiming that any monstrons combination of fur and feather, the like of which never was seen in the water or out of it, was the most killing. There are few rules without an exception, and both sides make a good showing when arguing from an experience with single fish, and not on a general average. There is no accounting for what an individual trout may do, any more than there is what an individual trout may do, any more than there is what an individual twoman may do. Trout sometimes take the fly under very strange and incomprehensible circumstances. I will relate two instances by way of illustration.

I was camping at Setting Pole, and had Cort row me to the side of the river opposite the camp. While fishing there, a yeung man and his guide came to the camp and commenced fishing in front, with bait, from a large, flat rock. Cort looked up at what he considered an intrusion, much as one dog might look if he thought another dog would take his bone. The old-time guides were not without ideas of etiquette. The young man soon caught a large trout, but in pulling him out with needless force, broke the line, the trout falling on the rock. The man threw himself flat upon the rock in his endeavor to stop the fish from regaining the water, the fall resulting only in the man seriously hurting his hand. The fish escaped. Cort watched the whole scene without moving a muscle until he saw the man's misfortune, when he laughed heartily, but without uttering a sound. The man departed, and we recrossed the river. I cast my flies from the rock, and took the trout with the hook and line in his mouth.

Another time I was sitting in my room watching the shadow slowly cover the river, waiting f

lowed to grow. Hence the trout were always kept on half rations, and welcomed with joy anything thrown at them, be it an ibis-fly or a piece of a guide's shirt. Now when the trout are few, the shiners, etc., have increased so that any lazy trout can get a good meal as often as he likes without leaving his hole. A well-fed fish, like a well-fed person, can afford to be more nice in selection than a starving one.

But I am wandering from the idea I had in view when I commenced writing, which was that with the exception of a few standard makes, like, for instance, the May-fly, Coachman, Romeyn, etc., the style and coloring of files as made and sold, is governed not by what the trout like, but by national music, and national religion. He hast being the most powerful, governing the former. In this country we have no national music nor national religion. Neither, as a rule, have we native fly makers. They are either Scotch or Irish. The fish, waters and climate are not materially different in the two countries in which they learn the art of fly making, but the men and their habits of thought are as different as possible. They leave the impression of their thoughts on their work.

The Scotchman has the most depressing of all religions; has very little expectation, or hope of his final salvation. If he sings at all at his work, which is doubtful, he chooses the saddest of all songs—

saddest of all songs—

"When Jamie had been gone a twelvemonth and a day, My Fether brak his arm and our cow was stole away My Mither taken sick and Jamie on the sea. And old Robin Gray he came courting me—

My Fether argued, sair, my Mither dinna speak, But she looked in my face 'til I thought my heart would break, She gie him my hand, my heart was on the sea, And old Robin Gray he came a gudeman to me."

Who with such sad thoughts and sad music could make

Who with such sad thoughts and sad music could make a bright gay fly (unless working from a model) that would skip over the rippling waters like a thing of life.

The Irish fly maker, on the contrary, takes no thought of the morrow. His religion sits lightly upon him and is not depressing. If he sins, he confesses the same, and is forgiven. He has then no responsibility of the past or fear of the future. He goes to his work with cheerfulness, combines the bright colors with an imagination not weighted by the doubt of his "election." In every bright feather he sees a possible trout he expects to take next Sunday after an early mass. He sometimes takes a little whisky with a slight aroma of peat smoke in it. If he sings, it is—

"I've a wife to wed, and shure I am willing to take her, But there she lies in the bed and the devil himself can't wake her, Don't say nay, charming Judy Flanigan, Don't say nay, you love Barney Brannigan."

Don't say may, so love Barney Braunigan."

In the two songs, if you know the music, you can see the two schools of fly making. Try the former, they are proper, conventional, each adapted to the various months of the year, and with them you will take a few small trout. When your arm aches with fruitless casting, if you are beside some deep pool where there should be large trout and you would have a great joy the memory of which would last you even to the time when you can fish no more, sit down, light your pipe, smoke it most out, then look over your book until you find a perfect nightmare of colors combined on one hook made by the man who cracked with his buckthorn stick at the bulge in the tent, and when told that that was his father's head, said he "couldn't help it, the chance was too good to be lost." Put it on, drop it lightly on the water and you will not wait long to have a "Donnybrook Fair" all to yourself. Los Angeles, Cal.

AN OWER TRUE TALE.

AN OWER TRUE TALE.

As an illustration of the trials and difficulties attending those who have determined to adhere closely to the truth under all circumstances, I will relate the adventures of a fishing party who left this city a few weeks for a trial of their skill on the waters of Barnegat Bay. The party was composed of fifteen congenial spirits, known as the "Long Bill" Fishing Club. The writer was one of the select few, and knows all the bottom facts in the case. Previous to our departure, a meeting of the club was held in Bird's carpenter shop, and it was then and there resolved that no member should tell a lie, or any part of a lie, about any of the transactions of the club during their labors on the bay. All must be truthful to the letter, under penalty of such punishment as provided for in the by-laws.

With light hearts and clear consciences we traveled two by two alongside of our heavy satchels to the depot. On the morning after our arrival at Barnegat, coaches conveyed the truthful fifteen to the bay, where five boats awaited us. We were assorted out and allotted three to a boat. Lines were got ready, and the work for blue fishing soon commenced. It can be truly said that it was blue fishing that day. Not a fish for our boat. Our boat was manned by Long Bill, Bird, and the writer. We, however, did not lose heart, but made the anticipation of lie morrow cheer us up. The next day things seemed to be worse than blue. We toiled hard until four o'clock, when black despair took hold of us. We threw down our squids, crawled into the cabin out of the sun, and went to sleep, every man of us except the captain.

cabin out of the sun, and went to steep, every man of us except the captain.

How long we slept I know not, but this I know, that we was suddenly awakened by the greatest racket that ever was heard on any boat this side of pa' demonium. The boat was full of fish. Yes, full, so full that we had not sufficient room to get about. "Great Cæsar! What a miracle!" "How did it happen?" We all cried with one accord to the captain.

room to get some repeated by the property of the captain. The captain, after due deliberation, replied laconically, "The boat went through a school, the fish smelt, or saw the squids, in the boat, and unanimously jumped aboard."

The boat ran in, we went ashore. Now came the most trying time of all. The crowd gathered around, and greeted us with, "Did you catch all them fish?" We looked at each other for a moment, then with one voice responded, no. The next inquiry was, "Who did catch them?" Another look all around, and the response came, "No one." The crowd immediately voted us a set of liars. That evening we were court-martialed, and made to tell the truth clear and clean, but the more we explained the more we were condemned and upbraided for violating the commandment. We were fined to do so no more, and ordered to set 'em up all over the house three times. Long Bill and Bird are still on the stool of repentance, and I don't want to go a-fishing.

WITH HACKLES AND GENTLES.

"To the stream let us go, Where the hawthorns do blow, And inhale the sweet balm of the vale; With our rods tight and right, And our flies in good flight. Our spirits with joy we'll regale.'

And our flies in good flight,
Our spirits with joy we'll regale."

In the whole wide range of English literature there are no fresher, sweeter "bits" than those descriptive of, or relating to, the life of the angler. From the quaint and rare book of Dame Juliana Berners to the "Compleat Angler," and thence down to this present year of grace e rery page is aglow with some "pretty phrase," some enthusiastic outburst of admiration, or some incomparable setting forth of lovely stretch of stream, or meadow view. There is that in angling that may not be found in any other pursuit, and every implement of the "gentle art" hath its own peculiar influence on the mind and spirits of its master. The devout lover of nature may find "sermons in stones, and good in everything," this doth the honest angler and more. In rod and reel; in creel and line; in look and fly; in float and leader—yea! in the minutest trifle of his well ordered tackle he may find a lesson, or a sermon, in accord with, or supplementary to, the glowing beauties of field and forest, of placed lake or brawling stream. All poets are not anglers, but I think it safe to assert that every true and gentle angler is a poet, by the grace of God and by oft mingfling with he poetry of nature in the practice of his craft. A "contemplative" mind is of all minds a susceptible one, and the man, or woman, who goes in quest of trout cannot fail (if at pence with his or her own conscience) to absorb the benign and poetic influences of the lovely scenes that are outspread on either hand.

All this must be, however, where that infernal pest, the "black fly," and his weak imitator, the mosanito are not "black fly," and his weak imitator, the mosanito are not

poetic influences of the lovely scenes that are outspread on either hand.

All this must be, however, where that infernal pest, the "black fly," and his weak imitator, the mosquito, are not found. Where these intrude I defy any saint of either sex to make many "casts" without having recourse, more or less emphatic, to some "damnatory clause" or other. Flesh and blood can endure gracefully many a heavy penance, but a constant bite at the landward end of the rod dissipates both gravity and grace. I have often wondered what our beloved master in the craft, Walton, would have written of these pests to the peace of angling in American and provincial waters had he ever known them in dear old England! Ah! as my thoughts flit thitherward, as imagination pictures the lovely fishing streams and fragrant copses, I long to be there.

"As pants the hart for water brooks.

"As pants the hart for water brooks, So do I pant to be Once more an angler on thy banks My river bright and free.

"The summer winds, that tremblingly Through reeds and flag-flowers quiver, Sing thee a dreamy lullaby, O, gentle angling river!

"Roll on, roll on, I shall not draw A moral from thy race, Enough for me, O, angling stream, Thy pleasant banks to trace."

A moral from thy race,
Enough for me, O, angling stream,
Thy pleasant banks to trace."

Of all fishing I prefer to fish a stream, and by "stream" I men any flowing water, from a stride-wide rivulet to a broad river. There is vivacity, beside the trout, in a clear, swiftly flowing brook, and the sparkling waters seem to be in jolly sympathy with the angler, whose fly lightly falls upon the most likely spot for a glorious "rise." "Tis to be lamented that clear streams are becoming foul whenever and wherever the eye of man can see a chance to turn a penny by villifying the waters, in many cases unnecessarily so. Where and how shall we class such men? Let every true angler suit his own taste in the classification of such. In many cases they deserve the fate of the fine fish they have wilfully murdered by recking the waters with poison to all life therein. I often wish that a congress of true sportsmen could be authorized to make and enforce their own laws respecting game and fish! It is the dut, of every one who carries rod or gun, to constitute himself a keeper, and to make wherever he walks a preserve. The life and liberty of every form of fin, fur or feather that is worth the cost, or the spot should be sacred and the close season be a respected one. Some men are born pot-hunters and poachers and some are made such by evil inclination or association. As individuals and as a class (there is no difficulty in their classification) they must be closely watched, and made amenable to whatever laws exist. That these may be made better should be the wish and the purpose of the sportsman everywhere.

Well, my friend, white I have waited tor your coming I have let my thoughts run riot, and had but now discovered how tardy you are. A "good excuse" alone can win you to favor, and although 'tis o'er late for any luck at fishing, we will go to the river and there you shall make your plea. I abhor a laggard angler almost as much as I do a listless one, both types betcheen some essential element lacking in his piesatorial chara

laws are to me as were those of "the Medes and Persians" to themselves.

It is pleasant to sit on the bank of a river, even if it has no remarkable fish within it. The water is suggestive, and the imagination is soon at work at what may have been and what, e'en now, might be! How these potentialities govern life. I admit that it is sad to see a goodly river, and to know there are no praiseworthy fish therein. The true fisherman alone can understand this feeling—it is like seeing a casket with its jewel gone. There are some 'deeps' in some rivers where I will never cast again. Of yore I raised many a goodly fish therefrom, but coming once, long after, I raised but sorry, or no specimens, and I lost heart to try again. I gave such spots a longing look, think of the refrain of Poe's 'Raven," and poss on.

Let us pass on to yonder shade and burn some 'baccy, watch the sluggish waters flow, and await the eventide ere we essay to fish. 'Tis always well to have a volume sacred to one's fishing bouts, whose author wrote in sympathy with

the gentle art. Walton is, of course, a rade mecum, and may be supplemented by such others as the taste inclines to. There are lulls in the best of fishing when some other than the book of nature may be pleasant to read. On the morrow we will bid adieu to these scenes and try a more promising water, and we'll pray that the conditions so well expressed in the following "cauny" language may be ours and every honest angler's then and alway:

"When the southwest win' blows,
And the clouds, as they pass,
Are varying the shade

Are varying the shade On the wide-waving grass; When the ripplin' waters hurry Across the deep pool—
Ah! this is the time
To be steady and cool. And to wave the rod deftly, Your flies mauna whistle, But fa' on the streamlet Like down on the thistle."

O W B

SOUTHERN FISH NOTES.

SOUTHERN FISH NOTES.

I OFTEN wonder if all men are not, in their hearts, anglers! Of course, there are dry, ascetic, bilious men who look upon all sport as a perversion of time and a sacrifice to their God, Mammon. Years ago, the idea of a sportsman was a bleareyed whisky bloated hanger on of village bar rooms, whose antiquated tackle and primitive mode of fishing would have made a modern angler stare, and immediately thereupon commence a violent personal attack upon the man who would dare to fish in his presence with such implements.

That reminds me, Mr. Mather, in a late Forkst and Strream, asserts that a half-pound perch with light tackle, will give more genuine sport than "a laker" weighing four pounds. Right he is, and mentally I shake hands with him. There is much false enthusiasm on the subject of fishing for large fish. When you can hook a three-pound bass in swift water, with an eight-ounce rod, a fine silk line, a light reel and no sinker that is the sugar of angling. No mountain trout can compare with the thrilling rushes, the acrobatic feats of that prince of game fishes. But how often do we accomplish this? Afraid of monster pike, we have a large line, an ounce ball at the end of it and a No. 8 hook when we should use No. 7. For the pike, that tackle is all right; but for all other game fish, all wrong. I have caught with three transfer of "E" silk twisted into a line, bass weighing ten pounds, with no reel. I'll guarantee that I can catch any bass with the same tackle, given a light tapering bamboo rod. I'll kill him, whatever his weight, in as many minutse as he weighs pounds. ass with the same tackle, given a light tapering bamboo od. I'll kill him, whatever his weight, in as many minutse he weighs pounds.

And yet, there is no comparison with perch fishing. As men

And yet, there is no comparison with perch fishing. As men usually fish for perch, there is no sport. A rod, weighing three pounds, a large grass line, three or four large buckshot on for a sinker, and you have the outfit. Look upon that picture, then upon this. Get a light bamboo rod from fourteen to seventeen feet long, and then trim off the ridges with a file. Now twist black or green "A" silk, three strands, into a line. Wax it well, and you have a line that will eatch a five-pound fish, and will give you more genuine sport than any line that you can buy. I know nothing of perch fishing at the North, but I presume that many perch in that section of the country weigh fully a pound. Don't "jerk" when one bites, but gently raise the point of the rod and you wil agree with me, that there is no angling to compare with it, though I, too, am a "Hy" fisherman, and fish "fine" on all occasions. A No, 9 hook, Pratt & Farmer's, is best. In swift water use a small buckshot with no cork. In still water use a light cork with no sinker, and fish on the bottom always. the bottom always.

e pottom always. We have here in the South the red perch and bream, not-We have here in the South the red perch and bream, not withstanding that your fishing editor says there are no bream in America. If they are not bream, what are they? They average about one pound, and are as game to their inches as any fish that swims. Many of them grow very large, some few having been caught of the weight of two pounds. They

average about one pound, and are as game to their inches as any fish that swims. Many of them grow very large, some few having been caught of the weight of two pounds. They are they have a control of two pounds. They are all of the weight of two pounds. They are all of the weight of two pounds. They are all of the weight of two pounds. They are they are any and none but the finest tackle will capture them. The red perch are equally wary, but they live entirely in swift streams, and are more easily taken. They, too, grow exceptionally large—for perch—specimens having been captured by a gentleman in this place—in the Ogechee River—that weighed, several hours after their capture, two and one-half pounds. I have never caught them so large; one and three-quarter pounds being the heaviest that I have ever taken. They follow the natural law of all fresh-water fishes; that the males must be the larger. The females rarely exceed one-half pound in weight. They are as deep a yellow as the mates are a deep red. They are bold biters and hard fighters, being almost tireless on the hook. They bite at earth worms and Catalpa caterpillars; but, in fact, they bite better at the Catalpa worms (Catawba worms in the South), than at any other bait. The negroes believe that they won't bite for them, but that is owing to their coarse tackle. *Certes*, none but an angler can catch them. Owing to the great number of logs and brush in our streams we cannot let them play as fully as so fine, active a fish should be played. So muscular and active are they, that they break a grass line if used on a stiff rod, and, indeed, they have broken my own line often; more especially in very swift water. They afford really fine sport, and will take the fly, like the bream, as readily as any mountain trout.

Go with me some still morning in September to the Ogechee River. Faint, subtle odors fill the air; a perfume as of violets now and then is wafted to you upon the gentle breeze; that is the late autunn flowering weeds and water resses. See that will

do—substitute a style of tishing as near like fly-fishing as possible.

Now, knights of the rod, lads of mettle and hearts of gold, through the columns of our staunch paper allow me once more to greet you. I read all that you write, and mentally grasp your hands. Long may you cast the delusive fly is the sincere wish of St. Clair.

Wader, Ga., June 19, 1882.

SOME FISH STORIES.

SOME FISH STORIES.

I SUPPOSE there is nothing that delights an enthusiastic fisherman more than to make a real, "bang-up" good eatch of fish—to this we must of course, add the pleasure of telling it to his listening friends. Now, these friends may be good listeners, may take in the whole yarn, swallow it greedily; but the question comes up very naturally, do they believe it? In many cases I fear you will find they are quietly nudging one another and exchanging sly glances, and finally some hardened, unbelieving reprobate will so far forget his good manners as to say, "Jim, that's a whopper! you don't expect us to swallow that, do you?" Of course Jim gets on his dignity at once; don't blame him for doing so. He has gone to a good deal of trouble in getting up a real nice fish story, and even if he forgot to put in a little truth, it is hard to find so little faith among those he is filling up. ing up.

ing up.

I want to tell something about some messes of fish caught up in Brown's Tract this season; and from the fact that I did not catch any of these fish, but am simply telling of what others have done, may I not reasonably hope that my story will be believed, as it deserves to be, for it is true this time.

time.

In the latter part of May two gentlemen from Philadelphia with their guides went over to Lime Kiln Lake, but failed to get the fish they expected, so picking up their baggage they made a move to an almost forgotten lake. I can't name it, but guess I could get it if so inclined. On this lake they failed out out the state of the latter than the failed on the lake they failed out out the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the latter than the state of the sta ished one day, and this was the result—fourteen trout whose united weight was thirty-three pounds, an average of two pounds and five and one-half ounces per fish, and remember these were all speckled trout. One fish was four pounds two ounces, five of the others weighed fifteen pounds. Comment on this day's work is needless. I might say, however, that this lake being very hard to get to, had probably not been fished for were.

that this take be no very hard to get to, had probably not been fished for years.

Another good catch was made about the middle of June on Seventh Lake by Adolph Steinbrunner, of Constableville, N. Y., and his guide Bart Halliday—this was all bait fishing, and it was done around the only island in that beautiful lake, and it was done around the only island in that beautiful lake, and all in one day. They caught a lot of minnows, and cut them up into small pieces, then scattered them around the spots where trout are known to feed, and then they both set to work fishing; and the catch yielded forty pounds of fish, of which four were lake trout, the balance being speckled

spots where trout and to work fishing; and the catch yielded the process of a hich four were lake trout, the balance being specked trout.

"Once more," as the good dominic said in closing, "and I have done." Henry Bristol, of Utica, and his guide Gus Syphert, fished the South Branch of Moose River, making a full day of it, Bristol using a fly rod and his guide a bait rod, and they brought back thirty pounds of dressed trout. If you will let me add one more case I promise to stop.

Early one morning—quite early and foggy, too, so much so that the boat was steered by the compass, for no shore or sentleman and his guide started out

and they brought back thirty pounds of dressed trout. If you will let me add one more case I promise to stop.

Early one morning—quite early and foggy, too, so much so that the boat was steered by the compass, for no shore or sky could be seen—a gentleman and his guide started out from camp for a day's fishing on North Branch of Moose River. By the time the river was reached the black flies had commenced skirmishing around for breakfast, and they made it uncomfortably hot; then the sun came out "like a strong man armed," and there was not a breath of wind. Have you ever been caught just so? A combination of circumstances, which, for the time being, make that portion of one's life anything but lovely. Would it not be a charity to ring down the curtain right here? or cut off short and say "to be continued?" But no, let the truth be told this time, too. Well, the two men, good men and true, went to get fish, and they did not propose to give up simply because of a few black flies and a phew degrees of sun; and to their work they went; one waded the stream and used a fly rod, the other fished from shore and used a bait rod—the net result was two men boiled down to that screne frame of mind that don't care a continental whether fish bite or not, and the same two menso much and so budly bitten by black flies that their nearest and dearest friends woul skip around the corner to avoid being recognized by two such blacks. same two men so much and so badly bitten by black flies that their nearest and dearest friends woul a skip around the corner to avoid being recognized by two such bloody, viliainous-looking tramps, besmeared with tar oil and gore. And the net result of their day's fishing was about four pounds of trout. Who dares say this is not true? Call it a fish story, put your fluger to your eye and quaintly remark about something green, and all that sort of stuff, but you cannot convict me of telling an untruth this time, for I was there.

J. R., JR.

THE ENGLISH FLY CASTING.

SATURDAY afternoon I attended an angler's tournament, held at the Welsh Hurp. This famous resort is located on the banks of a beautiful lake three-quarters of a mile in length and one-eighth of a mile wide, located within about eight miles of St. Paul's Cathedral. This is the largest body of fresh water, with the exception of the rivers located on the banks of a beautiful lake three-quarters of a mile in length and one-ciatht of a mile wide, located within about eight miles of St. Paul's Cathedral. This is the largest body of fresh water, with the exception of the rivers Thames and Lee, in the vicinity of London. It is kept well stocked with pike, bream, chub and perch. Indeed while we were there several large catches were made, among them four bream, weighing together twenty pounds, and three pike weighing respectively two, twelve and nineteen pounds. The bait casting was made from a stand placed in the center of a beautiful green lawn. At distances regularly marked off were broad stakes, the boundaries inclosed by various flags, conspicuous among them and at the head of the field in my honor, was floating the American flag.

Some very fine casts were made. The peculiar styles of some were quite interesting and novel. The fly casting was made from a put moored in the lake, my friend Mr. Marston still maintaining his position as champion of England. I suggested that at the international fishery exhibition to be held next year in London, an international fly-casting tournament be also held, which would certainly be one of the most attractive scenes, and my friend Reuben Wood, the American champion, will have an opportunity of widening his reputation gained in this art.

At the dinner which was beld after the conclusion of the programme at the Welsh Harp, I was called upon to reply to the toast of the American anglers, and at its conclusion was introduced to a large number of the nost prominent representatives of many angling associations.

On the evening of the 19th of July, by invitation of the

was introduced to a large latinose of the most prominent representatives of many angling associations.

On the evening of the 19th of July, by invitation of the Gresham Angling Society, the largest and most influential one in Great Britain, numbering over 250 members, I am to speak again on the subject of black bass.

The interest in the international fishery exhibition is in-

creasing every day, entries being made from all parts of the vorld

As the time for entries closes on September 1, it will be necessary that any of our people who expect to be represented make application at once. Geo. Shepard Page. LONDON, England, July 11.

LIGHT vs. HEAVY RODS.

HAVE no doubt that your readers are much interested in the articles written by Dr. J. A. Henshall and Mr. G. W. Van Sielen, upon the merits of light and heavy fly rods; W. Van Sielen, upon the merits of light and heavy tly rods, and as every expert has his favorite weight of rod, so will he naturally take sides in the pleasant controversy between two gentlemen of such experience, and I do not expect to change the views of either of them, but possibly what I write may be of benefit to some one of inexperience in buying a rod; also to show how much safer and easier it is to kill a large fish with a good sized rod than it is with a light one. light one.

light one.

My experience dates back nearly twenty years, and I have tried to learn something about casting a my and taking trout properly ever since. I began with a seven-ounce greenhart rod, and to-day I use a ten and a quarter-ounce split bamboo

rod, and to-day I use a ten' and a quarter-ounce split bamboo of the best make. My reasons for the change are these: I like to kill my fish quickly, for I take no delight in leading around a three-pound trout half an hour before netting it. Another reason is that I can save many a large fish that I would lose with a light rod. I can imagine about how Mr. Van Siclen would look "and feel also" with his five-ounce rod fastened to a seven-pound trout, that was rushing for and under the apron of the Upper or Middle Dam at Rangeley Lekes with half a dozen experts looking on; my opmion is he would sell out cheaply his light rod, if he was using one, as he would lose his fish three times out of five.

I well remember, an incident that took place at Widdle.

using one, as he would lose his fish three times out of five.

I well remember an incident that took place at Middle Dam camp several years ago that completely weand me from "light rods." I was starting out of camp with my friend, S. W. P., of this town, when I discovered that he had a very heavy rod, and I said to him: "Gilbert, don't—for my sake—take that bean pole to fish with before all these city fellows that know me. They will think you are awful green." "Well," said he, "this rod goes with me; you can go or not, just as you like." We went, and the result was that he took about thirty fish to my ten, and while I was trying to keep my trout out of the bushes, and from going under the boom, he was covering the bottom of the boat with good-sized trout. The next day when we started out, I had a rod that was as heavy as the one he used. When he saw how things were he said to me: "O, don't, Ed, take that bean pole 'along; what will the city gentlemensay?" but we went fishing all the same, with the heavy rods, and I never have used a light one since.

I also have in mind another chapter of experience that

went fishing all the same, with the heavy rous, and I never have used a light one since.

Talso have in mind another chapter of experience that took place at Trout Cove, just above the Upper Dam on the same range of lakes. There was in campa big six foot Scotchman who sported a five-ounce rod; he hailed from New York and was just "furious" when he was told he could not kill a seven-pound trout in a half day with that switch. It so happened that the very next day he struck and fastened to an eight-pound rout, and it was soon known in camp what was up, for the Scotchman "roared for help," but the boys in camp said, "Let him sweat it out," and he fought his fish long and well some six hours, and as darf-ness came on he got desperate and actually drove the fish ashore and at last killed him with a club. There was some loud talk when he came into camp, but we noticed the next year when he came up he brought in a ten-ounce rod, and used it.

No doubt a five-ounce rod is all right to take small fish, or "to play with," but for quick and safe fishing, nothing short of a ten-ounce split bamboo will do for me, and if a man can't handle a well balanced rod of that weight he had better keep out of the Maine woods unless he goes in for his health.

Petnam, Conn., July 10.

PUTNAM, Conn., July 10.

I have just read Dr. Henshall's very capital letter and cannot retrain from sending a few lines to thank him for standing out against the asthetic crazs for toy rods which has sprung up in America, and so will doubtless come over, here, but never to take root I feel sure. In this country we only buy these effeminate toy rods for our wives and daughters. We consider the greatest skill is exhibited in killing your fish as quickly as possible on the finest tackle, and I ask you whether more skill is required to kill a two or three pound trout on a nine or ten-ounce ten-foot rod in two or three minutes, or in simply hanging on to him until he is exhausted with a five-ounce hit of india-rubber, and "fool around" for fifteen or twenty minutes? Why not tie a ent to your line and "let her have line," and "give her the butt" until she is exhausted? Quite as much "sport" would be afforded, probably more. What would be thought of a sportsman who purposely used a weak shooting gun in order to get more sport out of his game by having to "pot" it repeatedly instead of killing it as soon as possible?

P. S.—1 am trying to get in a club for the purpose of in-

P. S.—I am trying to get up a club for the purpose of introducing black bass into this country. R. B. Marston. LONDON, England, July, 1882.

TENNESSEE NOTES.—The fishing in all our streams is excellent at present. Captain Wm. Stockell caught nine pounds of blue cats at the wharf the other day. Hermann Buckholz, Charley Horn, and Jack Bentley had rare sport in Duck River. They were camped out for a week, and every day was better than its predecessor in quantity of fish caught. Jack Bentley wishing to show his expertness as a diver, jumped into the stream from the top of a high overhanging tree and came near paying the death penalty for the hazardous undertaking. Dr. John W. Morton and a party of gentlemen I ave to-morrow for Harpeth River on a fishing excursion. This is one of the few streams tolerably protected from seiners and wholesale destroyers, and consequently fish are abundant. I heard of the champion fish enter on yesterday, he is said to have devoured ten pounds of extifish at one TENNESSEE NOTES .- The fishing in all our streams is are abundant. I heard of the champion fish eater on yester-day, he is said to have devoured ten pounds of catfish at one sitting; this should entitle him to the belt.—J. D. H. (Nash-ville, Tenn.)

A FORTY-TWO POUND SALMON.—New York, July 15.— Early June salmon angling on the Restigouche this year has been a failure. The backwardness of the season has no doubt been carefully recorded by those inigratory visitors, and but few made their appearance above tide-water before the first week in July. Extraordinary and continuous high water also worked to the anglers' disadvantage, and the scores were comparatively light. I have to record, however, one good fish—weight forty-two pounds, length forty-six inches, girth twenty-seven, tresh run and in high condition, handled in very strong water varying from seven to twelve feet, current six to sight miles per hour, distance traversed from hook to gaff one rule, time one and one-quarter hours, back fin up and game to the last, with a single leader.—Ax back fin up

THE ACCIDENT TO THE CURRENT WHEEL AT THE U. S. SALMON BREEDING STATION ON THE M'CLOUD RIVER, CALIFORNIA, SEPT. 18, 1681.

RIVER, CALIFORNIA, SEPT. 18, 1881.

EVERYTHING went on smoothly till packing time, and twe had no accidents with one exception. This exception, however, was one of the gravest character, and consisted of an accident to the water wheel, which filled us all with consternation and alarm. It happened the 18th of September, on a remarkably quiet and pleasant Sunday morning. The white men employed at the shery were scattered over the grounds, and there were three or our Indians about. No one had the slightest expectation of any disaster. Everything connected with the hatching of the weight of the water for the hatching house an onimous sound of a blow was heard, followed by a crash like the breaking of a board, then another and another, and those who happened to be in sight of the wheel saw that it had beginned to hereak up and was rapidly going to pieces. A moment before hardly half a dozen men could be seen, a moment a before hardly half a dozen men could be seen, a moment of the standard of the whose whose the twenty and red, were gathered on the atoposite where the wheel would be ton to pieces in a few moments. It was revolving at the rate of the revolutions a minute in a very rapid and powering current. But the injury itself was the cause of its own "Though no one knows positively the cause of the accident, it is supposed that it was the cause of its own the supposed that it was a conceptived by the cause of the accident, it is supposed that it was acceptived by the cause of the accident, it is supposed that it was the cause of the accident, it is supposed the supposed that it was the cause of the accident, it is supposed that it was the cause of the accident, it is supposed the supposed the cause of the accident, it is supposed the supposed the cause of the accident, it is supposed the supposed the supposed the cause of the accident, it is supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the supposed the suppo

and red, were gathered on the bar opposite where the wheel was stationed. It seemed at tirt as if the wheel would be torn to pieces in a few moments. It was revolving at the rate of the revolutions a minute in a very rapid and powerful current. But the injury itself was the cause of its own researtion.

Though no one knows positively the cause of the accident, its supposed that it was occasioned by driftwood coming does not be accident to the supposed that it was occasioned by driftwood coming of the cause of the accident of the supposed that it was occasioned by driftwood coming does not be supposed that it was occasioned by driftwood coming of the wheel that it forced the wheel around notwithstanding the obstruction, there could be but one result, viz., the breaking up of the wheel. But, of course, after five or six paddles were broken off on one side of the wheel there was a large space on the circumference of the wheel there was a large space on the circumference of the wheel there was a large space on the circumference of the wheel stopped of its own accord. As soon as the accident was discovered not a monacide to reach the current the wheel stopped of its own accord. As soon as the accident was discovered not a monacide to reach the current the wheel stopped of its own accord. As soon as the accident was discovered not a monacide to the succession of the was discovered not a monacide to the succession of

CANADIAN REPORTS.

CANADIAN REPORTS.

WE have before us "Supplement No. 2 to the Fourteenth Annual Report of the Department of Marine and Fisheries, for the year 1851." Also the "Report of Samuel Wilmot, Esq., on Fish Breeding Operations in the Dominion of Canada during the year 1881, with Remarks on the Decline of the Salmon Fisheries." The reports are very interesting, but so voluminous that our space will allow but few extracts. We find that the total value of the fsheries of the Dominion of Ganada for 1881 was \$15,81,162.74, an increase of over one million three hundred thousand dollars above the previous year. There are then given tables of the product of each Province, in detail as to kind of fish, quantity and value. The total expenditure for fishculture was \$41,550.02 for the year-ending June 30, 1881, divided among eleven hatcheries. Mr. W. H. Rogers, Inspector of Fisheries of Nova Scotia, reports that salmon are still decreasing, but he looks for a return of the former abundance from the fry which have been planted. Mr. W. H. Venning, Inspector for New Brunswick, announces a more marked decline in the numbers of salmon than previously reported, and that the fisheries have fallen off full lifty per cent. below former years. In all the

estuaries and rivers the number of nets is excessive, and for years this fishery has been pursued beyond the power of the fish to multiply. The same falling off is reported from the north and south shores of Quebec, which is attributed to the backward spring. The fly-fishermen laid their want of success to the low stage of water and its clearness, rather than to lack of fish. In Anticosti the salmon fishery was a complete failure, but twelve barrels being taken. From Prince Edward's Island the same condition obtained and no salmon angling was had, while from British Columbia it is reported that the canners have had a good season, although the spring run was light. The largest fish caught weighed sixty-live pounds.

run was light. The largest iish caught weighed sixty-live pounds.

In the report of Mr. Wilmot we find that a new hatchery has been built at the foot of Lake Mempremagoz, Quebec, where fish can be hatched on a large scale. One has also been completed at Sidney, Cape Breton, of the same dimensions as the above; while at the Indian House, Restigouche River, the latest and most expensive one is now under crection by Overseer Morvat. This will be 100 feet long by 36 feet wide, and one and a half stories in height. The fry turned out of the eleven hatcheries in the spring of 1881 numbered, salmon, 5,549,009; lake trout, 2,009,009; California salmon, 40,000; brook trout, 60,000; "pickerel" (wall-eyed pike), 12,200,000 brook trout, 60,000; We will take up the remarks on periodical fluctuation of the salmon fisheries at a future time.

THE EDINBURGH FISHERIES EXHIBITION.

WE have received the second annual report of the Scotch Fisheries Improvement Association, dated May 1882. The appendix contains a list of fishery associations and angling clubs; a Report on the International Fisheries Exhibition recently held at Edinburgh, by Archibald Young, Esq., and other matters. From Mr. Young's report we learn that during the sixteen days that the Waverly Market remained open nearly 140,000 persons visited it, and that the exhibition was a pecuniary success, as well as a satisfactory one in other ways. Angling was well represented by the tackle makers, but the few exhibitors in the fishcultural class were not of a high order of merit. The "Gance Fish of the United States," by Kilbourne and Goode attracted the attention that such a work deserves.

From the report of Mr. J. A. Leonard, U. S. Cousul at Leith, to the Assistant Secretary of State we extract the following:

such a work deserves.

From the report of Mr. J. A. Leonard, U. S. Cousul at Leith, to the Assistant Secretary of State we extract the following:

"The International Fisheries Exhibition referred to in previous dispatches from this consulate was held at Edinburgh. Scotland, opening on the 12th and closing on the 29th of April, 1882. It was, both in the extent of the exhibition and in the attendance it attracted, very satisfactory. Notwithstanding the provalence of bad weather during much of the time, the attendance was quite large, the number of visitors ranging from 7,000 to 15,000 a day, and aggregating about 150,000 for the whole 10 days. The visitors were principally from Scotland, and most of them from places casily accessible to Edinburgh. It was remunerative, taking in about \$29,000 as the proceeds of admission tickets. The number of exhibits was \$27, of which 302 were from Scotland, 39 from England, 41 from Sweden, 31 from Norway, 21 from Germany, 12 from Denmark, 4 each from Incident, the United States and Italy, 5 each from Russia, France and Switzerland, 2 from Canada and 1 each from Holland, Spain, feeland, China and Africa. It will be noticed that there were very few exhibits from the United States.

"Messrs Conroy, Bissett & Mallison, of New York, had on exhibition some samples of fishing rods of their manufacture. Their peculiarity consisted in being made of cane split and joined in such a way as to secure lightness, combined with strength, and they were besides very hundsomely finished. I was told by a Scotch manufacturer that the Americans gave their rods a finish that cannot be got in this country, but that the American article costs more than those made here, say about \$5 on a thirty-dollar set. A silver medal was awarded to Conroy, Bissett & Mallison for their exhibition of rose rangels of canned from the refuse of the company's manufacture. E. G. Blackford, of Fulton Market, New York, sent from there samples of canned rish from the United States exhibited by importers among collections show

American black bass was exhibited from the collection of the late Frank Buckland.

"Piscienture has not received the attention in Scotland that might be expected from the importance here of the subject; but interesting displays of hatching and foeding apparatus were made from the hatcheries of Byram Littlewood, of Hudderstield, England. Sir James Gibson Maitland, of Stirling, Scotland, and Joseph J. Armistead, of Diumfries, Scotland, and Joseph J. Armistead, of Diumfries, Scotland, and Joseph J. Armistead, of Diumfries, Scotland, Mr. Littlewood also exhibited cysters produced by artificial contact of the sperm and ova in artificial sea water by a process of his invention. He claims that while an American experimenter has succeeded in hatching the oyster, no one but himself has succeeded as yet in growing it beyond one of the earliest stages of development. He showed living specimens which he had kept in continuous growth from three to live months, which is as long as he has been experimenting in that direction, and expressed full contidence in the practicability of hatching and rearing cysters abundantly and profitably. Ten thousand fish, about three weeks old, were on exhibition by Coustantine Muszyuski, of St. Petersburg, Russia, which had been transported from there in a large glass bottle of his invention, with concave sides, without the loss of more than a dozen of the fry, and in excellent condition.

"The purification of the water, which after use in factories

loss of more than a dozen of the fry, and in excellent condition.

"The purification of the water, which after use in factories is returned to the streams in a condition fatal to fish, is a subject of great importance in connection with the preservation of the salmon and trout of this country. There were models of apparatus and samples of water exhibited, showing the success that had been attained at several places in England and Scotland in separatin; the impurities in a condition suitable for re-use or merchantable for manure and returning the water to the streams purified. The Native Guano Company exhibited living fish surviving in water from the factories of Aylesburg, England, which had been purified by this process. "A machine for fish-cleaning, the invention of John Ross, of Stonehaven, Scotland, was exhibited. It is claimed that by its use five girls can clean a hundred score of haddocks in three hours, and that the fish are less liable to be injured than by hand-cleaning. It consists of a series of stiff brushes revolving on a cylinder. Among the nets, fromms Davidson, of Aberdeen, Scotland, exhibited one called the jackal net, a long narrow net, by dropping which from a boat it is claimed that it may be seen whether there are any herrings under the boat and at what depth."

CALIFORNIA SALMON IN FRESH WATER.—Chippewa Falls, Wis., July 12, 1882.—Four years ago California salmon fry from the Madison State hatchery were placed in Clear Lake, or Big Pine, as it is also called, being a body of water west of the Chain Lakes, of which "our" Long Lake, twenty-five miles from here, is one. Lakely two of them were captured with a spoon hook, one weighing seven pounds and the other a little more. The boys are now going to investigate the Mackinaw trout question in Long Lake, two hundred

thousand of the fry having been in its waters long enough to respond to a "line." The bass and maskalonge fishing in Long and the other numerous lakes thereabouts is said to be excellent, in fact Chippewa county acknowledges no superior as a fishing ground.—Валоек.

as a fishing ground.—Badger.

STRIPED BASS FOR CALIFORNIA.—Oceanic, N. J., July 15.—We have on hand five hundred and twenty small bass for the Pacific waters. Have been detained, but fish are alive and hearty, and under Marks' careful handling he has induced them to feed in the cars. Think they will be ready for transportation on Monday. I am taking nice messes of kingish and weakitsh. Make that car of ceis a can or the Jerseymen will think we are depopulating their waters. I will experiment this summer on the lobster, and if I can get him to remain alive for eight days then we can add one more product to the Pacific waters. I am quite positive that the small bass we have taken are yearlings. The Erst six months they do not thrive so well, but after they pass that period they are like a little pig, eating all the time, consequently grow fast. I think in Ortober I can get the fry one and one-half inches in length. Will notify you upon receipt of the arrival of the fish, as Messrs. Redding and Throckmorton, the enthusiastic Commissioners of California, will receive the fish personally and telegraph me full results.—G. H. Wild.

TENNESSEE NOTES.—Nashville, July 12.—Mr. J. E. Warner informs me that his experiment of hatching and raising brook trout at his establishment, near Craggie Hope, has proved a perfect success. The eggs received a year ago were hatched with a small percentage of loss, and the young fish are growing rapidly. The temperature of the water in his ponds is below 60 deg., and as it never freezes very hard out here in the winter, the fish feed and grow the entire year. Mr. Warner thinks that brook trout hatched here will attain two pounds' weight in two years. If so the industry is destinct to be very remunerative, although he will not be able to get one dollar per pound for his fish, as growers do in New York. I have made frequent inquiry of the market fishermen about here if any shad had been caught in the Cumberland last spring, and had a negative reply invariably,—J. D. H.

SALMON IN NEW HAMPSHIRE.—Charlestown, N. H., July 16.—Commissioner Brackett, of Massachusetts, informed me on Friday, that Superintendent Hodge had taken twenty-one large salmon at the hatchery at Plymouth, N. H., up to the 13th inst., a larger number than have been secured in any previous ye ir up to the same date. The efficiency of the fish-ways on the Merrimac River is also proved by the arrival of alewives and lamprey eels, at Amosleag Falls, in Manchester. The run of salmon this year and last have all been large fish, from 16 to 29 pounds, and probably of the plants of 1878 and it. In 1877 and 8, only California salmon could be precured and these have not been heard from, but we hope to hear next year, of the returns from one plant of Penobscot eggs in 1879, and after that look for a heavy increase annually.—Sam Webber.

Look at this.—W. & C. Scott & Sous' brooch-looder. TRANSPORTATION OF DOGS TO THE TRIALS.

TRANSPORTATION OF DOCS TO THE TRIALS.

Editor Forest and Stream:

I have been at work seeing what I could do with the railroad companies in regard to getting the dogs for the Eastern field Trials passed free over the railroads, and it affords me pleasure to say to you that thus far I have been very successful. Mr. Samuel Carpenter, the Eastern passenger agent of the Pennsylvania Railroad Company, office at \$49 Broadway, writes under date of June 15 as follows:

"Dear Sir: Replying to your inquiry made recently for the annual trials at High Point to be made during the mouth of November of the Eastern Field Club, we will stransport the dogs free of charge over our lines. When the time comes, be kind enough to give me ample notice in order that the proper instructions may be given to bagagare agents."

The general passenger agent of the Associated Railways of Virginia and the Carolinas, Mr. A. Pope, Richmond, Va., writes under date of June 27 as follows:

"Dear Sir: We never refuse upon proper application to remit or reduce the rate for the dogs of sportsmen desiring to use our lines. I was aware that the Pennsylvania Railroad proposed in this particular instance to charge nothing between New York and Washington for the dogs taken by the gentlemen going to the High Point meeting, and we will arrange to do likewise between Was sington and High Point. Appreciating the courteous manner in which you bring this matter to our attention, I am," etc.

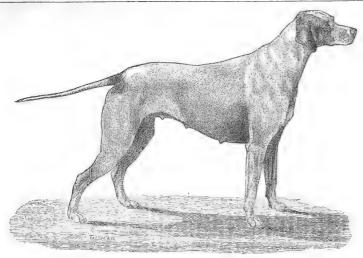

The general passenger agent of the Western North Carolina Railroad Company, Mr. J. R. Macmurdo, Salisbury, writes under date of July 15 as follows:

"Dear Sir: The Western North Carolina Railroad and its connections from Menuphis will pass dogs free when in charge of their owners or trainers to the field trial which is to take place at High Point, and will also put on round trip tiokets from High Point, and will also put on round trip tiokets from High Point, and will also put on round step the profer as to transportation of dogs."

I am glad to see that the railroads are di

NEW YORK, July 20.

THIEVES AND POISON.—Onondago Valley, N. Y.—Editor Forest and Stream: Mr. W. S. Barnum of Dunforth has lost two setters by poison and a pointer stolen—all valuable dogs. Mr. J. Glahn's bitch Minnie, was also stolen, but he traced the thieves and recovered the bitch. The scoundrels were very willing to settle.—W. M.

MR. J. G. HECKSCHER'S CHAMPION POINTER BITCH "LADY DUFFERIN."

LADY DUFFERIN.

WE give this week an excellent picture of the champion pointer bitch Lady Duff-rin, owned by Mr. John G. Heecscher, of New York. She is four years old and is by Goden's Dash out of Howson's Fan. She has been shown on the beach four times—once as a puppy, at New York, in 1879, when she was awarded an he; in 1831, at the New York show she was placed second in a very good class; at the last New York show in the champion class. Lady Dufferin is lemon and white, of small size, and one of the best formed and most gamy looking animals that we have ever seen. At the New York show of 1881 we expressed the opinion that it she were shown in proper condition she would make it very warm for her competitors. This year she came out in grand form, and the prediction was abundantly verified. At the Boston show she was in as good condition as we have ever seen an animal shown, and, although she met the beautiful Clytic, she carried off the honors in the champion class. At our request her attendant took her out and cut her loose on the common. We were already more than half in love with the little lady for her good looks, and she completely won our heart with her graceful movemants and wonderful speed. She is now in the hands of Predmore training for the fall campaign, and should she go all right we shall have something more to say of her after the field trials are over. The cut is by Harry Tallman.

GORDONS AND BLACK AND TANS.

should sho go all right we shall have something more to say of her after the field trials are over. The cut is by Harry Talman.

GORDONS AND BLACK AND TANS.

Editor Forest and Stream:

In your issue of May 4, your correspondent, Harry Malcolm, Esq., inquires in which edition of Stonehen ze I find the statement that the Gordon setter has unquest onably been crossed with the bloodhound. He also takes exception to my calling the Gordon a mongrel. In reply to his inquiry I would state that I do not remember seeing the statement in any one of his editions, but in one of his letters on "setters, English, Scotch and firsh," published in the London Field, and in this country in the Rad and Gun, the date of which I neglected to take when I reserved the letter for my scrap book. In my last I did not quote his language in full as I wished to save as much space as possible, I therefore used the word unquestionable so as to cover his proofs that the Gordon was a cross with the bloodhound, but now I will use his exact words: "It is said, and I think probably with truth, that the Scotch or Gordon setter's crossed with the bloodhound, which gives the comparatively heavy head and long folding cars often shown by him, and at the same time accounts for the deheacy of his nose and for the coarseness of his coat." Here he not only states that he believes him to be a cross or mongrel, but he gives points to prove his assertion. He states in his works that there are good black and tan Firsh setters, and in his letter to the London Field that "there are many black and tans which are not Gordon, and a similar remark may apply to the Irish setter, but he has not been treated in the same way, though, no doubt, a red setter of English blood without any Irish blood of exhibiting the desired points in perfection, would win in any Irish class. I must however, take things as I find them, and describe the setter according to the definition given in our prize its." Now he goes on to describe the different dogs. English, Irish and Sootch or Gord

Gordon. Kent, black and tan, Shot, black and tan, Scamp, Sir Matthew Ridley's liver and tan. Now, is this liver and tan a Gordon? Indeed, I doubt if the Duke of Gordon bred any one of his strain; in fact, all the evidence we have goesto show that he did not breed black and tan at all, but simply kept them so as to cross with his black and white to breed black, white and tan. Mr. Dixon states positively that the original Gordons were black and white and tan, and Mr. Lavcrack says that they were black white and tan, and that in 1836 the keeper showed him three black and tans which he thought nothing of, and of the eleven dogs sold belonging to the Duke's kennel, there was but one black and tan. This brought thirty-four guineas, and a black, white and tan day white pup thirty-five guineas, and a black, white and tan, the only black and tan bringing the lowest price of any.

This evidence will show that the Duke was not a breeder of black and tan dogs and yet your correspondent, Mr. Malcolm, states that he has pure Gordons and light weight at that, and wants to know what became of all the light weight Gordons as though it was the light weight which was the prize winner. He forgets that Kent and all the first prize winners were powerful, well-built dogs, and in size and form had more of the Irish type, than the dogs called Irish have to-day; it would not do to call this dog Irish, the rich and aristocratic dog sollers marked the Irish a red, and a name had to be found for the black and tan, which would sell better if he had a title. The next thing was to make a separate class for him and the standard a rich black with a brillant red. This settled the question of the setter, and a worthless mongrel commenced to receive prizes—they were advertised as prize winners and good bitches bred to them, and thus was the pure dog ruined. Kent and the other black and tan his has been proven to be the case. Vero Shaw states that the black and tan price with the Irish, probably to increase the brillancy of the tan, hence the appea

tau setters; but I think it would be a hard matter for him to prove that they were Gordons or that Gordon ever bred black and tan dogs.

What I am condemning is the Gordon dog as known by the rules of the show bench, and not the black and tan setters. Every owner of dogs likes to trace them to the kennel of some English or Scotch nobleman, which accounts for the calling of all black and tan dogs Gordons; and one dog, black and tan, having received a prize as a dog coming from Gordon kennel years back is considered sufficient for all the black and tan to be called Gordons, and to allow a special class to be made for that color, and all in the face of evidence which shows it to be impossible to prove that Lord Gordon ever bred a black and tan dog other than those which might come out by crossing the black and tan with his black and white. Since writing the above I have noticed a letter from Mr. Davidson in your issue of May 35 on Gordon setters. He speaks very highly of the Gordon, his good qualities, etc., and takes his own kennel as a proof of these good qualities. If Mr. D. did not wish to convey such an idea, why did he mention his black and tan in connection with the Gordon black and tan! He says they are not Gordons; then what have their good qualities, or his experience with them, to do with the Gordon except as I stated n my previous letter, that when a black and tan of pure setter blood showed good qualities, the Gordon mongrets got the credit. He says that he bred them from a liver and tan bitch. Now, I hardly think that Mr. Davidson would be willing to state that the liver color could not be preserved as well as the black and tan as a color, and if so, that they would not be just as fine in the field as the black and tan, and the orange and white just as pood as either of them. Mr. Davidson to point out one good qualities of some person's kennel of black and tan pointers, as to mention his dogs in connection with the Gordons. I suppose he means the good ones, and if so, that they would not be just as f

proveit, what has an U-ish or a half Irish setter to do with Lord Gordon or black and tan monerels called Scotch setters? Mr. Malcolm states that he wants black and tan Gordons of light veright, and wants the standard to suit his kennel, which is light weight, and wants the standard to suit his kennel, which is light weight, and wants the standard to suit his kennel, which is setters. Mr. Davidson wants the Gordons to be larce, nowerful does and does not want the rules altered; this suits his setters which according to his statement is not Gordon. These contlement know all about the Gordons and wet they differ widely as to the dow. Only upon one point do they arree, and that is to try and keep up the name of Gordon or Scotch setters at the expense of the Irish. There is no warmer friend of the black and tan setter than Lam, and for this reason I am opposed to prizes being offered for them, in fact I am opposed to making a class at all for color, each doe should stand on his merits and not on his color, and we would have fewer monerels black and tan, and red does called Irish. There should be entered in either class according to their mac and not according to their color. A red doe having the his should be entered in the English class, and a black and tan having the points of the Irish setter should be entered in the English class, and a black and tan having the points of the Irish setter should be redered.

Mr. Davidson states that the name of Gordon for the black and tan day reigned at Gordon. Cattle Liden of the head of the land this Mr. Davidson states that the name of Gordon for the black and tan day reigned at Gordon. Cattle Liden of the land the land tan bard the gordon. Cattle Liden of the land the land the land tand and tand the land the gordon. Cattle Liden of the land the land the land the land the land the land to the land

an Enclish setter should be entered in the Enclish class, and a black and tan havin the points of the Irish setter should be entered in that class, color being left to the fancy of the breeder.

Mr. Davidson states that the name of Gordon for the black and tan oricinated at Gordon Cattle. I do not think Mr. D. can prove his assertion, for the name is like a myth, it would be a difficult matter to saw where it did arise. There is one point which can be proven and this is that the name has been applied to many a bircheaded monerel with tail as long as brighted to many a bircheaded monerel with tail as long as his pedicree and equally as crooked, and as long as prizes are awarded to such dows the public must expect to be imposed upon, and the blood of the good dogs injured.

A friend of mine and a lover of dows, told me that he visited a dog show at one time, and that the judge in the Irish setter class was a creat Gordon setter admirer. He awarded the prize to a certain dog to which my friend and others called his attention, the monerel points of which stod out prominent in the dog, and that there were much better specimens on exhibition, whereunon this intelligent indee had his beau deal and one or two does that my friend another had his beau deal and one or two does that my friend mointed but as finer; specimens brought into a mivate room. "Now," said this Gordon indee of Irish setters, "look at this fine development of head for intelligence." My friend said 'Hook at his small ears pricked up on the top of his head," when the indee remarked, "Damm the ears, they don't give the dog intelligence." My friend soid 'Hook at his small ears pricked up on the top of his head," when the indee remarked, "Damm the ears, they don't give the dog intelligence with him. Some time after the breaker returned him with the remark: "I will charge won nothing for my tree and the other with him. Some time after the breaker returned him with the remark: "Will charge von nothing for my tree on the worth the powder that would kill him?

THE FIRST POINT.

THE FIRST POINT.

Editor Forest and Stream:
In almost every week's issue of your paper I read of the searcity of the ruffed grouse, and, as I have written before, I think that a great many young are killed in July and Agust by woodcock hunters. But I find that they have another enemy, at least they have in this vicinity.

Some weeks since, while out walking and giving my Irish setter pupy (Daisy) a run. I discovered two grouse nests, both of which were within half a mile of the city. I watched them with cave, never going near the nest to disturb the bird and not allowing the dog to do so. The number of eggs increased daily until in nest No. 1 there were eight, and in No. 2 fifteen, and the old hens concluded that twenty-three were enough and they would begin to hatch. How many times I thought of these young birds and anticipated the satisfaction I would have in seeing Daisy find them for the first time in company with Don, of whom I will speak later. "Don't count your chickens or grouse before they are hatched." After the hens had been hatching about ten days I thought I would visit the nests and see if they were all right.

"Don't count your chickens or grouse before they are hatched." After the hens had been hatching about ten days I thought I would visit the nests and see if they were all right.

It was a beautiful morning—one in which it seemed as if the loveliness of an entire summer month hed been concentrated. I approached nest No. I, walked cautiously up, so as not to disturb the old hen, and at last was within ten fect of the place, but could see neither hen nor nest. I could scarcely believe my own eves. I thought I must have made some mistake in the location. I looked again. There was the spring to the left, the old fence, the old edad bush. I concluded then that I must be some one else, and that 'I was not myself at all:" but as soon as I put my hand in my pocket, found doz-whistics, shell-extractor, etc., and then looked around and there was "dot leedle too Taist," savine with her eyes "what is the matter with you?" I knew I was all clear to me then. Some miscrable scamp had been and it was all clear to me then. Some miscrable scamp had been there, shot or killed the old hen, and destroyed the nest. To say that I was angry don't half express it: and although I have always acted on the principle when there was any fight have always acted on the principle when there was any fight have to be done) that a live coward is better than a dead hero, I think on this occasion that I would have bid farewell to every fear and boldly waded in to that secondard.

I then started for nest No. 3, expecting to find it in the same condition, and was not disappointed, except that the old hen had managed to escape; at least there was no evidence of her having been killed. I have offered a reward of S10 for any information that will lead to the conviction of the parties. We have a class of bad boys in this city who prowl around the woods, set fire to fences, and rob the nests of all the birds they can find; and if this is their wors I am satisfied that they can discount the work of foxes, skunks, squirrels and all. Having head such with my g

out finding anything when Charley said, "Look out!" and as I looked at Don, there were surely strong indications that there was something in the wind; and in less time than it takes to wite it, he had settled down and was making one of his grandest points. I called up Daisy, and when she saw Don, she straightened out and backed him finely. After allowing them plenty of time, Charley stepped in and flushed the bird, which proved to be the old make. About five rods from where we put up the make, we dished the female from her nest. There were five eggs in it. We did not disturb the nest; just took a look at it and then left, and did not follow up the female bird. While on our way out Charley said, "Look at Daisy May be is on a point." I walked up to her, but before I got very near the bird got up wild. Daisy never moved. I was pleased when she backed Don, but when she made this, her first point, and done it so nicely, I was overjoyed, and many of the readers of the Forest About the strains of the st

A STANDARD FOR THE GORDON.

A STANDARD FOR THE CORDON.

BALTIMORE, Md.

Editor Forest and Stream:
I wish to lay before the breeders of this grand field dog, the Gordon setter, a standard by which I think they should be judged at future shows, as my experience in hunting these dogs for many years has proved to me conclusively that the present standard by which they are judged is an abortion. Stonehenge evidently selected the largest dogs ever seen in the Gordon setter family, and while they may have looked well upon the bench, they are of very little service in the field, either in America or Europe, for I have always seen them succumb, after a day or two's work, to those of lighter frames, the latter-made dog lasting for as many weeks, and enduring just as much hardship as dogs of any other strain. The Gordon setter of former days was evidently of a light, racy frame; was a merry worker and good stayer, which we find to be the case to-day. Stonehenge in making his standard from the large, heavy dog has been mainly responsible for the present misconception about him, and we at present are suffering from that error. The original Gordon setter was anything but heavy or clumsy.

I agitated this change of standard several years ago, and was in hopes some person would get up a new one; after having waited in vain, I now take upon myself the task, and will request the breeders of these field beauties, if this standard meets with their approval, that they indorse the same through the Forest and Stream, and at the same time request the officers of the different shows to adopt it. If the breeders of the black and tan setters wish to have a separate class for their dogs, they have the same right as the Laverack or Llewellin setter, but by no means should a breeder of Gordon setters allow the two classes to be mixed as they are now at our benchshaws; allow no dogs to win in the Gordon setter class for they dogs, they have the same right as the Laverack or Llewellin setter, but by no means should a breeder of gordon setter salow the two classes to be

Many differ as to how the foot should be formed. My preference is always for a "cat-foot;" it looks better, is handled by its possessor with more ease and grace, and when well filled in with hair between the pads you will not require a stronger or stouter foot, nor one with more endurance than such a foot possesses, either to hunt on the bills or prairies. Any foot, either cat or hare shaped, bare of hair between the toes, is almost useless in the dog possessing it.

Symmetry and quality in character the Gordon setter should display an amount of, or, in other words, the general outline muist be good and at a glance taking to the eye of a sportsman. The coat should be soft, flat and close. A number of Gordon setters have wavy or curly coats; the curly coat is an abomination and should be bred out; the wavy coat should be treated in the same manner, but it is the lesser evil of the two. The coat should be straight and flat, and should not be as long as the English setter's. The back and ribs should be well coated with softer, flatter and straighter hair than the present Gordon setter; it should be very glossy looking, and in color be of a rich plum black. The Gordon setter should not show setter coat on his profile, legs and tail; the latter should be shorter than the English setter's and of graceful form, being bare of hair two inches from root of tail, with flag flat and scanty. tapering to nothing at the end.

The tan markings should be of deep, sienna color, and should show on lips, cheeks, throat, spot over eyes, under side of ear, but not to show except faintly in upper corner edges nearly at skull, to show nearly to elbows, hind legs up to stifles, and on the under side of flag but not running into its long hair. A Gordon setter with a white frill or a white toe or two should not be east aside as has too often been done in the past, but always aim to breed them with as little white as possible.

the past, but always aim to breed them when as a restriction as possible.

The Gordon setter should not weigh less than fifty nor more than fifty-five pounds, and should not stand at shoulder higher than twenty-four or twenty-four and a half inches. This will give a nice sized dog; he will look well, will not look by any means squatry, but stand well up, with nice straight legs and they must not be too short nor too long.

If the above is followed you will see Gordon setters worth looking at on the bench, and a pride and glory to their masters in the field.

A PENNSYLVANIA WOODCOCK SHOOT.

looking at on the bench, and a pride and glory to them masters in the field.

A PENNSYLVANIA WOODCOCK SHOOT.

A Sthe woodcock season opened very wet, and as birds were scattered in grain and grass fields, we postponed our trip until the 11th inst., when, at J. P. M., Mr. A. Flannigan, Chas. Savage and myself, with our dogs, started for "the black swamp," one of the best woodcock grounds in this section. Arriving there at 5 A. M. we entered the woods, giving our dogs the command to hi on; and nobly did they quarter and work for two hours in vain, as the birds had either been bagged or were out in the fields. We naturally felt somewhat discouraged, until Mr. Flannigan's Dick, a liver-colored setter, seven years old, made a point, backed up by my liver and white pointer Rag. The bird got up in good style and in an instant three shots were fired, scoring our first bird. That encouraged our dogs so that it was a sight to see them work. In a short time Rag made his second point, and I my first miss, when Mr. F. brought it down, making his lirst score. Mr. F. taking to his left flushed and brought down his second bird. After hunting very close and sending Rag in a thicket he flushed one, and owing to a house we were compelled to let it fly. Following it up Mr. S. flushed it, I making my first score.

Then giving our dogs a rest and eating a lunch we retraced our steps and having gone but a short distance Dick made a noble stand and Mr. S. scored his first bird for our team, and Mr. F. and myself taking off to our left entering a small woods. Rag jumped the fence, and as he lit stood firm. I flushed it and scored my second bird, it flying over 100 yards before it fell. On we went, when Rag flushed, when Mr. F. scored number three for Mr. F. The woods being so thick one was flushed tive, and the third time Mr. F. brought it down, making his score four. Another getting up near our feet Mr. F. scored another. This shot is indeed worth mention, it being a snap shot and the thirds time down the made and the hid with the oth

CHOREA.

[From our issue of Oct. 23, 1879.]

CHOREA.

[From our issue of Oct. 23, 1879.]

This terrible sequel to distemper is but too common, although it does not necessarily immediately follow an attack, or at least become immediately apparent. It may be developed only after the first violent exercise to which the animal is subjected. We deem the matter so important that, instead of answering the following query in the usual way, we give it space here:

"Thave a three-year-old black and tan hound, which I use for deer. During the past summer he lost a toe from his right foot, but it inconvenienced him hardly any. Supposing that same was well I let him have a run last Friday. The day was quite warm, and he had some four and a half hours' run before I got the deer. On looking at his foot I found that the skin on his toe was partly gone, and a peculiar twitching in the foot, leg and shoulder, and same continues yet. When standing the twitching is less, or scarcely noticeable; when lying down it can be plainly seen ten feet away. These twitches or movements are easiest seen from the center of breast to shoulder in front; the cord or muscles of the legs move somewhat, and holding the foot in my hand it seems as if he was trying to twitch or pull the same away. No fever or swelling, and he seems in perfect health. What is it, and caused by what—nervous irritation or from strain or becoming too tired in running?"

The trouble is chorea, and is due to nervous irritation. This form of disease often follows distemper, and when recovery follows, the twitching will only occur after too much exertion. It is impossible to say without seeing the dog, whether the injury to the foot caused in any way the chorea, but think not. It is possible that the twitching may have existed unnoticed for some time, and the four and a half hours been the cause of the attack which was noticed. This would be the more probable if the dog ever had distemper even in the lightest manner. The treatment consists in giving 1-32 grain stryehnia three times a day, giving less if this causes the

creasing gradually until 1-10 grain can be taken, the idea being to keep just short of the dose which causes this spasm or stiffening of the muscles. Cod liver oil should be given if needed, as shown by emaciation.

THE COLOR OF BULLDOGS.

Editor Forest and Stream:

"V. H. C." in your issue of June 20 complains that the judge at the late New York Beneb Show gave a vhc. to "one brindle bitch," a figure of merit that he begrudges on account of the color, and states that "Stonehenge says a bull-terrier must be pure white, and that it is useless to show one of any other color," Referring to my own copy of Stonehenge (Am. ed. p. 170) I do not find the above, but instead the following: "The color most admired is white, either pure or patched with black, blue, red, fawn or brindle. Sometimes black and tan, or self-colored red."

Now, I would respectfully ask, why is white to be preferred to other colors? Are the colorless dogs better ratters, fighters, scare-tramps or watch-dogs than brindles? Are they of better form or better disposition? What qualities do they of setter form or better disposition? What qualities do they of setter form or better disposition? What qualities do they of the setter of the dog than brindle? Let "V. H. C." answer these questions, and give good and substantial reasons why white bull-terriers are to be proferred to colored ones.

The writer of this first made the acquaintence of the brindle bitch in question at the New York show of 1881 fell in love with her at first sight, and tried to buy her b it couldn't. He renewed the acquaintance at the show of 1882, and be-spoke one of her progeny. A month ago he obtained possession of the bitch herself, and in nowise repents his bargain, and only regrets his inability thus far to lind a solid brindle dog of equal form and merit from which to breed. In certain breeds color is unquestionably an element of the first importance as indicating purity of blood, e.g., the water-spaniel, the New York with the setter with in others it seems to me to be merely a question of individual taste.

ENGLISH SHOWS AND CLUBS.

ENGLISH SHOWS AND CLUBS.

WE give below another instalment of "Sprint's" comments upon some of the English shows and clubs for which we are indebted to the Stock Kceper.

I.V.—NOISE ABL UT DOG CLUBS.

I do not know whether I am doint right or even committing a breach of confidence in reproducing the following letter received by me this morning. Unpleasant in a manner though it will appear to some parties, its publication may be of user.

received by the this house, though it will appear to some parties, its publication may be of use:

"Dear Mr. —,—I believe you are the writer of a series of letters on dog clubs, which are appearing in the Stock Keeper. I was at the Fox-terrier Show hast Wednesday, held at Blackpool by the Fylde Fox-terrier Club, and was so struck with the number of prizes awarded to officials connected therewith, or to those who gave special prizes, that I went carefully over the prize list, with the following astounding result. In eleven classes for smooth-coated fox-terriers, E54 Ss. was offered in prizes. Of this amount up less than £38 Iss. was awarded to officials of the show, subscribers of special cups, or to animals which one way or another, some of the committee had an interest in. The wire-haired classes I do not include, for none of the promoters of the show had entries therein; nor have I included the extra prizes, which, I believe, all went to interested parties. I believe that this is the sort of thing you object to in clubs. Fary give us your opinion thereon. Believe me, dear Mr. "Yours sincerely,"

is the sort of thing you object to in clubs. Pray give us your opinion thereon. Believe me, dear Mr.—

"Yours sincerely,"

Now, here is a text given me which, no doubt, the writer of the letter considers an excellent one. Unfortunately he falls to enter deeply enough into the matter, and neglects to give the number of entries made by "interested parties" in proportion to the number made by the general public. Neither does he supply any information as to the quality of dogs shown by the two sides, and so nothing reliable is afforded whereby the rights or wrongs of the case can be gauged. But it is just one of those occurrences which strikes the public, and, without much consideration, leaves the impression that the majority of the prizes were awarded to members of the club, because they are members, and not because the dogs they showed were better than those exhibited by others. "Suspicion," it is said, "haunts the guilty mind," but without saying that the mind of the public is a guilty one, there is no doubt it is a most suspicious one. As a guilty one, there is no doubt it is a most suspicious one. As fur. Montagu Wootten, one of your correspondents, hinted last week, the promoters of a show or club must support themselves, and how else can they do this without making entries at their own exhibition! They, as a rule, too, are possessed of more than moderate stock, and what is there more natural and likely than that they should win a share of the prizes? "More than a fair share," some one iterates, but perhaps he may be an unsuccessful exhibitor, whose opinion must, as a rule, be taken cun grano salis.

I consider that public judging and the publication of the prizes? "More than a fair share," some one iterates, but perhaps he may be an unsuccessful exhibitor, whose opinion must, as a rule, be taken cun grano salis.

I consider that public judging and the publication of the prizes before he supports his appointment by entering under him Acondidates in the self and in the skill as in his integrity, in the one as

more for the gratification of personal ends than the improvement of the valiety of dog they profess to support. Mind, I do not say there is any harm in this, but its members must not look upon themselves in that light of public benefactos, as I know many of them do. Nor are they quite justified in desiring the support of the public in so private a matter. I think I have been successful in showing that these minor clubs are not quite the unmitigated blessings their supporters would have us believe. Their members look well after themselves, evidently in the belief that "charity begins at home."

The public pay for all they get out of these clubs, and obtain no more for their money than any ordinary dog show committee would give, and, moreover, are a little less liberally treated in the selection of judges. One of the great blots on their arrangement is that, as a rule, they refuse to give special prizes at any show without a voice in the election of judge. Thus care istaken that the coteric has a judge of its own selection; others outside the symm-perhaps, too, a majority so far as numbers go—have to put up with whom the minor club chooses to appoint. The amalgamation furthers its own ends, and the in lividual who does not belong to the body is left, if not exactly lamenting, a long way toward so undesirable a conclusion.

With regard to Mr. Wootten's courteous letter last week, I consider the objects of his club laurlable in the extreme. All other clubs have similar objects—at least they started so—but, as I have attempted to show, they drift along with the tide of time until they attempt to usury the functions of the ordinary show committee, and in too great a degree distate what the latter should or should not do. The power these clubs have obtained must be used with every discrimination and care, else it is my belief, he general public will hold aloof from supporting exhibitions where their rules are in force, and where they have the appointment of, or even a say in, the appointment of judges. What dog show m

MAJOR AND THE CAT.—A gentleman in this city owns a fine large do; named Major. Major's hatred of a cut appears to be deep seated, and he will kill all that comes in his way, and will often go o to fo his way to vent his spite on his enemies. His master's wife had a cat which she determined Major should not harm, and she took great pains to impress the big brute with this idea. She would take puss in her arms, carry her up to the do; and while stroking and pettin her would talk to her enemy reprovingly. The intelligent do; seemed to understand every word she said, but for all that he would keep his eyes fastened upon puss with a longing and hunry look, as though anxious to bring the pressure of his ponderous jaws to bear upon her spinal column. But his mistress conquered, and made him understand that he must live on friendly terms with puss. More than once he had been seen watching the cat with a look of evil intent, but out of respect to his mistress he conquered his nature, and would throw himself upon the ground with a sigh expressive of deep disgust at the situation. The cat was disposed to be on friendly terms with her sneam, but Major would not tolerate the slightest familiarity. Whenever puss approached him be would get up and go away with a melaacholy look, which seemed to say, "I am dying to kill you, and it's doggone hard luck that i can't do it." Thus matters went on for some months, and puss began to incur the displeasure of her mistress by sneaking up-stairs at every opportunity and making trouble by cerling herself up and taking naps on the snowy counterpanes, and doing such other untidy acts as would naturally arouse the ire of a neat housekeeper. One morning the lady told her husband that the cat was getting so totoublesome that she guessed it would have to be killed. A few minutes later a rush and a struggling noise was heard. and as the lady of the house hastened to the door to see what had happened, Major walked up to his mistress and laid at her feet the dead body of puss, then looked up with

SALE OF SPORTING DOGS.—A number of pointers and setters from the kennel of Viscou t Downe was disposed of by Messrs. W. and F. Freeman, at Aldridge's, on Friday, the 30th ult. Several of the latter realized good pr.ces, but a number of dogs of both varieties were bought in. Among those sold were the setters Dash VI., b Dash IV., sold to Mr. D. P. Sellar for 30gs.; King Fred, by Emperor Fred.—Silk. Mr. Harter, 40gs.; Belle, by Fletcher's Rock, Major Flatt. 50gs.; Rock, by Emperor Fred, Mr. Harter, 40gs.; Sting, by Emperor Fred, Major Platt, 50gs. The highest-price pointer was Bounce, by Lord Downe's Bang, who realised 40gs.—London Field.

DOGS WANTED.—We are constantly receiving letters from all parts of the country from parties in want of the different breeds of non-sporting dogs for pets and for farm use. There appears to be an increasing demand for these animals, more particularly for the larger breeds, although we have many inquiries for the different terriers and toy dogs. Except in trare instances we are obliged to say that we know of none for sale. We are confident that it would pay those who have well-bred puppies for sale to advertise them in Forest and Stream.

SPANIEL IMPORTATION.—New York, July 19.—Editor Forest and Stream: On board the steamer Salem, which arrived from Hull, England, July 15, there came, consigned to my care, a black spaniel bitch in whelp, which was bred by Mr. A. W. Langdale, of Yarmouth, England, and imported for Mr. F. F. Pitcher, of the Riverside Cocker Spaniel Kennel, at Claremont, N. H. The bitch was a very beautiful little animal. She was shipped by express to her owner on Monday.—E. B. Goldsmith.

SANCHO.—Cleveland, July 18.—Editor Forest and Stream; My dog Sancho has been missin; since the night of July 4. If sportsmen will have "an eye out" for him and report to me it will be appreciated. He is I cish of a bright but not vory deep red, with white frill; long in the legs, and peculiarly gaited behind, straight thing them past the perpendicular, and with a bow-legged motion.—F. S. Chamberlin.

DANDY.—Palo, Mich., July II.—Editor Forest and Stream: I notice in your last issue that Mr. N. Elmore of Granby. Conn., claims the name of "Dandy" for beagle pupy. I would respectfully request Mr. Elmore to select some other name, as I claimed that name for a beagle pup by Ratiler out of Sill more than a year ago in Forest and Stream.—W. D. PERCHAL.

BOXER AND GREENHORN.—Can you inform me whether there is a buildog called Boxer, that is owned by Governor Cornell? There is a dog here that is offered for sale, said to be by Boxer out of a bitch called the Greenhorn bitch. 10 you know of any bitch of that name?—G. C. [Can any of our readers supply the desired information?]

SALE OF POINTE33.—If. Elmund Orgill, of Brooklyn, has sold the large pointer dog Rocket and the small bitches Rhyl and Rosalie to Mr. M. O. Lownsdale, of Portland, Oregon, who is said to be the owner of the finest kennel of sporting dogs on the Pacific Coast.

PRESIDENT ARTHUR has received a beautiful Scotch collie dog from Mr. Garrett, President of the Baltimore & Ohio Railroad.

KENNEL MANAGEMENT.

E. J. W., Pittsburgh.—I have an Irish setter hitch about fourteen months old, she had the distemper some four months ago and since then her eyes have been very red, and running water continually. If you can give any receipt you will greatly oblige. Ans. Keep the you can give any receipt you will greatly oblige. Ans. Keep the drops of the following. Borax tangent of the following. Borax tangent of the following. Borax tangent of the following. Borax tangent of the following. Frank, Singee, Ott.—My setter, eighteen menths old, has for the past three months been I wise in one force leg, worse at three than others. I have examined it carefully and can find nothing, his nose is hot and dry all the time, notice no other bad symptoms, eyes all right and appetite fair, has he the rheumatism and what can I do for it. Aus. It possible consult a veterinary or a medical man to see that there is no injury to any bone or muscle. Keep the dog out doors, keep the kennel dry and sheltered from wind. Rub the affected leg once or twice daily with the following: 1 ounce oil of turputine, 1 once the time of the possible concentration of the proprietine, 1 once the time of the past of

capsicium.

G. H., Westfield, Mass.—I have a cocker bitch, one year old, which has sores on her body. They first show as little blisters on the elements of the sores of the body. They first show as little blisters on the elements of the sores of the sore in the sore in the elements of the sore in the elements of the sore in the elements of the sore in the elements of the sore in the elements of the sore in the elements of the

mount in three days. Write a gain if there is not decided improvement.

J., Worcester, Mass.—A Gordon setter two years old had distemper last winter and ever since has been very thin in flesh, also weak, and now has twitchings of fore legs and head slightly, but only in fore part of body. While walking or running a great dead of stringy froth comes from mouth. Have given him cod liver oil and sulphate of iron, until since she St. Vitus dance appeared then stopped the iron and gave Hubbel's clixir of ammonia, but without any perceptible effect on the twitchings. Eyes are bright and clear but very little running from them, bowels inclined to be loose. Ans. See article on 'horea, reproduced from our issue of Oct. 23, 1879. Have seen good results from 1-32 grain strychinine given three times a day, giving less if this causes the dog to "stiffen out," i. e., have a sort of spasm, increasing gradually until 1-16 grain can be taken at a dose, the idea being to keep just short of the dose which causes this spasm or stiffening of the muscles.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ONE VIEW OF THE MATCH.

RANGE AND GALLERY.

ONE VIEW OF THE MATCH.

GEN. WINGATE in speaking recently of the international match to be fought at Creedmoor on September 15 and 16 next, gave his views at length on many points connected with the contest. Such unfailing success as followed American riflemen in the past that the people have come to regard victory as certain whenever their men and their weapons are tested side by side with foreign rivels. It is therefore a cuse of wonder to many that the result of their men and their weapons are tested side by side with foreign rivels. It is therefore a cuse of wonder to many that the result of their men and their weapons are tested side by side with foreign rivels. It is therefore a cuse of wonder to many that the result of their men and their weapons are tested side by side with foreign rivels. It is therefore a cuse of wonder to many that the result of the would hardly say more than that America had a chance of winning. Now, however, matters have taken a turn for the b-tier, and the probabilities of victory are regarded as pretty evenly balanced. American military shooting has heretofore been almost wholly limited to distances within 60yds. Only a stray match, ill-patron-troop, has ever caused a military rieger to be drawn at 80, 900 or victory are regarded as pretty evenly balanced. In the shooting on the British ranges every care has been taken to develop the gun of actual warfare, while keeping it within the rules defining a practical military piece. Riflemen and manufacturers have for years conducted experiments to this end, testing the sights with detached vernice scales, and trying every variety of rifling, action and weight adjustment. The result is a splendid weapon, possessing approaching the small bore or sporting gun in a contravious of the Atlantic—and especially that at 800, 200 and 1,000yds.—has been accomplished with "sporting" or "Creedmoor" rifles, weapons of very costly pattern and finish.

The sights are adjusted for elevation by venier screws marking differences of a

THE WESTERN RIFLE ASSOCIATION.

THE WESTERN RIFLE ASSOCIATION.

MINNEAPOLIS, Minn., July 19.—The second annual tournament of the Western Rifle Association opened upon the range at Fort Suelling to-day and it has been a very aispicious start. A gentle fishial breeze was blowing, and bothered the shooters in no small degree. The range was in capital order and with the present equipment of the content of the cont

RIFLE NOTES

Lieut, Mitchell, of the 324 Estatalion, Port Elgin, Capada, won the Princes of Wales prize of £10) at Wimbledon, with a score of 84. Sayon shars each, at 21), 513 and 513/13. The Canadians, while keeping up a very good shooting average, have been unfortunate in not striking the prizes. Former reports to the contrary, none of the Canadians got into the final sixty for the Queen's Cup.

The Cincinnati Lodepandent Ride Club heid a general field day July 4, with five clay pigeon matches and a liberal prize list.

At the request of the adjutant of the British ride team who are to visit this country in Soptember next, Mr. Chauvin, the Longon agent of the Western Union Company, has telegraphed to General Thomas T. Eckert to see General Wingste "to procure the sanction of the United States War Office to the British team wearing their unform out to filled permit was needed, the seem of the word of the contraction of the Charles of the Contraction of the Charles

THE TRAP.

BUTTE CITY, Mont., July 9, 1882.—Away up here in the Rockies we organized the Butck Rod and fun Club in the year 1889; but at that time no rather than the sum of the members the club did not move on prosperously. However, a few of us kept the thing in mind, and on the lat day of March, 1882, a meeting was called and a club organized. We limit membership to thirty active members, and drop all those who do not keep right up to time, alling their places with other men, whose names are on life, and the cash accompanying their application. In this way we have a club of good men, and about one-half appear on the grounds for practice every Saturday afternoon. I send you the score made on Saturday afternoon, the stinist. The wind was lowing almost a gale. Clay pigeons were this inst. The wind was lowing almost a gale. Clay pigeons were the projectiles used, from score made on Saturday afternoon, the stinist. On Saturday, July 22, at half-pas	two o'clock, the Cincinnati Gun
Club will play the Cincinnati Inde	pendent Shooting Club a game of
base ball on the grounds of the lat	ter.

base ball on the grounds of the latter.

WELLINGTON, Mass., July 21.—The attendance to-day at the meeting of the Raymond Cluo was limited. The few shooters who were present annused themselves by snooting sweepstake matches, also a novelty match. The latter was at one glass ball and one clay pigeon. This combination caused considerable trouble, being exceedingly difficult to life. The regular club shoot, at 25 birds, ibyds. rise, resulted as follows: T. J. Johnson, 19; J. Philbrick, 4; U. D. Mooney, 14; L. S. Kendall, 18; J. S. Savyer, 12.

MALDEN (MASS). GUN CLUB.—July 22.—The Malden Gun Club's shoot to-day consisted of eleven events. The first match was at trap No. 1, and was won by F. T. Noble, G. E. Durand and A. F. Adams dividing second. The second match was at five fety birds, F. H. Foster seconting first honors and F. T., Noble and G. R. Durand. The fourth was a "consolation match," G. R. Durand and P. H. Foster second.

The sixth match, at the same trap, was won by F. T. Noble, A. F.

trup, and was won by F. T. Noble, G. R. Durand and P. H. Foster second.

The sixth match, at the same trap, was won by F. T. Noble, A. F. Adams second. The seventh event was at clay pigeons, and was a closely contested match. In the shooting of the various ties J. Atwood was the leading man, F. Lording and F. T. Noble second, and C. F. Cook third.

The eignit matchend, also at clay pigeons, brought F. T. Noble first was a closely and the control of the various ties J. The signitude of the control of the shooting was had, the country of the control of the

THE REPUDIATED CUP.

THE REPUDIATED CUP.

If the New York Y. C. takes umbrage at the curt manner in which the silly circular challenging everybody to a match for the America Cup, while reserving unfair privileges to ourselves, has been sholved by British yacht dubt as not even worth the dignity of an acknowledgment, they certainly will know the reason why from the following extract taken from a seathing rebulke administered by the Belleville Intelligence. We publish the milder portions only, as we do the cub. Instead of deliberate sharp practice of the administered to the cub. Instead of deliberate sharp practice in the minds of the members. A want of familiarity with sporting equity, especially in yaching matters not closely connected with fireworks, uniforms or fandagos, is at the bottom of the blunder which has reduced the Cup to a laughing stock in sporting circles:

"The New York Y. C. may not be composed of 'aquatic animals,' but it has been guilty of just as mean and contemptible actions with regard to the America's cup – the former emblem of the world's yachting championship—as nave the Metropolian regatta authorities with regard to the champion oursmen of America. The cup in question of the properties of the provision was some of the world. The rules governing the contests were from the first unfair to challengers, giving the defenders the right to name their representative on the morning of the race. This provision was so interpreted in 150 as to cause the challenger to sail against a large fleet, and in 1871 the interpretation was changed so that in the series of races the defenders reserved to themselves the right to name a direction of the provision was a narranged, a more liberal course was pursued, one yacht being analysis to represent the holders, and that some time in advance of the first before scheduled as itself-ader, but the defenders was not manned until below as developed as itself-ader, but the defenders as the december of the contest were the provision was not contend in the morning of the race.

represent the holders, and that some time in advance of the first represent the holders, and that some time in advance of the first represent the holders, and that some time in advance of the first received the second of the first received the second of the day appointed for the first race. This final the morning of the day appointed for the first race. This final challenger was badly beaten, but it is now quite apparent that the holders feared that, when properly fitted out, she might very probably prove successful. So, as ner owner announced his intention of challenging again this season, the peculiar tactics came into day. In order to pave the way for their further proceedings, they announced, mufficially of course the season, the peculiar tactics came into day announced, mufficially of course the season of the property of the season of the season of the curb of the season of the curb of the curb of the season of the curb did not exceed \$500, as was clearly shown by Forest Announcement was made in order to so influence public sentiment that the programme desired might be carried out and public condemnation avoided, for the American poople have a natural love for fair play. The truth of the matter was that the legitimate expenses of the curb did not exceed \$500, as was clearly shown by Forest Announcemand of the femaling \$18,500, about \$17,000 was spent by the flag officers of the New York X. C. in building, as a private venture, of the first of the curb which proved a complete failure and is now for sale at a low price. The rest of the money was spent in champagne lunches which were consumed by the New York X. C. and their trends.

"The next thing heard of the cup was that the holders had de-

pagne tunches which were consumed by the New York Y. C. and their rends.

Tends.

Tends.

Tends set thing heard of the cup was that the holders had determined to surrender it to Mr. Geo. L. Schuyler, the only survivor of those who donated it to them, but that they would accept it again on conditions laid down by themselves. This programme was performed to the entire satisfaction of the N. Y. Y. C. by good-natured Mr. Schuyler, and to the disgust of every fair-minded sporting man who know the facts and the object in view. The lirst object was to get rid of the Atalanta as a possible competitor, and this was accomplished by providing (1) that the challenger must belong to an incorporated, parented or licensed chief, whose annual regatica. It had actain for two years, unless after a contest by some other vessel; and

on an ocean course; (2) that a defeated competitor snall not challenge again for two years, unless after a contest by some other vessel; and (3) that the competitor must proceed to. New York on her own bottom, under sail.

"The first of the new regulations shut out the lake clubs from which the formidable competitor of 1876 and the one that was feared for 1882, had come; the second prevented the Atlanta from competing until 1883, at all events; while the third was said to have been devised to prevent others than sea-going yachts from competing, but it was in reality designed to prevent as far as possible an English 40-tonner from coming out and carrying off the cup, which the

Madge's victories show that such craft as the Annasona, Sleuthhound, Sllver Star and other British racers could beyond reasonable doubt' very easily do ugainst such 'ocean-going yachts' as tue Gracte, Mischief, Fannie, Hidegard, Julia, et. al.—craft in which no man in his senses would ever attempt to go on a voyage. The idea of a club possessing such racers as these—and such only as these—amongst their single-stickers, declining to compete against similar vessels, is in itself an absurdity."

COMBINATION ROW AND SAIL BOATS.

COMBINATION ROW AND SAIL BOATS.

It is always difficult to unite the antagonistic qualities of a row boat and small yacht; hence the many inquiries for some boat we can recommend suitable to both purposes. Such boats should be easy enough to pull without great lauor agains a moderate sea and wind. Their beam must be restricted for the proper use of oars, and yet they must have stiffness under sail, and be sare from sinking in the event of an upset. They must have low weights without great draft, be partly decked for heeling, be as dry and easy as possible, and have all fittings made with a view to the outble servicely a fitted read in the event of an upset. They must have low weights without great draft, be partly decked for heeling, be as dry and easy as possible, and have all fittings made with a view to the outble servicely at a take combination and not been attained. Effect the boat would prove inefficient under canvas or too hard to pull, except as a dire necessity. They could all be classed as "rowable sainoats" or "saliator rowboats," but none, excepting the example we illustrate herewith, met the demand of being a "rowing and sailing" boat, and possessed immunity from sinking into the bargatile a specialty by F. Joiner, The Frene class of boats nave been my we have gathered, furnil the wants of a handy little boat from which to fish or sucoi in stretches of open water, to sail or to row, single-handed or in family, that their details will be found of muon interest to the readers of a lorser and break the respectively of the sail of the general form of the class. They are characterized by extremely clean-looking bodies, yet with enough power in the possible of the general form of the class. They are characterized by extremely clean-looking bodies, yet with enough power in the possible of the general form of the class. They are characterized by extremely clean-looking bodies, yet with enough power in the possible of the general form of the class. They are characterized by extremely clean-looking bodies, y

THE CUTTERS AND THEIR VICTIMS.

WE take the following from the Belleville Intelligencer: The fol-lowing table gives the measurement and cubical contents of the English cutters Madge and Maggie, and of the craft which they have defeated, carried out to four places of decimals: THE MAGGLAND HER VICTIMS.

Length	Beam	Depth	Cub Conts

GIVE THEM THE CHANCE.

GIVE THEM THE CHANCE.

A CORRESPONDENT owning the fastest keel sloop of the second class in Boston writes to know how we explain the fast that most prizes are won in those waters by keels without outside ballast. We answer by saying that bar the phenominally fast sloop in question, and we doubt the correctness of ins assertion. But allowing it to be true, it should not be overflooked that outside ballast is stin a common to the control of the property of the saying that bar the phenominally fast sloop in question, and the object of the property of the saying that outside ballast is stin a common to the overflooked that outside ballast is stin a common to the overflooked that outside ballast is stin a common to the property of the saying the saying that of the saying and the s

build two or three faulty imitations, and they do not quite reach top-noon from the day tady are launched when put into composition with a too sixual sloop; reprosenting the outcome of thirty years' ex-pension, study and refinement, and from which the very best only the product of the product of the product of the product of the graph of the product of the product of the product of the product of the graph of the product

are selected as the standard by which the new cutters are to be ga iged.

flareupon your flighty critic denounces cutters as slow, impossible to miste face fast, transfer in the equal to the fastest sloops, they are quite up to the average, and then having to eat his own words every time a genuine cutter turns up in our waters from abroad, and wipes us out with nine wins in cloven successive races, the two on the tally against her lost only by fluke and an accident. For the contract proposition that ballast put where it will do most record as the many proposition that ballast put where it will do most record as the contract proposition that ballast put where it will do most record as the contract proposition. It was the fact that the practice in beamy yachts, as well as in narrow examples in Indian practice in beamy yachts, as well as in narrow examples in the take the position without fear that the fastest place a yacht's weights can be put is down as deep as considerations of limited skin friction will permit. If yachts so ballasted have not as yet shown the average speed of those with inside pig, the cause of the difference is to be sought in other peculiarities. We consider that more longitudinal section is given to foston keels than is necessary, that with plumb consideration in the prediction is too great or speed in light windows the area exposed to friction is too great or speed in light windows.

THE matches sailed July 22 were rather tame for want of wind and some irregularity in starting the Joker, Myrtle and others with a larger class, giving them a start over the others by several minutes. Frotests were entered against them and have yet to be decided. Wind light and buffling all day, the sailing being reduced to a drift, with occasional carpaws as capacicons as they were short-lived. Course for first and second class twelve miles, for the rest six miles. Two sets of prizes were offered, a regular and an additional purse if even is Corinthian. The letters R and C affixed to the yacats and the pitzles they took indicate their nature accordingly. Judges C. B. Churennil, Dr. T. O. Loveland, J. H. Conant and Peleg Aborn. Summary:

WHY NOT ASK HER TO FLY?

WHY NOT ASK HER TO FLY?

What on earth does the South Boston Inquirer expect? Cutter Maggle, measuring according to E.Y. C. rule 39,64fc., beats crack gloud by Indian 51,22fc., some six minutes in time allowance, though the property of the second state over a 15 mile course. Says the Inquirer: Maggle 30 seconds later over a 15 mile course. Says the Inquirer: do you want? Must she fly? Is it not enough to take fly what more do you want? Must she fly? Is it not enough to take fly what more of such a goor as big Undine over so short a course after a turly sturf at that? It is glory enough surely to do what Maggle has done and a terribly bitter pill apparently to the benighted lot who have been sailing around cutters "as though they were at anchor" in their buncombe which preceded the cutter's advent. It is a back seat, hull down, the old school should take at such a defeat, after Maggle has imply by an influence of the cutter's advent. It is a back seat, hull down, the old school should take at such a defeat, after Maggle has imply by an influence of the cutter's performance must be measured, for that is putting expectations and the reality face to face. Have our adored sloops suddenly become scows that a small cutter should do anove than board the cup by six minutes? It is time for contemporaries to trim to the new breezs. There is nothing in Boston and we dould whether there is anything in York wich can hauf down the colors of the modern racing cutter.

THE CUTTERS SWEEP THE LAKES.

E LLEEN and Verve, a thirty-ton and a tenton cutter, both G. L. Watson designs, won first and second prize in the Royal Canadian Sweepstakes July 22, beating a whole fleet right handily. We reserve a full account of this great cutter victory for next issue. Cutters have received an impetus on the lakes by this event, which makes them the yacnts of the future on our fresh water seas quite as much as on the seaboard.

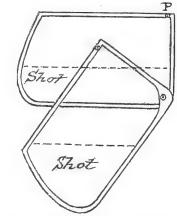

NEW YORK CANOE CLUB-July 22.

NEW YORK CANOE CLUB—July 22.

THE fourth race for the challenge cup open to all canoes within 50 miles of New York City, was sailed from the N. Y. C. C. club house on Saturday July 22, over a triangular course of about six bouse on Saturday July 22, over a triangular course of about six bouse on Saturday July 22, over a triangular course of about six both and Eversau Shadow heel canoe, day Comodore Yaar with the Dot, and Eversau Shadow heel canoe, day Comodore Yaar with the Dot, and Eversau Shadow heel canoe, day Comodore Yaar with the Dot, and Eversau Shadow heel canoe, day Comodore Yaar with the Yardo Mr. Stephens. Mr. W. Whilotok entered his Fearl Ripple, and Mr. Downing Yaux the Shadow centerboard Wrnith, victor at Lake George last summer. The wind was light from the S. E., and tide running strong obb. The course was from a line at the club house to and around buoy 17, leaving it on the port hand, thence to a bark and the Ripple being left in stays at the line, the Trand start was made, closely followed by the Dot and Wraith, the Ripple tacked across 34, closely followed by the Dot and Wraith, the Ripple tacked across 34, closely followed by the Dot and Wraith, the Ripple tacked across 34, closely followed by the say and taking in any advantace otherwised gainade, thence dead free to the bark, which was rounded by the Tramp well in the lead, the Dot, Ripple and Wraith bunched, rounding in the order named. From here to 18 the course was a dead beat with the tide, the wind very light. The superiority of the deep beat with the tide, the wind very light. The superiority of the deep every tack. Mr. Whitche had the misforture daying the others one steeping gear, in spite of which he perceptibly gained on the Tramp, but nothing could catch her now and she came in a winner in the quick time of 1.13½, followed by Dot 1.16½, Wraith 1.174, and Ripple 1.164, corrected time, the latter having been compelled to 1ay to for an ocean outward bound steamer in mid channel, thus losing a place. The race was throughout close an

CENTERBOARDS FOR CANOES.

Editor Forest and Stream:
Mesrs. Tyson and "Wren" have contributed valuable ideas on the subject of loaded centerboards for canoes. Having just finished a canoe for my own use in rough and smooth waters, and not being perfectly satisfied that further improvements in centerboards were out of the question. I got to work, and herewith present the result, a

simple, convenient and durable centerboard which possesses the advantages of carrying a light or heavy load, and of keeping the entire load at the lowest possible point, whether up or down. It is a hollow board of 1-16in, sheet iron, with a screw plug P at upper corner where the desired weight of shot is introduced or withdrawn at will The board hinged on "Wren's" plan.

CLAYTON VON CULIN. DELAWAGE CTYL, DEL.

BEVERLY Y. C .- JULY 15.

BEVERLY Y. C.—JOL. 10.

Editor Forest and Stream:

The sixty-eighth regatta of the Beverly Yacht Club, being the first special race of the season, was sailed oif Monument Beach July 15. The course lay from judge's yacht off Tobey Island, leaving Bird Island Buoy No. 10, and Scraggy Neck Buoy No. 10, on port hand, to Judges's yacht, eleven nautical miles. The wind in the morning was so light that the start was delayed fifty minutes to allow boats from early contrast rice. When the start was made, the wind was moderate profess and held so through the race. The first leg of the course was dead before the wind, the second close hauled, and the third a dead on end beat. Summary is given below:

Tuck, H. H. Saufeldt	1 58 00

18. Gordon, Judge and E. D. R. Thompson, timekeeper. Pearl was awarded the prize. The annual regatta of the club the first and second class prize pennants will be sailed Saturday 22d.—S.

The Pearl was awarded the prize. The manual regatus of the club for the first and second class prize penannial regatus of the club for the first and second class prize penannial regatus of the club for the first and second class prize penannia will be suited Saturday the 22d.—S.

SEAWANHAKA YACHT GUUR.—The cruising squadron hove up from New London July 17, and made for Flock Island, where the deet arrived after an uneventful day's run in light and variable airs, itattening out into a calm towards night. The smart little reveton volande and the topsail schooner Nokomis did not make harbor, but anchored outside for the night. Late next morning the fleet got a contract the contract of the contract per contract per contract to harbor, this time only 28 natures in Lates and the light draft of harbor, this time only 28 natures in 18 and

quality, and in proper hands ought to be equal to sweeping the lakes of anything near ber tomage.

LADIES AT THE PADDLE.—At the annual regatta of the Royal Canoe Clob, the executive this year instituted a rice in double canoes, the canoetists to consist of a lady and gentleman. That the canoetist is consisted a lady and gentleman. That the only four came to the post, the others not being able to get their craft up in time to take part in the race. It was an excellent competition, and caused great excitement among the numerous spectators both altout and shore. Unfortunately, however, the result was not satisfactory, for just as the race was ended the Hampton two and altout and shore. Unfortunately, however, the result was not satisfactory, for just as the race was ended the Hampton two ladges and the state of the finish, along crows were nearly level within a few yards of the finish, damp crows were nearly level within a few yards of the finish, along crows were nearly level within a few yards of the finish, can be also a supproved style, and ably supported their partners, the boats being constituted as follows: Irene: P. Nisbet and Miss Nisbet, R. C. C.; Pinafore: T. F. Knowles and Miss Farrer; Mr. Farrer and Mr. Farrer; and Farrison and Birs. Harrison.—Bell's Life.

NEW CUTTERS.—We have had the pleasure of inspecting the lines and plans for a new fifteen too cutter, longer and narrower than the Maggie, to be built in time for next sea-on. We hope to publish established the fact that our sloops are not equal to cutters in speed, we regate our foreneasure body take the built by the horms and try or regate our foreneasure of the properties of the right direction.

WATERPROUFING.—A correspondent, having tried the experiment kindly sends the following in an asser to the constant in our sloves.

to be in the right direction.

WATELPROOFING.—A correspondent, having tried the experiment, kindly sends the following in answer to the constant inquries we have: I used for my boat with good result the following: Two pounds parallhe wax, dissolved in one gallon bearine. Apply this mixture with a brush to both sitles of the canvas; over this apply a coat of boiled illnseed oil; you can add to the oil any color you may wish to give your boat (I used a little green). This preparation I find a perfect repellent of water, and also keeps the canvas soft VEDV MATHEMA TRANSPARATIONAL TRANSP

and plants.

VERY NATURAL.—The idea of racing steam yachts on length measurement is, if yos lible, a little more preposterous than matching satting vessels of different size on suon a basis. The London language was supposted to the condon introduce steam yacht racing into the long the racing into the language was a supposted to the language of the language was a supposted to the language was a supposted to the language was a supposted to the language was to be under no regulation for rating whatever beyond length, the language was to be under no regulation for rating whatever beyond length, the language was supposted to the condition that the competitors were not to exceed 70 t. in length, the language was supposted to the language was supposted

the condition that the competitors were not to exceed fort. In HULL Y. C.—Is now the second largest in the East, having 429 members. Twenty new names were added last meeting. This snows what enterprise, a liberal policy, cash prizes and working officers can accomplisate. What a contrast to the beggardy little clubs about New York, which to-day are no stronger than five years ago, and barely athle to sail one race in the year. The other cruise to himble-head, by any area in the year. The other cruise to himble-head, by any area of the competition of the compe

sair all told.

TERRIBLE.—The night had fallen, three boats had not arrived, but no one was afraid. The little Volando and the schooner Nokomis remained upon the waters of the broad Sound all night.—N. Y. Hevald. This is really fearful, all night and on the broad, broad Sound: And no one was afraid. And those two yachts, a cuttor safe as a rock and a schooner big, as an ark, actually survived the ordeal for a whole, whole night, in a dead, dead calm, on the broad, broad Sound:

broad Sound.

NEW CUTTER.—The dimensions of the new cutter built by Honny Podson, of Toronto, are: Length over all Mit. 6in., on the line 20ft.; beam, 6ft.; keel and outside weight. Mask Mit. long, bowsprit onbourd, 7ft.; boom, 19ft.; gall 18ft. 6in. Mast, deak to hounds, 17ft.; carries 69 square yards of cauvas. Her owner, Mr. Manton, will find out her points on a week's cruise he is about to undertake.

JEFRIES Y. C.—Second championship race sailed July 22. Light winds made it pratty much of a diffic. Lizzle, Silas Porter, Jr., 18ft. 9in., woa in 1.48429, beating Raven, Arthur Friend, 24ft. 6in., time 1.55-25, and Judith, E. T. Fiugeon, 22ft. 9in., time 2.9516; course 8tx miles.

APPEAL FROM THE GALLEY.—Miss Juliet Corson has placed many classes of society under obligations for good advice in the discourse of the composing at an other field which might bring down plessings from a large class of bard-working dyspeptics? Corinthian yachtsmen have to depend upon their own crude knowledge and primitive appliances for sustaining the luner man, and few know how to turn their meagre facilities to advantage. They look to the generosity and zeal of the principal of the New York Cooking School for enlightenment. Given a small oil or coke stove, little time, next to no incowledge, an ineradicable dislike to "cleaning up," how to get up a meal sufficiently attractive and hearty on moderate means adapted to such circumstances. There must be no greaty pans or pots to soour. Your Wikings will never become memblas. The lay out should be largely "all freeso."

FETREL.—From several sources we care that Mr. Hyslop's little from cutter being has been showing very great speed during the fount of the control

yachtsmen who were well pleased with her neat fittings.

NEW SHARPIE—The new sharpie Dolly, built by Thos. Clapham
for James A. Stebbins of New York, arrived at Oswego en route to
thub Island July b. Stessaled up the river from New York to Albany and was over the state of the property of the property of the
beauty of the property of the property of the property of the
beauty of the property of the property of the property of the
beauty of the property of the property of the property of the
beauty of the property of the property of the property of the
property of the property of the

CUTTERS.—As soon as the Lapwing is out of the hands of Lawley & Son, City Point, Boston, another eutter like her is to be com nenced. All hands in boston are quickly taking to the cutter rig, no matter what the model of their boats. Molanus & Son are giving Mr. Greely Curtis's Dream a cutter suit, also a new fit for the peerless Maggie.

pecriess alaggie.

ACTEA.—This Boston schooner arrived off Cowes, Isle of Wight,
June 19, after a passage of twenty-four days. Her owner, Mr. David
Sears, and guests are on board.

DORCHESTER YACHT CLUB.—The regata committee have decided upon the following fixtures: August 7, August 22, and Septem ber 5. Championship matches for club cat rigs, September 16, races open to all cat rigs. Eurires should be made to Louis M. Clark, Secretary, 39 Kilby street, Boston.

CART BEFORE THE HORSE.—Schooner Montauk shifts big, baggy jib for jib and staysail when cruising, but bends the bag again for a race. Is it possible that in some quarters old fogyism will not yet acknowledge staysail and jib a racing rig after the innumerable demonstrations in its favor?

NEW BEDFORD Y. C.—Has been on its annual cruise in Narragansett Bay for a week, visiting Newport, Rocky Point, Bristol, Fall River and other ports of interest. The fleet included schooner Indo Bonnie and Polly.

NARRAGANNETT Y. C.—Recent election of this Newport organi-

THIEVES.—Quincy Y. C. offers reward for conviction of river thieves or those who damage yachts at their moorings. Others should follow suit. We must say that we have been singularly free from such rascals so far in and about New York.

From such rascals so far in and about New York.

CHICAGO YACHT CLUB.—Hiler sailed alone over the fifteen mile course, July 11, for the Fisher Cup, which she had failed to take—the club regatta not finishing within the seven hour limit. She made the course in 4h. 10m.

REFORM ON THE LAKES.—Mr. Jas. George, of Toronto, has given his sloop a keel with an 1,800b. shoe, a housing topmast, squareheaded topsail and other sea-going fittings. The yacht is reported much improved.

uch improved.

BUFFALO Y. C.—A match was sailed July 18, over a five mile

sunse from club house to Sand Catch and return between the

cops Turk, T. P. Frank, and Telephone, H. B. Doyle. Turk won by

mi.

APPROPRIATE REMARK.—That the keel boat Maggie should beat the Hera so badly, and sail with such a centerboard as Undine, shows the stuff she is made of.—So. Boston Inquirer.

the stuff she is made of.—So. Boston Inquirer.

ROYAL CANOE CLUB.—This parent organization has six hundred members, with the Prince of Wales as Commodore, and the "father of the sport" J. Macgregoras Captain.

TORONTO Y. C.—Capt. Murray has given the club a cup, value \$250, open to yachts of the club, Aug. 12. We hope to see a good muster.

CHICAGO Y. C.—Club burgee is a swallow tail, red field, blue diagonal bar with C. Y. C. in white letters.

PUBLISHER'S DEPARTMENT.

Chas, J. Gopprey.—Attention is called to the advertisement of Chas, J. Godfrey, importer and dealer in guns, rifles and revolvers. Mr. Godfrey is one of the older members of the gun trade, and sports-men will do well to examine his stock of goods.

Answers to Correspondents.

D., Chicago, III.—See answer to J. G. B.

BAW BEESE, City.—See game table in last issue.
H. C. W., New York.—We do not know. Last heard of her in Europe.
C. H. H., Bagnor, Ont.—We do not know where you could purchase
a Cuban bloodhound.
J. G. B., New Haven, Conn.—Well-bred Newfoundlands are scarce.
We know of no puppies for sale.
J. L., Green Bay, Wis.—Where can I procure a first-class mastiff
dog, about two years old? Ans. Write to Mr. James Hutchings, 35
Candy street, Exeter, England,
Grandy street, Exeter, England,
Will's Management and Diseases of the Dog, "and it proved to be
just what I wanted. I now want to get a similar book on hoises,
their care and treatment in health and disease. Please advise which

CRUTTENDEN FLY

This cut is an exact representation of this rod, which

CANNOT BE EQUALED FOR THE MONEY.

It has Niclle Plated Patented Solid Red Plate which prevents Red getting fast by swelling of Rod. Tull Nickle Plated, and the preventing rod breaking where wood and ferrules join. Metal Tennons which never allow the joints to get stuck together by swelling of same if they should get wet. But stained dark, polished and wound with cane and slik, giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart while using it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten ounces. This is the best made, best finished rod for the money in the United States, and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus sawing expenses and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one frout or one Bass Tip for \$5.00. Trout Tips, each, \$1.00. Bass Tips, each, 7sets., Trout Tips, one-half Bamboo, each, \$1.25.

Manufacturers of Fine Fishing Tackle of Every Description

FOR SEA, RIVER OR BROOK FISHING. Rods, Reels, Flies, Leaders, Lines, etc. REPAIRING OF ALL KINDS.

We make a specialty of Wood and Rod Mountings for Amateur Rod Makers. Our Celebrated Bethabara Wood is far superior to anything known for making rods, being stronger than split bambod, and Frices, 4½fd, long, ½in, 3cc, 1½in, 42c, 1½in, 48c, 1 m, 58c, 1½in, 58c, 1½in, sqr, 3l each, Our Bethabara Fly and Bait Rods and Split Bamboo Fly Rods received the first premiums at the Centennial, Franklin Institute and Penna. State Fairs.

Price list of wood and rod mountings free. Our G5page new Illustrated Catalogue of Fishing Tackle sent, post-paid, on receipt of ten cents in stamps.

SUCCESSIVE SHOTS.

THE 15 BEST TARGETS EVER SEEN.

AT 60 FEET, WERE MADE BY

Hiram Engle, with 15 Stevens Rifles, of the ordinary \$20 make. He states under oath, that he fired five shots, no more, from each rifle, every one of the 75 shots striking a 6-10 meh bullseye, about the size of a sliver dime, and that every dhing that leaves the or it cannot pass.

striking a stiller dime, and that every sum of the cambe, and that every sum of the cambe pass, scarefully made as a Waltham watch. The only difficulty I have with them, is to get enough to fill my orders. When one goes to neighborhood a dozen or a hundred more are sure to follow, and the makers find it impossible to keep up with the demand. Like the Waltham people, the more they make, the greater the new demands become. SOLD BY DEALERS EYERYWHERE. Send stump for illustrated price list to
